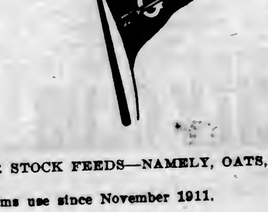
WANDER

FOR PREPARATION OF MALTED MILK AND A CHOCOLATE FLAVORED DAIRY SYRUP.
Claims use since Aug. 2, 1939.

Reg. No. 375,421. Registered Feb. 20, 1940. MONARK EGG CORPORATION, Kansas City, Mo., a corporation of Missouri. Republished by registrant.



The word "Brand" is disclaimed apart from the mark as shown.
FOR EGGS.
Claims use since about Feb. 1, 1932.

Reg. No. 377,160. Registered Apr. 23, 1940. H. R. SPENCER, doing business as Spencer Bakery Products Company, Richmond, Va., assignor to Southern Biscuit Company, Incorporated. Republished by Southern Biscuit Company, Incorporated, Richmond, Va., a corporation of Virginia.

MELL-O-GOLD

FOR COOKIES.
Claims use since June 15, 1939.

Reg. No. 377,622. Registered May 7, 1940. D. H. GRANDIN MILLING COMPANY, Jamestown, N. Y., a corporation of New York. Republished by registrant.

FOR STOCK FEEDS—NAMELY, OATS, CORN, BARLEY.
Claims use since November 1911.

Reg. No. 396,231. Registered June 30, 1942. FRANCIS

Reg. No. 379,766. Registered July 23, 1940. M. O. Best, Phoenix, Ariz., and El Centro, Calif. Republished by registrant, present address Phoenix, Ariz.

CREED

FOR FRESH VEGETABLES.
Claims use since Dec. 1, 1939.

Reg. No. 380,863. Registered Sept. 3, 1940. Borden Fruit Co., Anaheim, Calif., a firm. Republished by registrant.

NANCY

FOR FRESH CITRUS FRUITS.
Claims use since Apr. 19, 1940.

Reg. No. 380,864. Registered Sept. 3, 1940. Borden Fruit Co., Anaheim, Calif., a firm. Republished by registrant.

SIREN

FOR FRESH CITRUS FRUITS.
Claims use since Apr. 19, 1940.

Reg. No. 384,209. Registered Jan. 7, 1941. La Verne Orange Association, La Verne, Calif., a corporation of California. Republished by registrant.

LUPINE

FOR FRESH CITRUS FRUITS.
Claims use since Mar. 27, 1937.

Reg. No. 384,761. Registered Feb. 4, 1941. H. P. Coffee Company, St. Louis, Mo., a corporation of Missouri. Republished by registrant.

CITY CLUB

FOR COFFEE.
Claims use since Jan. 3, 1912.

Reg. No. 385,640. Registered Mar. 11, 1941. The Wander Company, Chicago, Ill., a corporation of Delaware. Republished by registrant.

OVALTINE

FOR FOOD PRODUCT MADE FROM BARLEY MALT, MILK, AND OTHER INGREDIENTS, SWEETENED OR UNSWEETENED, FOR USE IN MAKING FOOD BEVERAGES.
Claims use since Jan. 2, 1925.

Reg. No. 385,641. Registered Mar. 11, 1941. The Wander Company, Chicago, Ill., a corporation of Delaware. Republished by registrant.

Toddy

FOR READY TO SERVE FOOD PRODUCT IN FLUID FORM CONTAINING MILK WITH SUGAR, COCOA, AND OTHER INGREDIENTS.
Claims use since Aug. 12, 1940.

Reg. No. 386,241. Registered Apr. 1, 1941. National Starch Products Inc., New York, N. Y., a corporation of Delaware. Republished by registrant.

MELOJEL

FOR FOOD STARCHES.
Claims use since May 20, 1940.

Reg. No. 386,302. Registered Apr. 1, 1941. N. C. Coan, doing business as Animal Foods Company and Amco Sales Co., San Jose, Calif., and Houston, Tex. Republished by registrant.

Bounty

FOR CANNED FOODS FOR DOGS, CATS, FOXES, AND OTHER CARNIVOROUS ANIMALS.
Claims use since Oct. 25, 1940.

Reg. No. 388,304. Registered June 17, 1941. Southern Biscuit Company, Incorporated, Richmond, Va., a corporation of Virginia. Republished by registrant.

Hunt Club

FOR BISCUITS.
Claims use since January 1934.

Reg. No. 388,956. Registered July 22, 1941. Bercut-Richards Packing Company, Sacramento, Calif., a corporation of California. Republished by registrant.

The drawing is lined for blue and gold. The representation of the label is disclaimed apart from the mark as shown.
FOR CANNED FRUITS AND CANNED VEGETABLES.
Claims use since October 1937.

Reg. No. 392,262. Registered Dec. 16, 1941. The Somerset Canning Corporation, Somerset, Pa., a corporation of Pennsylvania. Republished by registrant.

TABLELAND

FOR CANNED VEGETABLES.
Claims use since Sept. 1, 1938.

Reg. No. 392,973. Registered Jan. 20, 1942. The Frank Tea & Spice Company, Cincinnati, Ohio, a corporation of Ohio. Republished by registrant.

Mr. Mustard

The word "Mustard" is disclaimed apart from the mark as shown.
FOR PREPARED MUSTARD.
Claims use since March 1941.

Reg. No. 394,988. Registered May 5, 1942. Pangburn Company, Inc., Fort Worth, Tex., a corporation of Texas. Republished by registrant.

FOR CANDY.
Claims use since Aug. 7, 1941.

Reg. No. 396,231. Registered June 30, 1942. Francis C. Stokes Company, Vincentown, N. J., a corporation of New Jersey. Republished by registrant.

STOKES

FOR APPLE JUICE FOR FOOD PURPOSES AND CANNED SWEET POTATOES.
Claims use since 1881.

Reg. No. 396,516. Registered July 21, 1942. Fillmore Citrus Association, Fillmore, Calif., a corporation of California. Republished by registrant.

AIRSHIP

FOR FRESH CITRUS FRUIT.
Claims use since December 1905.

Reg. No. 396,962. Registered Aug. 11, 1942. Bercut-Richards Packing Company, Sacramento, Calif., a corporation of California. Republished by registrant.

NANNELLA

FOR CANNED VEGETABLES.
Claims use since Jan. 16, 1942.

Reg. No. 402,666. Registered Aug. 10, 1943. Haxton Canning Company, Inc., Oakfield, N. Y. Republished by Haxton Foods, Inc., Oakfield, N. Y., a corporation of New York.

Blue Boy

FOR CANNED FRUITS AND VEGETABLES, FROZEN FRUITS, FRESH VEGETABLES, EXCEPT LETTUCE; FRESH FRUITS, EXCEPT CANTALOUPES; CANNED SAUERKRAUT, DRY BEANS, BOTTLED MILK AND CREAM, AND CANNED TOMATO JUICE.
Claims use since Jan. 26, 1904.

Reg. No. 404,934. Registered Dec. 28, 1943. Dehn & Co., Inc., Seattle, Wash. Republished by Dehn & Co., Inc. (1946), Seattle, Wash., a corporation of Washington.

DENCO

FOR CANNED SALMON.
Claims use since March 1935.

Reg. No. 404,935. Registered Dec. 28, 1943. DEHN & CO., INC., Seattle, Wash. Republished by Dehn & Co., Inc. (1946), Seattle, Wash., a corporation of Washington.

SNOW BELLE

FOR CANNED SALMON.
Claims use since April 1935.

Reg. No. 406,925. Registered May 9, 1944. KARL DEHN, doing business as Dehn & Co., Seattle, Wash. Republished by Dehn & Co., Inc., Seattle, Wash., a corporation of Washington.

BARGE

FOR CANNED SALMON.
Claims use since Dec. 14, 1934.

Reg. No. 406,926. Registered May 9, 1944. KARL DEHN, doing business as Dehn & Co., Seattle, Wash. Republished by Dehn & Co., Inc., Seattle, Wash., a corporation of Washington.

SEAWALL

FOR CANNED SALMON.
Claims use since Apr. 26, 1935.

Reg. No. 407,530. Registered June 6, 1944. PANOBURN COMPANY, INC., Fort Worth, Tex., a corporation of Texas. Republished by registrant.

Ranch Rhythm

FOR CANDY.
Claims use since Nov. 23, 1943.

Reg. No. 409,010. Registered Sept. 12, 1944. WHIS FISH PRODUCTS COMPANY, Seattle, Wash. Republished by Whis Fish Products Company, Inc., Seattle, Wash., a corporation of Washington.

Golden Mist

FOR FISH PRODUCTS—NAMELY, CANNED FISH.
Claims use since 1939.

Reg. No. 411,663. Registered Jan. 30, 1945. DESBERGERS-BISMOL LABORATORIES, Montreal, Quebec, Canada. Republished by Desbergers Limited, Montreal, Quebec, Canada, a corporation of Canada.

NOURIC

FOR DRY GRANULAR FOOD FOR BABIES AND CHILDREN, HAVING A CEREAL BASE AND CONTAINING VITAMINS AND MINERALS.
Claims use since Jan. 10, 1941.

Reg. No. 416,853. Registered Oct. 2, 1945. CAPITAL BAKERS INC., Harrisburg, Pa. Republished by Capital Bakers Inc., Harrisburg, Pa., a corporation of Pennsylvania.

CAPITAL

FOR BREAD, ROLLS, AND CAKE.
Claims use since Jan. 12, 1945.

Reg. No. 422,192. Registered July 9, 1946. THE WANDER COMPANY, Chicago, Ill., a corporation of Delaware. Republished by registrant.

OVALTINE

FOR FLAVORED DESSERT POWDERS FOR FOOD PURPOSES CONSISTING OF SUCROSE, COCOA, MALT EXTRACT AND OTHER INGREDIENTS; ALSO FOR FOOD PRODUCTS MADE FROM BARLEY, MALT AND OTHER INGREDIENTS, SWEETENED OR UNSWEETENED, FOR USE IN MAKING FOOD BEVERAGES.
Claims use since 1906.

Reg. No. 422,937. Registered Aug. 20, 1946. RODNEY MILLING COMPANY, doing business as The Russell Milling Co., Kansas City, Mo., and Russell, Kans., a corporation of Delaware. Republished by registrant.

RUSSELL'S BEST R

The words "Russell's Best" are disclaimed apart from the mark as shown.
FOR WHEAT FLOUR.
Claims use since on or about May 1, 1906.

Reg. No. 424,844. Registered Oct. 29, 1946. SOUTHERN BISCUIT COMPANY, INCORPORATED, Richmond, Va., a corporation of Virginia. Republished by registrant.

PEACOCK

FOR COOKIES.
Claims use since Jan. 20, 1942.

Reg. No. 430,354. Registered June 10, 1947. ROESCH AND RHODES, Clarence Center, N. Y., a firm. Republished by registrant.

ROAPON

FOR LIVE AND DRESSED POULTRY.
Claims use since Jan. 21, 1946.

Reg. No. 432,224. Registered Aug. 26, 1947. ATKINSON MILLING COMPANY, Minneapolis, Minn., a corporation of Minnesota. Republished by registrant.

BEST OF ALL

FOR WHEAT FLOUR.
Claims use since 1890.

Reg. No. 434,562. Registered Nov. 25, 1947. PALMER C. MENDELSON CO., San Francisco, Calif., a copartnership. Republished by registrant.

SKY-PATH

FOR FRESH DECIDUOUS FRUITS AND FRESH VEGETABLES.
Claims use since Apr. 13, 1946.

Reg. No. 434,988. Registered Dec. 9, 1947. KELCO COMPANY, San Diego, Calif., a corporation of Delaware. Republished by registrant.

COCOLOID

FOR ALGIN OR ALGIN-CARRAGEENIN COMPOSITION FOR USE AS A HYDROPHILIC COLLOID POSSESSING STABILIZING, BODYING, EMULSIFYING, SUSPENDING AND WATER HOLDING PROPERTIES IN DAIRY PRODUCTS SUCH AS CHOCOLATE MILK, SYRUPS AND TOPPINGS, CONFECTIONS, CHEESE AND IN OTHER FOOD USES.
Claims use since May 20, 1933.

Reg. No. 434,999. Registered Dec. 9, 1947. UTAH-IDAHO SUGAR COMPANY, Salt Lake City, Utah, a corporation of Utah. Republished by registrant.

U AND I

FOR SUGAR IN GRANULATED AND POWDERED FORM, AND POTATOES.
Claims use since Mar. 1, 1926.

CLASS 47

WINES

Reg. No. 21,716. Registered Sept. 6, 1892. COMPANHIA GERAL D'AGRICULTURA DAS VINHAS DO ALTO DOURO, Oporto, Portugal, a limited liability company of Portugal. Republished by registrant.

FOR WINES.
Claims use since 1852.

FOR CANDY.
Claims use since Nov. 23, 1943.

ENED, FOR USE IN MAKING FOOD BEVERAGES.
Claims use since 1906.

FOR WHEAT FLOUR.
Claims use since 1890.

FOR WINES.
Claims use since 1852.

CLASS 48

MALT BEVERAGES AND LIQUORS

Reg. No. 250,347. Registered Dec. 4, 1928. JACKSON BREWING COMPANY, New Orleans, La., a corporation of Louisiana. Republished by registrant.

SABANA

FOR NONALCOHOLIC MALT CEREAL BEVERAGES.
Claims use since Apr. 25, 1928.

CLASS 49

DISTILLED ALCOHOLIC LIQUORS

Reg. No. 47,605. Registered Nov. 14, 1905. JAS. E. PEPPER & CO., Lexington, Ky. Republished by JAS. E. Pepper & Company, Lexington, Ky., a corporation of Kentucky.

PEPPER

Jas E. Pepper & Co.

FOR WHISKY.
Claims use since 1880.

Reg. No. 57,616. Registered Nov. 13, 1906. JOHN WAGNER & SONS, Philadelphia, Pa., a firm. Republished by registrant.

WAGNER

FOR WHISKEY.
Claims use since March 1883.

Reg. No. 93,892. Registered Mar. 24, 1914. THE DISTILLERS COY. LD., Edinburgh, Scotland. Republished by The Distillers Agency Limited, Edinburgh, Scotland, a limited liability company of Great Britain.

TOP NOTCH

FOR SCOTCH WHISKIES.
Claims use since Mar. 16, 1912.

Reg. No. 312,796. Registered May 8, 1934. CRAIGHALL BONDING COMPANY, Glasgow, Scotland, a firm of Scotland. Republished by registrant.

The words "Old Scotch Whisky," "Glasgow," "London," and "Liverpool" are disclaimed apart from the mark as shown.
FOR SCOTCH WHISKY.
Claims use since Aug. 15, 1933.

Reg. No. 364,996. Registered Feb. 21, 1939. BEAR CREEK VINEYARD ASSOCIATION, Lodi, Calif. Republished by Wine Growers Guild, Lodi, Calif., a corporation of California.

CEREMONY

FOR BRANDY.
Claims use since July 30, 1938.

Reg. No. 406,220. Registered Mar. 14, 1944. BERNHEIM DISTILLING COMPANY, Louisville, Ky., a corporation of Kentucky. Republished by registrant.

I.W.HARPER

FOR WHISKEY.
Claims use since 1872.

Reg. No. 415,106. Registered July 10, 1945. PEBBLEFORD DISTILLERY COMPANY, Wilder, Newport, Ky., a corporation of Kentucky. Republished by registrant.

PEBBLE-FORD

FOR WHISKEY.
Claims use since Mar. 1, 1906.

CLASS 50

MERCHANDISE NOT OTHERWISE CLASSIFIED

Reg. No. 160,612. Registered Oct. 24, 1922. OVINGTON BROS. COMPANY, New York, N. Y. Republished by Ovington's Gift Shop, Inc., New York, N. Y., a corporation of New York.

OVINGTON'S

FOR IMITATION ART BRONZES, AND IMITATION BRONZES.
Claims use since Jan. 1, 1895.

PATENTS

GRANTED JANUARY 18, 1949

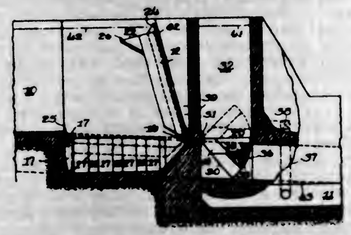
2,459,138
NICOTINE AND BETA-BETA-DICHLORETHYL ETHER INSECTICIDE
Owen T. Coffin and David J. Raden, Los Angeles, Calif., assignors to Swift & Company, Chicago, Ill., a corporation of Illinois
No Drawing. Application November 22, 1944, Serial No. 564,724
9 Claims. (Cl. 167—22)

2. An insecticide comprising nicotine and beta-beta-dichlorethyl ether; said nicotine and said beta-beta-dichlorethyl ether being present in a sufficient amount to provide, as compared with the separate insecticidal properties of the components, an improved insecticide that is effective over a longer period of time, that is effective under acid conditions, and that retains a greater insecticidal property at lower temperatures.

2,459,139
PROCESS FOR EXTRACTION AND PURIFICATION OF SUBTILIN
Keene P. Dimick, Redwood City, Gordon Alderton, Albany, and James C. Lewis, Berkeley, Calif., and Howard D. Lightbody and Harry L. Fevold, Chicago, Ill., assignors to the United States of America as represented by the Secretary of Agriculture
No Drawing. Application September 26, 1947, Serial No. 776,396
5 Claims. (Cl. 260—236.5)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

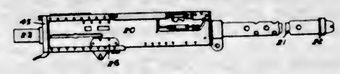
5. The method of preparing subtilin in purified form which comprises extracting a material containing subtilin with 65% to 70% ethanol, acidifying the extract with acetic acid and concentrating it to precipitate the subtilin-containing fraction, removing undesired components from this precipitate by washing with 95% ethanol, then with 85% ethanol containing about 1% acetic acid and about 1% sodium chloride, then extracting the partly purified precipitate with aqueous acetic acid which has been adjusted to a pH of 4.6 to 4.7 by the addition of alkali, removing ions from the extract and evaporating the solvents.

2,459,140
LOCK GATE SYSTEM
Christian Arne, Chicago, Ill.
Application April 5, 1946, Serial No. 659,753
21 Claims. (Cl. 61—24)



1. An automatic gate system comprising a lock, a hinged gate forming at least a part of one side of the lock and normally held upright when in closed position by the head of water within the lock, means for draining the water from the lock until the water level reaches a point where the weight of the gate overcomes the water head to lower the gate toward open position, means for applying fluid pressure to the under side of the gate when in open position for rotating the gate about its hinge toward closed position, and means for refilling the lock, said gate being forced to completely closed position by the rising head of water within the lock and said gate requiring substantially no more time to open and close than the time required for draining and refilling the lock.

2,459,141
ACCELERATION OF BREECH BOLTS IN MACHINE GUNS
Charles E. Ballcisen, Arlington, Va.
Application May 2, 1946, Serial No. 666,779
5 Claims. (Cl. 89—169)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



4. In a rapid fire machine gun; a receiver, a reciprocating barrel therein, a reciprocating breech bolt independently reciprocable therein, a barrel buffer and counterrecoil spring means for the barrel, a buffer and driving spring means for the bolt, positioned to be effective later in the recoil cycle than the barrel buffer, an accelerator pivotally supported in the receiver to swing against the bolt through part of the movement of the latter for accelerating the recoil of said bolt, a barrel extension having a bearing surface substantially transverse to the line of recoil and moveable in recoil to actuate said accelerator by bearing thereon during the pivotal movement thereof against the bolt, said accelerator having a leading cam edge for engagement with said barrel extension bearing surface, the contour of said leading cam edge being such as to initially fulcrum on said bearing surfaces at a radial distance from the pivotal axis of said accelerator which bears substantially the same ratio to the corresponding distance to the line of bearing between the accelerator axis of the bolt when the accelerator initially engages the bolt accelaratively as the ratio of barrel speed to bolt speed at this instant, said contour being shaped to progressively reduce said radial fulcrum distance as said barrel extension continues its recoil motion, whereby the bolt is progressively and smoothly accelerated relative to the barrel as recoil proceeds.

2,459,142
ELECTRICAL TEST APPARATUS
Mortimer F. Bates, Brooklyn, N. Y., assignor to The Sperry Corporation, a corporation of Delaware
Application August 30, 1945, Serial No. 613,621
8 Claims. (Cl. 177—311)

4. An electric system for detecting detonation of the cylinders of an internal combustion engine having a crankshaft and a plurality of combustion cylinders, comprising a detonation pickup

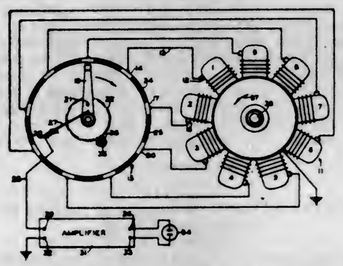
FOR SCOTCH WHISKIES.
Claims use since Mar. 16, 1912.

FOR IMITATION ART BRONZES, AND IMITATION BRONZES.
Claims use since Jan. 1, 1895.

1. An automatic gate system comprising a lock, a hinged gate forming at least a part of one side of the lock and normally held upright when in

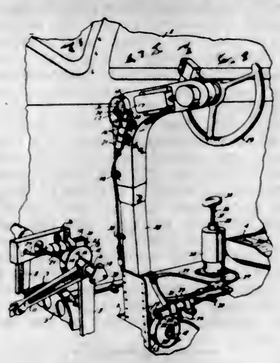
795

unit coupled to each cylinder of said engine to be tested for producing an electric signal responsive to detonation, detonation test apparatus for receiving the signal produced by a detonation pickup unit and indicating the occurrence of detonation, a rotary selector switch for rendering said test apparatus successively responsive to the detonation pickup units on said cylinders in an order determined from the engine cylinder firing order, said rotary switch having a rotary contact ele-



ment connected to said test apparatus and also having at least one cooperating stator contact element connected to each of said detonation pickup units, and coupling means interposed between said engine and said rotary contact element for driving said rotary element at a speed of rotation less than half the rotation speed of said crankshaft.

2,459,143
EMERGENCY CONTROL LOCK
John C. Beirise, Dayton, Ohio
Application November 26, 1945, Serial No. 630,965
2 Claims. (Cl. 244—83)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

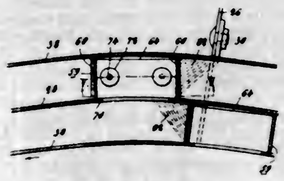


1. A control mechanism for aircraft of the type having a rudder, an elevator and ailerons, said mechanism comprising a pivotally mounted rudder control element, a pivotally mounted elevator control column, an aileron control wheel rotatably mounted on said control column, means including an axle mounted on said control column in parallel and horizontally offset relation with respect to the axis of said wheel for connecting said aileron control wheel to the aircraft ailerons, brake drums non-rotatably mounted with respect to each of said rudder control element, elevator control column and axle respectively, brake bands encircling said brake drums, hydraulic band actuating means connected to each of said brake bands and adapted to cause said bands to grip said drums on application of hydraulic pressure to the last-named means, and a single hydraulic pump connected to said hydraulic band actuating means for simultaneously locking the rudder, elevator and aileron controls of the aircraft at any desired setting thereof and thus maintain the aircraft on a predetermined flight course.

2,459,144
MANUFACTURE OF MALONIC ESTER
Charles F. Christie, Indianapolis, Ind., assignor to Eli Lilly and Company, Indianapolis, Ind., a corporation of Indiana
No Drawing. Application May 19, 1947, Serial No. 749,092
3 Claims. (Cl. 260—485)

1. In the process of producing malonic ester by simultaneously hydrolyzing and esterifying sodium cyanoacetate, the step which comprises heating a mixture which comprises sodium cyanoacetate, sodium chloride, ethanol, sulfuric acid and benzene, the benzene being present in the amount of about 0.5 to about 1.5 mols per mol of sodium cyanoacetate.

2,459,145
MULTIPLE SEPARATOR CENTRIFUGE
Gustav Karl William Boestad, Lidingo, Sweden, assignor, by mesne assignments, to Jarvis C. Marble, Leslie M. Merrill, and Percy H. Batten, as trustees
Application September 29, 1944, Serial No. 556,457
In Sweden April 28, 1944
10 Claims. (Cl. 233—18)



1. Apparatus for separating solid particles from an impure gas comprising rotor structure providing a plurality of concentric radially spaced walls forming between them a plurality of radially nested annular passages, means for causing the gas to flow through the respective passages in helical paths for separation of the solid particles by centrifugal force and collection thereof on the inner surfaces of the outer walls of the respective passages, said walls having spaced apertures therein the aggregate area of which constitutes only a minor portion of the areas of the walls, means for causing adjacent walls to rotate at different angular speeds, and a plurality of scraper devices moving with the inner walls of the respective channels for causing removal of the solid material collected on the outer walls thereof through said apertures, said devices being formed to provide passages for receiving and conducting radially through the channel in which the device is located solid material removed from an inner channel.

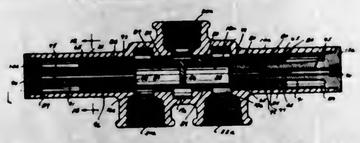
2,459,146
PURIFICATION OF GAMMA-PICOLINE
Robert S. Bowman, Pittsburgh, Pa., assignor to Jones & Laughlin Steel Corporation, Pittsburgh, Pa., a corporation of Pennsylvania
No Drawing. Application January 7, 1947, Serial No. 720,677
3 Claims. (Cl. 260—290)

1. The process of purifying 4-picoline which is contaminated with 3-picoline, comprising adding o-phenylphenol and a hydrocarbon solvent, cooling slowly to a temperature of about —10° C. to cause selective crystallization of the 4-picoline o-phenylphenolate, separating the solid o-phenylphenolate from the liquid, and fractionally distilling the respective o-phenylphenolates to regenerate the pyridine bases.

2,459,147
DISINTEGRATING CARTRIDGE BELT
Wilfrid M. Burgess, Cohoes, N. Y.
Application February 26, 1942, Serial No. 432,411
4 Claims. (Cl. 89—35)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

4. In a cartridge clip, a centrally disposed substantially flat body portion, a pair of oppositely bent ears on one longitudinal edge of said body portion for positioning the clip in a guideway, said ears being disposed at an angle with the plane of said body portion, a substantially rigid outwardly extending arcuate wing at each end of said body portion, a pair of spaced resilient arcuate fingers extending from said body portion between said wings, said wings and fingers having inner edges arranged to conform to and detachably engage cylindrical portions of a pair of spaced parallel cartridges, said body having a centrally located angularly bent portion whereby a coacting wing and finger and the adjoining part of said body are offset and parallel to the oppositely extending wing and finger.

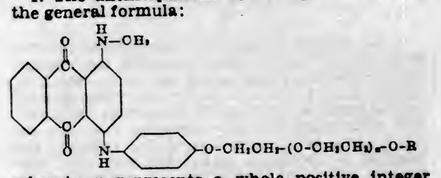
2,459,148
FLUID CONTROL APPARATUS
Niels A. Christensen, South Euclid, Ohio
Application September 20, 1944, Serial No. 554,949
3 Claims. (Cl. 137—139)



1. In a valve mechanism, the combination of a cylinder having a head at each end thereof and having a plurality of recesses arranged at spaced intervals therein, a hollow multiple piston slidably mounted in said cylinder, said piston having two cylinder-engaging portions disposed beyond the ends of the outermost recesses respectively and at least one cylinder-engaging portion disposed in the region between said recesses, said last-named portion having a width less than the width of either of the recesses, said portions having sealing means for automatically effecting a seal past the piston whenever said piston is disposed intermediate any two of said recesses, a tubular extension of smaller external diameter than the interior of the cylinder carried by one of the cylinder heads and extending into the interior of the piston, packing on the exterior of said extension coacting with the interior of the piston, and a vent from the annular space about the extension and between the piston and the head of the cylinder.

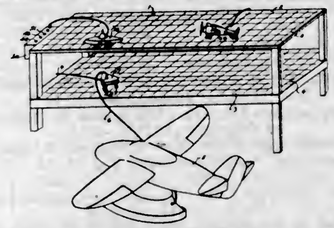
2,459,149
ANTHRAQUINONE COMPOUNDS
Harry W. Coover, Joseph B. Dickey, and Edmund B. Towne, Rochester, N. Y., assignors to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey
No Drawing. Application June 1, 1945, Serial No. 597,162
2 Claims. (Cl. 260—380)

1. The anthraquinone dye compounds having the general formula:



wherein n represents a whole positive integer of from 1 to 2 and R represents an alkyl hydrocarbon group containing from 1 to 2 carbon atoms.

2,459,150
INTERCEPTION TRAINER
Carl J. Crane and George V. Holloman, Dayton, Carl W. Muller, Osborn, and Raymond K. Stout, Dayton, Ohio
Application February 26, 1940, Serial No. 320,880
6 Claims. (Cl. 35—25)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

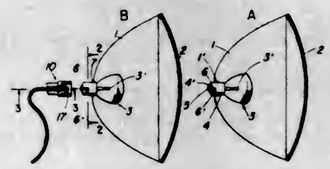


1. In an aviation ground training system, an aviation ground trainer for simulating aircraft flight, a pair of superimposed reference surfaces arranged in parallel spaced relation and at least one of said surfaces being formed of a transparent material, a course indicator associated with one of said surfaces and adapted to have a translatory movement relative thereto at a velocity proportional to an assumed velocity of said trainer and directionally controlled by said trainer, a target object simulating a land, air or water borne craft associated with the other of said surfaces and movable relative thereto at a velocity proportional to the supposed velocity of the craft to be represented and having a controlled directional heading, the said surfaces being arranged such that the instant course of said target object relative to the instant course of said course indicator is at all times apparent by visual observation through said transparent surface.

bullet-receiving port in its front side approxi-

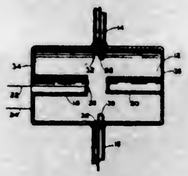
in parallel and horizontally offset relation with respect to the axis of said wheel for connecting said aileron control wheel to the aircraft ailerons, radially through the channel in which the device is located solid material removed from an inner channel.

2,459,151
SEALED LIGHTING UNIT AND ELECTRIC INCANDESCENT LAMP THEREFOR
Lorin W. Curtis, Verona, N. J., assignor to Tung-Sol Lamp Works Inc., Newark, N. J., a corporation of Delaware
Application September 28, 1945, Serial No. 619,046
4 Claims. (Cl. 176—34)



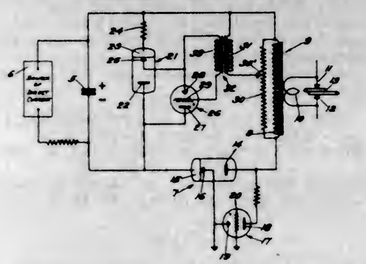
1. An incandescent lamp for a sealed lighting unit comprising a reflector having an opening therein for the reception of the lamp, said lamp having a base which is freely insertable through said opening and is sealable therein in fixed position with respect to the reflector with the end of the base projecting beyond the reflector and adapted to receive a socket-like electrical connector, said base having a fixed contact on the end thereof for supplying electrical energy to the filament of the lamp when the connector is attached and comprising a shell which contains in its outer end and adjacent said fixed contact an insulating filler material and said shell having on its outer surface an inwardly formed groove anchoring said insulating means against relative movement in the shell and adapted to accommodate an attaching and holding device carried by said socket connector, said groove beginning at the end of the base shell and extending generally longitudinally of the base and leading to a circumferentially spaced attaching and locking groove part.

2,459,152
ELECTRONIC VALVE
Delbert A. Deisinger, Long Branch, and Robert A. Kirkman, Elberon, N. J.
Application June 19, 1943, Serial No. 491,472
4 Claims. (Cl. 250—27.5)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



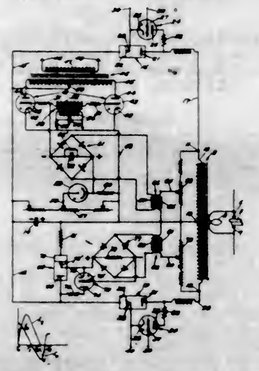
1. An electronic valve for high frequency energy comprising a cavity resonator having input and output circuit coupling means therein, a pair of spaced electrodes in said resonator, said resonator being sealed and filled with an ionizable gas, said resonator being resonant to said energy and the valve being conductive between said circuits when said gas is not ionized, an auxiliary electrode insulatedly secured on the internal exposed surface of one of said electrodes, and means connected to said auxiliary electrode to apply an external control voltage to said auxiliary electrode to ionize the gas and break down the gap between the electrodes, thereby detuning the resonator and making the valve non-conductive between the input and output circuits.

2,459,153
WELDING SYSTEM
John H. England, Wellesley Hills, Mass., assignor to Raytheon Manufacturing Company, Newton, Mass., a corporation of Delaware
Application May 28, 1945, Serial No. 596,119
7 Claims. (Cl. 219—4)



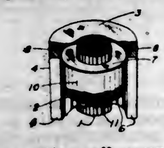
1. A welding system comprising a condenser, a welding load circuit, means for discharging said condenser through said welding load circuit in a unidirectional pulse of current during which said condenser is charged in an inverse direction, a shunt circuit across said condenser, and means responsive to the termination of said pulse of current for closing said shunt circuit to reverse the polarity of the inverse charge on said condenser thereby partially recharging the same in the original polarity.

2,459,154
WELDING SYSTEM
John H. England, Wellesley Hills, Mass., assignor to Raytheon Manufacturing Company, Newton, Mass., a corporation of Delaware
Application May 28, 1945, Serial No. 596,120
13 Claims. (Cl. 219—4)



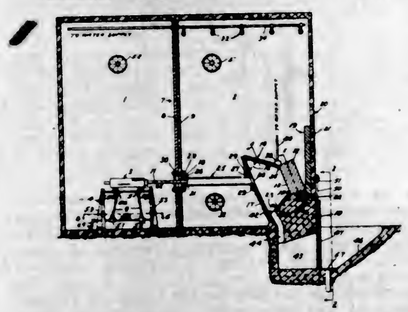
1. A welding system comprising a storage condenser, means including a rectifier tube for charging said storage condenser, a control electrode in said rectifier tube, a welding load circuit, means for discharging said condenser through said welding load circuit in a unidirectional pulse of current during which said storage condenser is charged in an inverse direction, means responsive to the flow of current through said welding load circuit for supplying a blocking potential to said control electrode of said rectifier tube, a shunt circuit across said condenser, means responsive to the termination of said pulse of current for closing said shunt circuit to reverse the polarity of the inverse charge on said condenser thereby partially recharging the same in the original polarity, and a control condenser adapted to be charged in response to said pulse of current to maintain said blocking potential on said control electrode for a predetermined time after the termination of said pulse of current.

2,459,155
PRESSURE CELL
Albert L. Erickson and James C. Kyle, Palo Alto, Calif.
Application September 19, 1945, Serial No. 617,418
1 Claim. (Cl. 171—242)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



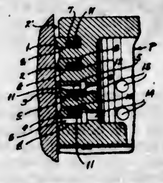
A pressure sensitive cell comprising a hollow, elongated magnetic casing open at one end, a very thin magnetic diaphragm closing said end and arranged flush therewith so that its outer surface is free and unconfined in space, an elongated magnetic core arranged axially of said casing with one end in proximity to said diaphragm to form an air gap therebetween, and a coil surrounding said core to substantially fill the space between the latter and the casing wall, said coil being spaced inwardly from said diaphragm and designed for external electrical connection.

2,459,156
GUN TEST RANGE
Ralph M. Ferguson, Dayton, Ohio
Application February 6, 1945, Serial No. 576,437
4 Claims. (Cl. 273—102.4)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



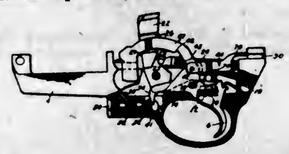
1. In a testing range for testing rate of fire and serviceability of gun actions, a gun support to hold a gun in a desired firing position, a bullet-proof bullet-receiving chamber having a bullet-receiving port in its front side approximately concentric with the axis of the bore of a gun in the support, a bullet deflecting body having a mass greatly in excess of that of the bullet so that a large part of the kinetic energy of the moving bullet may be readily absorbed by the bullet deflecting body, said mass being effective at a central point of impact on the body, said body having a forward face inclined to the said axis, said chamber having side walls united with said deflecting body and divergent forwardly, said chamber having also an eccentrically ported forward wall united with the side walls to form a closed chamber, a line central in said chamber normal to said face of the deflecting body being approximately coincident with said bore axis at said surface, said chamber having an effluent port for collected bullets, and means to cool the face of the deflecting body.

2,459,157
PISTON PACKING RING
Frank D. Frisby, St. Louis, Mo., assignor to Frisby Corporation, St. Louis, Mo., a corporation of Missouri
Application June 22, 1946, Serial No. 678,534
4 Claims. (Cl. 309—44)



4. In combination with a piston having a piston ring groove, an annular channel in the bottom of said groove, a piston packing ring comprising an annular split cylinder contacting element having no substantial inherent tension, and a helical spring element disposed within the circumferential margin of the cylinder contacting element and exerting radial pressure against all points in its circumference, said spring element being disposed within the ring groove channel.

2,459,158
HAMMER RETARDER FOR AUTOMATIC FIREARMS
John C. Garand, Springfield, Mass.
Application September 11, 1946, Serial No. 696,230
5 Claims. (Cl. 42—69)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

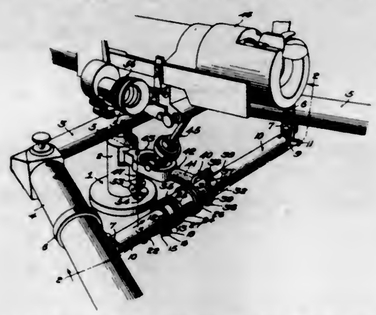


1. In an automatic firearm having a spring pressed hammer movable between a cocked and a firing position, a sear engageable with said hammer to retain said hammer in the cocked position, trigger means for moving said sear to a non-engaging position relative to said hammer, an inertia member movably mounted on the firearm and disposed in the path of said hammer as said hammer moves to its fired position, and cam

seal past the piston whenever said piston is disposed intermediate any two of said recesses, a through said transparent surface.

means on said hammer engageable with said inertia member to move it out of the path of said hammer whereby the firing movement of said hammer is delayed.

2,459,159
MECHANISM FOR TRAVERSING ARTILLERY PIECES
Nathan S. Glassman, Washington, D. C.
Application May 6, 1947, Serial No. 746,283
2 Claims. (Cl. 89—41)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

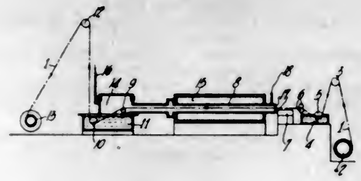


1. In a traversing mechanism for a gun mount having a rotatable gun carriage and a pair of adjustable trails, the combination of a traverse arm having one end mounted on the carriage and having a tubular portion at its other end; a traverse bar removably mounted on and connecting the trails; a sleeve slidable axially of said traverse bar; an adjustable clamp on said sleeve for fixing said sleeve on and releasing said sleeve from said bar, to prevent and permit movement of said sleeve axially of said bar; a second sleeve on said bar, and being interiorly threaded; a coupling for connecting said two sleeves, said second sleeve being rotatable in said coupling about said bar, immovable axially relative to said first sleeve, and movable with said first sleeve axially of said bar; a third sleeve slidable axially of said bar and having an exteriorly threaded portion received in said second sleeve, the threads of said second and third sleeves being meshed; and a yoke having its ends pivotally mounted on said third sleeve, and provided with a shank slidable in the tubular portion of said traverse bar.

2,459,160
TRAP
Durward B. Hampton, Sebastopol, Calif.
Application March 11, 1946, Serial No. 653,617
15 Claims. (Cl. 43—91)

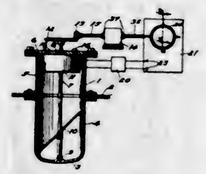
1. A trap of the character described comprising a base, a pair of jaws pivoted at one end of said base and swingable outwardly from the sides of the base to leave an unobstructed passage therebetween over said base, resilient means to swing said jaws together into trapping position, means of connection between said resilient means and said jaws exerting a force upon said jaws at dead center with respect to the pivots of said jaws when said jaws are swung apart, and tripping means on said base for tripping said jaws and said resilient means out of said dead center position.

2,459,161
METAL COATING
Arch W. Harris, Cleveland, Ohio, and Alfred H. Ward, Pittsburgh, Pa., assignors to The American Steel and Wire Company of New Jersey, a corporation of New Jersey and Carnegie-Illinois Steel Corporation, a corporation of New Jersey
Application January 13, 1945, Serial No. 572,728
3 Claims. (Cl. 117—51)



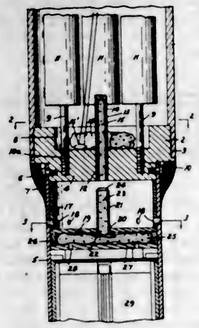
1. A ferrous metal coating method comprising wetting the ferrous metal with a water solution of ammonium chloride, drying the metal so it retains a coating of ammonium chloride, heating the metal to temperatures ranging from 660° F. to higher temperatures insufficient to melt the ferrous metal in an atmosphere containing sufficient hydrogen to make it reducing respecting the formation of iron compounds by the ammonium chloride, and subsequently coating the ferrous metal with molten metal selected from the group consisting of zinc, tin, aluminum and their alloys.

2,459,162
ACOUSTICAL SOUND LOCATING DEVICE
Harvey C. Hayes, Washington, D. C.
Application November 16, 1940, Serial No. 365,922
10 Claims. (Cl. 181—26)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



1. An apparatus for determining the direction of an emitted compressional wave comprising in combination a stationary housing pervious to compressional wave energy, a receiver of compressional wave energy, a reflector disposed within said housing and rotatable therein independently of the housing for reflecting at least a part of any intercepted compressional wave energy in the direction of said receiver for incidence thereupon, and visual means controllable by said receiver and reflector for indicating the direction of the compressional wave.

2,459,163
THERMAL IGNITER
Clarence N. Hickman, Jackson Heights, N. Y., assignor to the United States of America as represented by the Secretary of War
Application June 1, 1944, Serial No. 538,314
5 Claims. (Cl. 102—49)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



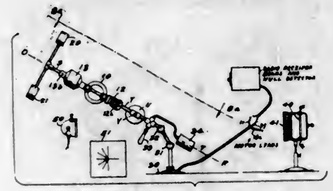
2. In a rocket projectile, a motor chamber arranged to contain a propellant charge, a load chamber arranged to receive combustible load, a wall separating said chambers, an igniting charge for said combustible load, and thermal delay means mounted in said wall arranged to conduct heat from said motor chamber to said igniting charge to ignite said igniting charge said delay means comprising a hollow tubular member having a helical reinforcing and heat transmitting fin on the surface thereof.

2,459,164
WEBBABLE, STRIPPABLE COATING COMPOSITION
William Henry Holst, United States Navy, and George Russell Hersam, Takoma Park, Md.
No Drawing. Application September 23, 1944, Serial No. 555,568
11 Claims. (Cl. 260—32.8)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. A webbable, strippable coating composition comprising as film-forming materials vinyl chloride-vinyl acetate copolymer having a vinyl chloride content ranging from 85 to 95 percent and from 4.7 to not more than 16.6 percent on the non-volatile components of vinylidene chloride-acrylo nitrile copolymer, said two film-forming materials ranging from 30 to 80 percent of the non-volatile components, the balance of the non-volatile components including plasticizer, said components being dissolved in a volatile solvent to give a solution of sprayable viscosity.

2,459,165
METHOD AND APPARATUS FOR DETERMINING THE THREE-DIMENSIONAL DIRECTION OF APPROACH OF AN ELECTROMAGNETIC WAVE FRONT
Joseph Y. Houghton, Chevy Chase, Md.
Application November 11, 1944, Serial No. 563,044
16 Claims. (Cl. 343—115)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. The method of determining the angle of incidence of a radiant energy wave front which consists in manipulating a directional antenna in three dimensions to establish, by the determinative alignment of its principal axis therewith, the three-dimensional direction of the resultant or total flux lines of the wave front, aligning a reference axis therewith, and thereafter establishing by manipulating a phase-discriminating system



about the so-aligned reference axis as a center, the position of another line of the group comprising lines lying in the plane tangent to the wave front and lines normal to such plane, whereby the position of the tangent plane and the azimuthal and vertical angles of incidence of the wave front are determined.

2,459,166
MAIN FEED PUMP RECIRCULATING LINE EROSION CONTROL DEVICE
Leighton E. Hughes, United States Navy
Application December 20, 1944, Serial No. 569,074
3 Claims. (Cl. 138—37)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. In a conduit in which there is an orifice through which passes a jet of fluid under high pressure, means for dissipating the energy of the jet, comprising a member having a substantially spherical recess therein opened toward and symmetrically disposed with respect to the axis of the jet, the reentrant walls of which extend through an arc of substantially more than 180° to reverse the flow of fluid to cause it to intersect the oncoming jet in a substantially opposite direction, thereby to retard its flow.

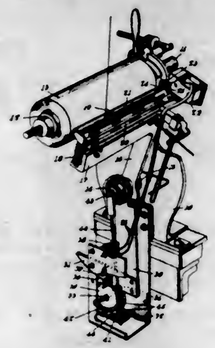
2,459,167

2,459,168

means for toasting a bread slice in the toasting

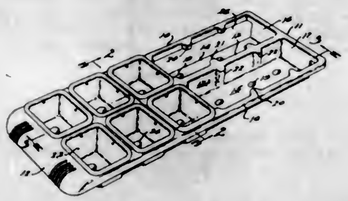
2,459,173
DEFROSTING MEANS FOR REFRIGERATION

2,459,167
WINDING MACHINE
Charles D. Jencks, Bristol, R. I., and Robert H. Lawson, Lakeport, N. H., assignors to Walter Kidde & Company, Inc., Belleville, N. J., a corporation of New Jersey
Continuation of application Serial No. 552,098, August 31, 1944. This application May 13, 1946, Serial No. 669,294. In Great Britain February 15, 1946
20 Claims. (Cl. 242—45)



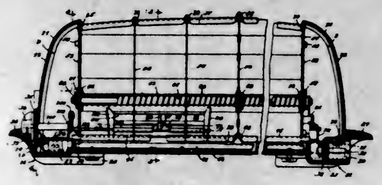
1. In a winding machine having a rotatable package support and a thread guide mounted for relative longitudinal and transverse movements; a back carrying said guide and being mounted to move freely by gravity away from said package, a package feeler mounted adjacent to the surface of the package being wound on the support, means for locking the back against movement, and means operated by said feeler for intermittently releasing the locking means.

2,459,168
ICE TRAY
Douglas L. Jocelyn, Detroit, Mich.
Application October 25, 1945, Serial No. 624,496
11 Claims. (Cl. 62—108.5)



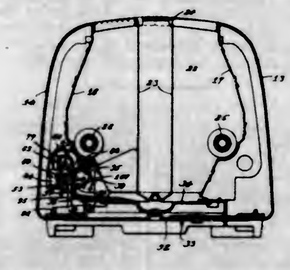
11. A liquid freezing device, comprising a generally rectangular frame having frame members extending around the four sides thereof and also having a bottom formed integrally with an upstanding rib extending centrally of the bottom the major length thereof, a number of separate individual liquid freezing receptacles adapted to rest on said bottom at opposite sides of the rib, and a plurality of spaced projections integral with the frame bottom and extending into recesses in the bottoms of the receptacles for positioning receptacles and restraining them against displacement.

2,459,169
RADIATION THERMOSTAT CONTROL FOR TOASTERS
Ludvik J. Koci, Chicago, Ill., assignor to Sunbeam Corporation, Chicago, Ill., a corporation of Illinois
Application January 9, 1946, Serial No. 639,934
20 Claims. (Cl. 99—331)



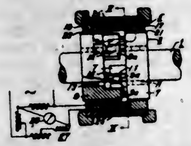
1. In a bread toaster or the like, in combination, heating means, means for holding a bread slice in toasting relation to said heating means, and control means for causing heat to be applied from said heating means to said slice for a toasting interval including radiation-sensitive means responsive in a control function to only that radiant energy emitted from the surface of the bread slice by virtue of the temperature of said surface while it is being toasted, means operated by said response to terminate the application of said heat when said radiation emission from the surface of the bread slice has increased to a predetermined value, said radiation-sensitive means comprising a relatively thin bimetallic strip, and means supporting the strip at its opposite ends with such ends restrained against angular and translational movement, shielding means providing an enclosure about the strip except for an opening which exposes to the described radiation emission the mid-portion of the strip and shields from said radiation emission the end portions of the strip, whereby said mid-portion of the strip is primarily responsive to the described radiation emission and the end portions of the strip are responsive to the ambient temperature and to the temperature of said end supporting means in a secondary or compensating action opposite from that of said primary response.

2,459,170
TOASTER CONTROL MECHANISM
Ludvik J. Koci, Chicago, Ill., assignor to Sunbeam Corporation, Chicago, Ill., a corporation of Illinois
Application March 28, 1942, Serial No. 436,649
33 Claims. (Cl. 99—331)



1. The combination in a control mechanism for toasters having a toasting oven and heating means for toasting a bread slice in the toasting oven, of a snap acting thermostat arranged to snap from a first position to a second position when heated in order to terminate a toasting interval, means for applying an external pressure on said thermostat, and means responsive to the insertion of a slice of bread into the toaster for rendering said last mentioned means effective to apply said external pressure on said thermostat to move said thermostat to said first position thereby resetting said thermostat for a subsequent toasting interval.

2,459,171
TORQUE MEASURING DEVICE FOR SHAFTS
Bernard F. Langer, Pittsburgh, and Frank W. Godsey, Jr., Forest Hills, Pa., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application September 15, 1942, Serial No. 458,378
21 Claims. (Cl. 73—136)

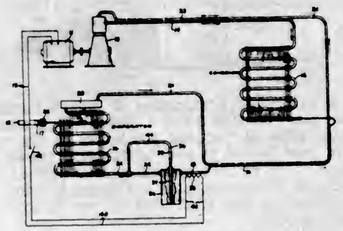


1. Apparatus for continuously measuring the torque of a shaft comprising, in combination, a rotor assembly having elements therein relatively displaceable upon circumferential distortion of said shaft due to torque, a stationary member, coil means secured to said stationary member, a source of alternating current for energizing said coil means, said coil means being adapted to induce a flow of alternating magnetic flux in said stationary member and said rotor assembly upon energization thereof, said elements in said rotor assembly being adapted to change the value of said alternating magnetic flux upon relative displacement thereof thereby changing the value of a voltage in said coil means, and means for measuring the voltage whereby the torque of said shaft is indicated.

2,459,172
BEARING
Henry W. Luetkemeyer, Euclid, and Ralph A. Schaefer, Cleveland, Ohio, assignors to The Cleveland Graphite Bronze Company, Cleveland, Ohio, a corporation of Ohio
Application May 31, 1947, Serial No. 751,574
9 Claims. (Cl. 308—237)

1. A composite bearing consisting of a steel backing layer, an intermediate layer of a high conductivity metal, a relatively thin barrier layer of a metal resistant to tin diffusion and a surface layer of a tin containing bearing alloy metal, said layers being uniformly bonded to each other all over their engaging surfaces.

2,459,173
DEFROSTING MEANS FOR REFRIGERATION APPARATUS
Graham S. McCloy, Springfield, Mass., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application February 5, 1946, Serial No. 645,612
12 Claims. (Cl. 62—3)



1. In refrigerating apparatus, the combination of a compressor, a condenser, a vessel adapted for accumulating and holding refrigerant liquid in an inactive state during the normal operation of said apparatus, an evaporator, a first conduit connecting said compressor with said condenser, a second conduit connecting said condenser with said vessel, a third conduit connecting said vessel with said evaporator, a fourth conduit connecting said evaporator with said compressor, at least a portion of said fourth conduit being in heat exchange relationship with the refrigerant vapor compressed by said compressor, said apparatus being arranged to produce refrigeration by means of said evaporator and heat dissipation by means of said condenser during normal operation, and actuating means for producing abnormal operation of said apparatus to defrost said evaporator, said means being adapted to discharge the refrigerant liquid from said vessel through said third conduit, said vessel, when being discharged supplying sufficient refrigerant liquid to flood both said evaporator and said portion of the fourth conduit.

2,459,174
PROBE
Joseph L. McFarland, Royal Oak, and Marguerite P. Van Camp, Detroit, Mich.
Application March 1, 1945, Serial No. 580,454
3 Claims. (Cl. 175—183)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

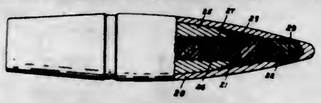
1. A sensitive element for a probe comprising a stub of dielectric material having the shape of a cylinder, provided at one end with a shallow conical surface, an anchoring means at the apex of said conical surface, a probe wire folded in half so as to form two parallel branches wound into a coil so as to form a double spiral layer covering the conical surface of said stub and a single helical layer covering its cylindrical surface, the fold of said wire being anchored by the anchoring means.

2,459,175
which the reed vibrates, an input circuit for said

periphery of a sole on the work table, a feed

at the feeding end of said digester, a sieve in said

2,459,175
EXPLOSIVE BULLET
Wiley T. Moore, United States Army, Laverne, Okla., assignor to the United States of America as represented by the Secretary of War
Application August 26, 1941, Serial No. 408,333
3 Claims. (Cl. 102—56)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

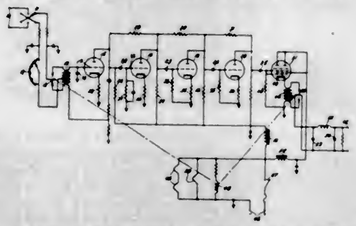


1. A projectile comprising a jacket having a hollow nose portion with a closed front end, an annular zone of reduced thickness in the inner wall of said jacket in rear of the said closed end, a hollow core in said jacket in rear of said zone of reduced thickness, and a charge in said core and extending into said zone of the hollow nose of said jacket.

2,459,176
PROCESS OF PREPARING OIL ACID MODIFIED ALKYD MATERIAL
Charles G. Moore, River Forest, Ill., assignor to The Glidden Company, Cleveland, Ohio, a corporation of Ohio
No Drawing. Application June 8, 1945, Serial No. 598,406
6 Claims. (Cl. 260—22)

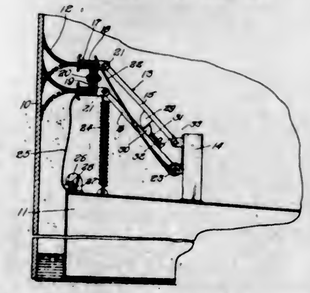
1. The process which consists essentially in intimately mixing together substantially equimolecular proportions of mono-glyceride, said mono-glyceride being one prepared by esterification of glycerin with equimolecular proportions of fatty acid selected from the class consisting of drying oil and semi-drying oil fatty acids to an acid number of not over 20, and maleic anhydride at a temperature below that at which any substantial reaction takes place, then quickly heating the mixture to 450° F., heating at this temperature until the reaction product has an acid number less than 80, then quickly cooling the reaction product to a temperature below that at which further polymerization takes place.

2,459,177
DIRECT-CURRENT AMPLIFIER
Francis L. Moseley, Osborn, and Lloyd J. Perper, Dayton, Ohio
Application March 5, 1945, Serial No. 581,018
2 Claims. (Cl. 179—171)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



1. An amplifier system for amplifying low level direct current voltages to high level direct current voltages, comprising a multi-stage alternating current tube amplifier and biased to operate as a class A amplifier, a vibrator having a vibrating reed with a pair of spaced contacts between which the reed vibrates, an input circuit for said amplifier having a transformer whose primary winding is connected across said vibrator contacts, the reed of the vibrator being connected in series between the direct current source to be amplified, and the electric midpoint of said primary winding, whereby zero alternating current voltage appears in the output of the amplifier when zero direct current voltage is at said input, another vibrator having a vibrating reed and a pair of spaced contacts between which the reed vibrates, means coupling said other vibrator to the output of said amplifier for full wave rectification, the vibratory armature of the first-mentioned vibrator being conductively isolated from direct current ground in the absence of direct current input voltages, and the input terminals of the system and the output terminals of the system being effectively isolated from each other with respect to the passage of direct current.

2,459,178
SEAL FOR FLOATING ROOFS
Frederick D. Moyer, Chicago, Ill., assignor to Chicago Bridge & Iron Company
Application October 20, 1945, Serial No. 623,515
10 Claims. (Cl. 220—26)

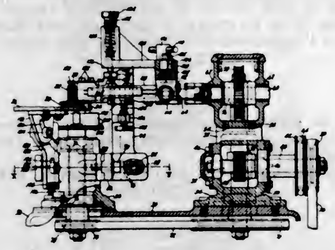


1. A storage tank comprising an outer shell, a floating roof, a plurality of circumferentially arranged pivotally mounted upstanding arms around the edge of the roof and extending toward the shell of the tank, an annular flexible sealing member carried on the outer ends of said arms, each of said arms comprising a pair of substantially parallel bars of substantially equal length mounted one above the other with their inner ends mounted on a substantially vertical post member attached to the roof and with the outer ends of said bars connected by a substantially vertical base member pivotally connected thereto and carrying the sealing member, means operating at the outer ends of said bars normally urging them down toward the roof to press the seal against the inner surface of the shell, and adjustable stop means for limiting the movement of said bars whereby pressure of the seal against the shell is limited.

2,459,179
MACHINE FOR OPERATING UPON SHOE SOLES
Eugene J. Ray, Beverly, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J., a corporation of New Jersey
Application May 23, 1946, Serial No. 671,862
8 Claims. (Cl. 12—77)

5. A machine for operating on shoe soles comprising a work table, a tool operable upon the

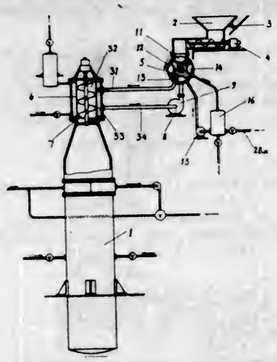
periphery of a sole on the work table, a feed wheel engageable with the upper face of the sole on the work table for advancing the sole and also pressing the periphery of the sole against said tool, a carrier for said feed wheel mounted for rising and falling movement of the feed wheel in accordance with local variations in the thickness of the sole, a pair of compression springs constructed and arranged to bear downwardly upon the feed wheel carrier to press the feed wheel down against the sole, means for limiting the downward expansion of each of said springs, said limiting means being adjustable independently for each spring, thereby enabling the limiting means to be so adjusted as to permit one spring to follow the feed wheel carrier throughout its full range of rising and falling movement and to permit the other spring to follow the feed wheel carrier throughout only the upper portion of the range of rising and falling movement of the feed wheel carrier, and a stop engageable with the feed wheel carrier to limit extreme downward movement of the feed wheel carrier and thereby to prevent contact of the feed wheel with the work table in the absence of a sole.



6. In a machine for operating on shoe soles comprising a tool operable upon the periphery of a sole, a frame, a driving member supported by said frame, driving connections from said driving member to said tool, a work feeding device constructed and arranged to advance a sole and also to hold the periphery of the sole against said tool, and a common support for said tool and said work feeding device, said common support being mounted on said frame with provision for adjustment toward and from said driving member to accommodate driving connections of greater or less speed ratio, the work feeding device and the tool being maintained in predetermined relation, notwithstanding such adjustment, by reason of their being carried by said common support.

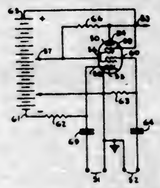
2,459,180
APPARATUS FOR CHARGING FIBROUS MATERIAL INTO A DIGESTER
Johan Christoffer Fredrik Carl Richter, Oslo, Norway, assignor to Aktiebolaget Kamyr, Karlstad, Sweden, a company of Sweden
Original application December 4, 1943, Serial No. 512,978. Divided and this application July 30, 1945, Serial No. 607,694. In Norway October 15, 1942
Section 1, Public Law 690, August 8, 1946
Patent expires October 15, 1962
8 Claims. (Cl. 214—17)

6. In an apparatus for charging a fibrous material into the liquid-filled space of a digester under pressure, the combination of a sieve housing at the feeding end of said digester, a sieve in said sieve housing enclosing a space at the feeding end of said digester and separating said space from the interior of said sieve housing, a feeding screw in said sieve-enclosed space, a sluicing device for the fibrous material, at least two conduits connecting said sluicing device with opposite sides of



said sieve in said sieve housing and forming a closed liquid-filled circulation system through said sluicing device and said sieve housing, and a pump connected to one of said conduits so as to effect circulation of liquid from said sluicing device to said sieve-enclosed space and through said sieve into said sieve housing and from the latter back to said sluicing device.

2,459,181
GATE SUPPRESSING LINEAR RESPONSE AMPLIFIER
Milton W. Rosen and Conrad H. Hoeppner, Washington, D. C.
Application July 14, 1945, Serial No. 605,169
8 Claims. (Cl. 315—26)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



2. In combination; a vacuum tube arranged so as to contain a reversal point in its transconductance characteristic, said reversal point being bounded by a negative transconductance region on one side thereof and a positive transconductance region on the other side thereof whereby two points of effective plate current cutoff are established, one of said points being situated in a linear portion of the positive region of said transconductance characteristic, and means biasing said tube to operate at said one of said points whereby linear operating characteristics of said tube are obtainable.

2,459,182
GRENADE MORTAR AND ADAPTER

containing a quenching liquid, a link pivoted on said support and having a portion spaced from

tions to prevent a permanent change in grid bias while permitting a varying circuit voltage to pass to the grid, connections between the inner elec-

combination which comprises a vacuum tube including an anode, an output circuit associated with said vacuum tube for supplying to said de-

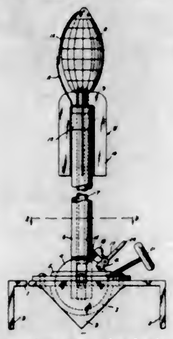
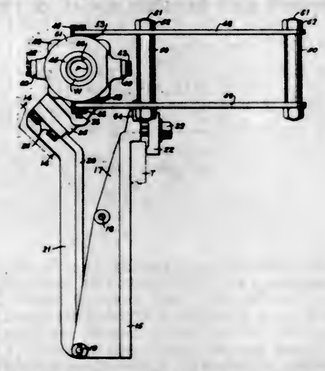
Josiah Ross, Sunnyside, Long Island, N. Y.
Application September 27, 1945, Serial No. 618,997
4 Claims. (Cl. 89—1)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. A grenade mortar comprising a launching barrel adapted to engage a self-ejecting car-



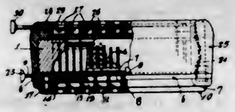
tridge, a mount therefor including a support member on said mount for elevating and depressing said barrel and to permit traversing thereof, a brake element carried by said support and operatively associated with said elevating and depressing means and said traversing means, means for exploding said cartridge, and means carried on the outside of said barrel to engage the arming member of a grenade positioned in said barrel for launching whereby said grenade is held in unarmed condition until launched.

2,459,183
FIXTURE FOR HARDENING DIES
Frank F. Roth, Jr., Philadelphia, Pa.
Application October 1, 1946, Serial No. 700,539
1 Claim. (Cl. 134—105)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



For heat treating and hardening perforated metal parts such as dies and similar articles by dipping them in a quenching liquid and by flowing the quenching liquid through the perforations in the metal parts, a fixture including, a support mounting the fixture adjacent a tank containing a quenching liquid, a link pivoted on said support and having a portion spaced from said pivot and rotatable about said pivot so as to be dipped into or be lifted out of the quenching liquid, a first body mounted on said rotatable portion of said link and having a perforated part for engagement with one end of the die so that the perforations in the die and said first body communicate, a movable body slidable on said first body and having a perforated part for engagement with the other end of the die so that the perforations in the die and in the movable body communicate when the part to be quenched and hardened is secured between the confronting portions of said bodies, means including a hose connected to one of said bodies for use in conveying the quenching liquid through the perforations in that body, through the perforations in the part being heat treated and out through the perforations in the other of said bodies, a spring stressing said movable body toward the confronting portion of said first body, a handle pivotally mounted so as to move said link about its pivot for dipping the part carried between said bodies into the quenching and hardening liquid, and a cam located between said handle and said movable body and arranged upon another movement of said handle to compress or release said spring so as to clamp or unclamp said part between the confronting portion of said bodies.

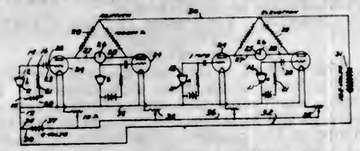
2,459,184
HARMONICA
Gabriel Ruffino, Los Angeles, Calif., assignor of one-half to Alfredo Magallon, Los Angeles, Calif.
Application January 16, 1945, Serial No. 573,053
8 Claims. (Cl. 84—377)



5. A harmonica comprising: means defining a plurality of mouth openings and at least a pair of air passages common to each mouth opening and arranged in upper and lower rows; an oscillatable gang valve including a shaft extending across said passages between said rows thereof and individual vane elements secured to said shaft and tiltable to close off the upper or lower row of passages by engagement with the upper or lower sides of said mouth openings; and reeds mounted in said air passages.

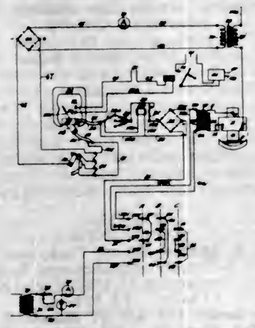
2,459,185
RADIANT ENERGY DETECTOR
William Sackville, Berkeley, Calif., assignor to the United States of America as represented by the Secretary of War
Application June 23, 1938, Serial No. 215,509
6 Claims. (Cl. 250—83.3)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. The combination with a radiant energy detector including a container, an insulated support in the container, a plurality of oppositely paired spaced segments of material sensitive to radiant energy annularly arranged on the support, electrodes on the inner and outer marginal portions of the segments, and lead wires for the electrodes; of a pair of triodes for each pair of oppositely spaced segments, electrical connections between the outer electrodes of the segments and grids on the triodes, means interposed in said connections to prevent a permanent change in grid bias while permitting a varying circuit voltage to pass to the grid, connections between the inner electrodes of the segments and the filaments of the triodes, a source of direct current electrical sup-



ply connected to the grid and filament connections, an indicator connected across the plates of each pair of tubes, means for supplying current to the filaments and means for supplying current to the plates.

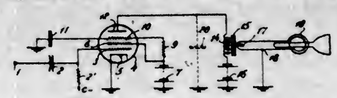
2,459,186
TESTING AND PROTECTION OF ELECTRICAL DISTRIBUTION SYSTEMS
Raphael Scheirmann, Warren, Ohio, now by change of name Ralph Sherman
Application July 19, 1943, Serial No. 495,311
10 Claims. (Cl. 175—294)



1. A protective arrangement for rendering perceptible predetermined degrees of changes of contact conditions in an electrical system having a circuit traversed by load current including a pair of conductors in contact, said protective arrangement comprising in combination with such contact and connections for connecting said contact to a useful load and for causing passage of load current through such contact, a device responsive to ratio of voltage to current having a movable element, a translating device actuated by movement of said movable element, said ratio responsive device including a voltage winding and a current winding, connections bridging the voltage winding across said contact and adapted to be connected permanently, and connections having a serial relation to said contact for energizing the current winding in proportion to the current traversing said circuit and adapted to be permanently connected.

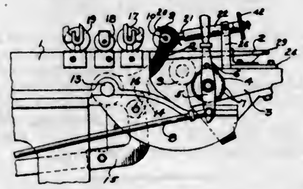
2,459,187
DEFLECTION CIRCUIT FOR CATHODE-RAY TUBES
Kurt Schlesinger, New York, N. Y., assignor to Columbia Broadcasting System, Inc., New York, N. Y., a corporation of New York
Application October 1, 1946, Serial No. 700,495
28 Claims. (Cl. 315—27)

1. In a deflection circuit for a cathode-ray tube having electromagnetic deflecting means, the combination which comprises a vacuum tube including an anode, an output circuit associated with said vacuum tube for supplying to said deflecting means deflection currents having sweep



periods alternating with relatively shorter retrace periods, and means for effecting the flow of emission currents from said anode during a portion of said sweep periods to damp out transient oscillations in said output circuit.

2,459,188
DUCTOR ROLLER CONTROL FOR PRINTING PRESSES
George H. Schultz, Elmsford, N. Y.
Application June 12, 1945, Serial No. 598,962
3 Claims. (Cl. 101—344)



1. An adjustable braking attachment adapted to be applied to a printing press having an ink fountain and a fountain roller, a reciprocating ink distributor table, a ductor roller, and means for oscillating said ductor roller for ink conveying engagement with said table and said fountain roller, comprising a bracket, an elongated member pivoted at one end to said bracket and having a longitudinal bearing at the pivoted end and a larger diameter bearing aligned with said first bearing at the other end, a rod adapted to fit slidably within said first bearing and having a larger diameter portion at one end adapted to fit slidably within the larger diameter bearing of said member and forming a shoulder between the portions of a different diameter, a U-shaped brake shoe adapted to fit over the shaft of said ductor roller attached to the larger diameter end of said rod with the axis of curvature of the braking surface substantially at right angles to said rod, a coil spring surrounding said rod and having one end against said shoulder and the other end against said smaller diameter bearing of said member, and a wheel threaded on the end of said rod and adapted to engage the other side of said bearing, whereby the sliding movement of said rod under the action of said spring is limited by the position of said wheel on said rod which position may be adjusted by rotating said wheel.

2,459,189
DUCTOR ROLLER CONTROL FOR PRINTING PRESSES
George H. Schultz, Elmsford, N. Y.
Application March 25, 1946, Serial No. 656,915
7 Claims. (Cl. 101—348)

1. An attachment for a printing press having a frame and a ductor roller, arranged to swing about an axis parallel to the shaft of said roller, comprising a brake shoe adapted to engage the shaft of said ductor roller, a base for said attach-

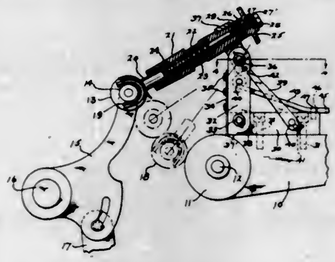
ment adapted to be secured to said frame, upright means pivotally mounted on said base, support means for said brake shoe pivotally mounted

2,459,191
SEPARATION OF PYRIDINE BASES
Kenneth H. Slagle, Mount Lebanon, and Robert

2,459,194
SUCTION CLEANER DUST CHAMBER HAVING

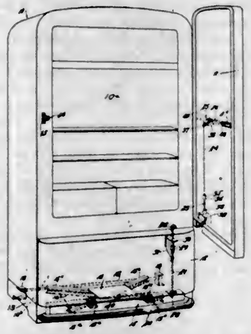
members; a cathode supported in said envelope in spaced relationship with respect to said anode members; magnet pole pieces extending into said

ment adapted to be secured to said frame, upright means pivotally mounted on said base, support means for said brake shoe pivotally mounted on said upright means, said base arranged to be mounted on said frame in such a position that the pivot of said brake shoe support means lies on a line perpendicular to said axis and within the arc of movement of said ductor roller, means asso-



ciated with said support means to cause said brake shoe to contact said ductor roller shaft for a portion only of its swing, and releasable means holding said upright means in fixed operating position with respect to said base and permitting the swinging thereof about the pivot on said base when said means is released to move said brake shoe clear of said ductor roller shaft.

2,459,190
REFRIGERATOR LATCH
Arthur C. Shuart, Evansville, Ind., assignor to Servel, Inc., New York, N. Y., a corporation of Delaware
Application March 14, 1945, Serial No. 582,732
10 Claims. (Cl. 292—255)



1. Latch mechanism for a hinged door of a cabinet including a latch bolt secured to said door, a treadle mounted on said cabinet and having a tread traversing substantially the entire front of said cabinet below said door, means operatively connecting said treadle to said latch bolt, said means including a vertical element operatively connected to said treadle and passing upwardly through said door on the hinged side thereof, and a horizontal element connected at one end to said vertical element and at its opposite end to said latch bolt.

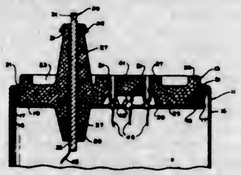
2,459,191
SEPARATION OF PYRIDINE BASES
Kenneth H. Slagle, Mount Lebanon, and Robert S. Bowman, Pittsburgh, Pa., assignors to Jones & Laughlin Steel Corporation, Pittsburgh, Pa., a corporation of Pennsylvania
No Drawing. Application January 7, 1947, Serial No. 720,674
5 Claims. (Cl. 260—290)

1. The method of separating a mixture of the pyridine bases 3-picoline, 4-picoline and 2,6-lutidine, which comprises adding benzoic acid and toluene to the mixture, cooling slowly to a temperature in the range −7° to −10° C., whereby the 2,6-lutidine benzoate is caused to crystallize, separating these crystals from the liquid, cooling this liquid to a temperature of about −20° C., whereby the 4-picoline benzoate is caused to crystallize, separating these crystals from the liquid, and regenerating the pyridine bases from their respective benzoates.

2,459,192
CONCENTRATION OF BETA-PICOLINE
Kenneth H. Slagle, Mount Lebanon, and Robert S. Bowman, Pittsburgh, Pa., assignors to Jones & Laughlin Steel Corporation, Pittsburgh, Pa., a corporation of Pennsylvania
No Drawing. Application January 7, 1947, Serial No. 720,676
5 Claims. (Cl. 260—290)

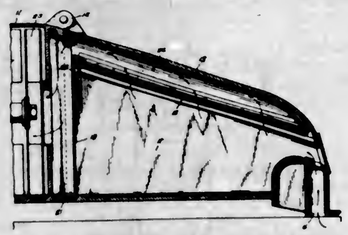
1. The process of treating a liquid mixture of 3-picoline and at least one of the other pyridine bases 4-picoline and 2,6-lutidine which comprises adding salicylic acid, cooling the mixture to a temperature low enough to cause crystallization of the salicylates other than 3-picoline but to retain 3-picoline salicylate as a liquid, separating the solid salicylates from the liquid, and recovering the pyridine bases from their salicylates.

2,459,193
CONTAINER
George R. Sparks, Asbury Park, and Carroll G. Killen, Jr., Wanamassa, N. J.
Application September 13, 1944, Serial No. 553,858
1 Claim. (Cl. 174—18)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



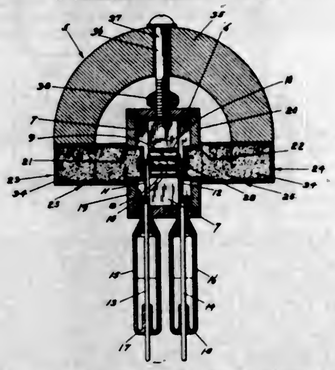
A container for an apparatus comprising a metal box open substantially throughout one entire side, the peripheral edges of the box about said open side being folded over to form an inner wall extending entirely around said open side, said inner wall being spaced slightly from the outer wall of said box and being slightly angulated thereto, a flange extending inwardly from said inner wall and completely around said open side so as to form a supporting ledge, a glass cover adapted to fit and close said open side and have its periphery abut said inner wall and have its inner surface rest against said supporting ledge, a hermetic seal of solder between the periphery of the glass cover and the inner wall to completely close and hermetically seal the open side of the box aforesaid so as to form a hermetically sealed container about said apparatus.

2,459,194
SUCTION CLEANER DUST CHAMBER HAVING A MOVABLE WALL THEREFOR
Charles H. Sparklin, Chicago, Ill., assignor to Birtman Electric Company, a corporation of Illinois
Application November 30, 1944, Serial No. 565,871
2 Claims. (Cl. 15—352)



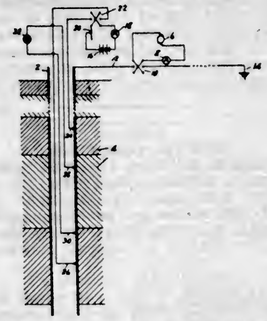
1. A suction cleaner comprising a vacuum creating portion, a nozzle portion arranged forwardly of the vacuum creating portion and hingedly attached thereto at a point on the upper part of the nozzle portion, and an air passageway between the vacuum creating portion and the nozzle portion, said nozzle portion comprising a housing, a dust screen within said housing and across said passageway, a dust chamber forming a part of said nozzle portion and located adjacent said screen, a wall hinged at its top to the nozzle portion and extending between the screen and the bottom of the dust chamber and forming a side of said chamber through which dust can be removed from said chamber, and readily-releasable locking means for normally locking said wall in airtight closed position between the vacuum creating portion and the dust collecting chamber, said nozzle and vacuum creating portions being turnable about their connecting hinge to permit pivoting of the nozzle portion upwardly to remove dust from the dust chamber.

2,459,195
ELECTRON DISCHARGE DEVICE
Percy L. Spencer, West Newton, Mass., assignor to Raytheon Manufacturing Company, Newton, Mass., a corporation of Delaware
Application March 3, 1945, Serial No. 580,767
2 Claims. (Cl. 250—27.5)



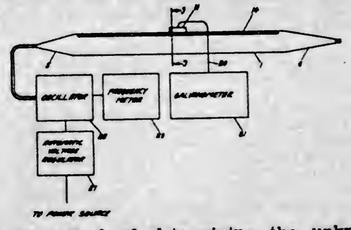
1. An electron-discharge device comprising an envelope provided with interiorly extending anode members; a cathode supported in said envelope in spaced relationship with respect to said anode members; magnet pole pieces extending into said envelope in axial alignment with said cathode; each of said pole pieces consisting of an electrically conductive, readily malleable, thin-walled shell having compacted therein finely divided magnetic material, and a magnet secured to and connecting said pole pieces exteriorly of said envelope.

2,459,196
ELECTRICAL LOGGING METHOD AND APPARATUS
William H. Stewart, Beaumont, Tex., assignor to Sun Oil Company, Philadelphia, Pa., a corporation of New Jersey
Application December 22, 1938, Serial No. 247,139
9 Claims. (Cl. 175—182)



9. An electrical process for determining the nature of the geological formations traversed by a cased drill hole comprising applying terminals of a voltage supply to the casing of the drill hole and to a remote ground, moving two exploring electrodes having a fixed spacing between them to various depths in said cased hole in electrical metallic contact with the interior of the casing thereof, and measuring voltage variations between said electrodes.

2,459,197
METHOD OF MEASURING CHARACTERISTIC IMPEDANCE OF FITTINGS FOR COAXIAL CONNECTORS
Chandler Stewart, Jr., Dayton, Ohio, assignor to the United States of America as represented by the Secretary of War
Application August 11, 1944, Serial No. 549,088
3 Claims. (Cl. 175—183)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



1. A method of determining the unknown characteristic impedance of a pair of spaced elec-

trical conductors from a known value of characteristic impedance and four measured linear distances including the steps of supplying elec-

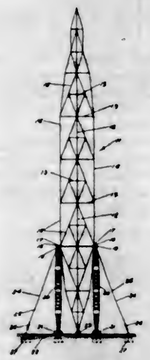
2,459,199
ARC DISCHARGE DEVICE
Paul W. Stutsman, Needham, Mass., assignor to

tionable selectively in engaging and in released position, means yieldingly holding the clutch means in each of said positions, manual control mechanism embodying means common to said

mechanism of the vehicle and being adapted to maintain the pointer in register with said de-

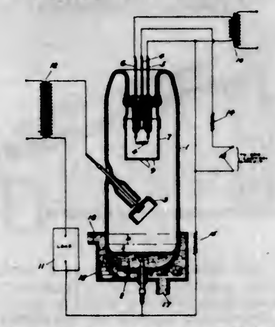
trical conductors from a known value of characteristic impedance and four measured linear distances including the steps of supplying electrical energy to one end of a measuring line of known characteristic impedance, and measuring the following distances in any order by any known means; the distance from the second end of said measuring line to the first point of voltage minimum along the line with said second end open circuited, the distance from said second end to the first point of voltage minimum along said line with said second end short circuited, the distance from said second end to the first point of voltage minimum along the line with the pair of conductors to be tested attached to said second end with the unattached end of said pair of conductors open circuited, and the distance from said second end to the first point of voltage minimum along the line with the pair of conductors to be tested attached to said second end with the unattached end of said pair of conductors short circuited, whereby the characteristic impedance of said pair of conductors may be computed from the characteristic impedance of said measuring line and the four measured distances.

2,459,198
TOWER STRUCTURE
Erastus R. St. John, Forest Hills, N. Y.
Application August 9, 1945, Serial No. 609,911
2 Claims. (Cl. 189—15)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



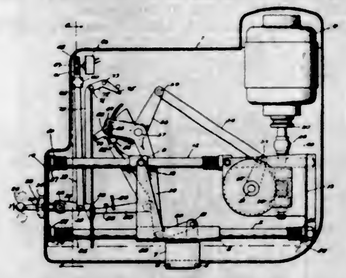
2. A tower structure comprising a ground frame embedded in the ground, said frame having a plurality of anchors exposed at the surface of the ground, a pair of elongated and rigid supports disposed in parallel spaced relation, said supports each having one end swingably attached to an anchor so that said supports can swing in parallel paths, a transverse trunnion rigidly interconnecting the ends of said supports, stays between said anchors and the ends of said supports adjacent said trunnion for securing said supports in vertical position with said trunnion extending horizontally, a tower rotatably mounted upon said trunnion and adapted to be disposed in vertical position with one end depending from the trunnion into proximity with the ground, and a lock on said ground frame for engaging said depending tower end to lock the tower in vertical position.

2,459,199
ARC DISCHARGE DEVICE
Paul W. Stutsman, Needham, Mass., assignor to Raytheon Manufacturing Company, Newton, Mass., a corporation of Delaware
Application May 22, 1943, Serial No. 488,305
7 Claims. (Cl. 250—27.5)



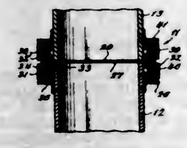
1. An arc discharge device comprising a member of non-conducting material, an anode, a liquid pool cathode consisting of mercury having a metal of the alkaline earth group incorporated therewith to thereby attenuate a portion of said mercury upon a surface of said non-conducting material projecting from said pool, a gaseous medium adjacent said cathode and means for ionizing said gaseous medium to cause ionic bombardment of said attenuated portion and thereby initiate an arc spot.

2,459,200
CONTROL APPARATUS FOR CARRIAGE DRIVE FOR RECIPROCATING CARRIAGE SLICING MACHINES
Walter Dorwin Teague, Jr., Alpine, N. J., and Robert H. Ensign, New York, N. Y., assignor to U. S. Slicing Machine Company, La Porte, Ind., a corporation of Indiana
Application October 6, 1943, Serial No. 505,092
14 Claims. (Cl. 146—102)



3. A slicing machine comprising the combination, with a motor, a knife drivingly connected with said motor, and a reciprocating carriage for a substance to be sliced, of motor control means, means for connecting the carriage for reciprocation by the motor and for disconnecting the carriage for manual reciprocation comprising a driven member connected with the carriage, a driving member connected with said motor, clutch means adapted to engage said driven and driving members, said clutch means being positionable selectively in engaging and in released position, means yieldingly holding the clutch means in each of said positions, manual control mechanism embodying means common to said clutch means and motor control means for disabling said motor from operation and for throwing the clutch means to released position, said manual means being operable to another position to render the motor active when the clutch means is in a released position, and means operable by said manual means engageable with the clutch means to actuate the same into its operating position, and means for moving the manual control mechanism to normal running position when the said clutch means has been rendered active.

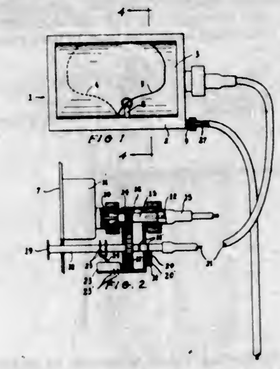
2,459,201
JUNCTION SEAL APPARATUS
Thomas R. Thomas, Baldwin, N. Y., assignor to The Sperry Corporation, a corporation of Delaware
Application March 22, 1946, Serial No. 656,375
13 Claims. (Cl. 285—196)



1. In a joint for maintaining two wave guide tubes in pressure-tight relation and in proper electrical relation while permitting relative rotation of the tubes, for operation under a wide range of atmospheric conditions, in combination, a pair of rings having cooperating pressure-sealing faces, at least one ring being mounted adjacent the end of one tube in a manner to permit relative axial movement between the ring and tube while restraining relative rotation therebetween, an abutment on said tube adjacent said ring, an annular resilient member located between said abutment and said ring, means for holding the tubes in fixed axial relation to each other, and means for maintaining said member under an initial compression whereby to squeeze said rings together, the initial compression being sufficiently great that the member is retained in compressed condition even when subject to shrinkage by reason of extreme atmospheric conditions.

2,459,202
PARKING INDICATOR
Roy M. Thorson, Richmond, Calif.
Application August 10, 1945, Serial No. 610,114
7 Claims. (Cl. 116—31)

1. A parking guide for a motor vehicle comprising a drum turnably mounted in a visible location on the vehicle with its axis transversely thereof, a deviating line marked on the drum circumferentially thereof and representing the path of movement of the vehicle when backing into a parking space, means connecting the drum with a moving part of the vehicle to rotate the drum not more than a full revolution upon a complete parking movement of the vehicle, said means being adapted for ready installation on a standard automobile, a pointer mounted in connection with the drum for movement axially thereof and adapted to read on the line and means connecting the pointer with the steering mechanism of the vehicle and being adapted to maintain the pointer in register with said deviating line by manipulation of the steering mechanism.



2,459,203
PRODUCTION OF SHAPED ARTICLES FROM FLUORITE
George J. Vahrenkamp, Rolla, Mo., assignor to the United States of America as represented by the Secretary of the Interior
No Drawing. Application February 21, 1944, Serial No. 523,249
4 Claims. (Cl. 75—3)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

3. A process for producing a shaped article from finely-divided fluorite flotation concentrates which consists in incorporating with such fluorite between 0.2 and 1.0 percent by weight of bentonite and sufficient water to form a plastic mix, then forming the resulting mixture into the desired shape and calcining the shaped mixture at an elevated temperature of between 700° C. and 1350° C.

2,459,204
BOX DUMPING MACHINE
Forest A. Van Vleck, Placerville, Calif., assignor to Food Machinery and Chemical Corporation, a corporation of Delaware
Application June 17, 1946, Serial No. 677,307
16 Claims. (Cl. 214—1.1)

1. A box dumping machine comprising an upstanding frame, an elevator on the frame adapted to engage and elevate a stack of loaded, open topped boxes, a box gripping, rocking head unit mounted on the frame for oscillating movement between a starting point in position to receive and grip the top box of each elevator supported stack at a predetermined elevation and a dumping point with said rocking head unit and box in inverted position, and power drive means arranged to operate the elevator and oscillate the rocking head unit in predetermined timed relation; there being a substantially floor-level box stack conveying mechanism disposed to deliver stacks to the elevator below said rocking head unit, said mechanism including transversely spaced conveyor chains which frictionally engage the stacks from below, a retractable stop normally disposed in the path of the lead stack whereby to prevent its advance and delivery to the elevator, the chains then slipping under the stacks, a vertically movable stack retarding member posi-

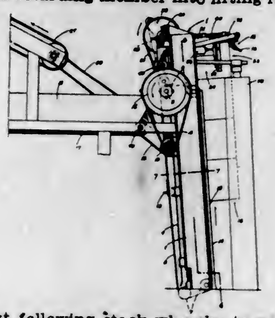
tioned in normally clearance relation below the next following stack, a lever mounted adjacent the conveying mechanism and operative when moved in one direction to retract the stop and to raise the retarding member into lifting relation to

ing; a cathode ray tube for providing a reference mark, optical means for imposing an image of said mark in the line of sight of a gunner whereby the image may be viewed simultaneously with a target, means responsive to movement of

latching engagement with said re-enforcing member, one of said latching members being pivotally mounted on each end of said supporting member, a friction gripping device secured to said supporting member adjacent each end, said

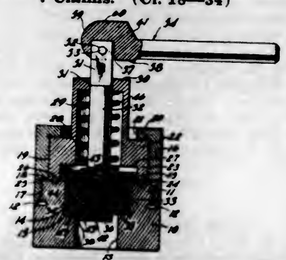
temperature to a point within the range of 2500° F. to 2750° F. for a period of time in excess of five minutes and thereafter cooling it to a temperature below 2500° F.

tioned in normally clearance relation below the next following stack, a lever mounted adjacent the conveying mechanism and operative when moved in one direction to retract the stop and to raise the retarding member into lifting relation to



said next following stack whereby to permit the lead stack to advance and deliver to the elevator while retarding movement of said next following stack so that one stack at a time is delivered to said elevator, and means operative from the elevator to so move said lever in timed relation to elevator movement.

2,459,205
MOLD FOR MAKING PLASTIC ARTIFICIAL EYES
Lee A. Wells and Charles A. Halbkat, Houston, Tex.
Application July 2, 1946, Serial No. 681,076
7 Claims. (Cl. 18—34)



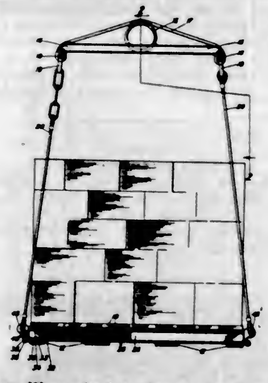
1. In a mold for making plastic artificial eyes, a base section, a cap section removably mounted thereon, a top section held on the base by means of the cap section, a plunger in the top section, a mold cup in the base section having a cavity, a plug inserted centrally in the bottom of the cup cavity and forming a recess at the top and a convex mold section on the plunger said cup and mold section having coacting faces, means in the cap section around the plunger for normally forcing the plunger into operative position and cam means engaged on the plunger and coacting with the cap section for raising the plunger.

2,459,206
CATHODE-RAY TUBE GUNSIGHT
Phillip Rood Wheeler, Alexandria, Va.
Application December 19, 1945, Serial No. 636,047
2 Claims. (Cl. 88—1)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. An automatic compensating gunsight for establishing the line of fire of a gun comprising; a cathode ray tube for providing a reference mark, optical means for imposing an image of said mark in the line of sight of a gunner whereby the image may be viewed simultaneously with a target, means responsive to movement of the sight in the plane of train for providing an electrical signal proportional to the rate of movement of the gunsight in train, means responsive to movement of the sight in the plane of elevation

to provide an electrical signal proportional to the rate of movement of the gunsight in elevation, means for amplifying said electrical signals, means for applying the amplified signals to the cathode ray tube for displacing the reference mark upon movement of the gunsight, means for modifying said electrical signals to compensate for changes in the target range, and means linking the gunsight and the gun for movement together in train and in elevation.

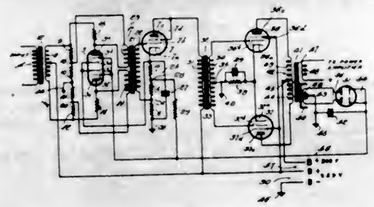
2,459,207
MATERIAL HANDLING MECHANISM
William W. Worthington, United States Navy, Cornwall Bridge, Conn.
Application April 16, 1945, Serial No. 588,520
8 Claims. (Cl. 294—67)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



1. A handling device for a load-supporting platform having a transverse reinforcing member, comprising a supporting member adapted for positioning adjacent said transverse member, and a pair of gate latching members adapted for

latching engagement with said re-enforcing member, one of said latching members being pivotally mounted on each end of said supporting member, a friction gripping device secured to said supporting member adjacent each end, said latching members being pivotally movable from a disengaged position with respect to said transverse member to a latching position wherein they are each engaged by a respective one of said friction gripping devices to lock said supporting member to said transverse member.

2,459,208
MODULATION CONTROL SYSTEM
Paul Gerhard Wulfsberg, Cedar Rapids, Iowa, assignor to Collins Radio Company, Cedar Rapids, Iowa, a corporation of Iowa
Application August 23, 1944, Serial No. 550,793
3 Claims. (Cl. 179—171)

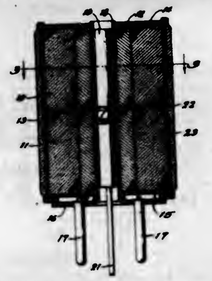


2. An amplification control system comprising a pair of balanced electron tube amplifier units, each connected in push-pull circuit arrangement and each including cathodes with associated control grid electrodes and coacting anodes, an electron tube system coupling the output of one of said balanced electron tube amplifier units with the input of the other of said balanced electron tube amplifier units said electron tube system including a cathode, a control grid, and an anode, a resistive circuit connected in series with said last-mentioned cathode, a tap on said resistive circuit connected with the grid electrodes of said first-mentioned electron tube amplifier unit, means coupled with the output circuit of said last-mentioned pair of balanced electron tube amplifier units for deriving a biasing current therefrom, and a connection from said means to the grid electrodes of said first mentioned electron tube amplifier unit for impressing compensatory bias potential on said first mentioned grid electrodes in excess of the bias potential impressed upon each of said grid electrodes from the tap on said resistive circuit, a signal input circuit connected with the first of said electron tube amplifier units, and a signal output circuit connected with the last of said electron tube amplifier units.

2,459,209
METHOD OF TREATING VITREOUS FUSED SILICA
Theodore K. Zagwyn, Waltham, and Peter R. Kosting, Belmont, Mass.
No Drawing. Application May 28, 1945, Serial No. 596,253
5 Claims. (Cl. 49—78.1)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

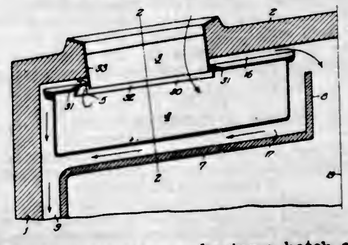
1. The method of improving the structural strength of a shaped vitreous fused silica article under high temperature conditions particularly at or about 2800° F. or above, which comprises, prior to subjecting it to said conditions, raising its temperature to a point within the range of 2500° F. to 2750° F. for a period of time in excess of five minutes and thereafter cooling it to a temperature below 2500° F.

2,459,210
VARIABLE DIFFERENTIAL TRANSFORMER
Ernest G. Ashcraft, Chicago, Ill.
Application July 21, 1944, Serial No. 546,031
3 Claims. (Cl. 171—119)



2. An electric translating device comprising a first winding having a pair of oppositely wound tubular sections connected in series and mounted coaxially end to end, a second tubular winding coaxial with said sections, a tubular casing of magnetic material enclosing the winding, annular end plates on the casing overlying the ends of the windings, a thin magnetic spacer separating the sections of the first winding and dividing the second winding and inductively related to the casing, and a magnetic core having a narrow circumferential groove about its mid section and movable axially in the opening through the windings, said groove and said magnetic spacer being of substantially the same axial dimension and in register with one another when said movable core is axially centered with respect to said tubular winding.

2,459,211
REFRIGERANT CONTAINER FOR REFRIGERATOR CARS
Edwin R. Battley and George E. McCoy, Montreal, Quebec, Canada
Original application January 26, 1945, Serial No. 574,790. Divided and this application March 17, 1947, Serial No. 735,105
3 Claims. (Cl. 62—17)



1. In a refrigerator car having a hatch opening in the roof thereof and a hatch frame therein extending below said roof container disposed below and spaced from said roof to provide air circulating space therebetween and having a filling opening therein registering with said hatch open-

ing, and means to prevent liquid within the container from surging out of the filling opening into said space during service movements of the car without preventing air communication between

other end of the fixed plate, a jaw formed across the opposite end edge of the jaw plate and adapted to move across the jaw flange when the jaw plate is swung toward the fixed plate when said

bottom wall provided with an aperture, a pin passing freely through the aperture, a seal on the pin, a spring attached to the bottom wall and to the seal, said spring normally urging the

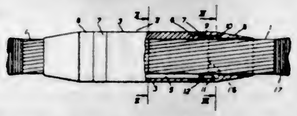
JOINTING OF CONDUCTORS OF ELECTRIC CABLES

Charles James Beaver, Bowdon, and Edward Leslie Davey, Timperley, England, assignors to W. T. Glover & Company Limited, Manchester, England, a British company

Application November 29, 1944, Serial No. 565,670
In Great Britain January 17, 1944
4 Claims. (Cl. 174—21)



1. A soldered ferrule joint between two lengths of gas filled cable conductor, comprising a longitudinally split metal sleeve having a longitudinal groove in its internal surface extending from end to end of the sleeve, a spigot portion on each end of said sleeve, a pair of metal rings each forming an inner part of an end cap for said sleeve and fitting on one of said spigot portions and having its external surface flush with the external surface of said sleeve and a through longitudinal groove in its internal surface registering with the adjacent end of the groove in the sleeve, a second pair of rings, each forming an outer part of one of said end caps and making with the free end of the adjacent inner part of the cap a spigot and socket joint of which the socket is of greater axial length than the spigot to provide between the fitted rings an annular groove and each having an external surface providing a smooth transition from the external surface of the inner part fitted on the said sleeve to that of the conductor, and solder filling the interstices within the said sleeve and within the adjacent ends of the inner parts of the end caps other than the registering longitudinal grooves therein, the annular grooves between the inner and outer parts of the end caps being clear and in communication with said registering grooves and with the interstices within the parts of the conductor surrounded by the outer parts of said end caps.

2,459,213

CLOTH CLIP

Robert A. Bellamy, Oklahoma City, Okla.

Application June 9, 1947, Serial No. 753,488
5 Claims. (Cl. 24—253)

1. A clasp of the character described, comprising a fixed plate having a jaw flange along one end edge and projecting from one side face of the plate, a hinge plate positioned against the other side face of the fixed plate, means holding the hinge plate to the fixed plate for limited rectilinear movement thereon, a jaw plate, a hinge connection between an end edge of the jaw plate and the hinge plate adjacent to the other end of the fixed plate, a jaw formed across the opposite end edge of the jaw plate and adapted to move across the jaw flange when the jaw plate is swung toward the fixed plate when said hinge plate has been moved in one direction to

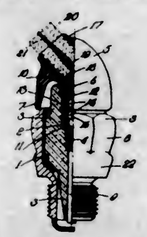
a predetermined position, the jaw plate when in the last named position having the hinge plate between it and the fixed plate, the jaw and jaw flange being locked together upon reverse movement of the jaw plate after the jaw has been moved as stated across the jaw flange.

2,459,214

SPARK PLUG

Harry Milman Bickle, Middlesex, and Ronald Albert Bailey, London, England, assignor, by mesne assignments, to Harry Milman Bickle, Heaton, Middlesex, England

Application November 29, 1944, Serial No. 565,612
In Great Britain February 2, 1944
8 Claims. (Cl. 123—169)



3. A sparking plug comprising a metal shell, surfaces on the shell for engagement by a box spanner which are so shaped as to allow to the spanner a limited universal movement with respect to the axis of the shell, an abutment on the shell limiting the extent to which the plug may enter the spanner, an insulator secured within the shell and having a recess in its outer end, a cap of insulating material covering the outer end of the insulator and having an integral tubular sleeve received in said recess, a skirt depending from the cap and spaced from the insulator, a central electrode comprising a section housed within the insulator and a section secured against removal within the tubular sleeve, means electrically connecting the two sections of the central electrode and removably securing the cap to the insulator, and means for connecting a high tension lead to the said central electrode section mounted within the tubular sleeve.

2,459,215

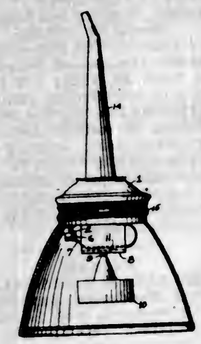
OILCAN WITH DRIP CATCHER HAVING A WEIGHT OPERATED RETURN VALVE

Marion E. Blake and Raymond A. Gartman, Fairhope, Ala.

Application February 13, 1947, Serial No. 728,336
4 Claims. (Cl. 222—110)

1. In an oil can, a catch basin adapted to be screwed into an oil can, said basin having a

bottom wall provided with an aperture, a pin passing freely through the aperture, a seal on the pin, a spring attached to the bottom wall and to the seal, said spring normally urging the



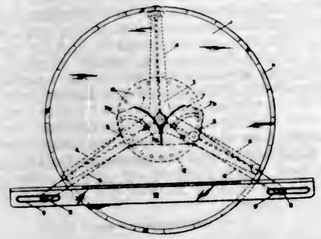
seal and pin down to open position, a bracket attached to the bottom wall, a weight supported by the bracket and arranged to bear against the spring when the oil can is tilted to close the seal and an outlet spout attached to the bottom wall.

2,459,216

DRAFTING MACHINE

Eustace Russell Booth, Staines, England, assignor of one-half to Sydney Marks, Feltham, England

Application May 30, 1945, Serial No. 596,658
In Great Britain June 6, 1944
1 Claim. (Cl. 33—78)



In a drafting machine, the combination with a drawing board having a support, of a pair of outwardly extending arms pivoted for lateral movement to the support below the board, each arm including a toothed quadrant at its inner end beyond its pivot point, the quadrants of the arms being meshed with each other so that the arms pivot about their pivot points simultaneously and to the same extent, a straight edge mounted over the board and connected to the outer ends of the pair of arms at points equidistant from the respective pivot points of the arms, the drawing board being rotatable with respect to the support, a spring-pressed pin carried by said support at the pivot point of one of said arms and adapted to engage the drawing board, and a lever pivoted to said last-mentioned arm and arranged to depress said pin.

2,459,217

ALKAMINE ESTERS OF PARA AMINO BENZOIC ACID

Arthur C. Cope, Englewood, N. J., assignor to Sharp & Dohme, Incorporated, Philadelphia, Pa., a corporation of Maryland

No Drawing. Application October 5, 1943, Serial No. 505,041
4 Claims. (Cl. 260—472)

1. As new therapeutic agents p-amino benzoic acid esters of secondary alkylamino butanols in which the secondary alkyl group has from 5 to 9 carbon atoms.

2,459,218

FLEXIBLE POCKET RECEPTACLE

Donald W. Corey, Springfield, Mass., assignor to Buxton, Incorporated, Springfield, Mass., a corporation of Massachusetts

Application November 8, 1946, Serial No. 708,777
2 Claims. (Cl. 150—37)

1. A purse which comprises a rear wall, a front wall including inner members connected one to each side edge of the rear wall, and folded in overlapping relation on the rear wall, and an outer member extending from the bottom edge of the rear wall and folded in superposed relation on the inner members, a flap member extending from the upper edge of the outer member and folded downwardly between the rear wall and the inner members of the front wall, a fastener element extending through said flap member, the overlapping portions of the inner members and said outer member to rivet said members together, one of the front wall members being provided with an opening giving access to the space between the front wall members for the insertion of keys, a closure flap extending from the upper edge of the rear wall and foldable over the front wall to close the compartment between the rear and front walls, and a fastener element carried by said closure flap and releasably engageable with the first mentioned fastener element when the closure flap is in purse closing position.

2,459,219

CONCENTRATION OF NONSULFIDE, NONSILICATE ORES WITH NITRIC ACID TREATED FATTY ACIDS

James B. Duke, Lakeland, Fla., assignor to Minerals Separation North American Corporation, New York, N. Y., a corporation of Maryland

No Drawing. Application February 2, 1946, Serial No. 645,244
14 Claims. (Cl. 209—166)

1. The process of separating the components of an ore of the class consisting of non-sulfide, nonsilicate minerals mixed with silicious gangue and silicate minerals admixed with quartz, which comprises subjecting an aqueous pulp of the ore in a suitably divided state to a concentrating operation in the presence of the reaction product resulting from heating a mixture in which the

principal ingredient is unsaturated fatty acid material containing hydrocarbon chains of 7 or more carbon atoms and the minor ingredient is

2,459,222

INTRODUCTION OF AMINO GROUPS INTO CELLULOSE

and said ledge being centrally apertured, a bearing in said housing on said base plate, a shaft mounted for rotation in said bearing, a permanent magnet

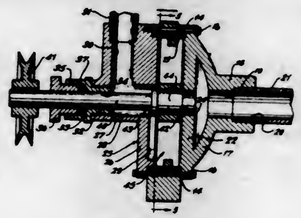
2,459,227

UNDERGROUND RESERVOIR FOR THE STORAGE OF LIQUEFIED GASES

Arthur N. Kerr, Los Angeles, Calif., assignor to

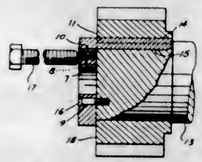
principal ingredient is unsaturated fatty acid material containing hydrocarbon chains of 7 or more carbon atoms and the minor ingredient is nitric acid.

2,459,220
CENTRIFUGAL PUMP
John A. Espy, Buechel, Ky.
Application December 13, 1945, Serial No. 634,719
3 Claims. (Cl. 103—103)



1. A pump comprising a ring shaped housing, a dome shaped cover closing one end of the housing, said cover having an axial fluid inlet opening therethrough, a web extending across the larger end of the dome shaped cover, said web having an opening extending therethrough in axial alignment with the inlet opening, a cover plate closing the opposite end of the housing, said last named cover plate having an axial discharge opening communicating with the housing and a radial discharge passage opening into the discharge opening, a bearing bushing and packing gland in the end of the discharge opening remote from the housing, an impeller shaft entering the discharge opening through the bearing housing and packing gland, the shaft extending axially through the housing and having its inner end journalled in the opening in the web, a drive pulley on the shaft adjacent its outer end and an impeller screw on the shaft within the housing.

2,459,221
COMBINED SHAFT KEY AND KEY EXTRACTOR
Charlotte M. Farrington, Flint, Mich.
Application December 31, 1946, Serial No. 719,434
3 Claims. (Cl. 287—52.05)

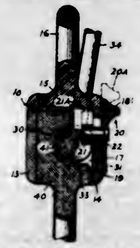


1. A combined shaft key and key extractor, comprising a flat disc having spaced screw threaded openings, a small opening and a rectangular opening disposed on a diametrical line equi-spaced from said threaded openings, said rectangular openings being arranged on the same side of the center of the disc as said threaded openings and said small opening being arranged on the opposite side of the center, and a rectangular key rigidly secured within the rectangular opening and extending axially of the disc.

2,459,222
INTRODUCTION OF AMINO GROUPS INTO CELLULOSE
John D. Guthrie, New Orleans, La., assignor to the United States of America as represented by the Secretary of Agriculture
No Drawing. Application June 13, 1947, Serial No. 754,585
5 Claims. (Cl. 260—231)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

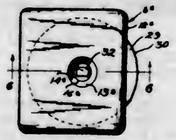
1. A process of introducing amino groups into cellulose comprising treating the cellulose with an aqueous solution of sodium hydroxide and 2-aminoethylsulfuric acid, heating the treated cellulose at a temperature from 70° to 110° C. for a minimum period from 40 minutes to 9 hours, the higher temperatures being used with the shorted periods, and then washing the cellulose to remove sodium hydroxide.

2,459,223
RELEASABLE SHACKLE
Thomas J. Henderson, Bayport, N. Y.
Application December 4, 1946, Serial No. 713,891
7 Claims. (Cl. 24—235)



1. A hollow housing, having an inner rear surface, a transverse cylindrical pin extending through the housing spaced from said surface and rotatably mounted in the housing, a part of the pin within the housing being cut away to form a flattened portion normal to a radius of the pin, a removable member having a rear surface slidable over the rear surface of the housing, said member being provided with a transverse groove in its front surface adapted to receive the transverse pin, the thickness of the part of the member above the groove being less than the minimum distance of the flattened portion of the pin from said rear surface of the housing, and manually releasable means for locking the pin against rotation.

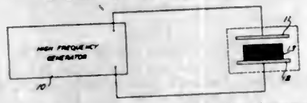
2,459,224
MAGNETICALLY OPERATED STIRRER FOR MIXING LIQUIDS
William L. Hendricks, Los Angeles, Calif.
Application August 17, 1946, Serial No. 691,217
2 Claims. (Cl. 259—108)



1. A device of the class described comprising a base plate, a housing on said base plate, said housing being provided with a central depression adapted to accommodate the lower portion of a drinking glass, said depression forming a ledge

and said ledge being centrally apertured, a bearing in said housing on said base plate, a shaft mounted for rotation in said bearing, a permanent magnet on the upper end of said shaft located for rotation in said aperture, and a hand wheel mounted on said shaft parallel to and above said base plate, said housing having a slot in one side, and a marginal portion of said wheel projecting through said slot for convenient access and manipulation.

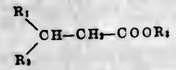
2,459,225
METHOD OF CONTROLLING HIGH-FREQUENCY HEATING OF DIELECTRIC MATERIAL
Willard H. Hickok, Louisville, Ky., assignor to The Girdler Corporation, Louisville, Ky., a corporation of Delaware
Application March 15, 1946, Serial No. 654,771
9 Claims. (Cl. 219—47)



1. The method of controlling the temperature of a material during the application of high-frequency electrical energy thereto which consists in mixing with the material prior to the application of said energy a substance having a phase-transition point at a temperature corresponding with the temperature to which the material is to be maintained constant for a period of time, and applying said high-frequency energy to the mixture until it passes through said point so to establish a time-interval of constant temperature of said material by utilizing the latent heat of phase-transition of said substance to prevent further rise in temperature of the material during said time-interval.

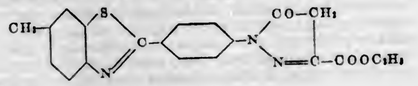
2,459,226
PRODUCTION OF PYRAZOLE-5-ONES
John David Kendall and Douglas James Fry, Ilford, England, assignors to Ilford Limited, Ilford, Essex, England, a British company
No Drawing. Application November 29, 1945, Serial No. 631,791. In Great Britain December 1, 1944
10 Claims. (Cl. 260—304)

1. Process for the production of pyrazole-5-ones which comprises reacting a diazonium compound with a compound of the general formula

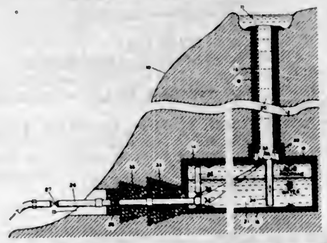


where R_1 and R_2 are organic groupings each selected from the class consisting of —COOR, —CN, —COR and —CO.NHR where R and R_3 are selected from the class consisting of hydrogen and hydrocarbon groups, the said reaction being effected in the presence of a strong base, the quantity of diazonium compound being less than two molecular equivalents per molecular equivalent of the compound of the said formula, separating the diazo compound formed, allowing it to stand to permit molecular re-arrangement, and recovering the pyrazole-5-one formed.

10. A compound of the formula

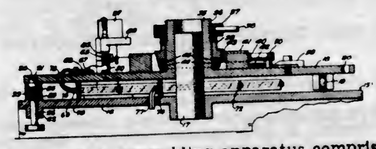


2,459,227
UNDERGROUND RESERVOIR FOR THE STORAGE OF LIQUEFIED GASES
Arthur N. Kerr, Los Angeles, Calif., assignor to Phillips Petroleum Company, a corporation of Delaware
Application August 6, 1946, Serial No. 688,761
4 Claims. (Cl. 62—1)



1. Means for storing as a liquid a normally gaseous hydrocarbon material liquefiable under pressure at normal earth temperatures which comprises, in combination, a totally enclosed subterranean storage zone, a reservoir of water the surface of which is sufficiently higher than said storage zone as to provide a hydrostatic head at least equal to the vapor pressure of said hydrocarbon material at the highest prevailing temperature of the earth surrounding said storage zone, a vertical shaft connecting said reservoir and said storage zone, a partition at the bottom of said shaft, a conduit extending through said partition to the bottom of said storage zone whereby water can freely flow between said reservoir and said storage zone, a man hole in said partition which is normally closed, a conduit leading from the top of said storage zone for introduction and removal of liquid hydrocarbon material and a conduit extending into the bottom of said storage zone for emptying of said storage zone, a valve in each of the last said two conduits, and means connected with each said valve and operable from the bottom of said shaft for opening and closing said valves.

2,459,228
ARTICLE ASSEMBLING APPARATUS
Frank Konicek, Baltimore, and Harald J. Vennes, Towson, Md., assignors to Western Electric Company, Incorporated, New York, N. Y., a corporation of New York
Application September 15, 1943, Serial No. 502,410
6 Claims. (Cl. 175—183)



1. An article assembling apparatus comprising rotatable means for supporting an annular element of the article for rotation, means provided on the rotatable means for aligning the annular element coaxially with the axis of rotation of the supporting means including an annular cam, a plurality of locating pins actuated by said cam for engaging the inner surface of the annular element and spacing it equi-distant from the center of the supporting means at all points of contact, removable clamping means for attaching a resistance element around the annular element

at a plurality of equally spaced points, means for positioning the rotatable supporting means in predetermined rotative positions in registry with the clamped points of the resistance element,

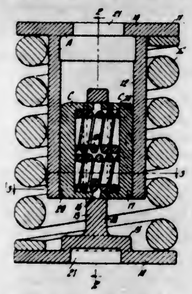
tachment having radially disposed scraper arms secured to an attachment ring adapted to en-

tudinally extending groove disposed to receive the cutting edge of the blade when said legs are moved toward one another against the resiliency of the coiled spring, and gripping jaws forming

flame will act thereon to seal the same, an endless belt cooperating with said conveyer to restrict

at a plurality of equally spaced points, means for positioning the rotatable supporting means in predetermined rotative positions in registry with the clamped points of the resistance element, and pivotally mounted contacting means engageable with the resistance element at each clamped point thereof when the rotatable means is in one of its rotative positions.

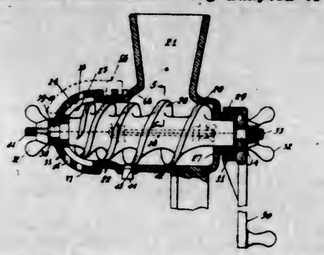
2,459,229
FRICTION SHOCK ABSORBER
Edward H. Lehman, Chicago, Ill., assignor to W. H. Miner, Inc., Chicago, Ill., a corporation of Delaware
Application March 11, 1944, Serial No. 525,976
2 Claims. (Cl. 267—9)



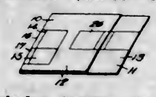
1. In a friction shock absorber, the combination with a friction casing having a follower flange at the outer end thereof, said casing having lengthwise extending friction surfaces parallel to the central longitudinal axis of the mechanism; of a yoke having a follower member at the outer end thereof, said yoke extending into the casing, and said yoke and casing being relatively movable in lengthwise direction, said yoke having a transverse guide opening therethrough at right angles to said longitudinal axis; a pair of oppositely disposed, laterally displaceable friction shoes within the opening of said yoke, said shoes having sliding frictional engagement with the interior friction surfaces of the casing; spring means interposed between said shoes for spreading the same apart, said spring means being under constant compression; and a spring surrounding said casing and yoke and bearing at opposite ends on the follower flange of the casing and the follower member of the yoke.

2,459,230
FOOD CHOPPER WITH ROTARY FORCER SCREW
Fred W. Litten, Zelienople, Pa.
Application December 8, 1944, Serial No. 567,190
2 Claims. (Cl. 146—182)

2. A food chopper comprising a cylindrical barrel having a forcer-screw rotatably supported therein and a crank for turning the same; a hemispherical, hollow rear end for said barrel provided with exit openings; a rotary cutting member removably secured to the front end of said forcer-screw and in superposed relation bearing against the exterior surface of the hemispherical rear end of said barrel; said rotary cutting member having exit openings for the passage of food and means attached to the barrel for removing the food usually adhering to the exterior surface of said rotary cutting member during the chopping operation, said means comprising a scraper attachment having radially disposed scraper arms secured to an attachment ring adapted to engage coincident lugs on the barrel to secure same removably thereon.

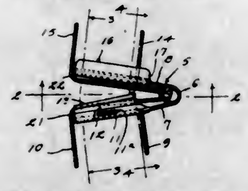


2,459,231
COMBINATION QUIZ DEVICE
Charles Lorber, Louisville, Ky.
Application June 21, 1946, Serial No. 678,495
4 Claims. (Cl. 35—48)



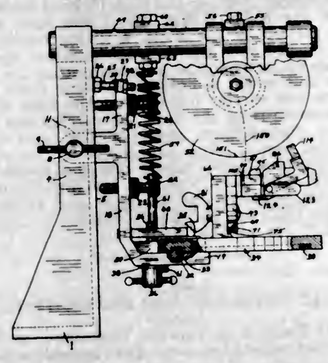
1. In a knowledge testing device, a pair of newspaper sections, one being superimposed on the other to form upper and lower sections, the upper section being freely slidable bodily on the lower section, the upper section having a first page carrying a marginally disposed unbroken and imperforate spaces bearing a series of printed knowledge tests and the lower section having a first page carrying a correspondingly marginally disposed unbroken and imperforate spaces bearing a series of printed informations giving the truth or falsity of replies made to said tests, the marginally disposed tests and the marginally disposed information being of equal vertical dimension and each information space being correspondingly positioned and of equal vertical dimension to the test relating thereto.

2,459,232
COMBINATION FRUIT OR FLOWER CUTTER AND HOLDER
Willis R. Mabrey, Oildale, Calif.
Application March 28, 1947, Serial No. 737,949
9 Claims. (Cl. 30—135)



1. In a holder and cutter for fruit and flowers or the like, a coiled spring having legs projecting from the ends thereof in normally diverging relationship, finger engaging portions projecting outwardly from each of the legs, a blade carried by one of said legs extending longitudinally thereof and disposed with its cutting edge facing toward the other of said legs, said other leg being provided with a finger guard having a longitudinally extending groove disposed to receive the cutting edge of the blade when said legs are moved toward one another against the resiliency of the coiled spring, and gripping jaws forming extensions of the legs and disposed in offset, substantially parallel relationship to the blade and guard and adapted to be actuated simultaneously therewith for grasping the stem of a flower or fruit as it is severed by the cutting blade.

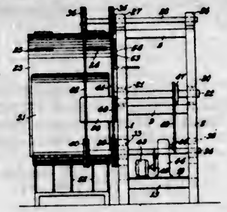
2,459,233
SAW SHARPENER
Arthur William Mall, Flossmoor, Ill., assignor to Mall Tool Company, Chicago, Ill., a corporation of Illinois
Application September 28, 1944, Serial No. 556,231
18 Claims. (Cl. 51—98)



3. A device for sharpening saw teeth comprising a support member, a grinding wheel carried thereby, a bracket member carried by the support member and movable relative thereto in a direction upwardly and downwardly relative to the grinding wheel, said bracket member also being movable in a rectilinear direction from side to side relative to the grinding wheel, a turntable carried by the bracket member and rotatively adjustable relative thereto, a wall extending upwardly from the turntable, a carrying member secured to the wall and rotatively adjustable relative thereto and means associated with the carrying member for temporarily anchoring the saw tooth to be sharpened.

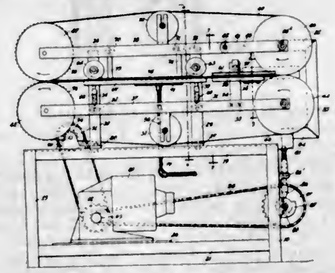
2,459,234
FLAME SEALING APPARATUS
Robert McDowall, Chicago, Ill., assignor to The Visking Corporation, Chicago, Ill., a corporation of Virginia
Application October 18, 1945, Serial No. 622,983
3 Claims. (Cl. 154—42)

1. An apparatus for flame sealing thin walled thermoplastic tubing, which comprises a rotary drum conveyer having cleats in spaced relationship circumferentially thereof and against which the tubing is disposed, a guide to position the tubing transversely of said drum and expose the end of the tubing to be sealed a predetermined distance beyond the edge of said conveyer, means to clamp the positioned tubing onto said conveyer, a burner disposed adjacent said edge of said conveyer and in position to provide a flame in the path of travel of said exposed end whereby as said tubing is conveyed the exposed end will pass through the zone of action of said flame and the flame will act thereon to seal the same, an endless belt cooperating with said conveyer to restrict



the action of said flame to said exposed end, and means to discharge the sealed tubing from the apparatus.

2,459,235
FLAME SEALING APPARATUS
Alfred G. Hewitt, La Grange Park, and Sylvester F. Clement, Chicago, Ill., assignors to The Visking Corporation, Chicago, Ill., a corporation of Virginia
Application April 5, 1946, Serial No. 659,970
9 Claims. (Cl. 154—42)



1. An apparatus for flame sealing thin-walled thermoplastic tubing which comprises a pair of driven belts located one above the other and adapted to contact with each other, cam actuated means to separate said belts periodically at the feed end of the machine to permit insertion of the tubing to be sealed between said belts, means to position said tubing between said belts whereby only a small portion of the end of the tubing is exposed beyond the edges of the belts, and a burner providing an open flame in the path of travel of the exposed end of said tubing whereby said end is sealed as it is conveyed through said flame by said belts.

2,459,236
REMOVING SHINE FROM FABRICS
Ralph H. McKee, New York, N. Y.
No Drawing. Application September 28, 1944, Serial No. 556,299
4 Claims. (Cl. 26—29)

1. The process of treating worn fabric which comprises applying thereto a neutral aqueous solution of an organic fabric-softening wetting agent which is water-soluble, neutral in reaction, which is not salted out of aqueous solution by brines and whose dilute water solution has a surface tension less than two-thirds that of pure water, said wetting agent being selected from the group consisting of sulfates and sulfonates of organic esters, organic alcohols, ethers and amines, permitting the fabric to which said solution has

been applied to stand for a short period, thereafter raising the nap of the fabric by a non-abrading brushing action, and thereafter drying the treated fabric.

2,459,240
ASBESTOS FIBERIZING
Lee C. Pharo, Thetford Mines, Quebec, Canada, assignor to Johnson's Company, Thetford Mines West, Quebec, Canada
Application October 12, 1943, Serial No. 505,999

bottom, an upwardly opening flint tube extending through an opening near one end of the bottom of the recess, the bottom of the recess having a tapped hole leading to the fuel chamber and located farther from said end of the recess, a rectangular box-like carrier member having side

system comprising a valve chamber having an intake at its base and an air outlet passage, and housed within the valve chamber, a float in the form of an open bottomed hollow member, a syphon tube and a thermostatically expansible bellows, said expansible bellows operatively con-

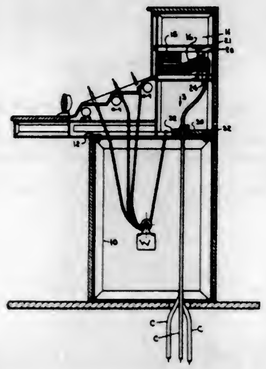
been applied to stand for a short period, thereafter raising the nap of the fabric by a non-abrading brushing action, and thereafter drying the treated fabric.

2,459,237

SELF-CONTAINED SWITCHBOARD AND CABLE CONNECTIONS THEREIN

Eugene L. Mentor, Westminster, Mass., assignor to Simplex Time Recorder Co., Gardner, Mass., a corporation of Massachusetts

Application November 26, 1945, Serial No. 630,915
6 Claims. (Cl. 179—91)



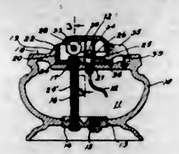
5. In a self-contained switchboard, a front portion having a large number of jacks and jack connections, and a plurality of multiple terminal blocks positioned rearward of but adjacent to said front portion, each multiple terminal block comprising a jack section and a plug section, said switchboard having a plurality of outside connection cables, said jack connections being grouped and secured to one section of each terminal block and the wires in one of said cables being connected to the corresponding other section of said terminal block, and means effective to force said terminal block sections together and also to separate said sections.

2,459,238

TABLE LIGHTER

Harry Negbaur, New York, N. Y., assignor to H. Negbaur & Co., New York, N. Y., a copartnership composed of Harry Negbaur and Dorothy B. Negbaur

Application August 28, 1946, Serial No. 693,393
2 Claims. (Cl. 67—4.1)



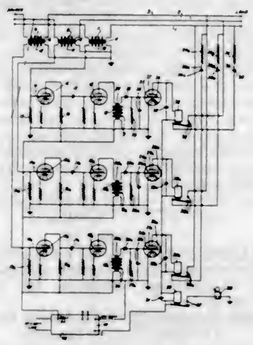
1. A lighter comprising a hollow, fuel-chamber-forming body having a top wall with an upper substantially flat surface outside a rectangular riser and a rectangular, upwardly opening recess within the riser, the recess having a bottom, an upwardly opening flint tube extending through an opening near one end of the bottom of the recess, the bottom of the recess having a tapped hole leading to the fuel chamber and located farther from said end of the recess, a rectangular box-like carrier member having side walls and end walls receivable in the recess, a top flange overlying the riser and a bottom wall spaced above the bottom of the recess, the bottom wall of the carrier member having a flint receiving opening in line with the flint tube and a hole in line with the tapped hole, a tubular headed member extending through the last mentioned hole and threaded into the tapped hole for securing the carrier member in place with the flange against the top of the body, a wick in the tubular member, a flint in the flint tube, a horizontal shaft extending between the side walls of the carrier member and with its ends below the top of the body, a flint wheel and flint wheel cover carried by the shaft, a spring urging the cover toward open position, a flint wheel operating ratchet mechanism interconnecting the flint wheel and cover, a horizontal latch shaft carried by the carrier member on the side of the wick remote from the flint, the carrier and riser having aligned latch receiving slots, and a depressible, spring returned-latch lever carried on the latch shaft and having one end cooperable with the flint wheel cover for latching the cover in closed position and its other end extending through the slots and above the flat surface of the body for manual actuation.

2,459,239

FAULT DETECTOR FOR TRANSMISSION LINES

Herbert Payne, New York, N. Y., assignor to Control Instrument Company, Inc., Brooklyn, N. Y., a corporation of New York

Application May 22, 1947, Serial No. 749,773
5 Claims. (Cl. 177—311)



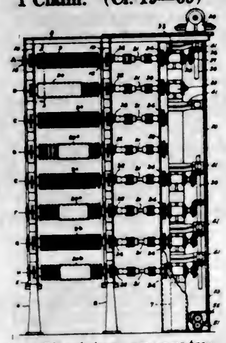
1. In a fault detecting means for alternating current transmission lines which differentiates between absence of current due to no load and an absence thereof due to a fault, the combination of means associated with said lines and responsive to current flow therein, means including a high impedance coacting with the first named means and activated by an absence of current in said transmission lines to establish a high impedance load and cause a small current to flow, and signaling means coacting with the last named means and operable when said high impedance means fails to cause a current to flow.

2,459,240

ASBESTOS FIBERIZING

Lee C. Pharo, Thetford Mines, Quebec, Canada, assignor to Johnson's Company, Thetford Mines West, Quebec, Canada

Application October 12, 1943, Serial No. 505,999
1 Claim. (Cl. 19—65)



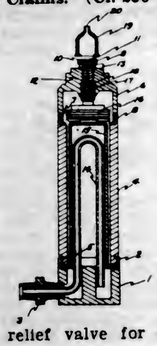
An asbestos fiberizing apparatus, comprising, a plurality of sets of rolls aligned to act successively on masses of asbestos during their passage through the apparatus, each set including a pair of companion rolls presenting inter-fitting longitudinal extending ribs and grooves, each set also including an alternate pair of companion rolls presenting interfitting circumferentially extending ribs and grooves, there being such sets of rolls wherein the distance on the surfaces of the rolls between the apices of adjacent ribs is about 2½ inches and the ribs and grooves are effective to flex the longest spicules without injury to the fiber, succeeding sets of rolls having a distance on the surfaces of the rolls between the apices of adjacent ribs of about 1½ inches whereby the ribs and grooves are effective to flex fibers of intermediate length without injury to the longer fibers, and final sets of rolls having a distance on the surfaces of the rolls between the apices of adjacent ribs of about ½ inch whereby the rolls are adapted to flex fibers of the shortest length without injury to the longer or intermediate fibers.

2,459,241

AIR RELIEF VALVE FOR HEATING SYSTEMS

Frank C. Risselt, Cincinnati, Ohio, assignor to Josephine M. Risselt, Cincinnati, Ohio

Application October 27, 1944, Serial No. 560,571
3 Claims. (Cl. 236—62)



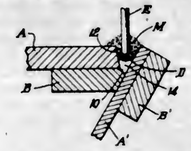
1. An air relief valve for a steam heating system comprising a valve chamber having an intake at its base and an air outlet passage, and housed within the valve chamber, a float in the form of an open bottomed hollow member, a syphon tube and a thermostatically expansible bellows, said expansible bellows operatively connected with a valve for closing said air outlet passage, and being in such position within the valve chamber as to be elevatable by contact with said float, said syphon tube having a discharge into the intake and a neck extending up throughout the height of the float when said float is in its lowermost position.

2,459,242

BLANKETED ELECTRIC WELDING WITH A FUSIBLE TROUGH TO SUPPORT THE COMMINUTED MINERAL COMPOSITION ABOVE THE BOTTOM OF THE WELDING ZONE

Frank Rothe, Niagara Falls, N. Y., assignor to The Linde Air Products Company, a corporation of Ohio

Application June 30, 1945, Serial No. 602,555
6 Claims. (Cl. 219—10)



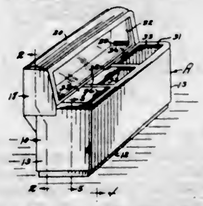
1. In the art of electric welding work composed of metal parts with an electrode of fusible metal under a blanket of comminuted mineral composition, the improved process which comprises providing a welding groove between the parts to be welded which groove is separated by a thin partition of fusible metal into upper and lower portions, supplying comminuted mineral composition to the upper portion only of the welding groove, so that the lower portion of the welding groove is substantially empty prior to the welding operation, completing a welding circuit under such mineral composition through the electrode and work, moving the electrode longitudinally with respect to the groove, and progressively melting said electrode and partition under the mineral composition as the welding operation progresses along the groove to complete the weld in both portions of the groove in a single pass.

2,459,243

REFRIGERATED DISPLAY CABINET

Max W. Schwartz, New Castle, Pa.

Application May 21, 1945, Serial No. 595,037
5 Claims. (Cl. 62—89.5)



1. A cabinet of the character described, comprising a lower body section having horizontally disposed and transversely slidable lids provided with transparent portions, an upper section extended above the lower section including a com-

partment separated from the lower section and having a permanent transparent front panel, refrigerating means positioned in the lower section,

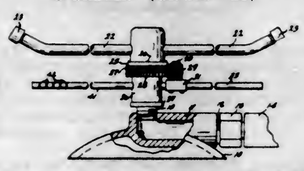
ber, an L-shaped lever member having the free end part of its lower horizontal portion pivoted to said lug and its vertical portion provided with an

thereof a pair of upwardly and inwardly extending flanges arranged in gripping relation with the lower portions of the sides of the article,

with said brace member and having vertically extending sections adapted to abut on the front end of said member, said hook elements having

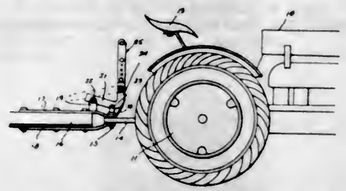
partment separated from the lower section and having a permanent transparent front panel, refrigerating means positioned in the lower section, and means for circulating cold air from the lower section to the upper section, said cabinet having a passage for the return of the air to the lower section.

2,459,244
SQUARE LAWN SPRINKLER
Leonard D. Sellars, Culver City, Calif.
Application October 30, 1946, Serial No. 706,551
3 Claims. (Cl. 299—18)



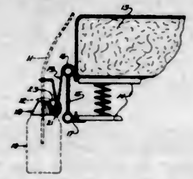
1. A device of the character described, comprising a base, a water inlet for said base, a tubular standard mounted in said base and communicating with said inlet, a head rotatably mounted on the upper end of said standard, a sleeve secured to the inner walls of said head, a sleeve fixed to the upper end of said standard, having loose contact with the sleeve within said head, ports in said sleeves adapted to aline with each other during the rotation of said head, water distributing arms mounted in said head in horizontal alinement with each other, and in diametrically opposed relation to each other, a gear secured to said head surrounding said standard, a gear of the same size but having one tooth less than the gear on said head mounted on said standard below the gear on said head, in parallel relation therewith, a sleeve rotatably mounted on said standard below the gear secured thereto, water distributing arms secured to said sleeve and gear mounting means on one of said arms a gear rotatably mounted on said last means, said last mentioned gear adapted to mesh with said first mentioned gears to cause rotation of said first gear when water is distributed by said last mentioned arms.

2,459,245
TRACTOR HITCH PIN DEVICE
Basil E. Seward, Elk Point, S. Dak.
Application November 1, 1946, Serial No. 707,213
2 Claims. (Cl. 280—33.15)



1. A hitch device for connecting an implement to the drawbar of a vehicle comprising, a horizontally-extending tongue member, upper and lower plate members secured to the upper and lower sides of said tongue member having vertically-spaced extensions on their forward ends which are apertured to receive a vertically-extending and upwardly-movable hitch-pin, a lug extending upwardly from the upper plate member, an L-shaped lever member having the free end part of its lower horizontal portion pivoted to said lug and its vertical portion provided with an aperture through its upper end part, means intermediate the opposite ends of said lever member for pivotally connecting said lever member to a hitch pin, an auxiliary arm member having its lower end portion pivotally secured to said vertical portion of said lever member, an extension secured to the upper part of said auxiliary member, a handle on the upper end of said extension for facilitating manual swinging of said auxiliary arm member and extension between a vertical position substantially coplanar with said vertical portion of said lever member and a relatively horizontal position, the adjacent faces of said vertical portion of said lever member and said extension being formed to have complementary serrations, and spring means normally urging said serrated faces into engaging relation.

2,459,246
BOTTLE SUPPORT
Orie I. Sinclair, Wilmington, Calif.
Application November 25, 1947, Serial No. 788,030
3 Claims. (Cl. 248—312)



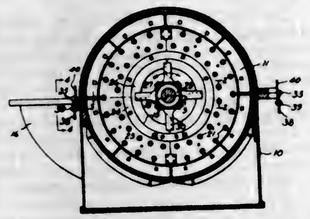
2. A bottle support comprising an annular band of thin flexible material adapted to surround a bottle neck and having apertured end portions, and a bracket having an apertured lug insertible between the apertured end portions of said band, a hook on said bracket adapted to engage the structure of a bed or stand, a tube clip on said bracket between said lug and said hook and positioned to overlie said band, and a screw fastener inserted through the apertured end portions of said band and said apertured lug to operatively connect said band to said bracket.

2,459,247
COMBINED CONTAINER AND HOLDER FOR BLOCKLIKE ARTICLES
John F. Skold, Chicago, Ill.
Application September 10, 1947, Serial No. 773,171
6 Claims. (Cl. 206—56)

1. As a new article of manufacture, a holder adapted for use with a block-like article and comprising a U-shaped piece embodying a pair of upstanding, spaced apart, substantially parallel sides, each with a vertical series of horizontally extending, open ended, inwardly facing grooves in alignment with the grooves in the other side, and a rectangular slide piece positioned under the article and having at the sides

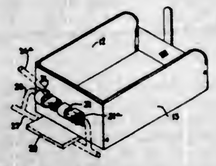
thereof a pair of upwardly and inwardly extending flanges arranged in gripping relation with the lower portions of the sides of the article, spaced laterally apart and shaped substantially conformably to the grooves in the sides of the U-shaped piece, and adapted to be brought into and out of seated relation with any one pair of opposed grooves by sliding the slide piece longitudinally relatively to the U-shaped piece.

2,459,248
REJECTOR-BLADE WEAR-COMPENSATING-RING, FOR DISCHARGE OF ROTARY BEATER MILL
Eric H. Smith and Oscar A. Johnson, Worcester, Mass., assignors to Riley Stoker Corporation, Worcester, Mass., a corporation of Massachusetts
Application January 31, 1947, Serial No. 725,440
3 Claims. (Cl. 241—186)



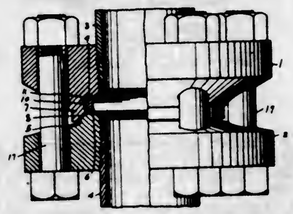
1. In a pulverizing apparatus of the type having a casing divided internally by a partition into a pulverizing zone and a fan chamber, the partition having an opening therethrough in which a ring is supported to define an outlet opening for the escape of pulverized material from the pulverizing zone to the fan chamber, and revoluble rejector blades with their outer ends overlapping the entrance side of the ring to prevent the escape of coarse particles of material therethrough, an improved mechanism for counteracting the effect of rejector blade wear comprising two rods extending substantially radially outward from opposite sides of the ring, handles connected to the outer ends of the rods to turn them about their axes, and means connecting the inner ends of the rods to the ring in such a manner as to move the ring axially in the partition opening as the rods are turned.

2,459,249
TRICYCLE CART
Joseph J. Sternad, Cleveland, Ohio
Application August 16, 1947, Serial No. 768,971
2 Claims. (Cl. 280—202)



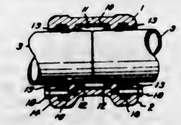
1. An attachment adapted to be removably attached to a tricycle having a frame including an elevated brace and a step below the brace at the rear of the tricycle, which attachment comprises a box-like member having an open top, a pair of upwardly open hook elements adapted to engage with said brace member and having vertically extending sections adapted to abut on the front end of said member, said hook elements having vertically extending slots formed in the vertical sections thereof, and means releasably engaging with said slots and hook elements to position said hook elements in adjustable relation to the box-like member.

2,459,250
DOUBLE SEAL FLANGE UNION
Crawford K. Stillwagon, Houston, Tex., assignor to Well Equipment Mfg. Corp., Houston, Tex., a corporation of Texas
Application March 11, 1944, Serial No. 526,052
2 Claims. (Cl. 285—137)



1. A union comprising aligned flanges, one of said flanges having an annular, inwardly converging, seat and having an annular end face within said seat, the inner side of the other flange being formed with an annular rib provided with a flared, annular seat, said seats fitting closely together when the flanges are assembled, the inner side of the rib being countersunk, annularly, and thus presenting an inside wall which is parallel with said end face and spaced therefrom and also presenting an outer side wall which converges toward the inner margin of the flared seat thus providing an inside annular groove when the flanges are assembled, a gasket fitted in said groove and clamp bolts securing said flanges in assembled relation with said seats fitting together and with the gasket under compression between said inside wall and the end face.

2,459,251
THREADLESS PIPE COUPLING
Crawford K. Stillwagon, Houston, Tex., assignor to Well Equipment Mfg. Corp., Houston, Tex., a corporation of Texas
Application June 30, 1945, Serial No. 602,560
5 Claims. (Cl. 285—194)



2. A coupling for the adjacent ends of a rod or pipe comprising, a housing formed of two sections shaped to closely surround said adjacent ends, said housing having inside, annular grooves formed with recesses, arcuate, plate-like dogs nested in the grooves and shaped to fit around, and engage, said adjacent ends and said dogs having lugs on their outer margins which project into the recesses, bolts screwed into said sections and extending through said lugs.

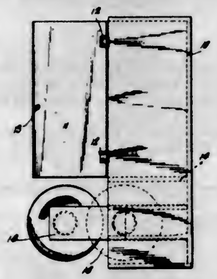
2,459,252
BOLLED TOILET PAPER CABINET AND DISPENSER
Charles J. Strahan, Milton, Pa.

2,459,254
PROCESS AND APPARATUS FOR THREADING UP CONTINUOUS SPINNING MACHINES
Anne van der Mei, Arnhem, Netherlands, assignor

2,459,256
DESULFURIZING MOLTEN FERROUS METAL
Frederick W. White, New Brighton, and Edward B. Story, Bethel Township, Allegheny County,

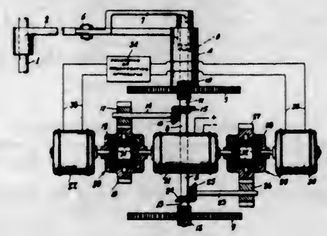
then forward and terminating in a horizontal section, a back member, vertical tubes secured to the back member into which the upper ends of the lengths of rod material are disposed, se-

2,459,252
ROLLED TOILET PAPER CABINET AND DISPENSER
Charles J. Strahan, Milton, Pa.
Application August 14, 1945, Serial No. 610,826
3 Claims. (Cl. 242—55.2)



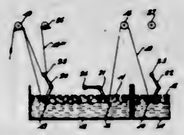
1. A roll paper dispenser comprising a box-like chamber open at its front and having side walls, one of said side walls having a channel extending longitudinally thereof, a plate slidable in said channel, a cantilever paper roll supporting spool extending from said plate, said spool and paper roll being partially recessed in said chamber when said plate is at its innermost channel position and supported exteriorly of said chamber when said plate is at its outermost channel position.

2,459,253
REPRODUCING APPARATUS
Joseph M. Tyrner, New York, N. Y., assignor to Air Reduction Company, Incorporated, New York, N. Y., a corporation of New York
Application November 29, 1944, Serial No. 565,759
5 Claims. (Cl. 318—8)



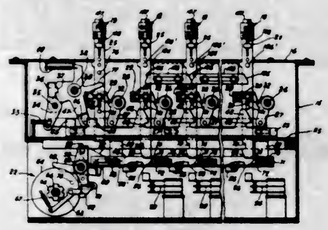
1. Apparatus of the kind described comprising a tracing element for use in tracing a given pattern, a pair of alternating current generators, means for normally driving said generators at a substantially constant speed so that they have a normal predetermined output frequency, said last named means comprising differential gearing for each generator through which such generator is driven, the differential gearing for each generator having a rotary housing, means actuated by the movement of said tracing element when tracing a pattern for rotating said housings in accordance with the movement of the tracing element to thus vary the speed of the generators and their output frequency, and means for recording on a record the alternating currents thus generated and varied in frequency.

2,459,254
PROCESS AND APPARATUS FOR THREADING UP CONTINUOUS SPINNING MACHINES
Anne van der Mei, Arnhem, Netherlands, assignor to American Enka Corporation, Enka, N. C., a corporation of Delaware
Application November 14, 1946, Serial No. 709,750
In Germany May 26, 1941
Section 1, Public Law 690, August 8, 1946
Patent expires May 26, 1961



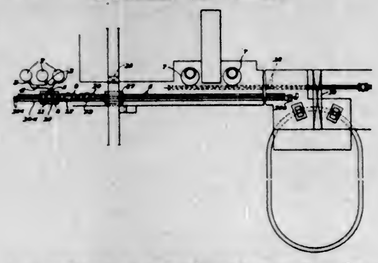
5. In the continuous spinning of rayon yarn that includes simultaneously delivering successive portions of a plurality of yarns to an after-treatment bath in the form of a warp, simultaneously withdrawing successive portions of said warp from said baths while passing said warp under a guiding element in said bath; the method of threading-up an individual yarn after breakage that includes controlling the broken end of yarn issuing from the point of delivery and leading it under a guiding element disposed outside of said bath to a point of temporary collection outside said bath, and substituting said outside guiding element for said bath guiding element to restore said broken yarn to normal position in said bath while avoiding disturbance of said running warp.

2,459,255
SWITCHING APPARATUS FOR FIRE CONTROL SYSTEMS
William Von Glahn, Richmond Hill, N. Y., assignor to Control Instrument Company, Inc., Brooklyn, N. Y., a corporation of New York
Application October 22, 1947, Serial No. 781,306
11 Claims. (Cl. 74—483)



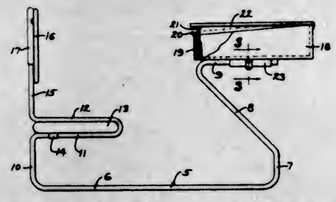
1. Switching apparatus comprising, in combination, keys arranged in columns and opposed to each other, a common locking bail for the keys in one column actuated by any depressed key therein to lock the same in its depressed position, a movable control member having a normal position from which it is actuated by a depressed key projecting therethrough, and means on said control member controlled by the movement thereof and by contact with said depressed key for preventing the full depression of a key in the other column opposed to the first named key.

2,459,256
DESULFURIZING MOLTEN FERROUS METAL
Frederick W. White, New Brighton, and Edward B. Story, Bethel Township, Allegheny County, Pa., assignors to A. M. Byers Company, Pittsburgh, Pa., a corporation of of Pennsylvania
Application January 11, 1947, Serial No. 721,659
4 Claims. (Cl. 75—55)



1. A method of desulphurizing molten ferrous metal comprising heating to a temperature about that of the molten ferrous metal to be desulphurized a quantity of previously unused desulphurizer which gasifies upon being heated to melt and decompose the desulphurizer to drive off substantially all gaseous matter formed and, after thus preparing the desulphurized, intimately associating the desulphurizer and the molten ferrous metal to effect desulphurization of the molten ferrous metal by pouring the molten ferrous metal and desulphurizer into a single chamber receptacle wherein throughout the pour all molten ferrous metal in the receptacle forms a single pool all portions of which are in mixable contact with the desulphurizer, the desulphurization in said receptacle being characterized by minimization of foaming which would be caused by release of gaseous matter and by enhancement of interface reaction between the desulphurizer and all portions of the metal.

2,459,257
CHAIR, TABLE, AND DESK COMBINATION
Halbert M. Wood, Madison, Wis.
Application August 12, 1946, Serial No. 690,058
1 Claim. (Cl. 155—124)

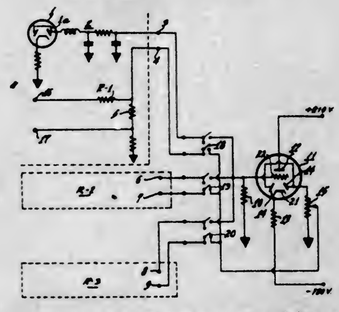


A combined desk and chair comprising identical frame sections arranged parallel to each other, each frame section embodying a length of rod material constructed with upstanding ends to form a back and then bent forward at right angles therewith and then bent backward in a U shape to provide spaced parallel members, a seat held between the parallel members of the frame sections, said parallel members frictionally engaging the upper and lower surfaces of the seat, the rod at the lower rear end of the U shape then bent downward to form a rear leg for the chair, then forward to form a floor engaging section, then upward to form a leg for the desk, then forward and terminating in a horizontal section, a back member, vertical tubes secured to the back member into which the upper ends of the lengths of rod material are disposed, securing the back to the back section, the forwardly extended ends of the sections being fitted in tubes of a desk, securing the desk to the frame sections, at the front ends thereof.

2,459,258
METHOD OF CONSTRUCTING SLIPPERS
Benjamin Wunsch, New York, N. Y., assignor of one-half to Isidor Wunsch, Bronx, N. Y.
Application January 8, 1947, Serial No. 720,792
2 Claims. (Cl. 12—142)

1. The method of forming footwear of the class described, which comprises first uniting side wall portions of the upper, then attaching the outwardly extending peripheral flanges at lower edges of the side walls to the corresponding edges of a soft insole, then attaching lower edges of the upper and peripheral edges of the insole to peripheral edge portions of a hard sole by a single line of stitching, and stretching the upper and insole in stitching the same together to size the upper and insole to the size determined by said hard sole.

2,459,259
DIVERSITY RADIO RECEIVING SYSTEM
Charles Percy Beanland, Chelmsford, England, assignor to Radio Corporation of America, a corporation of Delaware
Application December 7, 1944, Serial No. 567,014
In Great Britain October 25, 1943
Section 1, Public Law 690, August 8, 1946
Patent expires October 25, 1963
4 Claims. (Cl. 250—20)



1. A radio receiving system comprising a plurality of constituent receivers each including signal detecting means and an automatic gain control circuit, each of said receivers having a terminal connected to said detecting means to receive the output thereof and a terminal connected to said automatic gain control circuit to feed an automatic gain control voltage thereto, a combining circuit having an input and an output, means for coupling all of said detecting

means terminals to said combining circuit input and means for coupling all of said automatic gain control circuit terminals to said combining circ-

reached in said tank, and an electrical indicator lamp in said circuit said lamp having a filament

rately formed for cooperation with suitable sorting and tabulating machines and being provided at the upper and lower edges of the check with

2,459,266
ARTICLE FOR REPRODUCING DRAWINGS ON BLANKS
George B. Crouse, Wading River, N. Y., assignor,

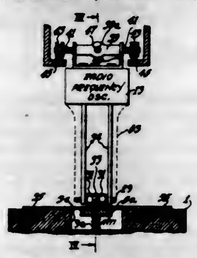
means terminals to said combining circuit input and means for coupling all of said automatic gain control circuit terminals to said combining circuit output, said combining circuit including a thermionic discharge tube having a plurality of cathode to anode discharge paths therein and a control electrode for influencing the cathode to anode current in one of said paths, said combining circuit input being connected to said control electrode.

2,459,260

HIGH-FREQUENCY ELECTRICAL BONDING APPARATUS FOR BONDING WIDE LAYERS OF DIELECTRIC MATERIALS

George H. Brown, Princeton, N. J., assignor to Radio Corporation of America, a corporation of Delaware

Application August 23, 1943, Serial No. 499,599
5 Claims. (Cl. 219—47)



1. In electrical apparatus for bonding together a plurality of dielectric parts with the aid of heat, the combination of a work supporting member for supporting said parts, said member having an opening therein, an assembly including (1) a source of high frequency electrical energy, (2) a pair of electrodes cooperating as a unit and electrically insulated from each other, and (3) a transmission line coupling each electrode of said pair to said source, said assembly being mounted above said work supporting member and being so arranged relative thereto that said electrodes are disposed in alignment with and in close proximity to said opening, a third electrode mounted below said work supporting member also in alignment with said opening whereby said unit and said third electrode are arranged in opposed relation and are adapted to receive said parts therebetween, means associated with said electrodes for effecting engagement of said electrodes with said parts, said third electrode bridging said pair of electrodes and cooperating therewith for the establishment therebetween of a high frequency electric field for producing dielectric losses in said parts whereby to heat said parts, and track means above said work supporting member on which said assembly is movably mounted.

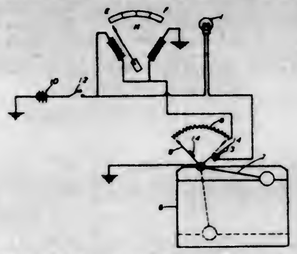
2,459,261

FUEL LEVEL INDICATOR SYSTEM

Donald Bennion Browne, Harpenden, England, assignor to General Motors Corporation, Detroit, Mich., a corporation of Delaware

Application February 2, 1946, Serial No. 645,219
In Great Britain February 15, 1945
3 Claims. (Cl. 177—311)

2. An electrical indicator system for a fuel tank for an internal combustion engine comprising a float in said tank, an electric circuit, contacts in said circuit controlled and adapted to be closed by said float when a low fuel level is reached in said tank, and an electrical indicator lamp in said circuit said lamp having a filament



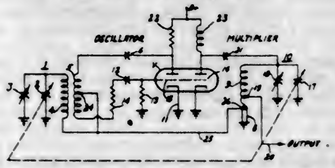
and a heat dissipating mass in contact therewith such that the filament lights up only when said contacts are firmly and completely closed by said float.

2,459,262

OSCILLATION GENERATOR AND FREQUENCY MULTIPLIER

Alan P. Buffington, Philadelphia, Pa., assignor, by mesne assignments, to Philco Corporation, Philadelphia, Pa., a corporation of Pennsylvania

Application March 13, 1946, Serial No. 654,046
7 Claims. (Cl. 250—36)



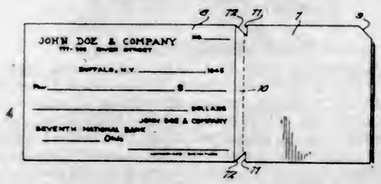
1. In combination, a high frequency oscillator comprising a tube having cathode, plate and grid electrodes, said oscillator including a tunable frequency-determining network and plate-cathode and grid-cathode circuits, a frequency multiplier having an output circuit tunable to a harmonic of the oscillator frequency, means for applying the oscillator output to the multiplier, and means for applying a portion of the output of said multiplier to the grid-cathode circuit of the oscillator.

2,459,263

BANK CHECK

Neil D. Callanan, Buffalo, N. Y.

Application February 15, 1945, Serial No. 577,991
4 Claims. (Cl. 235—61.12)



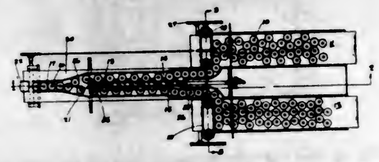
2. A check made of two parts, one part being of card material and the other part being of paper and having a check form thereon, said parts being arranged lengthwise of the check and secured together intermediate of the ends of the check, said card part of the check being accurately formed for cooperation with suitable sorting and tabulating machines and being provided at the upper and lower edges of the check with inwardly extending edge portions by means of which said card portion may be fed to sorting and tabulating machines with the edge of the card portion located at one end of the check leading and with the paper portion of the check trailing.

2,459,264

TRANSFER MECHANISM

Richard C. Cerruti, Oakland, Calif., assignor to California Packing Corporation, San Francisco, Calif., a corporation of New York

Application July 16, 1946, Serial No. 683,919
1 Claim. (Cl. 198—32)



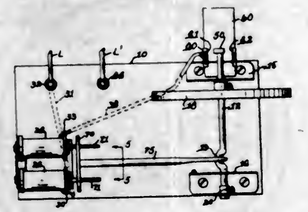
In a mechanism for transferring articles, a rotatable screw having a pitch larger than the width of said articles, a pair of movable article loading platforms arranged on opposite sides of the rotatable axis of said screw and movable in a direction substantially parallel thereto, an article guideway slightly larger than the width of said article extending from each of said platforms to and along side of said screw, auxiliary article moving means associated with each one of said platforms arranged to move articles transported thereon into the corresponding guideway, each of said guideways converging at one end of said screw to form a single guideway having a width slightly larger than the width of said article, stationary article abutment means arranged in proximity to said screw and on a prolongation of its axis, and article moving means arranged to move said articles when in said guideways.

2,459,265

MAGNETIC IMPULSE MOTOR

Elmer Keith Crosby, Worcester, Mass.

Application March 22, 1947, Serial No. 736,544
2 Claims. (Cl. 172—126)



1. In a magnetic impulse motor, a magnetic unit, an armature mounted to slide toward and away from said unit, non-magnetic and non-magnetized means to support and guide said armature for substantially straight-line movement, a shaft formed with a crank and having a fly wheel mounted thereon, a connecting rod having one end fixed to said armature and having the other end directly pivoted on said crank, and circuit-control means effective to periodically make and break the magnetic circuit.

2,459,266

ARTICLE FOR REPRODUCING DRAWINGS ON BLANKS

George B. Crouse, Wading River, N. Y., assignor, by mesne assignments, to Photo-Positive Corporation, New York, N. Y., a corporation of New York

Original application July 8, 1941, Serial No. 401,440. Divided and this application August 30, 1944, Serial No. 551,929
4 Claims. (Cl. 95—8)

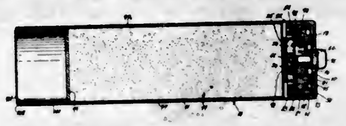
1. A composite transfer sheet comprising in combination a bottom base sheet of paper; a sheet of photo-sensitive emulsion coated on the upper face of said base sheet; a coating of nitrocellulose on the upper face of said emulsion; and a top layer of thermoplastic substantially transparent adhesive on the upper face of the nitrocellulose coating, said nitro-cellulose coating acting as a bonding between the adhesive and emulsion and permitting the emulsion to be activated by light falling on the top layer.

2,459,267

SELF-CONTAINED EMERGENCY SIGNALING DEVICE ADAPTED TO BE OPERATED AUTOMATICALLY AFTER BEING LAUNCHED

Martin Dwyer, Hewlett Harbor, and Philip B. Edwards, Port Washington, N. Y., assignors to Aerial Products, Inc., Merrick, N. Y., a corporation of Delaware

Application July 16, 1947, Serial No. 761,310
10 Claims. (Cl. 177—329)



1. A signalling device of the character described comprising a container, a signal within said container, explosive means within said container to expel said signal from said container, electrically operated means to fire said explosive means, chemical means distintegrable on contact with water to prevent operation of said electrically operated means for a predetermined time after contact with water, and frangible means to prevent access of water to said chemical means until said frangible means is destroyed.

2,459,268

BOREHOLE PRESSURE GAUGE

Lincoln F. Elkins, Tulsa, Okla., assignor to Stanolind Oil and Gas Company, Tulsa, Okla., a corporation of Delaware

Application April 24, 1944, Serial No. 532,399
10 Claims. (Cl. 73—300)

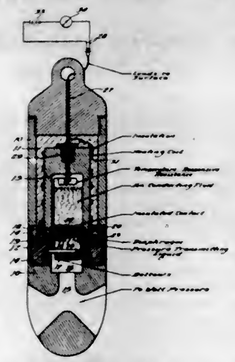
1. A pressure gauge for use in bore holes comprising a housing adapted to be lowered into a bore hole and having a first compartment containing a non-compressible liquid and a second compartment containing a known quantity of a compressible fluid, means for subjecting the liquid in said first compartment to the pressure existing in said bore hole, means for heating the fluid in said second compartment to increase the pressure thereof, a diaphragm disposed between said compartments, said diaphragm being responsive to difference between the pressures in said compartments, means actuated by said diaphragm for controlling said heating means, a

retaining the aforesaid members in alignment, and adjustable compression means mounted on the said pivot pin for regulating the degree of

away from each other so as to provide a continuous passageway for the free circulation of air between said plates and between and around

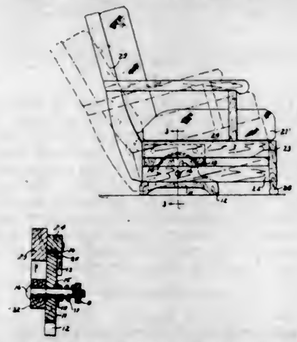
size receivable between the upper and lower molar teeth of a human being, said exposed handle portion being positioned to lie over the tongue of the patient, and a pair of spaced pro-

sponsive to difference between the pressures in said compartments, means actuated by said diaphragm for controlling said heating means, a source of electric energy, a temperature responsive resistance located within said second com-



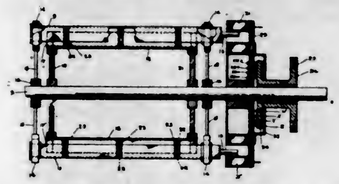
partment and connected to said source of electric energy, and means responsive to said temperature responsive resistance for indicating the temperature of the fluid within said second compartment whereby the pressure of the fluid may be determined.

2,459,269
RECLINING CHAIR
Ralph H. Ellsworth, Willoughby, Ohio, assignor to The Wolwin Chair Company, Willoughby, Ohio
Application October 12, 1944, Serial No. 558,320
3 Claims. (Cl. 155—77)



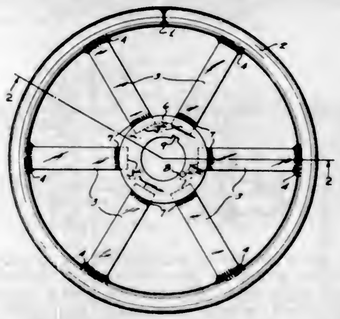
1. In a reclining chair, a base member having a first pivot hole therethrough and including a first friction surface perpendicular to the said pivot hole and a convex top concentric with the said pivot hole, a seat member having a second pivot hole therethrough aligned with the aforesaid first pivot hole, said seat member also having a lateral portion having a concave bottom concentric with the convex top and spaced therefrom and including a second friction surface perpendicular to the said pivot hole and frictionally engageable with the said first friction surface, the said lateral portion also having a depending flange adjacent to the said bottom portion and slidably engageable with the said base member, a pivot pin mounted in the aforesaid pivot holes retaining the aforesaid members in alignment, and adjustable compression means mounted on the said pivot pin for regulating the degree of frictional engagement between the said first and second friction surfaces.

2,459,270
ADVANCING REEL
William G. Esmond, Cumberland, Md., assignor to Celanese Corporation of America, a corporation of Delaware
Application June 21, 1947, Serial No. 756,179
10 Claims. (Cl. 28—71.7)



10. A reel for advancing helices of yarn axially, comprising a bearing, a rotatable shaft journaled in said bearing, springs carried by said shaft for rotation therewith, a plurality of spaced, circumferentially arranged, longitudinally extending bars for carrying the yarn along the reel mounted on said springs, spiders mounted on said shaft for rotation therewith, solenoids carried by said spiders for operating said bars, springs operatively connected to said bars, a plurality of solenoids mounted on said shaft, a plurality of concentric commutator strips for energizing said solenoids, and brushes electrically connected to said solenoids and said commutator strips whereby rotation of said reel effects the radial and axial reciprocation of said bars.

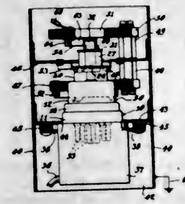
2,459,271
HANDWHEEL
Fred C. Fantz, Lima, Ohio, assignor to Midwest Piping & Supply Company, Inc., St. Louis, Mo., a corporation of Missouri
Application June 27, 1946, Serial No. 679,601
1 Claim. (Cl. 74—552)



A hand wheel comprising a rim, a series of inwardly extending spokes each welded at an end thereof to the inner circumference of said rim, and a pair of apertured plates forming the hub of said hand wheel, the inner ends of said spokes being positioned between said plates and spaced

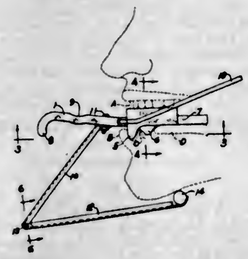
away from each other so as to provide a continuous passageway for the free circulation of air between said plates and between and around said inner ends of said spokes.

2,459,272
SOCKET
Roy C. Fox and Thomas N. Massey, Baltimore, Md., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application August 17, 1945, Serial No. 611,140
14 Claims. (Cl. 250—27.5)



1. A socket as characterized for support of an electronic tube, comprising a plurality of mountings in spaced parallelism to each other and each having an opening therein, said openings being disposed on a common axis, elongated band contact elements supported at longitudinal edges thereof by and bearing slidably upon said mountings and standing edgewise next said openings, said contact elements being rigid in an edgewise direction thereof and having parts thereof projecting inwardly of the openings and movable radially of the openings by flexing of said elements, whereby axial moment of force applied to an element by introducing a tube into said element toward the opening of the mounting is counteracted in rigid direction of the element by engagement of the element with the mounting and spreading of the element is obtained by the slidable bearing of said element on the mounting and flexing of the element.

2,459,273
SHOCK THERAPY MOUTH GUARD
Jacob Freedland, Detroit, Mich.
Application November 14, 1946, Serial No. 709,722
9 Claims. (Cl. 128—12)

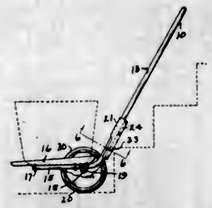


9. A shock therapy mouth guard comprising a rigid handle, a rubbery pad mounted thereon between the ends thereof and leaving the rear end portion of the handle exposed, said pad being of a size receivable between the upper and lower molar teeth of a human being, said exposed handle portion being positioned to lie over the tongue of the patient, and a pair of spaced projections from the lower surface of said pad, one of said projections being adapted to enter between the lower forward teeth and the tongue and the other between the lower forward teeth and the lower lip of the patient, and an adjustable clamp extending downwardly from said handle forward of said pad and adapted to engage beneath the chin of the patient.

2,459,274
MANDOLIN PICK
Hyman Galetsky, New York, N. Y.
Application January 10, 1945, Serial No. 572,195
3 Claims. (Cl. 84—320)

1. A mandolin pick comprising a relatively stiff resilient sheet member having a central large portion, a small sharp prong on the bottom of said central portion, and a small handle portion on the top of said central portion, said sheet member being formed of separate front and back layers and means for adjustably connecting them together to vary the stiffness of said prong.

2,459,275
HAND TRUCK WITH STAIR CLIMBING SHOE
John C. Gates, Indianapolis, Ind.
Application September 27, 1947, Serial No. 776,459
4 Claims. (Cl. 280—47)



1. A hand truck comprising a wheel mounted frame having a pair of side rails normally upwardly extending, and a shiftable shoe on each of said rails, each shoe comprising a box-like member encircling the rail to have a forward side slidably engaging the rail and a rear or under bearing side, and a spring interconnecting said rail and said member in a manner to increase the tension on the spring upon relative downward travel of the shoe along the rail, whereby the spring will tend to return the shoe to an upper normal position of rest.

2,459,276
PRESS AND DIE THEREFOR
Lee Granat, San Francisco, Calif.
Application November 7, 1945, Serial No. 627,236
1 Claim. (Cl. 101—4)

In apparatus, for impressing inscriptions on the internal surface of an annular member, having a supporting frame, a bolster plate fixed on

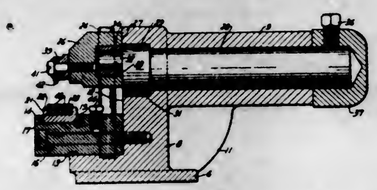
the frame provided with a guide groove traversing the longitudinal axis of the frame, and a die

2,459,278
DEVICE FOR CONVERTING A SAW-TOOTH-SHAPED VOLTAGE OF A COMPARATIVELY

hingedly mounted on the base, capable of being folded there-against, and including a transverse guide pin mounted therein opposite the hinge,

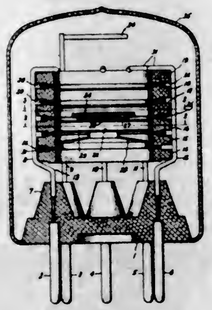
2,459,282
RESISTOR AND SPARK PLUG EMBODYING SAME
Edgar C. McDougal, Flint, Karl Schwartzwalder, Dayton, and Robert E. Wilson, Flint, Mich., assignors to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Application December 31, 1945, Serial No. 638,511
5 Claims. (Cl. 123—169)

the frame provided with a guide groove traversing the longitudinal axis of the frame, and a die adapted to enter said annular member and positioned above and movable in a linearly vertical path intersecting said bolster plate guide groove; a die block in and slidable longitudinally of said guide groove, said die block having therein a plurality of aligned recesses shaped to conform with and to receive dissimilar chordal masses of respective annular members, a leaf spring having a portion thereof secured in said guide groove and



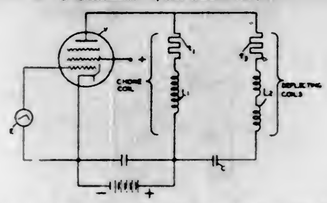
engaging said die block to frictionally resist movement of the die block in the guide groove, said die having an impression element thereon engageable with said annular member and said die block recesses being successively registrable with the path of movement of the die when the die block is moved along the guide groove, and a stop element threadedly engaged with the bolster plate and interposed between the latter and the die for variably regulating the degree of relative approach of the die and die block.

2,459,277
ELECTRODE SUPPORT STRUCTURE FOR ELECTRIC DISCHARGE DEVICES
Gerald G. Halstead and Richard B. Russ, Schenectady, N. Y., assignors to General Electric Company, a corporation of New York
Application December 3, 1946, Serial No. 713,796
14 Claims. (Cl. 250—27.5)



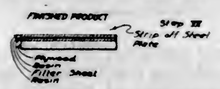
1. An electric discharge device including an envelope, a plurality of lead-in conductors sealed through said envelope and supported in a generally circular array, a plurality of insulating spacers mounted in a stack within said array of conductors, a plurality of electrodes having marginal portions received respectively between adjacent insulators of said stack, and means at the upper end of said conductors engaging the upper end of said stack holding said insulators and said electrodes in assembled relation.

2,459,278
DEVICE FOR CONVERTING A SAW-TOOTH-SHAPED VOLTAGE OF A COMPARATIVELY LOW FREQUENCY INTO A SAW-TOOTH-SHAPED CURRENT
Johan Haantjes, Eindhoven, Netherlands, assignor to Hartford National Bank and Trust Company, Hartford, Conn., as trustee.
Application July 16, 1946, Serial No. 684,081
In the Netherlands March 20, 1942
Section 1, Public Law 690, August 8, 1946
Patent expires March 20, 1962
3 Claims. (Cl. 315—27)



1. A device for converting a sawtooth-shaped voltage of comparatively low frequency into a sawtooth-shaped current in the deflecting coils of a cathode ray tube preferably serving for the image deflection, the sawtooth-shaped voltage being supplied to a discharge tube having a high internal resistance whose output circuit includes the deflecting coils which have connected in parallel with them a choke-coil through which flows at least part of the direct-current component of the sawtooth-shaped output current of the discharge tube, in which device the inductance of this choke coil is approximately equal to $10r_2T$, r_2 representing the resistance of the deflecting coils and T the period of the sawtooth-shaped current.

2,459,279
PROCESS FOR PLASTIC COATING
Robert W. Holden, Burbank, Calif., assignor to Laminating Specialties, Inc., Burbank, Calif., a corporation of California
Application June 24, 1947, Serial No. 756,659
9 Claims. (Cl. 154—99)

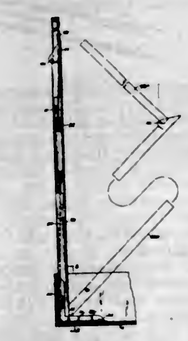


1. A process for producing a laminated article, comprising the steps of coating a flat or contoured platen with a polyester base resin in liquid form, exposing the resin to ultra-violet light to harden the resin as a pre-jell against the platen while the exposed surface of the resin remains "tacky," bringing a base into contact with the exposed resin surface, heating the resin while maintaining it under pressure between the base and the platen, and subsequently stripping the platen from the resin and base.

2,459,280
FOLDING SUPPORT
Morris Lange, University Heights, and Martin Spiegel, Shaker Heights, Ohio, assignors to Superior Funeral Supply Corporation, Cleveland, Ohio, a corporation of Ohio
Application November 6, 1946, Serial No. 708,100
2 Claims. (Cl. 248—159)

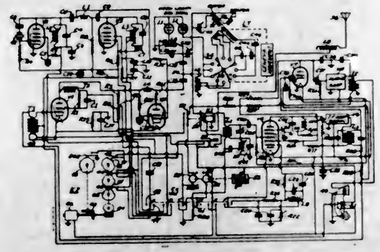
1. A folding support comprising in combination, a base, a hollow support having one end

hingedly mounted on the base, capable of being folded there-against, and including a transverse guide pin mounted therein opposite the hinge, and an axially extending open shoe formed on the other end thereof, a hollow arm hingedly mounted on the end of the support within the open shoe and limited to 180° flexing movement



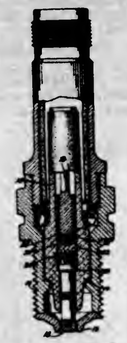
with reference to the said support by the said shoe, and a coil spring positioned within the hollow support, having one end attached to the arm opposite the hinge and the other end attached to the base after passing over the guide pin and capable of causing the support and arm to assume a co-axial position perpendicular to the base when released from their folded condition.

2,459,281
TWO-WAY RADIO EQUIPMENT FOR LIFEBOAT SERVICE
Joseph F. McDonald, Bronx, N. Y., assignor to Radio Corporation of America, a corporation of Delaware
Application January 8, 1945, Serial No. 571,904
8 Claims. (Cl. 250—13)



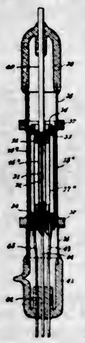
7. In the receiver portion of a two-way radio communication system a plurality of tube stages having an automatic gain control circuit connected to their input electrodes, a hand-set of the type which includes a microphone and an earphone, a push-to-talk switch for conditioning the transmitter of said system to emit a carrier wave modulated by voice signals which originate at said microphone, and means including a self-biasing circuit associated with at least one of the tubes in said transmitter for supplying a bias potential to said gain control circuit, whereby the receiver tube stages are blocked during the operation of said transmitter.

2,459,282
RESISTOR AND SPARK PLUG EMBODYING SAME
Taine G. McDougal, Flint, Karl Schwartzwalder, Holly, and Alexander S. Rulka, Flint, Mich., assignors to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Application May 24, 1943, Serial No. 488,114.
22 Claims. (Cl. 315—58)



1. The combination of a sleeve of ceramic insulating material, a resistance within and closing the passage through the sleeve and comprising a mixture of glass and carbon black fused in place and thermally bonded to the sleeve, and a seal comprising a mixture of glass and conducting material overlying one end of the resistance element fused in place and thermally bonded to the resistance and to the sleeve and protecting the element from the atmosphere.

2,459,283
POSITIVE GRID OSCILLATOR
John W. McNall, East Orange, N. J., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application April 13, 1944, Serial No. 530,889
11 Claims. (Cl. 315—5)



1. A positive grid oscillator having electrodes in parallelism to each other, said electrodes comprising a cathode, an electron pulling electrode and two grids therebetween of which one is a control grid adapted to be positive with respect to the cathode and the other is a selector grid, the spacing of said electrodes being related to the electron transit time and oscillating cycle such

that round-trip electron transit time from selec-

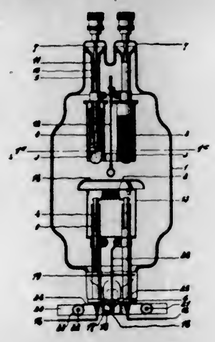
2,459,285
COMBINATION TOOTHBRUSH AND

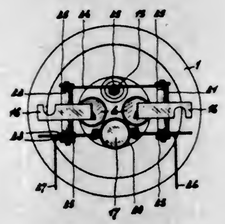
gagement with said shoulders, each of said insulators being provided with a central bore, said housing being provided with an aperture there-

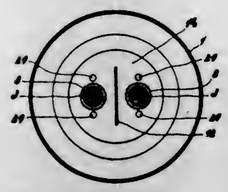
which the acid radical of the salt is in quantity of from over three to less than six equivalents, and magnesium sulphate in the proportion of over

that round-trip electron transit time from selector grid to electron pulling electrode and back to said selector grid is substantially the same time required for 180° phase shift of the said selector grid.

2,459,284
DEVICE COMPRISING A CURRENT CONVERTING TUBE
Johannes Gijsbertus Wilhelm Mulder, Eindhoven, Netherlands, assignor to Hartford National Bank and Trust Company, Hartford, Conn., as trustee
Application July 20, 1946, Serial No. 685,208
In the Netherlands January 30, 1943
3 Claims. (Cl. 250—27.5)





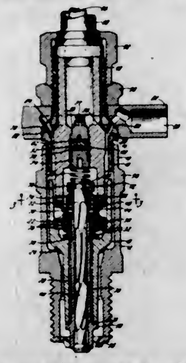


1. A gaseous discharge current converting tube comprising a closed vessel having a gaseous filling, and containing a cathode, a plurality of anodes, and a cathode screen mounted between the cathode and the anodes, the cathode screen having a number of sections corresponding to the number of anodes, a voltage-divider connected between the cathode and each anode, and means connecting each cathode screen section to an intermediate point of the corresponding voltage-divider between the cathode and the associated anode.

2,459,285
COMBINATION TOOTHBRUSH AND DENTIFRICE RECEPTACLE
Donard Murphy, New York, N. Y.
Application February 23, 1946, Serial No. 649,479
3 Claims. (Cl. 132—84)

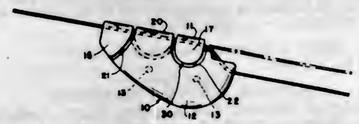
1. For use with a dentifrice container, a fully enclosed combination toothbrush and dentifrice receptacle comprising a separable toothbrush, a brush protecting tube removably secured thereto, a cap, the toothbrush having a bristled head, a short shank and a tubular handle removably secured at one end to the shank, the other end of the tubular handle being open and being capable of admitting the dentifrice container within the bore of the handle, said tubular handle having a longitudinal groove in its bore and a longitudinal slot extending through its wall and being provided with a dentifrice ejector consisting of a plate positioned within the handle, an ejector shank joined at one end to the plate and extending through the slot, and a knob on the outer end of the ejector shank, whereby the knob can be grasped and moved in the slot toward the open end of the tubular toothbrush handle, thus moving the plate and ejecting the dentifrice container, the cap closing the open end of the handle and being removably secured thereto, and the brush protecting tube having an open end and fitting about the bristled head and the shank of the toothbrush.

2,459,286
COMBINATION SPARK PLUG AND FUEL INJECTOR
Hector Rabezzana, Flint, Mich., and Francis J. Wiegand, Ridgewood, N. J., assignors to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Application May 27, 1944, Serial No. 537,602
15 Claims. (Cl. 123—169)



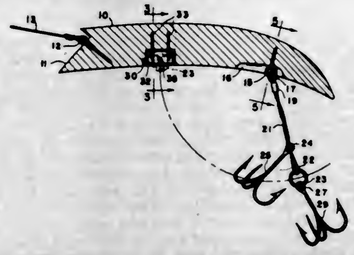
6. In a fuel injection spark plug the combination of a tubular housing having inwardly extending shoulders adjacent its ends, insulators in the ends of the housing, each in sealing engagement with one of said shoulders, the adjacent ends of said insulators being spaced from each other to provide a passage therebetween, means yieldingly urging the insulators into engagement with said shoulders, each of said insulators being provided with a central bore, said housing being provided with an aperture therethrough communicating with the passage between said insulators, a combination center electrode and fuel injector in one of said bores, an electrode on the housing cooperating with said center electrode, and a conductor in the other of said bores in conducting relation with the said center electrode.

2,459,287
RELEASABLE WEIGHT
Sam E. Robbins and Frank L. Larson, Seattle, Wash.
Application December 18, 1944, Serial No. 568,668
4 Claims. (Cl. 43—52)



1. A releasable weight for fishing lines, comprising: a body member having a longitudinal passage therethrough for the threading therein of fishing line, and releasable clamp means adjacent an end of said passage and disposed wholly within the surfaces of said body for gripping a line threaded through said passage.

2,459,288
RELEASABLE HOOK MEANS FOR FISH LURE
Sam E. Robbins and Frank L. Larson, Seattle, Wash.
Application December 18, 1944, Serial No. 568,669
2 Claims. (Cl. 43—46)

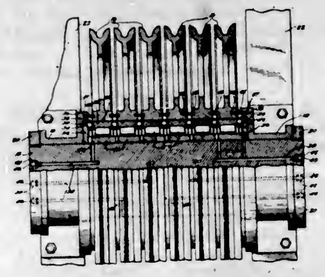


2. A fishing plug, comprising: an elongated body having an under socket adjacent the forward portion thereof, a snood having one end attached to the rear portion of said body and a ring on the other end, means in said socket to receive and releasably retain said ring whereby the snood is stretched below and along said body, hook means slidably carried by said snood, and hook means carried by said ring.

2,459,289
BASIC ALUMINUM SALT SOLUTIONS
Victor H. Rochrich, St. Paul, Minn.
No Drawing. Application March 24, 1945, Serial No. 584,731
3 Claims. (Cl. 167—90)

3. A composition of matter comprising an aqueous solution of a basic aluminum salt in which the acid radical of the salt is in quantity of from over three to less than six equivalents, and magnesium sulphate in the proportion of over one-third molecule of magnesium sulphate for each two atoms of aluminum.

2,459,290
PULLEY BLOCK AND BEARING ASSEMBLY
Joseph J. Roxner, Chicago, Ill., assignor to Aetna Ball & Roller Bearing Company, Chicago, Ill., a corporation of Illinois
Application August 30, 1945, Serial No. 613,501
2 Claims. (Cl. 254—192)



1. In a multiple pulley block and bearing assembly, the combination comprising a shaft; substantially rigid support means secured to and carrying the ends of the shaft; a plurality of sheaves having hubs; bearing means supporting the sheaves in side-by-side relationship upon the shaft for rotation relative thereto and relative to one another, said bearing means for each of the sheaves including an outer roller race secured in the hub of the sheave and having integral end flanges thereon extending inwardly in a radial direction, a plurality of rollers mounted within each of said races and axially positioned between said end flanges, means providing inner races for said rollers so that the radial forces of the sheaves are carried thereby, said outer roller races having adjacently disposed annular ball bearing races in the ends thereof, end thrust ball race rings carried by said substantially rigid support means at opposite ends of the plurality of outer races and having ball bearing races therein aligned with the ball races in the ends of said outer races, series of ball bearings mounted between said adjacently disposed ball races and between said end thrust ball race rings and the adjacent outer races so that end thrust forces are transmitted to and carried by said substantially rigid support; spacer rings for each series of ball bearings for maintaining the ball bearings of each series in relatively uniform circumferentially spaced relationship; means comprising a series of annular rings individually carried by the support means at one end of the plurality of sheaves and by each of said sheaves and extending into annular recesses in adjacent ones of the sheaves and the support means at the other end of the plurality of sheaves for retaining lubricant around said bearings; and means including a plurality of passages in said shaft in approximate alignment with each of said series of ball bearings for lubricating the bearings.

2,459,291
MANUFACTURE OF SHAPED TEXTILE

photo-electric cathodes and an anode, an output circuit for said photocell, said circuit including

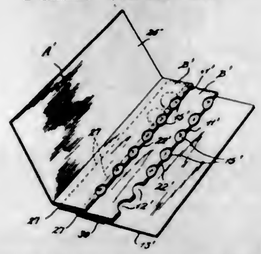
the edges thereof, a pressure chamber around said envelope, and means for establishing fluid

discharge tube adapted to break down upon application of a predetermined voltage, and the

2,459,291
MANUFACTURE OF SHAPED TEXTILE MATERIALS
George Schneider, Montclair, N. J., and Alfred J. Steinberger, Jamaica, N. Y., assignors to Celanese Corporation of America, a corporation of Delaware
No Drawing. Application March 9, 1946, Serial No. 653,431
16 Claims. (Cl. 18—47.5)

1. The method of producing shaped articles from formed textile materials containing a thermoplastic organic derivative of cellulose, which comprises treating said formed textile materials with a solution of a plasticizer for the organic derivative of cellulose in a volatile solvent for the plasticizer, drying the plasticized textile materials, extracting the plasticizer from the textile materials, and then processing the extracted materials to shape.

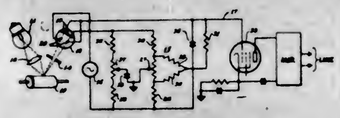
2,459,292
HOLDER FOR CARFARE TOKENS
William A. Sherbondy, Shaker Heights, Ohio
Application May 2, 1945, Serial No. 591,470
1 Claim. (Cl. 206—56)



A one-piece holder and dispenser for disk-like articles comprising, a single sheet of material reversely folded a plurality of times intermediate its ends to provide a plurality of fold portions of different widths adapted to lie upon each other in staggered relationship and integral front and back portions adapted to cover said fold portions thereby forming a substantially book-like folder, the said fold portions each being adapted to receive disk-like articles between the two sides thereof, the staggered folded edges of the said fold portions having apertures spaced longitudinally thereof, the dimensions of said apertures longitudinally of said folded edges being less than the diameter of the disk-like articles so that the articles placed within the fold portions are held therein with portions of their edges exposed through said apertures, the said folded edges being constructed to rupture adjacent the said apertures on the application of force to the exposed portions of the disk-like articles, and means for securing the two sides of each of the fold portions together adjacent the unexposed edges of the articles therein thereby preventing accidental displacement of the articles.

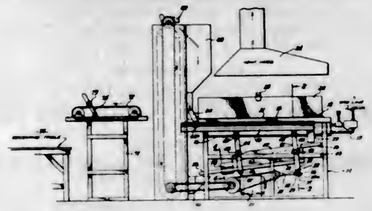
2,459,293
SIGNAL GENERATOR OR MODULATOR
John R. Shonnard, New York, N. Y., assignor to Times Facsimile Corporation, New York, N. Y., a corporation of New York
Application August 15, 1946, Serial No. 690,822
3 Claims. (Cl. 250—41.5)

1. In a photocell modulator, in combination, a photocell provided with electrodes including two photo-electric cathodes and an anode, an output circuit for said photocell, said circuit including one of said cathodes, a source of alternating electromotive force and means comprising a balancing network connected between said source and said output circuit for generating a modulated



carrier in said output circuit upon equal light modulation of both of said cathodes, said network including the space paths between electrodes of said photocell and also including external impedances connected to said source and the electrodes of said photocell.

2,459,294
SHINGLE DIPPING MACHINE
Webster S. Sidwell, Los Angeles, Calif., assignor to Evertite Roof Corporation, Los Angeles, Calif., a corporation of California
Application February 25, 1946, Serial No. 650,086
12 Claims. (Cl. 91—46)

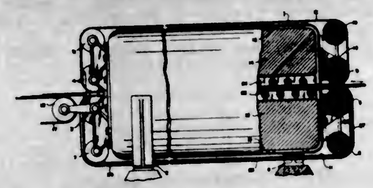


1. In a machine for dipping shingles, the combination of: a vessel for holding liquified asphaltic compounds; means within said vessel for limiting the depth to which a shingle may be dipped therein; a trough having an inlet end and an outlet end, and adapted to hold mineral granules wherein said shingles may be subsequently dipped; agitating means operatively connected with said trough for arcuate oscillation thereof in a vertical plane whereby said granules are maintained in a fluid state receptive to said shingles and are moved toward said outlet end; screening means adapted to receive said granules from said outlet end and to separate from said granules any asphaltic-granule agglomerates resulting from dipping shingles into such granules, said screening means being operatively connected to said agitating means for agitation thereby; and means for conveying said separated granules from said screening means to said inlet end of said trough.

2,459,295
APPARATUS FOR THE FLOW MANUFACTURE OF SHEET MATERIAL
Per F. Skeog, Olympia, Wash.
Application May 6, 1944, Serial No. 534,492
8 Claims. (Cl. 154—1)

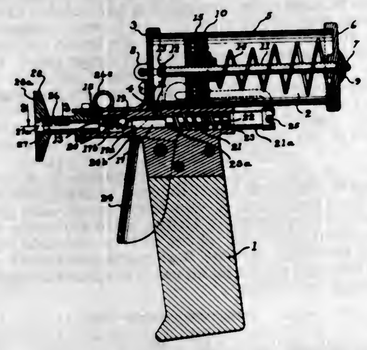
1. A press having two endless belts with portions thereof placed in opposition to form a flowing envelope, endless sealing strips flowing with said belts, each strip having a portion placed between opposed faces of said belts and adjacent

the edges thereof, a pressure chamber around said envelope, and means for establishing fluid



under pressure in said chamber and on the exterior sides of said envelope.

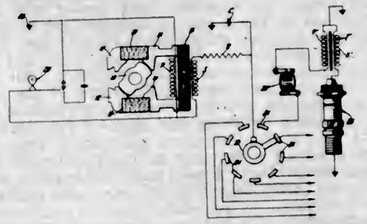
2,459,296
FILLER GUN
Willis E. Smith, Springfield, Oreg.
Application August 25, 1945, Serial No. 612,649
1 Claim. (Cl. 18—3.5)



A plastic applying device comprising, in combination, a reservoir, a dispensing nozzle, means for expressing plastic material from said reservoir through said dispensing nozzle, a plastic applicator nozzle pivotally attached to said dispensing nozzle, a notched flange extending radially from said applicator nozzle, a pair of spaced lugs extending radially from the end of said dispensing nozzle and adjacent said flange, and a spring fixed relative to said dispensing nozzle and having a free end extending longitudinally thereof, the free end of said spring being biased to nest between said lugs and in a selected notch in said flange to lock said applicator nozzle relative to said dispensing nozzle.

2,459,297
IGNITION SYSTEM
Lucian B. Smith, Flint, Mich., assignor to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Application October 29, 1945, Serial No. 625,245
5 Claims. (Cl. 315—255)

1. An ignition circuit comprising a source of alternating current, a step-up transformer having its primary in series with the source, a damping resistance and a condenser in series with the secondary of the transformer, a second step-up transformer, and a discharge circuit for the condenser comprising a distributor, an electrical discharge tube adapted to break down upon application of a predetermined voltage, and the

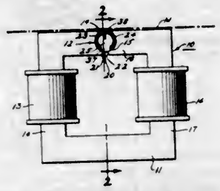


primary of said second step-up transformer, the secondary of said second transformer having a spark discharge device in series therewith.

2,459,298
PLASTIC COMPOSITIONS MADE WITH VULCANIZED, POLYETHYLENE GLYCOL ESTERS AS PLASTICIZERS
Paul Stamberger, Stamford, Conn.
No Drawing. Application November 17, 1944, Serial No. 563,989
2 Claims. (Cl. 106—180)

1. A plastic composition consisting of a thermoplastic film-forming material from the class consisting of cellulose esters and cellulose ethers and as a plasticizer, vulcanized polyethylene glycol ester of an unsaturated long chain fatty acid having at least 16 carbon atoms in the chain and at least one double bond.

2,459,299
MAGNETIC TRANSDUCER WITH SEPARABLE POLE FACES
William P. West, Philadelphia, Pa., assignor to Philco Corporation, Philadelphia, Pa., a corporation of Pennsylvania
Application July 20, 1946, Serial No. 685,049
11 Claims. (Cl. 179—100.2)

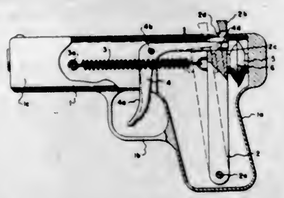


10. A magnetic head comprising a yoke structure including a magnetic core with a gap therein, said gap having a generally circular shaped portion and a generally rectangular shaped portion, the latter providing the core with end sections disposed in generally parallel confronting relationship, a generally cylindrical pole-piece unit mounted in said circular shaped portion of the gap and including a pair of substantially C-shaped pole pieces and a generally cylindrical member supporting said pole pieces with their end portions in adjacency, a shim disposed on said support and extending radially therefrom and in engagement with adjacent end portions of the pole pieces to establish a definite spacing there-

between, a boss disposed on said support and projecting radially therefrom and in engagement with other adjacent end portions of the pole pieces to separate said other end portions and to effect seating engagement between the first-mentioned end portions and the shim, and an element provided on said boss and extending in the rectangular portion of the gap between the mentioned end sections of the core to prevent the pole-piece unit from rotating beyond desired limits in said circular gap portion.

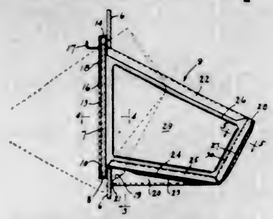
11. For a magnetic head including a magnetic core provided with a gap having a generally circular portion and a generally rectangular portion, the latter providing the core with end sections disposed in generally parallel confronting relationship, a generally cylindrical pole-piece unit mountable in said circular portion of the gap and including a pair of substantially C-shaped pole pieces and a generally cylindrical member supporting said pole pieces with their end portions in adjacency, a shim disposed on said member and extending radially therefrom and in engagement with adjacent end portions of the pole pieces to establish a definite spacing therebetween, a boss disposed on said support and projecting radially therefrom and in engagement with other adjacent end portions of the pole pieces to separate said other end portions and to effect seating engagement between the first-mentioned end portions and the shim, and an element provided on said boss and adapted for insertion in the rectangular portion of the gap between the end sections of the core to guide the mounting of the pole-piece unit in the circular portion of the gap and to prevent the pole-piece unit, when so mounted, from rotating beyond desired limits in relation to the circular gap portion.

2,459,300
NOISEMAKING DEVICE
Darwin M. Wolf, Long Beach, Calif.
Application November 4, 1946, Serial No. 707,613
2 Claims. (Cl. 46—174)



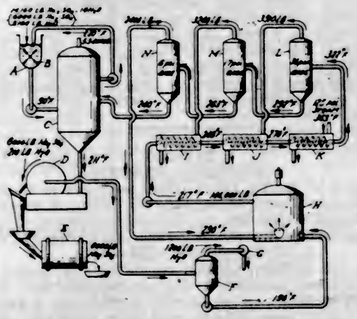
1. In a noise producing toy of the class described the combination of a frame in the form of a pistol, a lever pivoted in said frame, a vacuum cup in rigid connection with said frame, a second vacuum cup in connection with said lever engageable face to face with said first mentioned vacuum cup, a spring in connection with said lever tending to force said vacuum cups apart, a trigger pivotally connected with said frame and having a sear portion engageable with said lever, arranged to hold said lever in cocked position with said vacuum cups engaging each other, firing operation of said trigger releasing said lever from said cocked position, the tension of said spring then causing the lever to suddenly separate the engaged vacuum cups and thereby to produce a sharp smacking noise.

2,459,301
TILTABLE BIN
Ralph D. Adams, Inglewood, Calif., assignor of one-half to Thomas A. Feeney, Los Angeles, Calif.
Application May 26, 1945, Serial No. 596,041
3 Claims. (Cl. 312—155)



3. In a cabinet having upper and lower panels defining an opening, the combination of a bin provided with sides having rearwardly converging top and bottom edges, with a bottom and with a front plate overlapping the outside of the upper and lower panels, the forward edges of the tops of the sides of said bin being normally free of the bottom edge of said upper panel, and the forward part of the bottom of said bin normally resting on said lower panels and pivoting the bin, the bottom of said bin being provided with tapering projections normally bearing against the rear of the lower panel and spaced from the portion of the plate overlapping the front of the lower panel a distance to accommodate the lower panel thereby to pivot said bin on the upper edge of said lower panel, said projections cooperating with the plate engaging the outside of the upper panel to form the sole support for, and prevent horizontal movement of, the bin, said bin being movable to open and closed position by tilting.

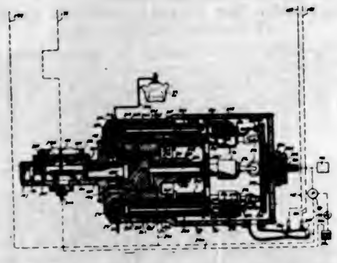
2,459,302
CONCENTRATION OF SALTS HAVING MINIMUM SOLUBILITIES AT TEMPERATURES ABOVE THOSE OF THE INITIAL SOLUTIONS
David Aronson, Pine Bluff, Ark., assignor to American Viscose Corporation, Wilmington, Del., a corporation of Delaware
Application December 10, 1942, Serial No. 468,531
15 Claims. (Cl. 23—121)



1. The process of separating a solute from a solution thereof in a solvent in which the solute has solubility characteristics including a point

of minimum solubility corresponding to a temperature above that of the initial solution and a concentration less than that of the initial solution and having increasing solubility with increasing temperature above the point of minimum solubility comprising diluting the solution to a solute concentration less than that corresponding to its minimum solubility and heating the solution while maintaining the concentration below saturation to a temperature above that corresponding to its minimum solubility, and then evaporating at least sufficient solvent therefrom that crystallization of the solute would normally occur on changing its temperature to the point of minimum solubility.

2,459,303
FLUID METERING SYSTEM
Thomas A. Baker, Logansport, Ind.
Original application May 12, 1942, Serial No. 442,711. Divided and this application December 24, 1942, Serial No. 470,014
7 Claims. (Cl. 103—37)



1. A variable capacity pump comprising, in combination, a pump chamber, means for entrapping fluid in said pump chamber and discharge same therefrom, variable means associated with the pump chamber for varying the amount of fluid entrapped in and discharged from said chamber, positionable means for operating the variable means through a range of positions to govern the quantity of fluid flowing into and out of the pump chamber, first control means responsive to the quantity of fluid flowing to the pump chamber, operable control means, fluid pressure actuating means for governing the moving and the repositioning of the positionable means, fluid valve means including a fluid valve having two relatively movable parts for controlling the fluid pressure actuating means, means for actuating one of said valve parts by the first control means and for actuating the other of said valve parts by the operable control means, whereby said fluid pressure actuating means and the positionable means are governed both by the fluid flowing into the pump chamber and by the operable control means.

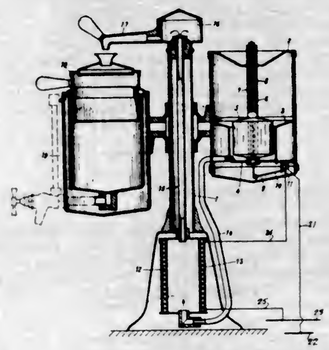
2,459,304
MEDICAL VIAL STOPPER FOR INSURING STERILE NEEDLE PUNCTURES
Frederick Blank, New York, N. Y.
Application August 28, 1946, Serial No. 693,542
8 Claims. (Cl. 128—272)

1. A hygienic vial closure for multiple injections, comprising a container stopper of soft, pliable and impervious material with a plurality

of individual sterile areas distributed over its upper surface, and cover means normally protecting the individual areas to retain normally

their sterility and adapted for removal individually to expose areas in succession when it is desired to pierce the stopper therethrough.

2,459,305
APPARATUS FOR MAKING INFUSIONS
Willi Brandl, Zurich, Switzerland
Application March 30, 1945, Serial No. 585,618
5 Claims. (Cl. 99—281)



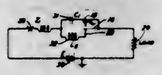
1. In an apparatus for making infusions, such as coffee or tea, a vertical hollow column, a heating chamber provided with an electric heating element arranged in the lower portion of said hollow column, a vertical pipe extending from said heating chamber upwardly toward the upper end of said hollow column, a discharge spout for heated water rotatably mounted on the upper end of said hollow column and in continuous communication with said vertical pipe, an open cold water container extending laterally from said column and fixedly secured thereto at an elevation above said heating chamber, a pipe connecting the bottom of said cold water container with the bottom of said heating chamber for conducting water by gravity into said heating chamber, a float in said cold water container, an electric switch, means operatively connecting said float with said electric switch whereby said switch will be automatically opened when the float touches the bottom of said cold water container and will be automatically closed when the float is lifted from said bottom, as by water poured into said open cold water container, and conductor means connecting said switch in circuit with said electric heating element and with a source of electric power.

the engaged vacuum cups and thereby to produce a sharp smacking noise.

has solubility characteristics including a point

618 O. G.—54

2,459,306
CONTACT PROTECTION FOR MERCURY WETTED SWITCH CONTACTS
Everett T. Burton, Millburn, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application July 21, 1944, Serial No. 545,985
2 Claims. (Cl. 175—294)



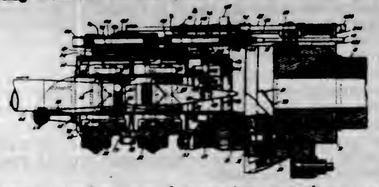
1. In combination, contacts for making and breaking an electrical circuit, a pool of mercury, means leading from said pool of mercury to one of said contacts for supplying mercury to said contacts, the surfaces of said contacts being formed to retain mercury thereon, means for moving said contacts toward and away from each other whereby the resistance between said contacts while in contact with each other is extremely low due to the thickness of the column of mercury formed therebetween but which varies through a wide range to a comparatively high value during the movement apart of said contacts due to the drawing out of a fine thread of mercury before a complete break in contacts between said contacts, and an electrical network providing means for transiently limiting the flow of current through said contacts during the said transient high resistance periods of the operation of said contacts, said network including an inductance element in series with said contacts, and a capacitor bridged about the said series combination of contacts and inductance element.

2,459,307
CABLE AND THE LIKE SUPPORTING STRUCTURES
Wilmer H. Churchill, Saugus, Mass., assignor to United-Carr Fastener Corporation, Cambridge, Mass., a corporation of Massachusetts
Application April 29, 1944, Serial No. 533,418
6 Claims. (Cl. 248—74)

1. A cable harness clamp comprising a resilient band having an intermediate base portion and terminal ends adapted to be connected to form a closed loop for engaging an article therein, a mounting member having a bridge portion and a spaced base portion, a swivel connection between said bridge portion and band base, the base of said mounting member being slotted to receive part of a tongue-type fastener member for attaching the mounting to a support.

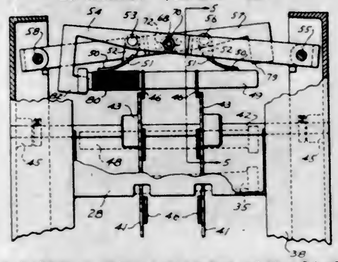
2,459,308
FUSE SETTING AND RAMMING MECHANISM
Frank E. Cole, Manchester, William V. Goodhue, Ipswich, and Roland Heeley, Beverly, Mass., assignors to United Shoe Machinery Corporation, Flemington, N. J., a corporation of New Jersey
Application October 30, 1945, Serial No. 625,516
12 Claims. (Cl. 89—6.5)

1. In combination, a breech-loading gun, a fuse-setting and a ramming device mounted in tandem on said gun, said devices being constructed and arranged to act successively upon a round of two-part ammunition, the fuse-setting device being nearest to the gun, said ramming device



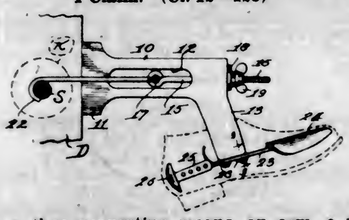
having similar round-engaging members positioned serially behind the fuse-setting device and spaced by a sufficient distance so that said members will engage the two parts of the round respectively.

2,459,309
BOBBIN SORTING APPARATUS
Louis M. Cotchett, Hingham, Mass., assignor to Foster Machine Company, Westfield, Mass., a corporation of Massachusetts
Application July 11, 1944, Serial No. 544,451
16 Claims. (Cl. 209—72)



1. A bobbin sorting apparatus of the kind described and including in combination conveying means for directing the bobbins to be sorted toward a sorting station. detecting means engageable with a bobbin and moveable longitudinally thereof for progressively exploring the surface of each bobbin at said sorting station, and selective means rendered operative by said detector means for directing bobbins in one direction when said bobbins contain any residual yarn, and in another direction when said bobbins are bare of residual yarn.

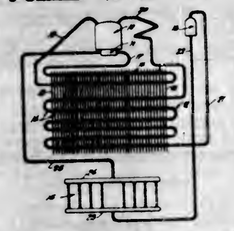
2,459,310
SHOE POLISHING BRACKET AND TREE
Ira B. Crow, Los Angeles, Calif.
Application August 12, 1947, Serial No. 768,211
1 Claim. (Cl. 12—123)



In a shoe supporting means, an arm, a pair of door knob spindle-engaging hooks, releasable

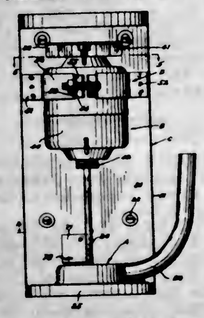
means on said arm adapted to draw said hooks into engagement with a door lock spindle and clamp the end of said arm against the edge of a door and means provided to extend within a shoe carried by the outer end of said arm for supporting the shoe.

2,459,311
MOTOR COOLING SYSTEM
Gordon M. De Jarlais, Evansville, Ind., assignor to Seeger Refrigerator Company, a corporation of Minnesota
Application May 15, 1946, Serial No. 669,756
5 Claims. (Cl. 62—115)



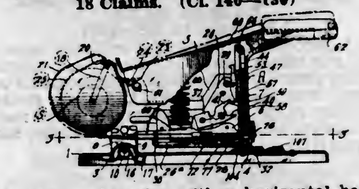
1. The method of refrigeration which comprises withdrawing vapor from an evaporator directly into a compressor located outside of a motor housing, compressing the vapor and discharging the superheated and compressed vapor directly from the compressor into a preliminary cooling condenser, partially condensing the vapor and consolidating the oil entrained therewith into droplets in said condenser and conducting the partially condensed vapor and oil from the condenser into an upper part of the housing of a motor driving said compressor and having a housing separate from said compressor, causing the condensed liquid refrigerant and oil to run down in the motor housing to cool the motor parts, the refrigerant again evaporating in this cooling operation, and the oil being separated and collected in an oil sump, and discharging the vapor substantially without oil from the top of the motor housing into a main condenser, where it is cooled and liquefied for use in the evaporator.

2,459,312
LIQUID CIRCULATOR
Bryant Essick, Los Angeles, Calif.
Application September 15, 1945, Serial No. 616,513
2 Claims. (Cl. 103—87)



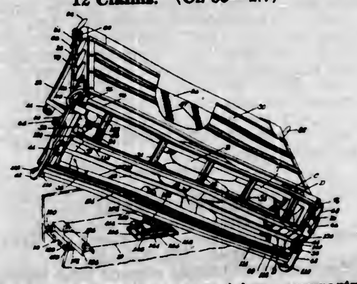
1. In combination a vertical frame member, a motor carried by the frame member and having a depending shaft, a liquid handling pump carried by the frame below the motor and including a case member with a central inlet opening into which the shaft extends with clearance and a rotor in the case member driven by the shaft, there being a peripheral outlet opening in said case, a vertically disposed baffle plate above the case member carried by one of the members and extending radially relative to the shaft to a point in the vicinity of the inlet opening to check circular motion of liquid in the vicinity of said opening.

2,459,313
STAPLING MACHINE
Frederick Franz, West Haven, Conn., assignor to The Bates Manufacturing Company, West Orange, N. J., a corporation of New Jersey
Application May 25, 1945, Serial No. 595,677
18 Claims. (Cl. 140—130)



1. The combination with a horizontal base, a frame thereon, a device mounted on said frame for vertical reciprocatory movement to act upon wire, and a support for a wire supply, of means above said base for pulling wire from said supply and for feeding it to a predetermined position to be acted upon by said device, said means including a plurality of cooperative wire-gripping elements normally to grip said wire between them, said elements being relatively bodily movable in planes substantially parallel to said base so that they may be moved apart and the wire may be manually grasped with one hand and while the grasp is retained may be pulled from said supply and placed in proper relation to said elements to be gripped between them when they are moved toward each other, means for actuating at least one of said elements to feed said wire from said supply to said predetermined position, and means holding said wire-gripping elements normally in wire-gripping relation.

2,459,314
ROCKET LAUNCHER
William V. Goodhue, Ipswich, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J., a corporation of New Jersey
Application July 15, 1946, Serial No. 683,674
12 Claims. (Cl. 89—1.7)



1. A rocket launcher comprising a magazine, a

fuse-setting and a ramming device mounted in

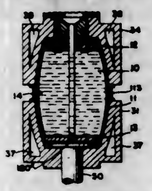
of door knob spindle-engaging hooks, releasable

launching way arranged to support a rocket in firing position, said magazine being inclined downwardly toward said launching way whereby rockets are fed by gravity into firing position from said magazine, means for firing a rocket when in firing position, said means comprising a firing circuit having terminals arranged to be engaged by corresponding terminals on the rocket in firing position, a switch, and means actuated by a rocket during its movement into firing position for closing said switch.

2,459,315
PROCESS FOR PREPARING METAL SALTS OF PENICILLIN
Moses Wolf Goldberg, Upper Montclair, and Sidney Teitel, Rutherford, N. J., assignors to Hoffmann-La Roche Inc., Nutley, N. J., a corporation of New Jersey
No Drawing. Application July 19, 1945, Serial No. 606,024
7 Claims. (Cl. 260—302)

1. A process for preparing penicillin salts of alkali and alkaline earth metals which comprises reacting penicillin dissolved in a substantially anhydrous organic solvent with an organo metallo compound of the group consisting of alkali metal and alkaline earth metal dialkyl malonates, alkyl acetoacetates and acetylacetone.

2,459,316
METHOD FOR MANUFACTURING BILGE BARRELS
Clarence U. Grameispacher, Jasper, Ind.
Application October 29, 1945, Serial No. 625,357
4 Claims. (Cl. 29—160)

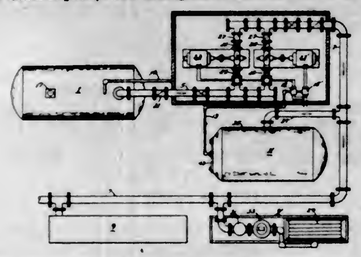


1. A method of manufacturing a barrel-shaped vessel which includes precutting sheets of wood or the like to form in each sheet a plurality of joined staves, arranging a plurality of said sheets in face engagement with adhesive therebetween, disposing the engaged sheets in the form of a cylindrical shell loosely around a closed metal container, positioning heads of wood or the like adjacent the closed ends of said metal container and within the wood-sheet shell, disposing the thus arranged metal container, heads, and shell between dies having their interior surfaces of a barrel-shaped form, closing the dies to contract the ends of the wood-sheet cylinder and retain the said heads therein, applying pressure within the metal container to expand and permanently deform the same against said retained heads and the assembly of wood sheets and simultaneously to expand the said sheets outwardly against the interior surfaces of the closed dies, and causing the adhesive to set while maintaining the assembly in its final shape.

2,459,317
FUELING SYSTEM
Albert J. Granberg, Oakland, Calif.
Application February 7, 1944, Serial No. 521,467
2 Claims. (Cl. 103—25)

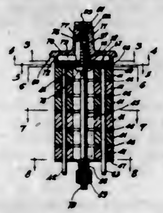
1. A pressure and liquid storage tank assembly comprising a tank having an inlet and outlet for

liquid to be stored therein, an independent removable chamber in said tank having flexible walls exposed to said liquid to provide a cushion for said liquid, said independent removable cham-



ber having an initial volume approaching that of said storage tank in the absence of liquid in said tank, and an outlet connection through a wall of said tank from said independent removable chamber for connection to a pressure switch.

2,459,318
FILTER
William W. Hallinan, Racine, Wis.
Application June 10, 1946, Serial No. 675,765
6 Claims. (Cl. 210—120)



1. A filter assembly comprising a supporting member said member comprising a disc having an axially extending lug, said lug being provided with a filter assembly outlet leading to the lower side of said disc, a centrally located rod threaded into said member and having a threaded member providing a retaining shoulder, a supporting plate having an aperture for said rod and engaged by said shoulder, said plate also having filtrate apertures, a lug depending from said supporting member surrounding said rod and a depending cylindrical wall carried by said supporting member, and a filter screen having an annular gasket surrounding said rod and a second annular gasket located at the edge of said screen to be clamped between said cylindrical wall and said plate when the gasket surrounding said rod is clamped between said lug and said plate.

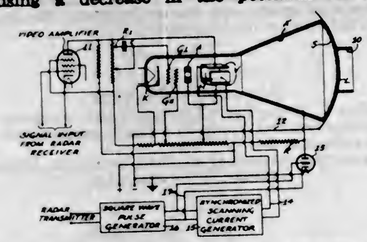
2,459,319
CATHODE-RAY OSCILLOSCOPE
Clarence W. Hansell, Port Jefferson, N. Y., assignor to Radio Corporation of America, a corporation of Delaware
Application October 11, 1944, Serial No. 558,200
19 Claims. (Cl. 315—30)

3. The method of operating a cathode ray oscilloscope having a fluorescent target and a second anode, which comprises applying periodically recurring signal waves to an electrode of said oscilloscope, raising the potential on said second anode during periods in which said signals

a motor carried by the frame member and hav-

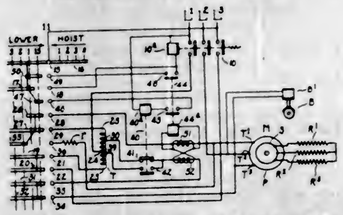
1. A rocket launcher comprising a

are being applied to said oscilloscope, and causing a decrease in the potential on said



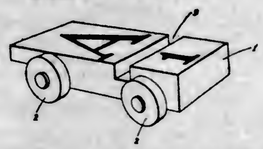
second anode during intervals between said periods.

2,459,320
CONTROLLER FOR ALTERNATING CURRENT MOTORS
Richard B. Hunter and Eric Pell, Shorewood, Wis., assignors to Cutler-Hammer, Inc., Milwaukee, Wis., a corporation of Delaware
Application December 14, 1945, Serial No. 634,943
13 Claims. (Cl. 318—363)



1. In combination, a polyphase alternating current motor subjected to overhauling loads, a power supply circuit therefor, an autotransformer, means to connect said autotransformer between the primary of said motor and said supply circuit to effect voltage unbalance of the motor primary, causing said motor at zero speed to produce a small torque in a direction opposite to that in which the overhauling load tends to move, and means associated with the former means to establish motor connections including said autotransformer which afford for spotting or checking the load a substantial increase in the aforesaid motor torque.

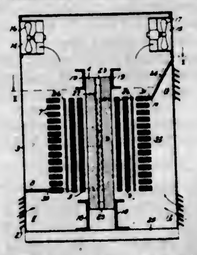
2,459,321
EDUCATIONAL TOY
Dorothy E. Johnson, Sacramento, Calif.
Application October 5, 1946, Serial No. 701,556
1 Claim. (Cl. 35—69)



In combination, a plurality of toy units, each unit comprising a relatively flat block, wheels journaled on the sides of the block and supporting the same, the block being provided with a groove cut downwardly from the upper face of the block and in substantial parallelism with the wheel axes transversely of the longitudinal axis of the block,

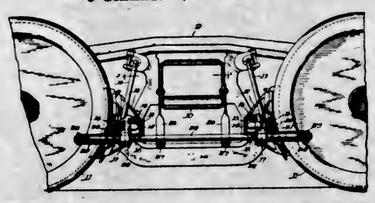
and a bar to be positioned in said slots to line the blocks up in side by side parallel relation; the top faces of the blocks containing selected educational indicia.

2,459,322
STATIONARY INDUCTION APPARATUS
Gorman J. Johnston, Bellevue, Pa., assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis., a corporation of Delaware
Application March 16, 1945, Serial No. 583,053
9 Claims. (Cl. 175—361)



3. Stationary induction apparatus comprising a core provided with windings thereon, said windings being spaced to provide lateral and longitudinal passages therebetween, said windings being arranged substantially symmetrically about a longitudinal plane through said core and windings, a casing surrounding said core and said windings and provided with an inlet in a first portion thereof and an outlet in a second portion thereof, and a baffle structure having a substantially step-shaped cross section in a plane normal to said longitudinal plane, said baffle structure extending between walls of said casing and having an aperture in alignment with said longitudinal passages, the edge of said aperture being adjacent said windings whereby said baffle and said windings cooperate to separate said casing portions, said longitudinal passages providing a rectilinear path for the flow of cooling fluid between said casing portions.

2,459,323
BRAKE BEAM SAFETY SUPPORT
Lawrence W. Kass, Chicago, Ill., assignor to Grip Nut Company, Chicago, Ill., a corporation of Illinois
Application February 28, 1945, Serial No. 580,145
6 Claims. (Cl. 188—210)



1. In a brake beam safety support for brake rigging comprising a pair of brake beams, each including a compression member and a tension member and swingable hangers for supporting the brake beams, the combination of single piece brackets, one adjacent each hanger and each having a body portion disposed between the compression and tension members and extending down below the same, each said bracket being

formed with a laterally projecting horizontal flange at its upper end resting on the associated

exert a force on said field structure in the direc-

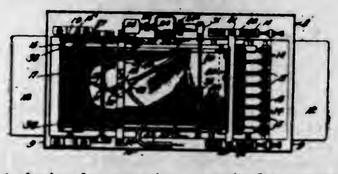
restraining said lock-out means, automatic means

section being adapted to cover the inner surfaces, the tops and the exterior surfaces of the

1. A pressure and liquid storage tank assembly comprising a tank having an inlet and outlet for

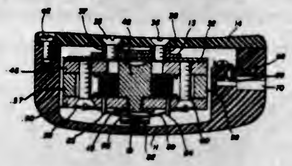
formed with a laterally projecting horizontal flange at its upper end resting on the associated compression member, and each said bracket having a hook-like seat member arranged to underlie the associated tension member, said seat member having a concave seat paralleling the tension member, brake beam positioning rods extending through the brackets below the brake beams and locking them upon the brake beams, with the compression member confined between said flange and positioning rod, and auxiliary supporting means for supporting the positioning rods in the event of failure of a hanger.

2,459,324
PAN GREASING MACHINE
Paul Kellner, New York, N. Y., assignor to Dukay Machinery Corporation, New York, N. Y., a corporation of New York
Application July 18, 1946, Serial No. 684,399
7 Claims. (Cl. 91—44)



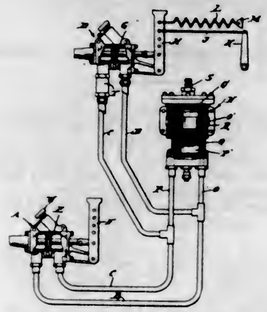
1. A device for greasing receptacles comprising a movably mounted belt of foraminous material, means for imparting longitudinal movement to the belt, a source of grease supply, means for distributing liquid grease on the foraminous belt so as to be carried thereby, means for supporting the receptacles to be coated on one side of the foraminous belt and means for imparting an air blast to the other side of the foraminous belt to spray liquid carried by the belt onto the receptacles.

2,459,325
BONE CONDUCTION UNIT
Hugh S. Knowles, River Forest, Ill., assignor to Zenith Radio Corporation, a corporation of Illinois
Application October 27, 1944, Serial No. 560,667
2 Claims. (Cl. 179—107)



1. A bone conduction unit including a driving structure and a casing surrounding said driving structure, said driving structure including a magnetic field structure, a pole piece supported in said field structure and an armature supported on said magnetic field structure in normally spaced relationship to said pole piece to permit vibration of said armature in response to those variations in density of magnetic flux from said pole piece corresponding to audio signal currents impressed on said field structure, said armature being connected to a first region on said casing to transmit vibrations to said casing, a spring element interposed between a second region on said casing and on the side of said field structure opposite said armature and positioned to exert a force on said field structure in the direction of said armature, and an adjusting element associated with said spring to vary the force exerted on said field structure.

2,459,326
PULSATOR SYSTEM
Arthur E. Kremiller, Glendale, Calif., assignor to Adel Precision Products Corp., a corporation of California
Application November 19, 1945, Serial No. 629,646
2 Claims. (Cl. 60—54.5)

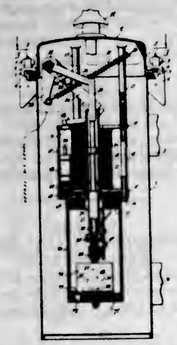


1. In a pulsator system for actuating a spring loaded control element, a transmitter unit including a cylinder and piston assembly and a means for reciprocating said piston; a receiver unit including a cylinder and piston assembly in which the piston is adapted for operative connection with said control element so that the spring load thereon is imposed on said piston, fluid lines connecting the cylinders of said units so that the receiver piston will move responsive to movement of said transmitter piston; a tubular valve body member connected in one of said lines, an annular elastic valve seat of circular cross section mounted in the bore of said body member, a valve member movable from a seated position within said seat in either direction to open the bore of said body member to the passage of fluid therethrough, and a pair of springs mounted in said body member for holding the valve member seated against forces externally applied to said receiver piston when the transmitter unit is not in operation and arranged so that one or the other will yield and allow the valve to open when the transmitter unit is operated to force fluid through said one line in one direction or the other.

2,459,327
AUTOMATIC RECLOSING CIRCUIT BREAKER
William D. Kyle, Jr., Milwaukee, and Carl Schindler, Wauwatosa, Wis., assignors to Line Material Company, a corporation of Delaware
Original application June 6, 1941, Serial No. 396,850. Divided and this application July 17, 1943, Serial No. 495,117
8 Claims. (Cl. 200—89)

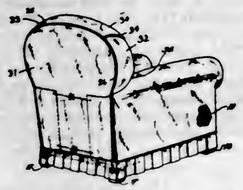
1. In a device of the class described, an electric switch normally biased towards closed position, normally inactive lock-out means for moving said switch to open position and for locking said switch in open position, biasing means biasing said lock-out means towards switch open position, a latch, said lock-out means having a latching lever normally engaged by said latch for

restraining said lock-out means, automatic means for moving said latch to release said latching lever, and manual means for moving said latch-



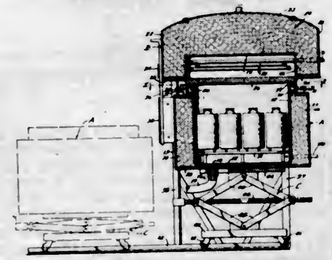
ing lever with reference to said latch to release said latching lever while said latch remains stationary.

2,459,328
SLIP COVER
Lionel C. Lens, Chicago, Ill., assignor to Sam Pass, Chicago, Ill.
Application October 4, 1945, Serial No. 620,309
1 Claim. (Cl. 155—182)



A slip cover for an article of stuffed furniture provided with front and back legs, a seat, arms and a back rest, said cover comprising two separately positionable and unconnected cover sections, the first of said sections comprising a baglike enclosure including connected front and rear panels and shoulder cover panels adapted to be drawn down over the back rest of the article to cover the front and rear surfaces and shoulders of the back rest and having surplus material at the lower edge of the forward panel adapted to be tucked into the space between the rear edge of the seat of the article and the adjacent portion of the back rest, said rear panel extending down to the lower portion of the rear of the chair and having a tubular piping extending over the top of the rear panel and down its sides to terminate at the bottom corners thereof, the lower edge of each shoulder cover panel and the lower portion of the adjacent side edges of the forward panel being free and adapted to be tucked into the spaces between the forward face of the back rest and the rear ends of the arms of the article, the second section of the slip cover comprising connected panels for covering the front of the article and the seat and the arms thereof, the seat cover panel of said second section being provided with a flap at the rear edge adapted to be tucked into the space between the rear of the seat and the lower portion of the back rest of the article, the arm cover panels of said second section being adapted to cover the inner surfaces, the tops and the exterior surfaces of the arms of the article and being provided with rear extensions adapted to be drawn partially across the rear of the article beneath said rear panel of said first section and having means for securing said extensions together at the rear of the article for preventing forward displacement of the said second section with respect to the article, the rear edges of the arm cover panels that cover the inside and top portions of the arms of the article being adapted to be tucked into the respective spaces between the rear and ends of the arms and the contiguous portions of the back rest of the article, and drawstrings extending loosely through the piping of the rear panel of said first section and projecting from the ends for securing said rear panel of the first cover section to the rear chair legs and over the rear extensions of said second cover section and for holding said rear panel under tension and preventing upward displacement of said first cover section.

2,459,329
DEHYDRATION DEVICE
Sidney O. Levinson and Franz Oppenheimer, Chicago, Ill., assignors to Michael Reese Research Foundation, a corporation of Illinois
Application May 29, 1944, Serial No. 537,780
2 Claims. (Cl. 34—76)



1. A device adapted for use in the drying of frozen materials, comprising a container having heat insulated walls and adapted to contain the materials to be treated, a closure for said container and having heat insulated walls, said container and closure being provided with sealing surfaces which are frusto-conical in shape, a resilient sealing member between said surfaces, means within said closure for refrigerating the interior of said container when said closure is in place thereon, and means for positioning said closure with respect to said container so that said sealing surfaces are positioned with respect to each other, said poistioning means including a wall exterior of and spaced from the interior wall of said container so as to provide an insulating space therebetween, said wall of the positioning means having at its top edge an inclined surface which is adapted to engage said closure to position the container with respect to the closure.

2,459,330
CONTROL SWITCH FOR SYNCHRONIZERS AND THE LIKE
George Albert Ley, Chicago, Ill.
Application October 23, 1944, Serial No. 559,987
5 Claims. (Cl. 200—153)

1. In a manually actuable circuit control switch, a housing, a pair of terminal members mounted

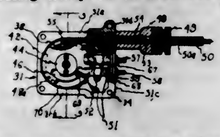
on said housing and having a pair of flexible contact elements extending into said housing, one

site sides of said annulus, one of said coatings extending from the outer edge of said annulus

the auxiliary air compressor, and optionally controlled means whereby air under pressure may

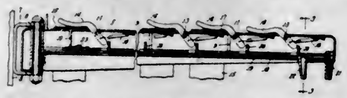
latches when the latches are in predetermined positions and the hub is in a position holding the collapsible reel segments in uncollapsed posi-

on said housing and having a pair of flexible contact elements extending into said housing, one of said contact elements being longer than the other; a non-conductive rotatable member journalled in said housing; a spring connected to said rotatable member and adapted to impel the same into contacting position; a metal switch plate on the peripheral portion of said rotatable member, said plate being adapted to connect said contact



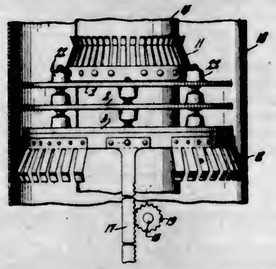
elements when said rotatable member is released in one direction; an outwardly curved cam member on said rotatable member, said cam member, on retracting movement of said rotatable element, being adapted to engage and flex outwardly one of said contact elements and thereby prevent said switch plate from closing the circuit of said contact elements during such return movement.

2,459,331
RACK FOR NECKTIES
Jack Linenthal, Chicago, Ill.
Application April 27, 1946, Serial No. 665,487
4 Claims. (Cl. 211—89)



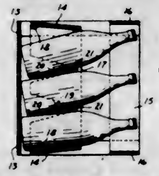
1. A necktie rack comprising a supporting bar, a series of necktie gripping elements pivotally mounted on the bar and having gripping portions overlying the bar, means individual to each gripping element yieldingly urging the overlying portions toward the bar, means carried by the bar to lift the overlying portions away from the bar to permit removal of a necktie held therebetween, and latch means operable to latch said gripping portions in lifted position.

2,459,332
CONDENSER
William E. McCown, Haddonfield, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application April 5, 1946, Serial No. 659,707
9 Claims. (Cl. 175—41)



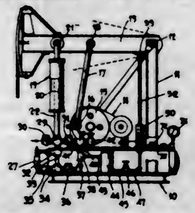
1. A condenser comprising an annulus of dielectric material, coatings of highly electrically conducting metallic material deposited on opposite sides of said annulus, one of said coatings extending from the outer edge of said annulus to a circular marginal area free of said coating and located adjacent the central aperture of the annulus, the other coating extending from the central aperture of the annulus to a circular marginal area free of said coating and located adjacent the outer edge of the annulus, said annulus having its inner and outer edges free of metallic material, an annular brush mechanically linked and electrically connected to one coating, and another annular brush mechanically linked and electrically connected to the other coating, said annular brushes having different diameters.

2,459,333
COMBINED SHIPPING AND DISPLAY CASE FOR BOTTLES
Floyd C. McKinley, Shaker Heights, Ohio
Application December 29, 1945, Serial No. 637,914
14 Claims. (Cl. 217—19)



1. A bottle case having an open top and a side upon which it may be stood, bottle positioning members within the case spaced from the bottom and sides and defining spaces to receive rows of bottles, said members forming fulcrums about which bottles may tilt by gravity to inclined positions when the case is stood upon its side, and spacers interposed between rows of bottles below said fulcrum members, said spacers being mounted for lateral movement with the bottles toward said side wall.

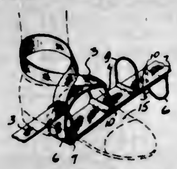
2,459,334
METHOD AND MEANS FOR PUMPING AIR IN AIR BALANCED PUMPING UNITS
Edgar W. Patterson and Clifford D. Spracher, Downey, Calif.; said Spracher assignor to said Patterson
Application October 9, 1944, Serial No. 557,870
17 Claims. (Cl. 74—41)



1. In combination with a pump jack having a walking beam; a balance cylinder and piston interposed between said beam and a fixed support whereby air may be compressed within the cylinder as the beam oscillates, a conduit through which said air under pressure may be discharged, a storage tank receiving said air under pressure, an auxiliary air compressor actuated by oscillation of the walking beam, a conduit leading from the auxiliary air compressor to the storage tank, a conduit connecting the balance cylinder and

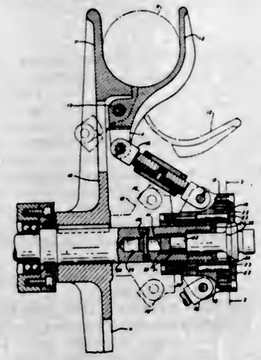
the auxiliary air compressor, and optionally controlled means whereby air under pressure may be delivered from the balance cylinder to the auxiliary air compressor to complete a multistage compression of air delivered from the compressor to the storage tank.

2,459,335
HOLDING ATTACHMENT IN COFFINS OR THE LIKE
Oscar C. Pope, Petaluma, Calif.
Application January 27, 1947, Serial No. 724,660
2 Claims. (Cl. 27—1)



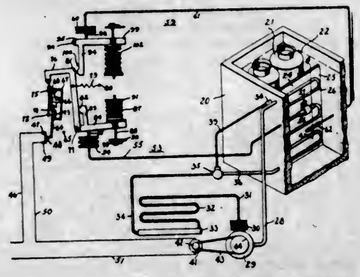
1. A coffin attachment for preventing displacement of a body in the coffin, comprising a strap made of flexible material, a pair of spaced rings on one side of the strap adapted to extend between the feet of said body; a pair of rings on the other side of the strap and spaced outside the respective first rings and located outside each foot when said strap is wound around the respective feet and through said rings in sequence, and securing elements on the strap for connection with the sides of the coffin.

2,459,336
COLLAPSIBLE REEL
Paul R. Powell, Baltimore, Md., assignor to Western Electric Company, Incorporated, New York, N. Y., a corporation of New York
Application October 22, 1946, Serial No. 704,819
6 Claims. (Cl. 242—111)



1. A collapsible reel, which comprises a shaft, a rigid reel section carried by the shaft, a plurality of collapsible reel segments carried by the rigid reel section, said collapsible reel segments being movable between collapsed positions and uncollapsed positions, a hub mounted slidably on the shaft, a plurality of links for connecting the hub to the collapsible reel segments, a plurality of rigid latches carried by the hub for pivotal movement with respect to the hub, said shaft having portions serving to interlock with the latches when the latches are in predetermined positions and the hub is in a position holding the collapsible reel segments in uncollapsed positions, means for urging the latches toward said predetermined positions, said latches being pivotable to positions in which they clear the shaft, each of the latches being provided with a camming portion, and a plunger having camming portions for engaging the camming portions of the latches to move the latches out of interlocking engagement with the interlocking portions of the shaft.

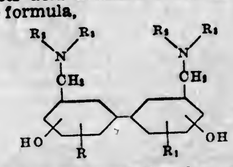
2,459,337
LIQUID COOLER INCLUDING CONTROL APPARATUS FOR LIMITING ICE FORMATION THEREON
Estel C. Raney, Delaware, Ohio, assignor to Ranco Incorporated, Columbus, Ohio, a corporation of Ohio
Application June 1, 1945, Serial No. 597,040
4 Claims. (Cl. 62—7)



2. The method of operating a refrigeration system, including a heat absorber immersed in a body of a normally liquid medium and a circulator connected to said absorber to supply refrigerant thereto, said method comprising controlling the operation of said circulator by variations in the temperature of said absorber as long as the medium, at a predetermined point spaced from the heat absorber, is in the solid phase and causing the presence of the medium in liquid phase at said point to cause operation of the circulator until the liquid is converted at said point into the solid phase.

2,459,338
AMINO METHYL PHENOLS
Albert L. Rawlins, Grosse Pointe Woods, Walter F. Holcomb, Detroit, Eldon M. Jones, Grosse Pointe Woods, Frank H. Tendick, Grosse Pointe Park, and Joseph H. Burckhalter, Detroit, Mich., assignors to Parke, Davis & Company, Detroit, Mich., a corporation of Michigan
No Drawing. Application April 22, 1944, Serial No. 532,372
7 Claims. (Cl. 260—570.9)

2. A compound of the class consisting of a free base and its acid addition salts, said free base having the formula,



where R is a member of the class consisting of

alkyl and alkenyl, R_1 is a member of the class consisting of alkyl, and alkenyl, and R_2 and R_3 are alkyl containing not more than 6 carbon

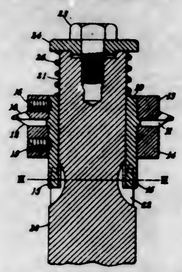
electron tubes connected in circuit with said source and the motor armature for alternately conducting successive half-waves of energy from

ures between about 10% to about 30% of the original mass by weight and said comminuted infusible residue measuring from 70–90% by

formed out of said nozzle, the openings of said nozzle and gas-collecting tube lying substantially

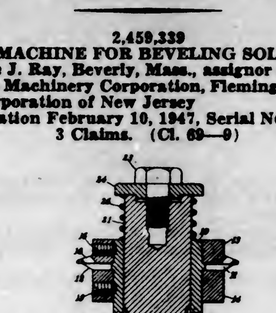
alkyl and alkenyl, R_1 is a member of the class consisting of alkyl, and alkenyl, and R_2 and R_3 are alkyl containing not more than 6 carbon atoms.

2,459,339
MACHINE FOR BEVELING SOLES
Eugene J. Ray, Beverly, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J., a corporation of New Jersey
Application February 10, 1947, Serial No. 727,703
3 Claims. (Cl. 69—9)



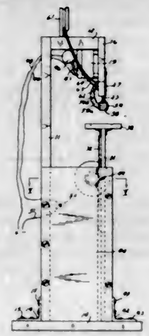
1. In a machine for beveling unattached soles, a work-supporting table, a rotating supporting means arranged to rotate about an upright axis, a cutter surrounding said rotating supporting means in telescopic relation thereto and arranged to slide up and down with respect thereto, the cutter having peripheral cutting teeth above the plane of the table and a hub extending above and below said teeth, a collar affixed to said hub above said teeth and extending radially beyond them to ride on the upper face of a sole and thereby support the cutter, and another collar carried by said hub below said teeth to guide the perimeter of the sole, said rotating supporting means and said hub having interengaged elements arranged to drive the cutter and permit it to slide up and down in response to variations in the thickness of the margin of the sole.

2,459,340
ELECTRONIC ENERGY CONVERSION AND CONTROL SYSTEM
James B. Reeves, Whitefish Bay, Wis., assignor to Cutler-Hammer, Inc., Milwaukee, Wis., a corporation of Delaware
Application April 14, 1944, Serial No. 531,090
25 Claims. (Cl. 318—345)



25. In combination, an alternating current source, a direct current motor, a pair of gaseous electron tubes connected in circuit with said source and the motor armature for alternately conducting successive half-waves of energy from said source to said armature during the positive half cycles of the alternating current voltage impressed upon the respective tube by said source, each of said tubes having a cathode, an anode and a control electrode, means to provide a periodic potential varying substantially linearly from a minimum to a maximum during said voltage half cycles and to drop substantially instantaneously to said minimum at the end of said half cycles, means to superimpose a unidirectional potential upon said periodic potential, and means to impress the resultant of said last-named potentials between the cathode and control electrode of each tube for varying the moments when each such tube becomes conducting during the respective positive half cycles.

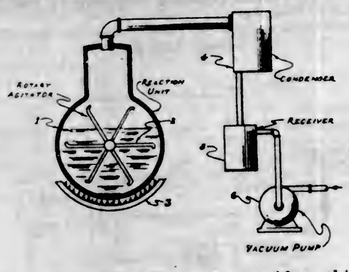
2,459,341
FLUXMETER
Valoran Russell, Morton Grove, Ill.
Application August 13, 1945, Serial No. 610,610
7 Claims. (Cl. 175—183)



1. In apparatus for determining the flux density in the air gap of a permanent magnet speaker comprising means for supporting a permanent magnet speaker with its diaphragm and voice coil removed, means simulating the removed voice coil, means for linearly vibrating said simulating means in the air gap of said speaker through a substantially constant stroke and at a substantially constant frequency, and means responsive to the effective value of the induced voltage in said simulating means for indicating the relative flux density in said air gap.

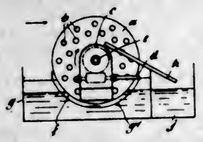
2,459,342
COMMINUTED DRYING OIL RESIDUES
William F. Schaufelberger, Pleasant Grove, N. J., assignor to Irvington Varnish and Insulator Company, a corporation of New Jersey
Application March 8, 1944, Serial No. 525,615
8 Claims. (Cl. 260—407)

1. Method of obtaining a comminuted, infusible residue from a drying oil having an iodine number in excess of 120 (Wijs) and substantially free of conjugated double bonds which comprises distilling such an oil at a temperature between 610°–700° F. under reduced pressure ranging downwardly from 5 inches of mercury pressure and with continuous agitation until the quantity by weight of distillate removed therefrom measures between about 10% to about 30% of the original mass by weight and said comminuted infusible residue measuring from 70–90% by weight of the original oil is obtained.



7. A comminuted infusible residue obtained from a drying oil having an Iodine No. in excess of 120 (Wijs) and substantially free of conjugated double bonds, said residue produced by distilling said oil at a temperature between 610° F. to about 700° F. under reduced pressure ranging downwardly from 5 inches of mercury pressure and with continuous agitation until the quantity of distillate removed therefrom is between about 10%–30% of the original mass by weight and said residue measuring between about 70%–90% by weight of the original mass is obtained.

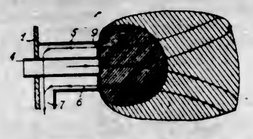
2,459,343
MEANS OF AUTOMATICALLY REMOVING FERROUS AND OTHER PARTICLES FROM LIQUID
Arthur Scrivener, Birmingham, England
Application September 14, 1944, Serial No. 554,120
In Great Britain April 25, 1944
1 Claim. (Cl. 210—1.5)



A device of the class described comprising, in combination, a rotatable disk, means for driving said disk continuously in one direction, a conduit for carrying in contact with a portion of said disk a stream of liquid containing magnetizable particles, magnetized rods extending transversely through said disk and having their ends on one side of the disk substantially in a single plane and their ends on the other side of the disk substantially in a single plane, and scrapers for removing particles from the ends of the rods after they emerge from the stream of liquid.

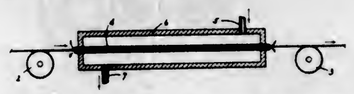
2,459,344
GAS PRODUCER
Fernand Sepulchre, Paris, France
Application March 17, 1945, Serial No. 583,340
In France January 28, 1943
2 Claims. (Cl. 48—118.5)

1. In combustion with an air gas producer, the provision of a furnace, a nozzle adapted to inject combustive material continuously into said furnace and a gas-collecting pipe mounted coaxially with said nozzle and adapted to remove the gases formed out of said nozzle, the openings of said nozzle and gas-collecting tube lying substantially



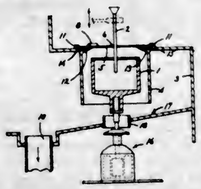
in the same plane perpendicular to the axis of the nozzle.

2,459,345
METHOD OF DRYING FIBROUS MATERIAL
Wayne A. Sisson, Silverside, Del., assignor to American Viscose Corporation, Wilmington, Del., a corporation of Delaware
Application March 14, 1945, Serial No. 582,713
29 Claims. (Cl. 34—23)



1. The method of drying fibrous articles of indefinite length and having at least one small dimension comprising continuously passing the moisture-laden article through a substantially closed channel having an entrance and exit for the article, maintaining the walls of the channel at a temperature above the boiling point of the liquid carried by the article at the prevailing atmospheric pressure in the vicinity of the entrance and exit of the channel, evaporating the liquid on the article as it passes through the channel while maintaining the vapor in contact therewith until the moisture-content throughout the article closely approaches an equilibrium condition with respect to the vapor in the channel and discharging the article from the channel while enveloped with some of the vapor into an unheated atmosphere in which the vapor is freely dissipated while leaving the article in a dry condition but with an appreciable amount of moisture therein.

2,459,346
LOCK LID FOR BOX COMPARTMENTS
Donald C. Thompson, Roanoke, Va., assignor to American Viscose Corporation, Wilmington, Del., a corporation of Delaware
Application November 12, 1946, Serial No. 709,389
9 Claims. (Cl. 57—76)



1. In combination, a centrifugal spinning pot, means for guiding filamentary material into the pot, a protective member surrounding the pot, a cover for the protective member, a recess around the upper rim of the protective member, a flange extending downwardly from said cover seating in said recess, and means for clamping said flange against its seat in said recess.

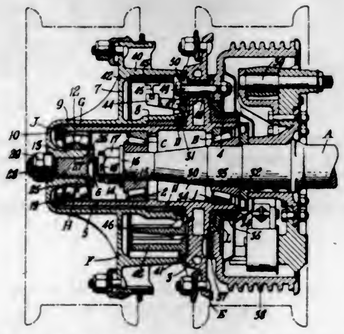
2,459,347
DUAL WHEEL ASSEMBLY

2,459,349
MOTOR CONTROL SYSTEM WITH LATCHING

means responsive to operation of said auxiliary device for maintaining said driving means in driving operation irrespective of subsequent

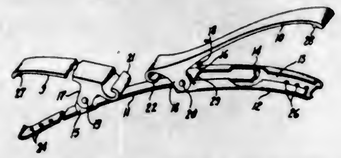
united to the outer layer, the lower end of the tibial section being closed, a foot rest block of wood attached to the closed lower end of the

2,459,347
DUAL WHEEL ASSEMBLY
Charles P. Tolman, Kew Gardens, N. Y., assignor to Differential Wheel Corporation, Detroit, Mich., a corporation of Delaware
Application May 25, 1946, Serial No. 672,326
1 Claim. (Cl. 301—36)



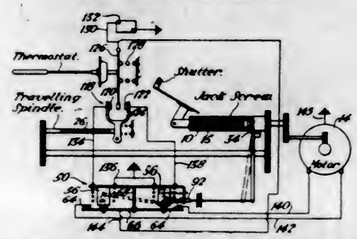
In a dual wheel structure for vehicles, an axle, an inner wheel having a hub surrounding and rotatively mounted on the axle and having interiorly of its outer end a bearing, a lock ring for preventing outward movement of said bearing, an outer wheel having a hub surrounding and rotatively mounted on the inner wheel hub, said outer wheel hub having an end rotatively supported on the interiorly positioned bearing of the inner wheel hub, a stud having an inner end engaging the bearing and an outer end removably carrying a head abutting and clamping the outer face of the outer end of the outer wheel hub, whereby the outer end of said outer wheel hub is held against outward movement from said bearing and the bearing is held against inward movement longitudinally of said inner wheel hub.

2,459,348
SHOE FASTENER
Richard Webb and Charles V. Webb, Los Angeles, Calif.
Application March 19, 1947, Serial No. 735,697
6 Claims. (Cl. 24—68)



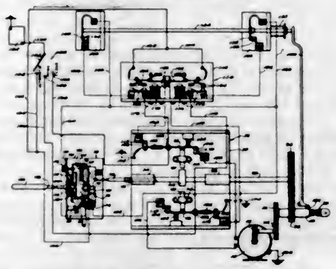
1. A pair of levers having juxtaposed curled ends adapted to be brought into a clasping relation with each other, means each having one end portion secured to an eyelet on each side of a cleft portion of a shoe, the other end portions of said means having a telescopic interlocking relation with each other, a pair of upstanding ears carried by one of said means intermediate its ends, a pair of upstanding ears carried by the other means adjacent its unattached end, pairs of flanges depending from the side edge portions of said levers adjacent their curled ends and embracing said pairs of ears, and means pivotally securing said pairs of ears and flanges together.

2,459,349
MOTOR CONTROL SYSTEM WITH LATCHING RELAYS
Victor Weber, Greensburg, Pa., assignor to Robertshaw-Fulton Controls Company, a corporation of Delaware
Application May 31, 1943, Serial No. 489,180
15 Claims. (Cl. 318—31)



1. In a driving mechanism, the combination with a direct current electric motor, a control switch therefor, means for operating said switch with gradual action, of a rotatable shaft driven by said motor, an electromagnetic device for relaying current between said switch and motor, said device having an armature movable to attracted position upon operation of said switch and being subject to chattering during said gradual action, latching means operatively engageable with said armature for maintaining said armature in attracted position, means biasing said latching means toward latching position, and means operated intermittently from said shaft into operative engagement with said latching means for overcoming said biasing means to release said armature.

2,459,350
AUTOMATIC REVERSING CONTROL FOR ELECTRIC MOTORS
Victor Weber, Greensburg, Pa., assignor to Robertshaw-Fulton Controls Company, a corporation of Delaware
Application August 6, 1943, Serial No. 497,613
4 Claims. (Cl. 318—31)



1. A control system for cowl flap or shutter actuators, comprising driving means for the actuator, a control device movable between positions for starting and stopping said driving means actuating means for said control device and being operable to stop said driving means, thermally responsive means for operating said control device between said positions to start said driving means, an auxiliary control device operable in response to movements of the first said device from one position to another,

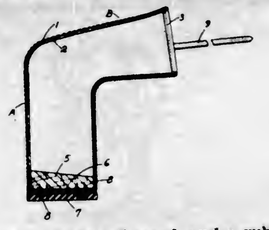
means responsive to operation of said auxiliary device for maintaining said driving means in driving operation irrespective of subsequent movement of said control device by said actuating means from said one position to another to stop said driving means, means operated from said driving means and cooperable with said control device for rendering said maintaining means ineffective after a predetermined period but being adapted to cause said driving means to stop only when said control device is in position to stop said driving means, and a position limit control operable from said driving means for stopping operation of said driving means and concurrently causing another operation of said auxiliary control device to render said maintaining means ineffective independently of said control device.

2,459,351
ILLUMINATED TEST DEVICE
Maurice Weincord, Chicago, Ill.
Application August 14, 1944, Serial No. 549,471
1 Claim. (Cl. 175—183)

A circuit continuity tester comprising a tubular housing member having a visibility opening at one end and an accessibility opening at its other end, an illumination bulb disposed adjacent said visibility, an electrically conductive wire helix having its intermediate convolutions constricted for screw threaded engagement with the filament contact base of said bulb and having its extreme convolutions radially and longitudinally distended for compressive engagement with the internal forward wall of said housing on the one hand and with the foremost end of a battery of cells constituting a power unit on the other hand, an electrically conductive prod bar secured to the foremost ones of said distended convolutions and extending through a journal opening of said housing whereby said helix may be compressed during abutment engagement of said prod bar, and a closure plug for said housing having an electrically conductive terminal plug to engage the rearmost end of said battery of cells and including in electrical engagement therewith a flexible lead wire terminating with a test engagement terminal element, said plug being screw adjustable throughout a distance to permit contactual engagement between said illuminating bulb and the foremost terminal of a battery cell in opposition to the tension of said helix spring or to be spaced therefrom so that the device may be used as a prod controlled illumination tester or as a contions of test requirements.

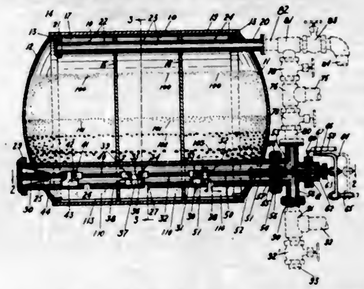
2,459,352
LEG WARMER BAG
Gertrude C. Williams, Cleveland, Ohio
Application October 28, 1946, Serial No. 706,179
6 Claims. (Cl. 2—69)

1. As a new article of manufacture, a leg warming garment comprising a leg covering made of pre-shaped integral tibial and thigh leg sections normally disposed at an angle to each other conforming with the angle of the tibial portions and thighs of the legs of a person when sitting, and means to fasten the covering about the legs of a wearer, the sections including an outer layer of water impervious material, and an inner layer of warming material of the nature of wool united to the outer layer, the lower end of the tibial section being closed, a foot rest block of wood attached to the closed lower end of the



tibial section inwardly thereof, and a rubber pad or section vulcanized to the outer under face of the impervious layer at the closed end of the tibial section.

2,459,353
LIQUID FILTER
Clayton W. Woods, Omaha, Nebr.
Application July 8, 1946, Serial No. 682,069
4 Claims. (Cl. 210—144)



1. In a filter having three chambers each provided with an outlet: means for governing a flow of backwash water through said chambers and outlets, said means comprising a conduit-pipe having closed ends adapted to be connected to a source of supply of water under pressure, said pipe being provided with an opening for and in communication with each chamber; a shoe for each opening, said shoes each being of a larger size and of a complemental transverse shape with respect to the walls of their respective openings for sealing the latter at desired times, said shoes being longitudinally slideably disposed in said pipe; means connecting said shoes together, the middle shoe being provided with an aperture therethrough adapted to align with the walls of its opening at times; and means slideable with respect to said pipe and secured to one of said shoes and extending outwardly of said pipe for causing said shoes to slide longitudinally of said pipe.

2,459,354
DOOR LATCH
Richard T. Anderson, Stacy, Minn.
Application June 21, 1944, Serial No. 541,344
7 Claims. (Cl. 292—163)

2. A door latch comprising a casing, a handle extending through said casing, means pivotally supporting said handle for pivotal or swinging movement thereof, means on said handle spaced from the axis thereof engageable with said cas-

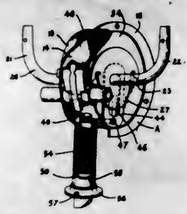
ing upon pivotal movement of said handle in either direction to cause a swinging movement of said handle, resilient means urging said handle to one extreme position, a link looped about

trol grid, a circuit connected to said anode and said cathode, loading means in said circuit, a step-down transformer having its primary in parallel with said loading means, the trans-

constituting a relatively fixed base, a power plant mounted on said framework and including a drive shaft, a complemental driven shaft mounted on said framework, a pulley on said drive shaft, a

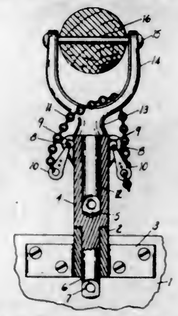
2,459,361
TORQUE RESPONSIVE CLUTCH
Harold E. Carnagua and Clifford L. Swift, Muncie, Ind., assignors to Borg-Warner Corporation, Chicago, Ill., a corporation of Illinois

ing upon pivotal movement of said handle in either direction to cause a swinging movement of said handle, resilient means urging said handle to one extreme position, a link looped about



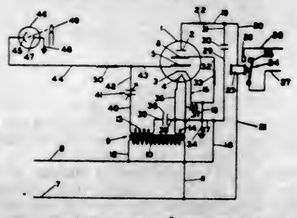
said handle at a point spaced from said pivotal supporting means, the swinging movement of said handle sliding said link, and a slidable latch bolt connected to said link to move therewith.

2,459,355
OARLOCK EXTENSION
Max W. Arcaux, Paw Paw, Mich.
Application December 5, 1946, Serial No. 714,333
10 Claims. (Cl. 9—26)



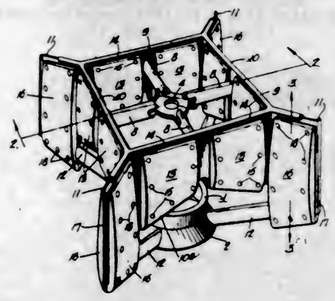
10. A rowing aid comprising a body member defining a central recess adapted to receive the stud portion of an oarlock, and an auxiliary stud formed on the opposite end of said body from said recess and adapted to fit within the oarlock socket of a boat, said stud being axially aligned with said recess.

2,459,356
ELECTRIC CONTROLLING SYSTEM
Fred B. Aubert, Detroit, Mich.
Application June 19, 1946, Serial No. 677,873
2 Claims. (Cl. 250—41.5)



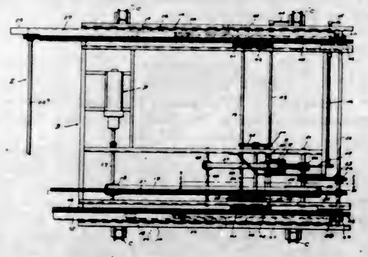
1. In an electric controlling system, an electro tube having an anode, a cathode and a control grid, a circuit connected to said anode and said cathode, loading means in said circuit, a step-down transformer having its primary in parallel with said loading means, the transformer secondary having one end isolated from ground and having its other end connected to said grid, a condenser interposed between said transformer other end and said grid, a photocell, a conductor connecting the photocell cathode to said grid, and a resistor in said conductor.

2,459,357
BOMB FIN STRUCTURE
Richard A. Bell, Penn Wynne, Pa., assignor, by mesne assignments, to Philco Corporation, Philadelphia, Pa., a corporation of Pennsylvania
Application March 30, 1944, Serial No. 528,749
1 Claim. (Cl. 102—2)



In an aerial bomb of the type including radio apparatus, a fin structure constituting an antenna for said apparatus and comprising a plurality of active fin elements of thin metal, and vibration-inhibiting pads secured to the faces of said elements, said pads lending stiffness to the said elements and being composed of wood having a stiffness-to-mass ratio substantially in excess of that of the metal of said fin so as to increase the stiffness-to-mass ratio of the composite fin element as a whole.

2,459,358
LUMBER STACKING MACHINE
Boswell M. Birkhead, Ola, Ark.
Application September 14, 1945, Serial No. 616,348
3 Claims. (Cl. 198—118)



1. In a lumber handling and stacking machine of the class described, an open-style framework

constituting a relatively fixed base, a power plant mounted on said framework and including a drive shaft, a complemental driven shaft mounted on said framework, a pulley on said drive shaft, a second pulley on said driven shaft, a propulsion belt trained over said pulleys for operating said driven shaft, a lumber conveying, elevating and stacking unit embodying a pair of complementail arms located one on each side of the framework, the forward ends of said arms being hingedly mounted on the forward end portion of said framework, a sprocket shaft mounted in the rear upper ends of said arms, sprocket wheels mounted at opposite ends of the latter shaft, a second sprocket shaft mounted on the forward end portion of said framework beyond and in advance of the hinged ends of said arms, sprocket wheels keyed on the opposite end portions of said second named sprocket shaft, endless conveyor chains disposed in parallelism with each other and spaced from one another and trained over respective coacting sprocket wheels on the end portions of the sprocket shafts, an operating connection between said driven shaft and said second named sprocket shaft, means for raising and lowering said arms in respect to the framework, said means embodying levers, said levers being similarly arranged one on each side of the intermediate portion of the framework and said levers being pivotally anchored at their lower ends on said framework, idling rollers mounted on the upper ends of said levers and in rollable camming contact with intermediate portions of said arms, a pair of sheaves, one for each lever, links pivotally attaching the respective sheaves to the upper portions of the respective levers, cables securely anchored at corresponding ends on the upper portion of the front end of said framework, intermediate portions of said cables being trained over said sheaves, a horizontal cable winding shaft mounted for operation on said framework on a plane below the anchored ends of said cables and provided with cable winding drums, said cables being reelable at their remaining ends on the drums, and an operating connection between the winding shaft and the aforementioned driven shaft.

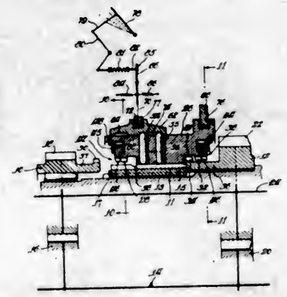
2,459,359
PURIFICATION OF BETA-PICOLINE
Robert S. Bowman, Pittsburgh, Pa., assignor to Jones & Laughlin Steel Corporation, Pittsburgh, Pa., a corporation of Pennsylvania
No Drawing. Application January 7, 1947, Serial No. 720,675
9 Claims. (Cl. 260—290)

1. The process of purifying 3-picoline that is contaminated with at least one of the bases 4-picoline and 2,6-lutidine, comprising heating to a temperature not exceeding about 100° C. for about one-half hour to about two hours the contaminated 3-picoline with formaldehyde and an acid salt of a secondary amine adding water and extracting and recovering 3-picoline having a purity at least of approximately 95% from the reaction products.

2,459,360
LACTONE DERIVATIVES OF 2-PYRIDONE COMPOUNDS
William F. Bruce, Penfield, Pa., assignor to Wyeth Incorporated, Philadelphia, Pa., a corporation of Delaware
No Drawing. Application April 3, 1945, Serial No. 586,439
3 Claims. (Cl. 260—295.5)

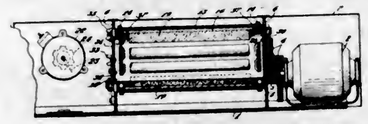
1. The lactone of 3-carboxy-4-hydroxymethyl-5-hydroxy-6-methyl-2-pyridone.

2,459,361
TORQUE RESPONSIVE CLUTCH
Harold E. Carnagua and Clifford L. Swift, Muncie, Ind., assignors to Borg-Warner Corporation, Chicago, Ill., a corporation of Illinois
Application June 26, 1943, Serial No. 492,378
16 Claims. (Cl. 192—48)



1. In a coupling device, a pair of coupling members, one rotatable relative to the other, adapted for positive coupling connection with each other, at least one of said coupling members being shiftable to effect said connection, torque responsive means for shifting said shiftable coupling member into and out of said connection in response to torque transmitted therethrough in opposite directions, and operator controlled shift means connected with said shiftable coupling member for moving the same from a non-torque responsive position to a position from which said shiftable coupling member may shift torque responsively, said shift means being adapted for free movement with said shiftable coupling member during torque responsive shifting thereof.

2,459,362
PHOTOGRAPHIC PRINTING APPARATUS HAVING A ROTARY LIGHT-TRANSMITTING CYLINDER AND AN ENDLESS BELT BEARING AGAINST THE CYLINDER
Francis H. Cary, Warwick, R. I., assignor to Builders Iron Foundry, Providence, R. I., a corporation of Rhode Island
Application June 2, 1945, Serial No. 597,186
3 Claims. (Cl. 95—77.5)



1. Apparatus for printing light sensitive sheets from record sheets comprising rollers disposed at the corners of an intervening space, a hollow light-transmitting cylinder disposed in said space adjacent two of said rollers, and an endless belt trained around said rollers and looped into said space between said two rollers and around the cylinder in supporting relation to said cylinder, the diameter of the cylinder being greater than the distance between the two rollers and the cylinder being free to be drawn into juxtaposition to the two rollers when the belt is taut, the belt having marginal flanges which straddle the cylinder to keep it centered on the belt.

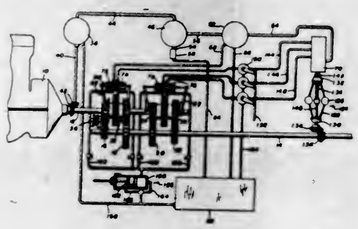
2,459,363
AUTOMATIC TRANSMISSION
Jerry C. Chamberlain, Phoenix, Ariz., assignor of one-fourth to H. S. Chamberlain and one-

of the crepe, creping to produce a high ratio crepe above 1½:1 and heating the paper to polymerize the resin, the amount of the resin in the paper being sufficient to impart elastic return thereto

2,459,367
1,4-DI(HETEROCYCLIC SUBSTITUTED) PIPERAZINES
John Joseph Denton, Somerville, and Kenneth

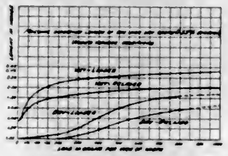
into a holder, engaging the opposite end of the pear at the calyx to determine a reference axis through the pear corresponding substantially with the stem of the pear and holding the pear so

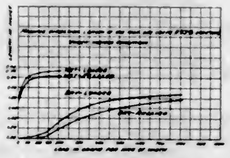
2,459,363
AUTOMATIC TRANSMISSION
Jerry C. Chamberlain, Phoenix, Ariz., assignor of one-fourth to H. S. Chamberlain and one-fourth to Dorothy Chamberlain, both of Phoenix, Ariz.
Application April 11, 1947, Serial No. 740,949
3 Claims. (Cl. 74—336.5)



1. A hydraulic gear shift for variable speed gearing including a source of pressurized fluid connected to a selector valve, clutches operatively associated with gearing and having the selective engagement thereof controlled by said selector valve, and a governor controlling said selector valve, said source being connected to a reservoir for said fluid, said gearing including reverse gears, and a three-way valve operable to direct said pressurized fluid selectively to said reservoir, to the one of said clutches associated with said reverse gears, and to said selector valve.

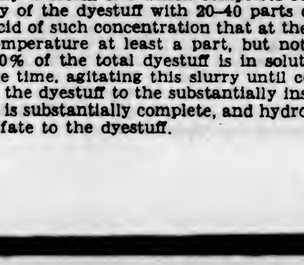
2,459,364
CREPED PAPER AND METHOD OF MAKING
Robert F. Charles, South Acton, and Frank W. Durgin, Natick, Mass., assignors to Dennison Manufacturing Company, Framingham, Mass., a corporation of Massachusetts
Application December 5, 1944, Serial No. 566,746
8 Claims. (Cl. 154—33.05)





1. The method of making crepe paper which comprises impregnating a sheet of paper with an aqueous solution of a polymerizable synthetic resin selected from the group consisting of aldehyde condensation products of urea, phenol and melamine, said resin capable of wetting paper fibres, of adhering firmly thereto, and of imparting to the paper a sharp elasticity with respect to even slight distortion of shape as well as throughout the complete opening out of the folds of the crepe, creping to produce a high ratio crepe above 1½:1 and heating the paper to polymerize the resin, the amount of the resin in the paper being sufficient to impart elastic return thereto when both wet and dry but insufficient to produce brittleness and stiffness whereby the flexible crepe paper may be stretched when both wet and dry and will return considerably to its original crepe length upon release of such stretching tension.

2,459,365
ELECTROLYTIC PROTECTIVE SURFACE TREATMENT OF MAGNESIUM BASE ALLOYS
Geoffrey Edward Coates, Swansea, Wales, assignor, by mesne assignments, to The Permanente Metals Corporation, a corporation of Delaware
Application February 21, 1944, Serial No. 523,296
In Great Britain April 3, 1942
1 Claim. (Cl. 204—56)



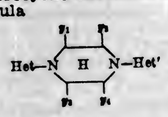
A process for the electrolytic protective surface treatment of magnesium base alloy which consists of treating said alloy in an electrolytic cell wherein said alloy is the anode, the electrolyte in said cell consisting of a solution in water of from 0.2 to 0.5 mol per liter of dichromate ion, from 0.1 to 1.5 mols per liter of sulfate ion, a buffer mixture consisting of acetic acid and sodium acetate and being adapted to maintain the pH of the electrolyte within the range pH4 to pH6, the acetate ion being present in a concentration of 0.2 to 1.0 mol per liter, and the electrolyte constituents being so selected that within this pH range their cations remain in stable solution, the current density in said cell being from 10 to 20 amperes per square foot of anode surface.

2,459,366
ACID TREATMENT OF PYRANTHRONE VAT DYESTUFFS
John F. Cullinan and Lawrence D. Lytle, Plainfield, N. J., assignors to American Cyanamid Company, New York, N. Y., a corporation of Maine
No Drawing. Application March 13, 1944, Serial No. 526,345
8 Claims. (Cl. 260—360)

1. The method of converting a vat dyestuff characterized by the presence of the pyranthrone nucleus into very finely divided particles of substantially uniform size which comprises forming a slurry of the dyestuff with 20–40 parts of sulfuric acid of such concentration that at the reaction temperature at least a part, but not more than 10% of the total dyestuff is in solution at any one time, agitating this slurry until conversion of the dyestuff to the substantially insoluble sulfate is substantially complete, and hydrolyzing the sulfate to the dyestuff.

2,459,367
1,4-DI(HETEROCYCLIC SUBSTITUTED) PIPERAZINES
John Joseph Denton, Somerville, and Kenneth Leon Howard, Westfield, N. J., assignors to American Cyanamid Company, New York, N. Y., a corporation of Maine
No Drawing. Application November 12, 1947, Serial No. 785,527
7 Claims. (Cl. 260—251)

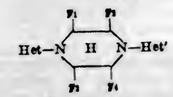
1. 1,4-diheterocyclic substituted piperazines of the type formula



in which Het and Het' are members selected from the group consisting of the pyridyl, pyrimidyl, pyridazyl and pyrazyl radicals, the bond being to a

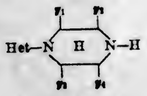
linkage, and γ_1, γ_2, γ_3 and γ_4 are selected from the group consisting of hydrogen and the lower alkyl radicals, and salts of said piperazines.

6. A method of preparing 1,4-diheterocyclic piperazines of the type formula



in which Het and Het' are members selected from the group consisting of the pyridyl, pyrimidyl, pyridazyl and pyrazyl radicals, the bond being to a

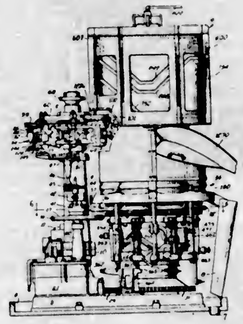
linkage, and γ_1, γ_2, γ_3 and γ_4 are selected from the group consisting of hydrogen and the lower alkyl radicals, which comprises reacting, in the presence of a basic acceptor for hydrogen halides, a substituted piperazine of the type formula



and a ring halogenated member of the group consisting of pyrimidine, pyridazine, and pyrazine, separating the resultant disubstituted piperazine

2,459,368
PEAR PEELING, CORING, AND SPLITTING METHOD AND APPARATUS
Guy A. Dunn, Oakland, Calif., assignor to California Packing Corporation, San Francisco, Calif., a corporation of New York
Application September 9, 1940, Serial No. 355,988
12 Claims. (Cl. 146—238)

6. In a continuous method of preparing pears for canning, the steps of positioning a pear in a fruit circuit by feeding the neck end of a pear into a holder, engaging the opposite end of the pear at the calyx to determine a reference axis through the pear corresponding substantially with the stem of the pear and holding the pear so positioned, transferring the pear into a continuously moving operating cycle, passing a stemming



tube during transfer along the reference axis so determined, and then peeling the pear while supported on the stemming tube, and then splitting and coring the pear while guidingly supporting the pear on the core axis formed by the stemming tube along the said reference axis.

2,459,369
METHOD OF EXTRACTING RUBBER FROM PLANTS
Howard Tint and Charles W. Murray, Salinas, Calif., assignors to the United States of America as represented by the Secretary of Agriculture
No Drawing. Application January 13, 1947, Serial No. 721,829
10 Claims. (Cl. 260—818)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. A process of extracting rubber from guayule plants, comprising comminuting the green, lush, freshly harvested, defoliated guayule shrub and then subjecting the said comminuted, green, lush, freshly harvested, defoliated guayule shrub to extraction with a water-miscible organic solvent which dissolves the resins therein and not the rubber, removing the solvent, and thereafter removing the rubber from the shrub.

2,459,370
PACKING ASSEMBLY
William C. Ferguson and Paul Sussenbach, St. Louis, and Frank L. Limn, University City, Mo., assignors to The Presstite Engineering Company, St. Louis, Mo., a corporation of Missouri
Application May 15, 1946, Serial No. 669,978
4 Claims. (Cl. 288—13)

1. A packing comprising two plugs, each plug comprising an ungulate wedge having end surfaces, a partial cylindrical surface and a planar wedge surface inclined at an acute angle to the longitudinal axis of said cylindrical surface, said wedge surface intersecting said end surfaces, said

plugs forming a cylinder when assembled with said wedge surfaces in coextensive engagement, each of said wedge surfaces having a groove

carrier, a tension member pivotally supporting said carrier for rocking movement about its longitudinal axis, disposed centrally longitudinally

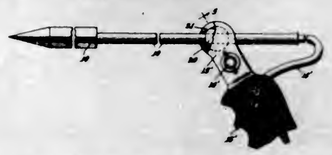
said cores and having a threaded end and a nut thereon, and a rod located at each of the ends of said cores within said recesses, each rod ex-

on the side toward said housing with a conduit communicating with one part and with the housing adjacent its inner face and being provided with another conduit communicating with the

plugs forming a cylinder when assembled with said wedge surfaces in coextensive engagement, each of said wedge surfaces having a groove therein opposite the groove in the other, said

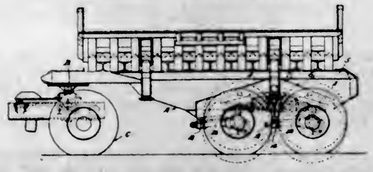
grooves providing an inclined passage along said engaged surfaces and between the end surfaces for a conduit or the like through the packing when said plugs are so assembled.

2,459,371
ADJUSTABLE SOLDERING IRON
Allen T. Foster, Chicago, Ill., assignor to Electric Soldering Iron Co., Inc., Deep River, Conn., a corporation of New York
Application December 19, 1946, Serial No. 717,129
4 Claims. (Cl. 219—26)



1. An adjustable electric soldering iron, comprising in combination a relatively flat, finger-grip type handle composed of two edgewisely united parts provided with longitudinal cavities for accommodating a conductor, one end of the handle parts being adjustable in respect to each other and forming means for the reception of and for adjustably holding an iron casing, and means at that one end of the handle parts for fixing the casing in its desired, adjusted position, said casing holding means comprising a pair of spaced handle extensions having substantially annular termini, and means for drawing the latter toward each other for clamping between them a portion of the iron casing.

2,459,372
TANDEM AXLE RUNNING GEAR FOR TRAILERS OR THE LIKE
George D. Fraunfelder, Easton, Pa., assignor to Easton Car & Construction Company, Easton, Pa.
Application July 18, 1945, Serial No. 605,796
18 Claims. (Cl. 280—104.5)

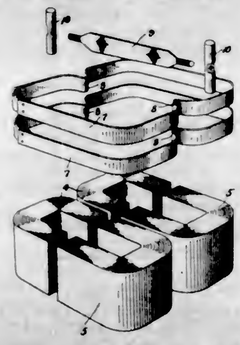


1. In a land vehicle running gear, a frame, a pair of wheels arranged side by side on a single axle disposed horizontally and tranversely with respect to the intended line of travel, a single carrier, a tension member pivotally supporting said carrier for rocking movement about its longitudinal axis, disposed centrally longitudinally between said wheels, means pivotally supporting said tension member at its advance end extremity on said frame for swinging movement in a vertical longitudinal plane, means mounting said axle at the free trailing end of said carrier, and a single spring means disposed centrally between said wheels and yieldably resisting upward movement of the free trailing end of said tension member.

2,459,373
V-BELT CLUTCHING DEVICE
William W. Gettys, Greeley, Colo.
Application June 8, 1945, Serial No. 598,367
4 Claims. (Cl. 74—242.14)

1. A V-belt clutching device comprising: a drive shaft; a V-belt drive pulley on said drive shaft; a driven shaft; a V-belt driven pulley on said driven shaft; an endless V-belt surrounding both pulleys; means for causing said shafts to approach each other when desired; and a guide member positioned in spaced relation to the outer face of said belt intermediate said pulleys, said guide member being pivoted at its one extremity; and means operable from said means for causing said shafts to approach each other and connected with said guide member for swinging the latter on its pivot toward said belt to prevent said belt from moving outwardly as said shafts approach each other.

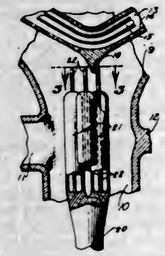
2,459,374
CORE CLAMPING MEANS
Earl F. Goodrich, Grand Rapids, Mich., assignor to Kirkhof Manufacturing Corporation, Grand Rapids, Mich., a corporation of Michigan
Application December 23, 1946, Serial No. 717,949
2 Claims. (Cl. 175—356)



1. In a transformer structure including two cores located side by side, each of said cores being divided between its ends, the ends of said cores at adjacent sides being rounded to form outwardly opening recesses, two strong flexible bands extending completely around both of said cores in spaced relation, a bolt extending between

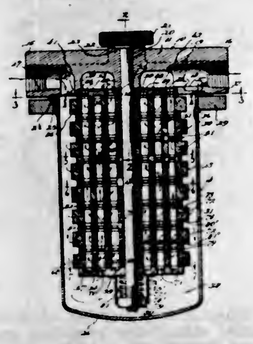
said cores and having a threaded end and a nut thereon, and a rod located at each of the ends of said cores within said recesses, each rod extending between and engaging said bands and said rods being engageable with said bolt at opposite ends thereof, whereby manipulation of said nut on said bolt will draw said bands into said recesses and tighten them about said cores.

2,459,375
MICROFRACTIONATION STILL WITH CAPILLARY TUBE OFFTAKES FOR CONDENSATE
Clark Webster Gould, Jr., Pasadena, Calif., assignor to California Institute Research Foundation, Pasadena, Calif., a corporation of California
Application September 15, 1944, Serial No. 554,314
10 Claims. (Cl. 202—202)



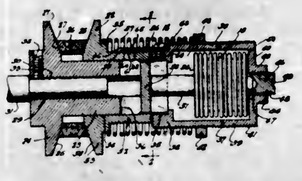
1. An apparatus for the microdistillation of liquids comprising: a boiler; a condenser shell communicating therewith; a condenser mounted within said shell and spaced from the walls thereof and having a condensing surface; a collector tip depending from said surface; a receiving cup; and a capillary tube loosely positioned in said cup and adapted to contact said tip.

2,459,376
FILTER
William W. Hallinan, Racine, Wis.
Application February 9, 1944, Serial No. 521,598
5 Claims. (Cl. 210—120)



1. In a filter assembly, the combination of a supporting body provided with outlet and inlet ports, with a housing member carried by said body, the said housing projecting laterally from one side of said body, said body being provided on the side toward said housing with a conduit communicating with one part and with the housing adjacent its inner face and being provided with another conduit communicating with the other port and communicating with the interior of said housing adjacent the central portion of the housing, said two latter conduits being separated by a wall and said wall being recessed to receive an end plate, said body having a centrally located bore for receiving a threaded member projecting into said housing, a threaded member located in said bore and housing and having a manual actuating member located outside said housing, and a plurality of filter elements and pressure plates carried by said threaded member, the filter elements being located between alternate pressure plates, one of said pressure plates constituting an end plate having apertures communicating with the conduit leading to one of said ports and another of said pressure plates constituting another end plate having apertures communicating with the interior of said housing, all the other pressure plates and the filter elements being provided with a plurality of series of through apertures adapted to communicate with apertures in adjacent filters and pressure plates to form conduits communicating with predetermined apertures in said end plates, the said filters comprising thick fibrous members with the said apertures pre-formed in said filters, the walls of certain of said apertures acting as filtering surfaces.

2,459,377
VARIABLE-SPEED PULLEY
William W. Hallinan, Racine, Wis.
Application February 8, 1946, Serial No. 646,267
2 Claims. (Cl. 74—230.17)



1. In a variable diameter pulley, the combination of a pulley section provided with a cylindrical hub and adapted to be secured to a shaft with a second pulley section having a cylindrical bore, whereby it is slidably mounted on said hub, said pulley sections being provided with circular belt-engaging flanges having opposed frusto-conical faces for engaging the sides of a tapered belt, thermostatic means carried by one section and reacting against said section and acting against the other section for urging the pulley sections toward each other, the pressure of the belt between said opposed frusto-conical flanges urging the sections apart, and resilient detent means acting between said sections for resisting movement of one section relative to the other until a predetermined force is built up adapted to overcome said resilient means to move the sections into any of a plurality of definite positions for predetermined speeds, said resilient means comprising a spring finger carried by one section and notches formed in the other section and adapted to be engaged by a laterally turned end portion on said spring finger, said notches being curved to provide a camming formation whereby the laterally turned portion of the spring finger may be cammed out of a notch by axial pressure exerted between the sections in either direction.

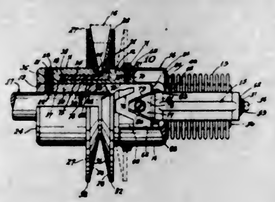
2,459,378
VARIABLE-SPEED PULLEY

2,459,380
CLOTHESLINE HOLDER

and elongated recesses on their outer sides, the

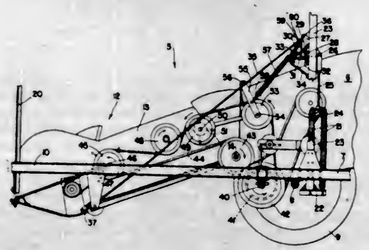
clamping a bale or other compact mass of material to hold the same on the base, an open-ended,

2,459,378
VARIABLE-SPEED PULLEY
William W. Hallinan, Racine, Wis.
Application June 10, 1946, Serial No. 675,764
11 Claims. (Cl. 74—230.17)



3. In a thermostatically controlled pulley, the combination of a pair of pulley sections movably mounted for axial movement relative to each other with a thermostat adapted to react against one section and to act on the other section to move the sections toward each other or apart in accordance with changes of temperature, the said thermostat comprising a bellows having one end secured to a frame member carried by one pulley section, the opposite end of the bellows having an end plate provided with a pair of axially extending flanges which are fixedly secured to the other pulley section, the end of the bellows reacting on the first mentioned pulley section being fixedly secured in a frame, and said frame surrounding said bellows and being secured by an axial securing device to said first mentioned section.

2,459,379
BELT-TIGHTENING DEVICE
Fredrick C. Hanson, Cordova, Ill., assignor to Deere & Company, Moline, Ill., a corporation of Illinois
Application July 10, 1944, Serial No. 544,288
9 Claims. (Cl. 74—242.11)

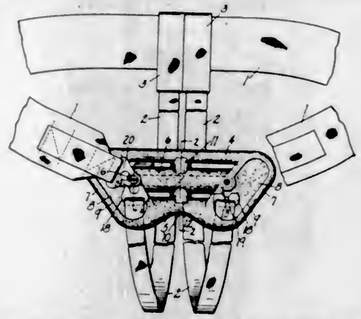


1. In combination, a pair of frames connected together by means providing for relative shifting movement therebetween, a rockshaft mounted on one of said frames and connected with the other of said frames by means causing said rockshaft to rock coincidentally to said relative shifting movement, power transmitting mechanism including a sheave journaled on said other frame, an idler mounted on said one frame by means providing for shifting movement toward and away from said sheave, a power transmitting belt trained over said sheave and said idler, and a connection between said idler and said rockshaft for shifting said idler coincidentally with relative movement of said frames, to maintain a substantially constant belt tension.

2,459,380
CLOTHESLINE HOLDER
Willis C. Hess, Kenmore, N. Y., assignor of one-third to Leo C. Krazinski, New York, N. Y.
Application February 20, 1946, Serial No. 648,956
6 Claims. (Cl. 24—241)

1. A clothes line holder comprising a ring-shaped body having a transverse slot for admitting a clothes line into the central space in the body; a screw extending from the outer edge of the body for securing the body to a support; a pair of discs engaging the opposite outer sides of the body; means to center the discs on the body; members loosely connecting the discs together for preventing their relative rotation, the discs being provided with slots extending from their peripheries toward the centers and registering with each other, the width of the slots corresponding to the width of the slot in the ring, the depth of the slots being sufficient to form an opening for the clothes line between the bottoms of the slots and the inner edge of the body, whereby the clothes line is held firmly between said bottoms and said inner edge; and threaded means centrally disposed on said discs for tightening the discs against the outer sides of the body, so as to limit the rotational movement of the discs relative to the body between the open and closed positions of the slot in the body.

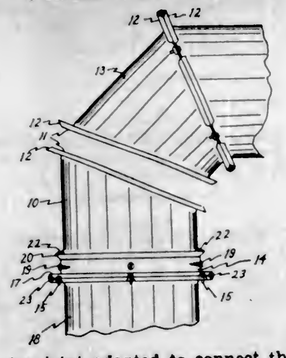
2,459,381
TRUSS
Fred Hollingsworth, Grand Rapids, Mich., assignor to Doctors Truss Company, Grand Rapids, Mich., a corporation of Michigan
Application October 30, 1946, Serial No. 706,767
4 Claims. (Cl. 128—95)



1. In a truss, a body member of molded yieldable material comprising vertically spaced top, bottom, and intermediate horizontal members, and downwardly converging end members integral therewith, the end members substantially exceeding the horizontal members in width, and having downwardly converging elongated pads on their inner sides molded integrally therewith

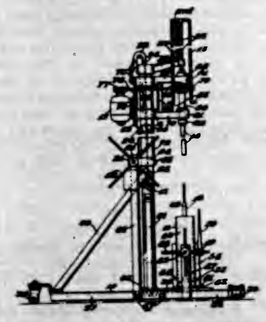
and elongated recesses on their outer sides, the horizontal members being integrally connected centrally thereof, a springable blade-like reinforcing member imbedded in the intermediate horizontal member with its ends at the inner edges of said recesses, and attaching studs engaged with the ends of said reinforcing member and projecting to the outside of said body member and adapted to be connected to supporting straps for said truss.

2,459,382
DEMOUNTABLE SEALED STOVEPIPE JOINT
Arthur Hollub, Chicago, Ill.
Application September 14, 1946, Serial No. 697,070
6 Claims. (Cl. 285—130)



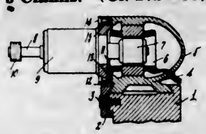
1. A pipe joint adapted to connect the adjacent ends of two or more pipe sections, an annular flange on one pipe section having a plurality of spaced holes therein; a metal collar having outwardly bent flanges integral with both its edges; said collar being securable on an end of a pipe, one of said collar flanges having spaced holes therein and being bent at an angle to form a V-shaped groove with said first mentioned flange; fastening elements extending through the holes of said flanges; and a removable sealing ring of mastic material in said groove.

2,459,383
SAMPLING DEVICE
Robert M. Levy, Brevard, N. C., assignor to Ecusta Paper Corporation, a corporation of Delaware
Application December 7, 1945, Serial No. 633,546
6 Claims. (Cl. 73—421)



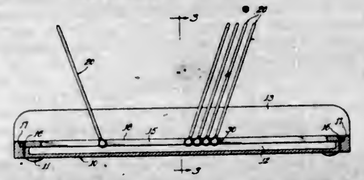
1. In a bale sampler and the like, a wheeled supporting base, means for positioning and clamping a bale or other compact mass of material to hold the same on the base, an open-ended, interiorly unobstructed, vertically moveable, motor-driven, rotatable core-taking tube located vertically above the bale or mass supporting area of the base, the tube having an annular, forward, cutting end, to penetrate the underlying positioned material and take a core of the material into the tube, manually operable means for raising and lowering said core-taking tube at will, and manually operable ejector means for removing the entire core of material taken into the tube, said ejector means comprising an elongated, vertical rod of excess length and approximate tube-bore diameter, cooperatively positioned normally above and in axial alignment with and enterable endwise and movable lengthwise in said core-taking tube, an inverted, substantially U-shape operator element rigidly secured at its middle to the upper end of said ejector rod, with the legs of said operator element depending in spaced, parallel relation on opposite sides of said rod and having hand grasp portions at their lower ends for the downward and upward manipulative actuation of the rod, and means for releasably holding said ejector rod in its raised, normally inactive position.

2,459,384
MOTOR-DRIVEN TOOL MECHANISM
Thor H. Ljunggren, Charlestown, N. H., assignor to Bryant Chucking Grinder Company, Springfield, Vt., a corporation of Vermont
Application September 11, 1943, Serial No. 501,949
3 Claims. (Cl. 172—36)



1. In combination, a unit comprising a spindle, a motor rotor on one end of said spindle, a device at the opposite end of said spindle, and a spindle bearing casing between said rotor and device and within which said spindle is journaled, a support, a motor stator comprising a core and frame carried by said support, and means for removably securing said unit with the motor rotor in operative relation to said stator.

2,459,385
VERTICAL FILE
Alfred M. Martin, Park Ridge, Ill.
Application July 28, 1944, Serial No. 546,961
14 Claims. (Cl. 129—15)



1. A file of the class described comprising a base to receive file cards thereon, a central channel extending longitudinally of said base, a longitudinal guide rod carried by the base in the channel, a plurality of follower-supports for the file cards associated with the base transversely of the guide rod, each follower-support having a

with the cutting edge portion of the knife blade

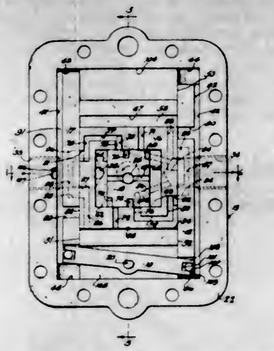
mount part depending therefrom and received in said channel, a slot in each mount passing the guide rod therethrough, said slot and rod being cooperatively arranged for limited tilting of the follower-support from a vertical position rearwardly and forwardly thereof, a spring barrel on the mount on each side of said rod, said barrels being open at their ends adjacent the rod and at least partially closed at their outer ends, a coil spring in each spring barrel abutted therein adjacent said outer end, a spring plunger in the said open end of each spring barrel and pressed by said spring against said rod to frictionally resist relative sliding movement of the mount with respect to the rod and sliding movement of the follower-support with respect to the base while permitting said sliding movement when said follower-supports are in vertical position and when increased numbers of file cards are received between two adjacent follower-supports.

2,459,386
TROLLEY WIRE HANGER
Samuel S. Matthes, Mansfield, Ohio, assignor to The Ohio Brass Company, Mansfield, Ohio, a corporation of New Jersey
Application October 19, 1945, Serial No. 623,216
5 Claims. (Cl. 287—14)

1. An article of manufacture comprising, a body member provided with means for attachment to another body member, the first said body member having fixed longitudinally projecting spaced lugs with substantially smooth inner faces, an arm having one end positioned in the space between the lugs, the lugs and the said one end of the arm having transversely disposed registering openings, a pintle extending through the openings by means of which the arm may be moved in a longitudinally disposed plane to change its angular relation with the longitudinal axis of the body member, the pintle provided with spaced bearing portions positioned in the lug openings whereby the pintle is rotatable relative to the lugs, means on the pintle intermediate the said spaced portions and means on the arm cooperating with the last said means whereby the arm is non-rotatable relative to the pintle but the pintle may be moved axially of the arm, means at one end of the pintle and other means on the other face of one lug to cooperate with the last means to prevent relative rotation of the pintle and lug and prevent the said angular movement of the arm relative to the said longitudinal axis and means on the other end of the pintle to engage the outer face of the other lug to prevent axial movement of the pintle and to maintain said cooperation of the said means on the pintle and on the lug.

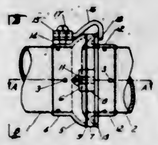
2,459,387
METHOD OF CONDENSING ORGANOSILICOLS
Rob Roy McGregor, Verona, and Earl L. Warrick, Pittsburgh, Pa., assignors to Corning Glass Works, Corning, N. Y., a corporation of New York
No Drawing. Application October 5, 1942, Serial No. 460,830
10 Claims. (Cl. 260—46.5)

1. The method of condensing an organo-silicol whose organic substituents consist essentially of hydrocarbon radicals attached to silicon through carbon-silicon linkages, there being less than



three hydrocarbon radicals per silicon atom which comprises dehydrating said silicol in the presence of boron trifluoride.

2,459,388
VARIABLE DELIVERY PUMP
David J. Munroe and John C. McAlvay, Racine, Wis., assignors to Webster Electric Company, Racine, Wis., a corporation of Delaware
Application July 23, 1945, Serial No. 606,619
15 Claims. (Cl. 103—41)



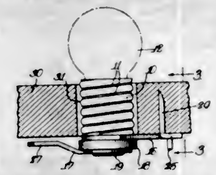
1. In a fluid pump of the reciprocating type, the combination of a supporting body provided with a rotating shaft having an eccentric trunnion extending into a pump cavity in said body, with a reciprocating member engaged by said trunnion and adapted to be reciprocated in said cavity by said trunnion, said body being formed with inlet and outlet ports and said reciprocating member being formed with passageways and ports adapted to be alternatively connected to provide communication between the inlet and a pumping space and between the outlet and said pumping space, and adjustable valve means interposed between the outlet port and passageways extending from the pumping space to the outlet port, whereby a predetermined amount of the output may be diverted from the output to effect a predetermined measured discharge of said pump, said body being provided with passageways for conducting the fluid which is diverted from said outlet port back to the inlet of said pump.

2,459,389
PIPE COUPLING
Henry Bowford Leslie Newman, Rockhampton, Queensland, Australia
Application April 12, 1947, Serial No. 741,045
In Australia October 11, 1946
3 Claims. (Cl. 285—91)

1. An improved pipe coupling consisting of a socket for attachment to an end of a pipe, said

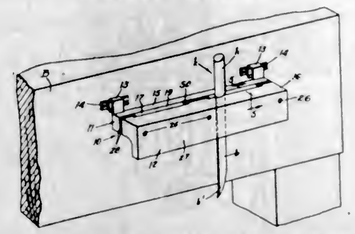
socket having, at its rim, a rigid ring provided with a concave seating; and a spigot for attachment to the abutting end of an adjacent pipe, said spigot having a convex flange adapted to seat in the said ring; a flexible ring extending from said socket to the said convex flange; and a spring clip attached to said socket, the hook of said clip adapted to lie behind the flange on said spigot when the coupling is assembled.

2,459,390
SOCKET TERMINAL MOUNTING
Harry A. Olson, Park Ridge, Ill., assignor to Micarta Fabricators, Inc., Chicago, Ill., a corporation of Illinois
Application June 6, 1946, Serial No. 674,777
3 Claims. (Cl. 173—339)



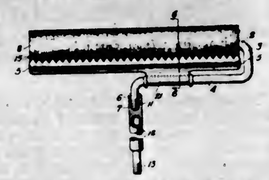
1. In a socket assembly of the character described, comprising a tubular lamp socket body, a contact mounted in said body in insulated relation thereto, and a pair of axially spaced apart, laterally extending terminal arms insulated from each other and connected respectively to said body and said contact, at the bottom end of the body, one of said arms having a sharp pointed prong formed integrally therewith and extending upwardly therefrom, and adapted to be projected into a panel of material for supporting said socket assembly on the panel, said one arm having a down turned ear constituting a soldering lug.

2,459,391
KNIFE RACK AND EDGER
Samuel S. Otis, Winnetka, Ill.
Application May 24, 1947, Serial No. 750,344
6 Claims. (Cl. 76—82)



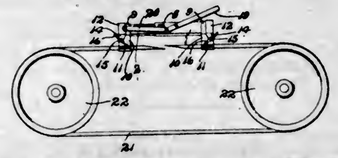
1. In a knife rack and edger, a metal wall member provided with a slot intended for reception of a knife blade, said wall member having an edging element at one side of said slot, and a lip at the other side of said slot extending from said wall member at an angle thereto bendable toward and away from said edging element, said lip having at its free edge an edging element defining with said first edging element the sides of said slot, the effective width of said slot being adjustable by bending said lip toward and from said first edging element, said edging elements being disposed for edging contact of one thereof with the cutting edge portion of the knife blade when the latter is moved lengthwise through said slot with its back edge in contact with the other of said edging elements.

2,459,392
STIPPLER
Augustine Power, New York, N. Y.
Application July 17, 1945, Serial No. 605,567
5 Claims. (Cl. 41—5.5)



1. In a stippler having a handle, a spindle secured to said handle, a handle connection substantially parallel to said spindle and a roller rotatable on said spindle, a cutter swingingly mounted on said handle connection and a roll of paper removably secured to said roller, said roll of paper having a plurality of adhesive strips spaced apart substantially equal to circumference of said roll of paper to secure the end of the paper to said roll of paper after the outer layer of paper has been severed by said cutter from said roll of paper, whereby the outer layer of paper may be cut off after stippling and the remaining outer layers held secure to said roll of paper for rotating on said spindle until all of said outer layers and said roll of paper have been used up for stippling whereby an unused outer layer of paper is exposed after the used outer layer has been removed.

2,459,393
V-BELT TENSIONING CLAMP
Francis F. Raniville, Grand Rapids, Mich., assignor to Ton-Tex Corporation, Grand Rapids, Mich., a corporation of Michigan
Application April 16, 1945, Serial No. 588,557
3 Claims. (Cl. 254—52)



1. A belt clamp comprising, two telescoping members of channel form, a plate secured at the outer end of each channel member and depending therebelow and formed at its lower end portion into a belt receiving trough open at its upper side, a second plate located over the first plate and permanently secured therewith to its respective channel member and having an outturned intermediate section and terminating in a downturned section, a pivot pin extending through the downturned section and an opposite portion of the first plate, a spring actuated dog mounted on said pivot pin over said channel, manually operated means mounted on one of said channels and connected with the other channel for adjusting said channel members longitudinally with respect to each other, and means for releasably securing said channel members in any position to which adjusted.

2,459,394

horizontal plane, a work-conveying belt with an

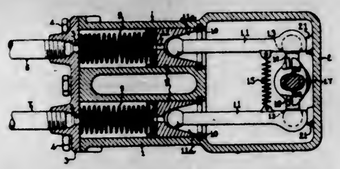
AIRWAYS TRAFFIC CONTROL SYSTEM

2,459,401
FISHING DEVICE

2,459,394
LIQUID PRESSURE BRAKE MECHANISM
Charles A. Sawtelle, Rosedale Gardens, Mich.
Application June 7, 1944, Serial No. 539,101
5 Claims. (Cl. 74—99)

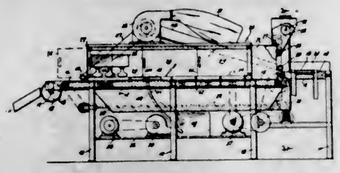


1. In a liquid pressure brake mechanism, the combination with two substantially parallel cylinders and pistons reciprocable in such cylinders, of springs for retracting the pistons, push rods for advancing the pistons, an actuator for the push rods, a lever pivoted on the actuator and forming arms oppositely projecting from the actuator, such arms having a ball and socket engagement with the push rods, and a tie connection between the push rods maintaining said ball and socket engagement.

2,459,395
PISTON RING
Dallas M. Smith, Kirkwood, Mo., assignor to McQuay-Norris Manufacturing Company, St. Louis, Mo., a corporation of Delaware
Application May 13, 1943, Serial No. 486,759
1 Claim. (Cl. 309—44)

A piston ring comprising an annular member having an axis, the cross section of said member having a radial dimension on the order of twice its axial dimension, said member having an external face entirely out of parallel with the axis and having inwardly converging upper and lower sides, the angular relationship between said face and said sides being nearer to perpendicular at the upper side than at the lower side, and a conical surface at the inside of said member, said surface being inclined with reference to the axis in the opposite sense and in substantially greater degree than said external face.

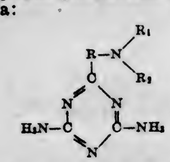
2,459,396
FLOCKING DEVICE
Carlos G. Solana, Brooklyn, and Joseph Casingena, New York, N. Y., assignors to Herbert B. Levine, New York, N. Y.
Application June 7, 1945, Serial No. 598,082
9 Claims. (Cl. 91—8)



5. In a device for the purpose indicated, a work-receiving belt disposed in a substantially horizontal plane, a work-conveying belt with an enclosure over its entire upper run disposed in a plane lower than that of the work-receiving belt, and a work-discharge belt in the plane of the work-conveying belt, a vibratory sheet beneath that upper run portion of the conveyer belt which is in near adjacency to said work-receiving belt, said vibratory sheet serving for vibrating said upper run portion, thus causing the moving work supported thereon to vibrate.

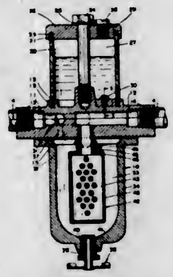
2,459,397
AMINO ALIPHATIC GUANAMINES
Jack Theo Thurston, Cos Cob, Conn., assignor to American Cyanamid Company, New York, N. Y., a corporation of Maine
No Drawing. Application August 30, 1941, Serial No. 409,154
6 Claims. (Cl. 260—249.5)

1. Aminoaliphatic guanamines having the following formula:



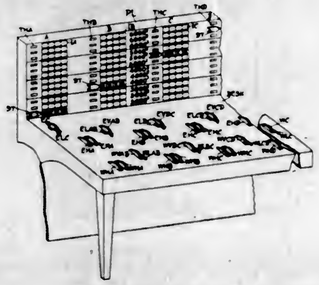
in which R is an acyclic radical united to the 2 carbon atom of the triazine ring by a carbon to carbon bond and R_1 and R_2 are radicals included in the group consisting of hydrogen, alkyl, aryl, aralkyl, acyl, sulfonyl and a portion of a saturated heterocyclic ring.

2,459,398
COMPRESSED AIR TREATMENT DEVICE
Wyeth C. Walters, Glendale, Calif., assignor to CCA Products Engineering Company, Glendale, Calif., a copartnership
Application July 12, 1946, Serial No. 683,258
5 Claims. (Cl. 184—55)



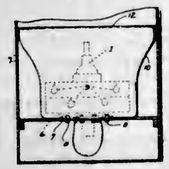
1. A device for installation in a compressed air line, comprising a body portion having an inlet and an outlet, an oil supply chamber, a threaded passage communicating between the oil supply chamber and the outlet, a valve screw loosely threadedly mounted in said passage and having a portion thereof adapted to close said passage on a predetermined movement of said valve screw, said valve screw having the head thereof exposed to the oil in said oil supply chamber to move said valve from open to closed position on a predetermined unbalance of pressure between the oil in said oil chamber, and said outlet.

2,459,399
AIRWAYS TRAFFIC CONTROL SYSTEM
Sedgwick N. Wight and Oscar S. Field, Rochester, N. Y., assignors to General Railway Signal Company, Rochester, N. Y.
Application December 24, 1942, Serial No. 470,018
34 Claims. (Cl. 235—61)



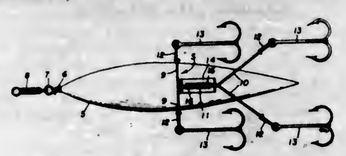
1. In a schedule calculating means for a conveyance travelling over a route separated into sections by spaced check points, a time indicator for each point, an operator operatively connected to each indicator and effective to move each indicator the same amount to establish the starting time, a calculator organization so operatively connected to each indicator as to move each indicator from its starting time setting an amount proportional to its distance from the entrance end of the route and divided by speed of travel of a conveyance over the route, and an adjusting means individually associated with each point and acting on said calculator organization to move its associated indicator amounts corresponding to travel control factors existing between it and the next preceding point toward the entrance end of the route and at the same time moving the indicators for all succeeding points toward the exit end of the route a corresponding amount.

2,459,400
AIRPLANE ENGINE PACKAGE AND METHOD OF PACKAGING THE SAME
John C. E. Williams, Englewood, N. J., assignor to Wingfoot Corporation, Akron, Ohio, a corporation of Delaware
Application March 12, 1942, Serial No. 434,333
4 Claims. (Cl. 206—46)



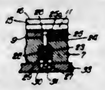
1. In combination an airplane engine with a back plate, a shipping case with a support for the engine attached thereto, a flexible, moisture-proof sheet which encloses the engine substantially completely, and fastening means which pass through the sheet and join the plate to the support.

2,459,401
FISHING DEVICE
Elmer Wiitala, Kaleva, Mich., assignor of thirty-three and one-third per cent to Reino Wiitala and thirty-three and one-third per cent to Leo Mannila, both of Kaleva, Mich.
Application March 18, 1947, Serial No. 735,499
4 Claims. (Cl. 43—46)



1. A fishing device embodying an artificial bait and a multiple fish hook spreader pivotally attached to the bait for limited lateral oscillation relative to the latter, said spreader including front and rear pairs of laterally extending arms having means to attach fish hooks to their outer ends, said arms co-acting with the bait to limit the oscillation of the spreader.

2,459,402
MOLD
Eric H. Zahn, Pound Ridge, N. Y., assignor to Austenal Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application February 26, 1944, Serial No. 524,025
3 Claims. (Cl. 22—154)



1. In a casting mold of the class described, in combination, a plurality of complementary mold sections each consisting of an outer hard and wear resistant reinforcing shell member and an inner lining of low fusing cast metal softer than said outer reinforcing member and fitting tightly within said outer wear resistant shell member, the face of at least one of said relatively soft linings which is opposed to the cooperating face of the other lining having a casting cavity of a shape for casting the desired object, said linings completely enclosing and defining the casting cavity throughout its entire extent so that none of the surfaces of said outer members is exposed to said cavity, registering ingate openings one in said lining and the other in at least one of said outer members through which the molten material to be cast is introduced into the casting cavity in said lining from outside said outer members with the mold sections assembled in casting relation, ejector means slidingly mounted in and guided by at least one of said outer members and operable through its softer lining into engagement with the object cast in said cavity to eject same from the casting cavity, said ejector means being normally constrained to a position projecting from the outer surface of the adjacent outer reinforcing member, and a removable guard plate fitting against the outer surface of said outer member in position covering said ejector means and having a recess for receiving said ejector means to guard said ejector means against actuation and permit application of the guard plate to said outer member without actuating said ejector means.

whose organic substituents consist essentially of

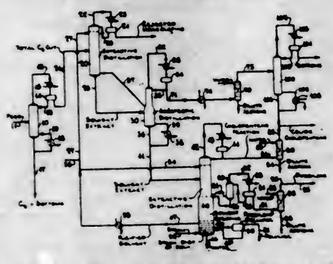
socket for attachment to an end of a pipe, said

2,459,403

SEGREGATION OF C_5 HYDROCARBONS BY EXTRACTIVE AND AZEOTROPIC DISTILLATION

George L. Ahrens, Scotch Plains, N. J., assignor to Standard Oil Development Company, a corporation of Delaware

Application July 20, 1944, Serial No. 545,814
2 Claims. (Cl. 202—39.5)



1. The process of separating isoprene and transpiperylene from a debutanized refinery cracked stock of about 5 to 10% isoprene and transpiperylene content, which comprises fractionally distilling the debutanized cracked stock to separate a fraction containing the isoprene and transpiperylene in about 15 to 30% concentratiou, subjecting said fraction in an extractive distillation zone to an extraction distillation in the presence of a solvent having substantial effect upon the relative volatilities of the hydrocarbons present in said fraction, said solvent being aqueous acetone containing about 8% by weight of water and being used in the ratio of between about 2 and 3 parts by volume to 1 part by volume of said fraction, separating a distillation residue containing isoprene and transpiperylene of increased concentration by said extractive distillation, subjecting said residue to azeotropic distillation in which an overhead fraction stream consisting essentially of an azeotropic mixture of isoprene and solvent is obtained, redistilling a resultant residue from said azeotropic distillation in the presence of an added quantity of solvent to separate a distillate stream of transpiperylene and solvent from residual excess solvent, stripping residual hydrocarbons from said excess solvent, recycling the thus stripped solvent into the first mentioned extractive distillation zone for distilling the fraction containing isoprene and transpiperylene of about 5 to 30% concentration, and recovering the separated isoprene and transpiperylene from their respective streams.

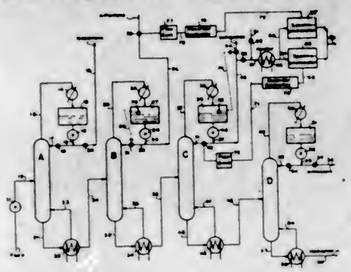
2,459,404

METHOD AND APPARATUS FOR CONTROLLING MULTICOMPONENT SEPARATION PROCESS IN ACCORDANCE WITH LIGHT ABSORPTION CHARACTERISTICS

James A. Anderson, Jr., Goose Creek, Tex., assignor to Standard Oil Development Company, a corporation of Delaware

Application March 15, 1946, Serial No. 654,574
8 Claims. (Cl. 202—160)

1. In a process involving at least a first stage and a second stage in which a feed stream comprising at least three components is separated to obtain at least first, second, and third successive product streams the predominant component of each of which streams has a unique absorption characteristic for different wave lengths of light, the steps of continuously analyzing at least said second product stream and obtaining therefrom at least two electrical potentials, the first of said potentials being a function of a unique light absorption characteristic at a predetermined wave length of light for the predominant component in said first product stream and the second of said potentials being a function of a unique light absorption characteristic at a different predetermined wave length of light for the predominant component in said third product stream, employing said first potential to control the first stage and said second potential to control the second stage in the process of separating said feed stream into said product streams.



2,459,405

KEY RING

Olof V. Anderson, Cowesett, R. I.

Application November 8, 1944, Serial No. 562,497
5 Claims. (Cl. 70—459)

1. In a key ring, a hollow top, a key retainer comprising a wire element having one end secured in the top and the other end extending upwardly and towards the top, a cooperating closure element pivotally mounted in the top and having a portion extending towards the key receiving end of the wire element, a spring device normally urging said closure element into aligned contact with said key receiving end and yieldingly resisting turning movement of the closure element, whereby to permit insertion of a key over said key receiving end, and a latch device comprising a U-shaped frame, and a cross rod in said frame extending through aligned slots in the sides of the top, said closure element having a notch for releasably holding the frame cross rod.

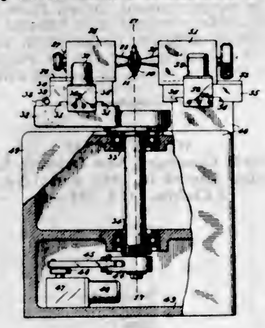
2,459,406

OSCILLATING RACEWAY GRINDER AND METHOD OF GRINDING RACEWAYS

Warren D. Anderson, Glenbrook, Conn., assignor to Norma-Hoffmann Bearings Corporation, Stamford, Conn., a corporation of New York

Application June 26, 1946, Serial No. 679,400
20 Claims. (Cl. 51—97)

1. In an oscillating raceway grinder having a workhead rotating a workpiece, a wheelhead rotating a grinding wheel, and a power driven mechanism for oscillating the workpiece about an axis of oscillation, the combination of a power driven mechanism for feeding the workpiece relative to the axis of oscillation, a mechanism for feeding the wheel relative to the axis of oscillation, and a control mechanism integral with the grinder for coordinating said feed mechanisms.

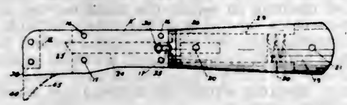


2,459,407

ROOFER'S KNIFE

Daniel C. Beaver, Mason City, Iowa

Application September 5, 1947, Serial No. 772,259
5 Claims. (Cl. 30—337)



5. A cutting implement comprising a pair of elongated plate members, means securing the plate members in parallel spaced relation, a front spacer plate between the forward end portions of the plate members, the bottom edge of said front plate being spaced upwardly from the bottom edges of said plate members, upper and lower spacer plates between the intermediate portions of the plate members, a plunger member slidably positioned between the opposed inner edges of said upper and lower spacer plates and between said plate members, spring means carried between the rear portions of said plate members biasing said plunger member forwardly, a cutting blade having a holding portion adapted to be received in the space between said front spacer plate and the forward edges of said upper and lower spacer plates, said holding portion being formed at its rear edge with a notch adapted to lockingly receive the forward end of the plunger member and with a shoulder at its forward edge adapted to underlie the front spacer plate, one of the plate members being formed with a longitudinal slot, and a pin carried by said plunger member projecting through said slot.

2,459,408

METHOD OF PROLONGING THE USEFUL LIFE OF AQUEOUS ALUMINUM-CASEIN COATING COMPOSITION

John Alfred Bicknell, Westbrook, Maine, assignor to S. D. Warren Company, Boston, Mass., a corporation of Massachusetts

No Drawing. Application January 14, 1946, Serial No. 641,172
9 Claims. (Cl. 106—146)

2. The method of preparing the aqueous paper coating composition comprising casein and finely divided aluminum, which comprises dissolving casein in water with the aid of sodium pyrophosphate and a solvent for casein of the group consisting of urea and substituted urea compounds exerting alkaline reaction in aqueous solution, the sodium pyrophosphate being used in an amount insufficient by itself to solubilize the casein and incorporating the finely divided aluminum uniformly through the resulting casein solution.

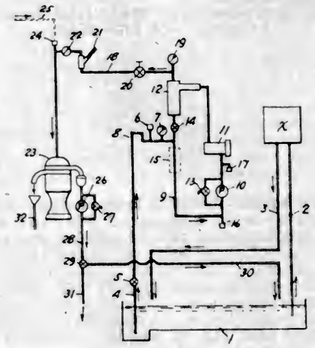
8. An aqueous paper coating composition whose solids content consists essentially of finely divided aluminum, casein, about 5 parts by weight of sodium pyrophosphate per each 100 parts by weight of casein, and urea in an amount at least sufficient to complete solution of the casein.

2,459,409

METHOD FOR PURIFYING USED OILS

Curt Roger Adolf Magnus Björnstjerna, Stockholm, Sweden, assignor to Aktiebolaget Separator, Stockholm, Sweden, a corporation of Sweden

Application February 4, 1946, Serial No. 645,471
In Sweden February 17, 1945
3 Claims. (Cl. 196—16)



1. A method for the continuous purification of used oil, which comprises pumping oil through an endless circuit and heating the oil in a heating locus during its passage through the circuit, continuously flowing oil to be purified from a source of supply into said circuit at a rate less than the rate of flow through the heating locus, continuously releasing a part of the oil flowing through said circuit while reconveying through said circuit the part of the oil not so released, and purifying the released oil and returning it to the supply.

2,459,410

AZEOTROPIC DISTILLATION OF 2,3-DIMETHYLBUTADIENE FROM METHYL PENTADIENE

Richard C. Brandon, Elizabeth, N. J., assignor to Standard Oil Development Company, a corporation of Delaware

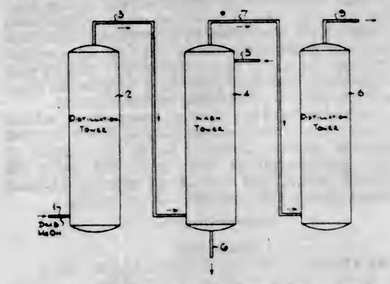
Application March 7, 1947, Serial No. 733,177
2 Claims. (Cl. 202—42)

1. A process for separating 2,3-dimethylbutadiene from its mixtures with methyl pentadiene which comprises adding methanol to the mixture

cured to the adjacent supports whose longitudinal axes are in parallel relationship with the sup-

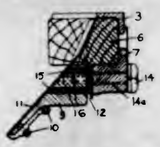
necktie-holding fingers, individual spring clamps on the upper surface of each of said fingers, a

of dimethylbutadiene and methyl pentadiene and distilling the resulting mixture to separate the di-



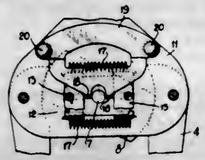
methyl butadiene as an azeotrope with the methanol.

2,459,411
PICKER STICK GUIDE FOR LOOMS
Carl D. Brown, Hopedale, Mass., assignor to Draper Corporation, Hopedale, Mass., a corporation of Maine
Application September 18, 1946, Serial No. 697,681
7 Claims. (Cl. 139—255)



1. In a bobbin-changing loom having a lay including a lay beam, a lay sword, a lay end, and a shuttle box including part of said lay end as the bottom thereof, there being an ejected bobbin slot in said lay end at the bottom of said shuttle box; an ejected-bobbin guide support unit positioned below and forwardly of said slot, means securing said unit to said lay, and a plurality of set screws positioning said unit on said lay, certain of said screws being adjustable and determining the angular relationship of said unit with respect to the lay.

2,459,412
SELF-STARTING IMPULSE TYPE ELECTRIC MOTOR
George E. Canham, West Orange, N. J., assignor to Schick Incorporated, Stamford, Conn., a corporation of Delaware
Application October 28, 1947, Serial No. 782,507
6 Claims. (Cl. 172—36)



1. In an impulse type motor having field poles, an armature, a shaft therefor and make and break contact mechanism actuated from the shaft, said mechanism being timed to provide for self-starting of the motor from a predetermined position of the shaft upon excitation of the field poles, the improvement which comprises a centrifugal brake operatively associated with the said shaft, including fly weight means driven from the shaft and adapted to contract and expand into and out of braking position, respectively, and a stop located for engagement by the fly weight means when the shaft is at rest in its said self-starting position.

2,459,413
WRIST BAND
David Canovsky, New Orleans, La.
Application August 30, 1944, Serial No. 551,819
2 Claims. (Cl. 224—4)

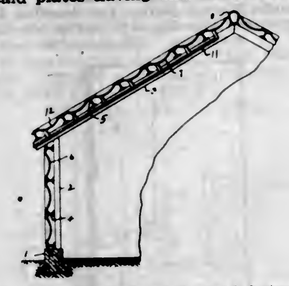
2. A wrist band comprising in combination: a two part band formed with a series of openings in a portion thereof; a second portion overlapping with the opening provided portion a traveller carried by an end of said opening-provided portion, freely slidable on the second portion of the band; a hook pivoted directly on the remaining end of the second portion, engageable with a selected opening to retain the band on the wrist of a wearer; a second traveller freely slidable on said opening-provided portion; and a second hook pivotally carried by said second traveller adapted to overlap said first named hook and engage an adjacent opening while the first-named hook is in holding position.

2,459,414
PRODUCTION OF SODA ASH
Egbert Wendell Carrier, Cranford, N. J., assignor to Standard Oil Development Company, a corporation of Delaware
Application November 7, 1942, Serial No. 464,835
2 Claims. (Cl. 23—63)

1. Process for the manufacture of soda ash, which comprises maintaining a fluidized mass of previously manufactured soda ash in a rising carbon dioxide gas stream within a confined reaction zone, introducing sodium bicarbonate into said reaction zone, decomposing said bicarbonate while in said zone into soda ash, carbon dioxide and water vapor, withdrawing soda ash solids from said reaction zone, separating the soda ash solids withdrawn from the reaction zone into two streams, heating one of said streams to a temperature substantially higher than the temperature in said reaction zone, returning the thus heated stream of soda ash solids directly into said reaction zone to maintain the decomposition temperature for decomposing the sodium bicarbonate therein, and cooling the other stream of withdrawn soda ash solids to recover the desired soda ash product.

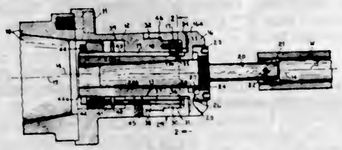
2,459,415
ROOF AND WALL STRUCTURE
Alois Cibulka, Highlands, Tex.
Application April 13, 1945, Serial No. 588,137
2 Claims. (Cl. 108—13)

1. In building construction, an inclined roof framework having spaced supports whose longitudinal axes are horizontal, a series of sheet metal plates arranged in adjacent relationship between the supports and whose margins are secured to the adjacent supports whose longitudinal axes are in parallel relationship with the supports, said plates having end flanges and being



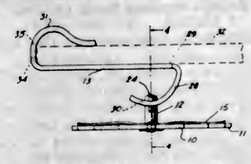
concavo-convex from end to end between said flanges with the concave sides upwardly forming troughs.

2,459,416
ADAPTER FOR BORING BARS
Adolph H. Davis, Norwood, Ohio, assignor to The R. K. LeBlond Machine Tool Company, Cincinnati, Ohio, a corporation of Delaware
Application April 22, 1948, Serial No. 22,659
3 Claims. (Cl. 77—58)



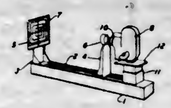
1. In an adjustable boring tool support having a rotatable tool spindle member, a tool shank, and means for mounting said tool shank on said rotatable member including, means to affect an axial adjustment of said tool shank in an acute angular relationship to the axis of rotation of said tool spindle so as to affect an accurately controlled radial adjustment of the tip of a cutting tool bit on said tool shank, micrometer nut means, a resilient back-lash free connection from said tool shank member to one side of said nut means, and a direct positive connection from said shank member to the opposite side of said nut means so that rotation of said nut means affects minute and accurately controlled positions of axial adjustment of said tool shank while a constant contact pressure is maintained at said connections for any position of said adjustment.

2,459,417
PORTABLE NECKTIE RACK
Ralph E. Dodge, Takoma Park, Md.
Application February 28, 1947, Serial No. 731,594
3 Claims. (Cl. 211—89)



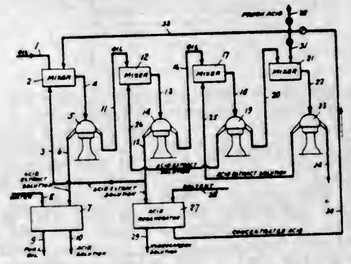
1. In a portable necktie rack, the combination, which comprises a wheel with radially extending necktie-holding fingers, individual spring clamps on the upper surface of each of said fingers, a vertically disposed centrally positioned post extending upward from the upper surface of the wheel, means rotatably mounting the wheel on the post, a bracket with a spring clip at one end and a slotted arcuate element at the other end, and means comprising projections on the sides of the post slidably mounting said post retainably in the slot of said arcuate element.

2,459,418
LIGHT SPOT AND REFLECTOR MEANS FOR ALIGNMENT OF CAMERAS FOR TITLE PURPOSES
George D. Ellis, Los Angeles, Calif.
Application December 8, 1945, Serial No. 633,610
4 Claims. (Cl. 88—24)



1. In a device for photographing titles, the device including an elongated base with a camera lens supported at one end and a target card with lines forming rectangles supported at the other end, the axis of the lens and the center of the card being substantially in alinement, a removable cap attached to the lens and having a mirror therein which is perpendicular to the axis of the lens and in a plane which is parallel to the plane of the card, an aperture in a predetermined position along one of the lines on the card through which light rays can pass and be directed to the mirror and reflected back onto the card to an opposite line for lens alining purposes.

2,459,419
METHOD OF REFINING HYDROCARBON OIL
Bruno Kuno Engel, Hoglandstorget, and Fredrik Teodor Emanuel Palmqvist, Stockholm, Sweden, assignors to Aktiebolaget Separator-Nobel, Stockholm, Sweden, a corporation of Sweden
Application December 8, 1945, Serial No. 633,768
1 Claim. (Cl. 196—40)



The process of refining mineral oils and mineral oil products, which comprises continuously introducing, in a primary treating step, fresh and concentrated sulphuric acid into a stream of oil to be refined, and in which primary treating step the acid is caused to act upon the oil at a temperature not exceeding 20° C. and during a period not exceeding four minutes, whereby by means of acid only the more unstable components of the oil are dissolved, while substantially inhibiting water yielding reactions by the same, passing the oil

and acid mixture through a locus of centrifugal force to separate the mixture into two phases, one of which is a pre-refined oil product whereas the other is an acid solution of said more unstable components of the oil, and subjecting said pre-refined oil to a further treatment comprising a plurality of steps each of which involves addition of an acid refining agent and in which the acid refining agent is caused to act upon the oil in counter-current thereto, each counter-current step involving centrifugal separation of the mixture into a refined oil product and an acid solution containing the less unstable soluble components of the oil.

2,459,420

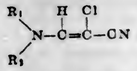
β-AMINO-α-CHLOROACRYLONITRILES AND METHODS OF PREPARATION

John G. Erickson, Greenwich, Conn., assignor to American Cyanamid Company, New York, N. Y., a corporation of Maine

No Drawing. Application August 7, 1947, Serial No. 767,345

7 Claims. (Cl. 260—465)

1. β-amino-α-chloroacrylonitriles of the general formula



wherein R_1 and R_2 are chosen from the group consisting of hydrogen, alkyl, aryl.

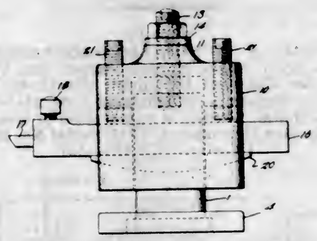
2,459,421

TOOL POST FOR LATHES

Isham H. Fann, Washington, D. C.

Application September 20, 1946, Serial No. 698,207

1 Claim. (Cl. 82—37)



A tool post for use in a lathe carriage having a T-slot therein comprising a rectangular washer adapted to slidably fit in said slot and provided with an internal undercut wall, a longitudinally slotted stud extending out of said washer and adapted to project upwardly of said carriage, said stud having a base flange fitting in said washer and locked therein by said wall of the washer, a sleeve fitting over said stud and provided with opposed side slots registering with the slot in said stud, a tool holder bar slidably extended through said slots, means to clamp said bar in the side slots of said sleeve, and means to feed said sleeve along said stud toward said washer adapting said sleeve to clampingly engage said carriage and said washer to similarly engage the top of said T-slot, the first-mentioned means comprising a rocker bar extending through said slots below said tool holder bar, and set screws in said sleeve extending into said side slots and bearing against the top of the tool holder bar.

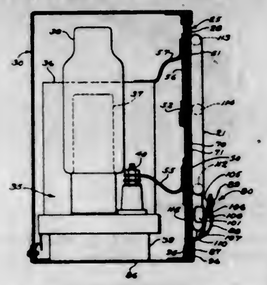
2,459,422

EXCITING MEANS FOR HIGH-FREQUENCY DISPLAY TUBES

Charles Harvey Fuller, Los Angeles, Calif.

Application May 31, 1947, Serial No. 751,545

8 Claims. (Cl. 315—248)



1. Means for exciting a gaseous discharge tube of substantially plane configuration, said means comprising means for positioning the tube in a given plane, two electrodes spaced from each other and having a relatively high electrical capacity relation with respect to ionized gas in the positioned tube, a third electrode intermediate the said two electrodes and having a relatively low electrical capacity relation with respect to ionized gas in the positioned tube, the third electrode being electrically connected to one of the said two electrodes, and electrical circuit means for applying a high frequency oscillating voltage between the other of the said two electrodes and the pair of connected electrodes.

2,459,423

REACTION OF ORGANIC COMPOUNDS WITH HYDROGEN HALIDES

Arthur Ira Gebhart, Union, N. J., assignor to Colgate-Palmolive-Peet Company, Jersey City, N. J., a corporation of Delaware

No Drawing. Original application April 8, 1942, Serial No. 438,075. Divided and this application November 13, 1943, Serial No. 510,219

10 Claims. (Cl. 260—663)

1. The process of reacting organic compounds with a hydrogen halide which comprises intimately contacting a hydrogen halide from the group consisting of hydrogen chloride and hydrogen bromide with an organic reactant while at least one of said halide and said reactant is dissolved in liquid sulphur dioxide.

2,459,424

ANTHRIMIDE CARBAZOLE DYESTUFFS

Hermann Hauser, Binningen, and Max Bommer, Riehen, Switzerland, assignors to the Swiss firm of Ciba Limited

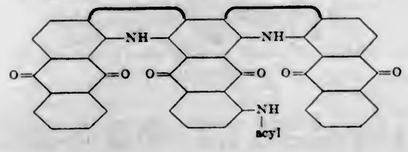
No Drawing. Application April 20, 1943, Serial No. 483,804. In Switzerland April 18, 1942

Section 1, Public Law 690, August 8, 1946

Patent expires April 18, 1962

2 Claims. (Cl. 260—316)

1. An anthrimide-carbazole of the formula:



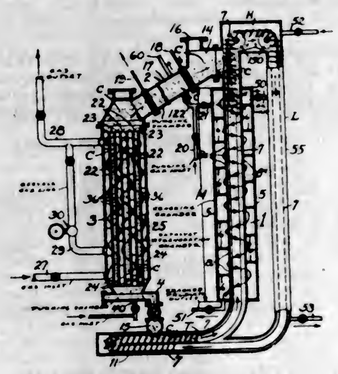
2,459,425

APPARATUS FOR CONTACTING GASEOUS FLUIDS WITH SOLIDS

Charles E. Hemminger, Westfield, N. J., assignor to Standard Oil Development Company, a corporation of Delaware

Original application April 1, 1939, Serial No. 265,288. Divided and this application December 11, 1942, Serial No. 468,624

2 Claims. (Cl. 23—288)



1. An apparatus of the character described including in combination an elongated vertical vessel, a continuous conveyor adapted to move upwardly through said vessel for moving granular catalyst upwardly through said vessel, a gas inlet communicating with the upper portion of said vessel, an outlet communicating with the lower portion of said vessel, a second vertical vessel including a casing containing a plurality of vertical shafts having perforated side walls, alternate shafts having caps on the top thereof, tubular means connecting the upper portion of said first vessel with the upper portion of said second vessel, a second inlet for introducing gas into the lower portion of said second vessel, horizontal baffles arranged only in alternate capped vertical shafts to direct gas introduced through said second inlet to flow transversely through the uncapped perforated vertical shafts, a second outlet for removing gas from the upper portion of said second vessel and tubular means connecting the bottom portions of said vessels.

2,459,426

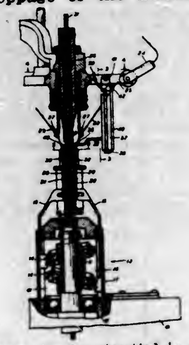
AUTOMATIC STOP MOTION FOR KNITTING MACHINES AND THE LIKE

George E. Henning and Clay E. Lewis, Baltimore, Md., assignors to Western Electric Company, Incorporated, New York, N. Y., a corporation of New York

Application May 14, 1947, Serial No. 747,976

13 Claims. (Cl. 66—166)

1. In a knitting machine arranged to knit a textile covering around a continuously advancing core which oscillates excessively upon the occurrence of a faulty knitting operation of the machine, a potential generating element arranged to be actuated by the oscillatory movement of the core, and means electrically connected to said potential generating element for effecting a stoppage of the knitting machine



when a predetermined potential is generated by said element.

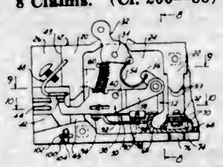
2,459,427

CIRCUIT BREAKER

Harold Albert Humpage, Hartford, Conn., assignor, by mesne assignments, to Federal Electric Products Company, Newark, N. J., a corporation

Application May 24, 1945, Serial No. 595,556

8 Claims. (Cl. 200—88)



7. In a circuit breaker having relatively movable companion contacts engageable with and disengageable from each other and a flexible bimetallic current-carrying strip, the combination with a movable one of said contacts and with said strip of electro-magnetic means operable in response to the current carried by said strip to flex said strip for effecting relative movement of said contacts, said electro-magnetic means comprising a magnetic member positioned in such relation to said current-carrying strip that the latter constitutes the energizing current-conductor of said magnetic member, and an armature mounted so that said magnetic member moves toward said armature when a current of predetermined strength flows in said strip, said magnetic member being operatively connected to said strip to flex the latter in response to said movement of the magnetic member toward said armature, said strip and said magnetic member and its armature being all secured together as a unit with said movable one of said relatively movable contacts.

2,459,428

AIR CLEANER

Edward N. Jacobi, Milwaukee, Wis., assignor to Briggs & Stratton Corporation, Milwaukee, Wis., a corporation of Delaware

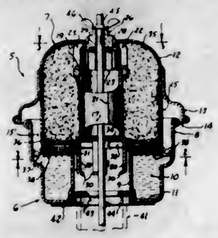
Application April 19, 1945, Serial No. 589,197

3 Claims. (Cl. 183—15)

1. In an oil bath air cleaner for carburetors having an upwardly opening air inlet duct and provided with means for drawing the air cleaner down onto the mouth of its air inlet duct: a

slots and bearing against the top of the tool holder bar.

casing comprising opposed upper and lower cup-like sections, the latter providing a reservoir for a quantity of oil and being adapted to rest on the mouth of the carburetor inlet duct; the contiguous open ends of the cup-like sections being radially spaced to provide an annular air inlet into the cleaner casing; a discharge duct for cleansed air disposed axially within the casing with its inlet end adjacent to the top of the upper casing section, and its outlet end connected to and opening through the bottom of the lower casing section for delivery of cleansed air to the carburetor inlet duct, said discharge duct defining a closed passageway so that oil contained in the reservoir



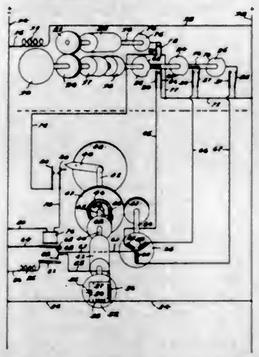
is precluded from entering the duct; filter means within the casing between the air inlet into the casing and the inlet to the discharge duct; means providing a permanently fixed connection between the top wall of the upper casing and the inlet end of the discharge duct whereby the upper casing section is supported by the discharge duct, said means having a surface spaced from the adjacent top wall of the upper casing section to receive the downward thrust of the means by which the cleaner is held down onto the mouth of the carburetor air inlet duct and for transferring the force of said downward thrust onto the discharge duct and thereby relieving the walls of the upper casing section of forces likely to produce distortion thereof.

2,459,429

CONTROL APPARATUS FOR TRAFFIC SIGNALING SYSTEMS

Walter M. Jeffers, Syracuse, N. Y., assignor to Crouse-Hinds Company, Syracuse, N. Y., a corporation of New York

Application March 23, 1942, Serial No. 435,770
4 Claims. (Cl. 177—337)



1. A traffic signal control apparatus for an inter-connected signal system comprising a master timer and a secondary timer, said secondary timer including a driving motor, motion transmitting means including compensating gearing connecting said motor to the timer, a series of switches periodically operable by the master timer in a predetermined succession, an electro-responsive impulse device connected to said gearing and said device having a series of driving coils, each coil being connected in circuit through one of said switches, and said device being cooperable with said gearing as each coil is connected in circuit to vary the speed of the secondary timer.

2,459,430

PRODUCTION OF ETHYLENE CYANOHYDRIN

Albert W. Jefts and Joseph A. Schmidlein, Stamford, Conn., assignors to American Cyanamid Company, New York, N. Y., a corporation of Maine

No Drawing. Application May 4, 1946, Serial No. 667,488
2 Claims. (Cl. 260—465.6)

1. A method of producing ethylene cyanohydrin which comprises bringing ethylene oxide together with hydrocyanic acid into contact with a heated aqueous suspension of a compound selected from the group consisting of magnesium oxide, magnesium hydroxide, and magnesium cyanide in which the aqueous suspension is maintained at a temperature within the range of 40 to 100° C.

2,459,431

COLD PROCESSED FRUIT SPREAD

Gestur Johnson, Albany, and Mildred May Boggs, Berkeley, Calif., assignors to the United States of America as represented by the Secretary of Agriculture

No Drawing. Application April 26, 1946, Serial No. 665,038
13 Claims. (Cl. 99—132)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. A process of preparing gelled fruits in which a fruit of the group consisting of fruit juice, pureed fruit, pureed fruit containing crushed fruit, and pureed fruit containing sliced fruit, is mixed with an amount of powdered high-methoxyl pectin not to exceed 1 percent of the finished product by weight, and with an amount of sugar such that the mixture at this stage does not contain in excess of 30 percent of soluble solids by weight; stirring the mixture at room temperature until the pectin is hydrated; adjusting the pH of the mixture to 3.5 or below by adding a fruit acid, when the pH of the mixture is above 3.5; then adding more sugar in an amount to total 40 to 55 percent of added sugar and to result in a finished product having from 45 to 60 percent of soluble solids, the mixture being allowed to stand at about 70° F. to 100° F. until gelled.

2,459,432

SEPARATION OF CINEOLES FROM HYDROCARBONS OF SIMILAR BOILING RANGE BY AZEOTROPIC DISTILLATION WITH PHENOLS

Harold E. Johnson, Wilmington, Del., assignor to Hercules Powder Company, Wilmington, Del., a corporation of Delaware

No Drawing. Continuation of application Serial No. 726,958, February 6, 1947. This application August 20, 1948, Serial No. 45,443
9 Claims. (Cl. 202—42)

1. The process of separating the cineole and hydrocarbon constituents of a mixture containing cineoles and hydrocarbons of similar boiling range which comprises subjecting said mixture to fractional azeotropic distillation in the presence of phenol as the azeotropic agent.

2,459,433

SEPARATION OF CINEOLES FROM HYDROCARBONS OF SIMILAR BOILING RANGE BY AZEOTROPIC DISTILLATION WITH PHENOLS

Harold E. Johnson, Wilmington, and Harold M. Spurlin, Marshallton, Del., assignors to Hercules Powder Company, Wilmington, Del., a corporation of Delaware

No Drawing. Application February 6, 1947, Serial No. 726,958
3 Claims. (Cl. 202—42)

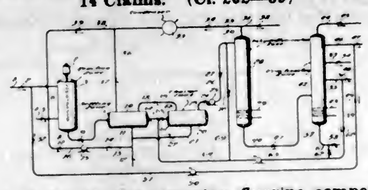
1. The process of separating the cineole and hydrocarbon constituents of a mixture containing cineoles and hydrocarbons of similar boiling range which comprises subjecting said mixture to fractional azeotropic distillation in the presence of phenol as the azeotropic agent, recovering hydrocarbon-phenol and cineole-phenol azeotropes as separate fractions, and subjecting each individual azeotrope to fractional steam distillation with water reflux.

2,459,434

DISTILLATION OF HYDROCARBONS TO REMOVE FLUORINE COMPOUNDS

Elmer R. Kanhofer, Riverside, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a corporation of Delaware

Application August 31, 1944, Serial No. 552,127
14 Claims. (Cl. 202—39)



1. A process for removing fluorine compound as hydrogen fluoride from a mixture of reaction products comprising unconverted reactant, higher boiling reaction product and fluorine compound, which comprises fractionally distilling said mixture to separate hydrogen fluoride from the unconverted reactant and higher boiling reaction product, thereafter separating by fractionation the unconverted reactant from the higher boiling reaction product, and recycling at least a portion of the said higher boiling reaction product to the first mentioned fractional distillation step.

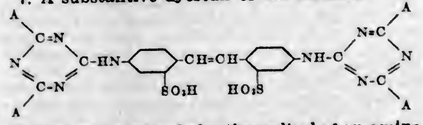
2,459,435

SUBSTANTIVE TRIAZINE AZO DYES

Ernst Keller and Reinhard Zweidler, Basel, Switzerland, assignors to J. R. Geigy A. G., Basel, Switzerland, a Swiss firm

No Drawing. Application August 28, 1944, Serial No. 551,622. In Switzerland September 1, 1943
10 Claims. (Cl. 260—153)

7. A substantive dyestuff of the formula



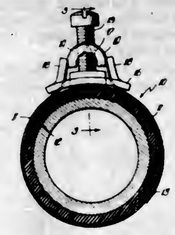
wherein each A stands for the radical of an amine

2,459,436

HOSE CLAMP

Rudolf G. Krasberg, Chicago, Ill.

Application December 22, 1945, Serial No. 636,591
6 Claims. (Cl. 24—19)



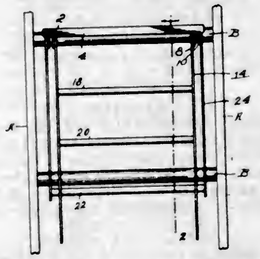
1. A clamp, which comprises a circular banding member having overlapping portions, a yoke member having a central opening therethrough, one of said overlapping portions forming a loop which passes through the opening in said yoke, and means carried by said loop and held in spaced relation with respect to said other overlapping portion to draw the loop through said opening to decrease the size of said banding member to tighten the same against objects to be clamped together, and to maintain the circular arrangement of said banding member whereby to bring equalized pressure to bear on objects to be clamped by said banding member only.

2,459,437

ADJUSTABLE LADDER ATTACHMENT

Earl E. Kreissler and Francis C. Wilkinson, Kansas City, Mo.

Application October 26, 1945, Serial No. 624,698
1 Claim. (Cl. 248—238)



An attachment for ladders comprising a platform adapted to rest at one end upon a rung of the ladder and provided at said end with depending means for engaging one side of the rung, lugs fixed to the underside of the platform and spaced to extend downward adjacent to the other side of the rung, arms operably connected to the lugs and extending downwardly to bear against a lower rung of the ladder, a transverse rung fixed to and uniting the lower portions of the arms,

1. A traffic signal control apparatus for an inter-connected signal system comprising a

9 Claims. (Cl. 202—42)

1. The process of separating the cineole and hydrocarbon constituents of a mixture contain-

wherein each A stands for the radical of an amine

dow-handle engaging loop in the central area of said article-supporting portion, and fabric-engaging elements secured to the under-surface of the edge of said article-supporting portion from which said intermediate portion extends.

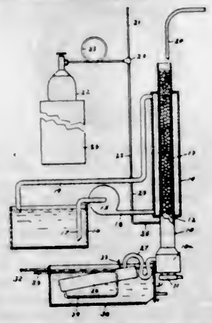
legs spaced inwardly from the arms and operably connected at their upper portions to the platform near the opposite end from the depending means and having their lower portions adjustably engaging said transverse rung, said legs having forwardly extending knees at their upper portions, a transverse rung uniting the knees, and a rung spaced intermediate the last-mentioned rung and the rung uniting the lower portions of the arms, said rungs on the arms and legs being spaced to give ready access to the platform.

2,459,438
MANUFACTURE OF HYDROFLUORIC ACID

Harry C. Kremers, Cleveland Heights, and Irwin E. Johnson, Cleveland, Ohio, assignors to The Harshaw Chemical Company, Elyria, Ohio, a corporation of Ohio

Application August 23, 1945, Serial No. 612,286

2 Claims. (Cl. 23—153)



1. A process of continuously producing aqueous HF of uniform HF content comprising the steps of producing a mixture of gaseous anhydrous HF containing SO_2 as an impurity with a gas inert thereto in the proportion of from ¼ to 5 volumes of inert gas for each volume of HF, passing the resulting gaseous mixture at a constant rate into a packed, vented column whereby it may pass upwardly therethrough, passing water downwardly through said packed column also at a constant rate whereby it absorbs HF from said gaseous mixture but the SO_2 is flushed out by the inert gas, maintaining the temperature in the hottest portion of said packed tower approximately constant, and removing the resulting aqueous HF.

2,459,439
POLYMERIC MATERIALS FROM ISO- AND ISOTHIOCYANATES WITH ACRYLIC ACIDS

Joy G. Lichty, Stow, and Nelson V. Seeger, Cuyahoga Falls, Ohio, assignors to Wingfoot Corporation, Akron, Ohio, a corporation of Delaware

No Drawing. Application September 16, 1943, Serial No. 502,634

7 Claims. (Cl. 260—79)

1. A process of forming a solid rubbery polymeric material which comprises reacting from one to two mols of a monomer selected from the group consisting of acrylic acid, alpha methacrylic acid, alpha ethacrylic acid, alpha phenyl acrylic acid, alpha chloroacrylic acid, alpha bromoacrylic acid, alpha methoxyacrylic acid and alpha beta dichloroacrylic acid with one mol of a material selected from the group consisting of organic diisocyanates having as the sole functional constituents two isocyanate radicals and organic diisothiocyanates having as the sole functional constituents two isothiocyanate radicals at a temperature between 100°–150° C.

2,459,440
PROCESS OF PRODUCING WAX ESTERS OF HYDROCARBON SULFONATES

Eugene Lieber, West New Brighton, N. Y., and Aloysius F. Cashman, Bayonne, N. J., assignors to Standard Oil Development Company, a corporation of Delaware

No Drawing. Application January 1, 1943, Serial No. 471,014

7 Claims. (Cl. 260—456)

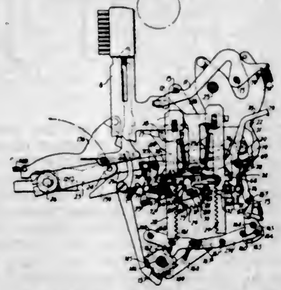
1. The process which comprises reacting a thiourea with a halogenated organic compound having the general formula RX_n in which R is a hydrocarbon radical of at least 8 carbon atoms and containing an aliphatic group, X represents halogen connected to R by linkage to aliphatic carbon and n represents the number of halogen atoms, converting the resulting pseudo-thiourea product by means of water and halogen into the corresponding sulfonyl halide, treating the latter with a basic metal neutralizing agent to form the corresponding metal sulfonate derivative, and finally condensing the latter with chlorinated petroleum wax to produce an oil-soluble wax ester of a hydrocarbon sulfonate.

2,459,441
COMPUTING MACHINE

Walter E. Lippert, Jackson Heights, N. Y., assignor to Underwood Corporation, a corporation of Delaware

Application December 20, 1938, Serial No. 246,856

1 Claim. (Cl. 235—60)



In a calculating machine having cycling mechanism, a totalizer, sets of actuators respectively at opposite sides of said totalizer, means for shifting the totalizer into engagement with one or the other of said actuator sets and to a neutral position between them, a mechanism operable to effect tens-transfers by an extra step of movement of said actuators, total-taking control means, and means operated by said cycling mechanism prior to total-taking for moving the totalizer to neutral position and restoring actuators that have been moved an extra step; the combination with the foregoing of supplemental means for restoring actuators that have been moved an extra step when the totalizer moves from one set of actuators to the other in conditioning the machine for total-taking, comprising movable means positioned opposite the actuators, a rotatable member having cams, a connection from said rotatable member to said means

for shifting the totalizer from one set of actuators to the other, means preventing rotation of said rotatable member except when said total-taking control means operates to condition the machine for total-taking and enabling rotation of said member to cam-operate said connection and said movable means upon subsequent cycling of the machine.

2,459,442
SEPARATION OF HYDROCARBONS

Moses Robert Lipkin, Philadelphia, Pa., assignor to Sun Oil Company, Philadelphia, Pa., a corporation of New Jersey

No Drawing. Application December 5, 1945, Serial No. 633,037

4 Claims. (Cl. 260—677)

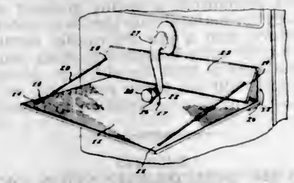
1. A cyclic process for separating an unsaturate non-aromatic hydrocarbon from a hydrocarbon mixture containing the same together with at least one saturate hydrocarbon which comprises treating said mixture in liquid phase with silica gel to preferentially adsorb said unsaturate hydrocarbon therefrom and to yield a liquid of higher saturate content, then washing the used adsorbent, at ordinary temperature and without heating, with an essentially saturate hydrocarbon liquid other than said liquid of higher saturate content, in sufficient amount to substantially desorb the unsaturate hydrocarbon and to simultaneously reactivate the adsorbent for re-use, said essentially saturate hydrocarbon liquid being the sole desorbing agent employed, withdrawing from the adsorbent a liquid mixture of desorbing agent and unsaturate hydrocarbon, and then, while the adsorbent is still wet with desorbing agent, directly re-using the adsorbent for further separation of unsaturate hydrocarbon in the manner specified.

2,459,443
TRAY

Steve M. Mabry, Yokena, Miss.

Application April 1, 1947, Serial No. 738,669

2 Claims. (Cl. 311—22)



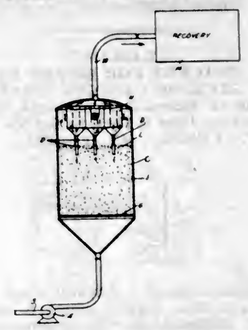
2. A tray arranged to be mounted on the inner side of a vehicle door having a window-operating handle comprising a rectangular piece of sheet material including an article-supporting portion, an intermediate portion folded along one edge of said article-supporting portion to a position substantially perpendicular thereto, and a flap portion folded along the outer edge of said intermediate portion toward said article-supporting portion, said article supporting portion having an aperture in each outer corner thereof and a pair of closely-spaced apertures in the central area thereof, a cord secured at its ends to the opposite ends of said flap portion and extending through the apertures in the outer corners of said article-supporting portion and through the apertures in the central area of said article-supporting portion to provide a respective brace between each outer corner of said article-supporting portion and the corresponding end of said flap portion and a win-

2,459,444
HYDROCARBON SYNTHESIS

Thomas C. Main, San Antonio, Tex., assignor to Standard Oil Development Company, a corporation of Delaware

Application November 8, 1946, Serial No. 708,626

8 Claims. (Cl. 260—449.6)



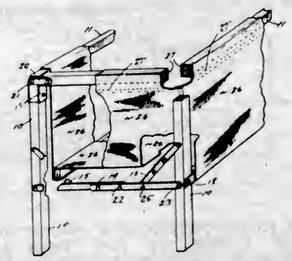
1. The method of synthesizing hydrocarbons and oxygenated hydrocarbons from a gaseous feed containing carbon monoxide and hydrogen which comprises forcing a mixture of carbon monoxide and hydrogen into a reaction zone containing a bed of fluidized iron catalyst, maintaining elevated temperatures and pressures in the reaction zone, insuring good fluidization of the iron powder therein by mixing with the iron a quantity of a powdered inert material having a particle size larger than that of the powdered iron but of lower density than said iron whereby classification of the two materials is avoided and a homogeneous mixture thereof is obtained in said reaction zone and withdrawing from the reaction zone a product containing a normal liquid hydrocarbon.

2,459,445
FOLDING INFANT'S CRIB

William M. McClintock, New Kensington, Pa., and Chester N. McCandless and Dean E. McCandless, Youngstown, Ohio

Application September 11, 1946, Serial No. 696,078

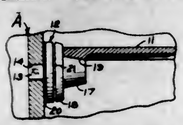
6 Claims. (Cl. 5—99)



1. A folding structure comprising four straight legs, a pair of upper side rails, a pair of lower

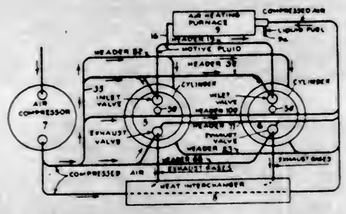
side rails, a pair of upper end rails, and a pair of lower end rails, each of said upper side rails being supported at its ends on two of said legs, each upper side rail being secured at one end to its supporting leg by a pivotal connection, the center of which is offset from said leg and at the other end to its supporting leg by a pivotal connection the center of which is offset from said rail, said upper end rails being detachably secured at each end to the ends of said upper side rails, said lower side rails being detachably secured at each end to one of said legs, and each of said lower end rails being pivotally secured at each end to one of said legs and comprised of two members having a central knee joint.

2,459,446
ROLLER BRACKET FOR ROUND REFRIGERATOR OR CABINET SHELF
Joe H. Meredith, Springfield, Mo.
Application June 1, 1945, Serial No. 597,105
1 Claim. (Cl. 308—231)



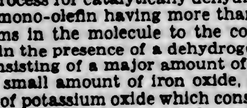
The combination of a movable shelf, a bracket comprising a disc shaped member having diametrically opposed bearing members formed thereon at the center thereof, one of said bearing members being square shaped in cross section and adapted to be detachably seated in a support, the other of said bearing members being circular in cross section, a roller journalled on said circular bracket for the engagement of the shelf therewith to permit free rotation of the roller, a flange on said roller of the same diameter as said disc shaped member, said roller being downwardly tapered on the contact edge thereof, a rubber washer on the square shaped bearing member and a steel washer on the circular bearing member to permit free rotation of said roller, and a track on said shelf conforming to the taper of the contacting surface of said roller to permit smooth sliding motion of said shelf.

2,459,447
APPARATUS FOR CONVERTING HEAT ENERGY INTO USEFUL WORK
Humphreys Milliken, Mount Royal, Quebec, Canada
Application March 4, 1944, Serial No. 525,034
9 Claims. (Cl. 60—44)



6. An engine comprising a cylinder, a piston operating therein, an inlet valve chamber through which motive fluid is delivered to said cylinder to operate said piston, an inlet valve in said chamber controlling the opening through which the motive fluid enters said cylinder, a motive fluid inlet header partially surrounded by a cooling jacket and provided with an outlet through which motive fluid passes from said header to said chamber, means for supplying to said header a hot gaseous motive fluid at a high temperature and pressure and means for intermittently supplying to the cooling jacket of said header a cooling medium consisting of compressed air at a temperature below the temperature of the motive fluid.

2,459,448
BALL-AND-SOCKET VEHICLE COUPLING
William Moffet Murray, North Balclutha, New Zealand
Application June 26, 1945, Serial No. 601,652
In New Zealand January 31, 1945
1 Claim. (Cl. 280—33.17)

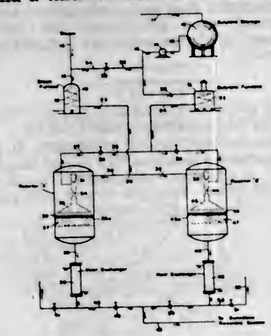


A trailer or like hitch, including a body formed at one end for one connection of the hitch and at the opposite end with a part ball receiving socket, a block swingingly supported in the body and formed to cooperate with the body part of the socket to complete the ball receiving portion of the hitch, the completed socket having a ball entrance materially less in width than the diameter of the ball, and the ball part of the socket formed in the body having an integral restricted retaining lip to underlie the second hitch connecting element received in the socket, said hitch connecting element being in the form of a ball, means carried by the ball for connecting the ball to the second element of the hitch, a lever pivotally mounted in the body and connected to and for operating the block relative to its socket formation, a spring pressed element in the body for maintaining the lever under yielding pressure, and a pin removably mounted in the body to directly engage the block independent of the lever to hold the block in socket forming relation, said pin being removable to permit block movement in one direction to free the ball member.

2,459,449
CATALYTIC DEHYDROGENATION OF OLEFINIC HYDROCARBONS WHILE MAINTAINING THE POTASSIUM CONTENT OF THE CATALYST
Eugene H. Oliver, Baytown, and Charles F. Van Berg, Goose Creek, Tex., assignors, by mesne assignments, to Standard Oil Development Company, Elizabeth, N. J., a corporation of Delaware
Application June 10, 1946, Serial No. 675,813
10 Claims. (Cl. 260—680)

1. A process for catalytically dehydrogenating a normal mono-olefin having more than three carbon atoms in the molecule to the corresponding diolefin in the presence of a dehydrogenating catalyst consisting of a major amount of magnesium oxide, a small amount of iron oxide, and a small amount of potassium oxide which consists of passing a mixture of said mono-olefin and steam at a reaction temperature through a bed consisting of a thin first layer of said dehydrogenating catalyst

containing a relatively large amount of potassium oxide and a thick second layer of said dehydrogenating catalyst containing a relatively small amount of potassium oxide.

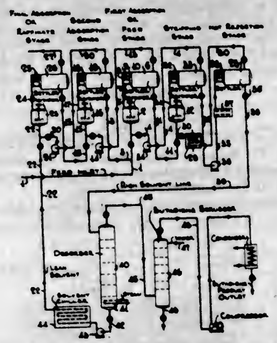


2,459,450
NONREFILLABLE BOTTLE
William F. Owen, Daytona Beach, Fla.
Application February 23, 1946, Serial No. 649,558
7 Claims. (Cl. 215—25)

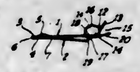
1. The combination of a bottle having a neck with fluted inner walls and spaced valve seats, valves mounted on the seats, one valve being a float valve and the other a non-float valve, a cap having an outlet passage and being permanently fixed to the neck, together with means in the neck and upon the cap for permanent fixture of the cap on the neck, said passage being U-shaped, an inclined tube connecting therewith, an air passage for permitting air to enter the bottle, said cap having an annular flange sealed to the bottle neck, a gap in said air passage, said tube forming a spout and projecting beyond the outer surface of the cap.

2,459,451
BUTADIENE EXTRACTION
John W. Packie, Green Village, and Edwin M. Glasier, Elizabeth, N. J., assignors to Standard Oil Development Company, a corporation of Delaware
Application February 2, 1945, Serial No. 575,817
8 Claims. (Cl. 260—681.5)

1. In the liquid phase solvent extraction of an olefin from a mixture of olefins and saturated hydrocarbons in a plurality of stages each stage comprising a turbine-type agitator and a settling chamber in which (1) the solvent passes through the stages in progressively increasing concentration of the olefin content and the hydrocarbon mixture passes through the stages in progressively decreasing content of the olefin, (2) fresh hydrocarbon is intimately contacted with a preferential solvent for an olefin in a feed stage, (3) the mixture of hydrocarbon and solvent is first passed to the turbine type agitator of the feed stage and then to the settling chamber of the feed stage to form a solvent phase and a hydrocarbon phase, (4) the solvent phase after being separated is contacted with a hydrocarbon phase, having a higher olefin concentration than the hydrocarbon phase from which it was separated, (5) the hydrocarbon phase after being separated is contacted with a solvent phase, having a lower olefin content than the one from which it was separated, (6) the solvent phase after passing through the turbine type agitator and settling chamber of the last stage is heated and passed to a settling chamber to expel in the liquid phase substantially all hydrocarbons except the desired olefin, (7) the expelled hydrocarbons are separated from the solvent phase in the said settling chamber, (8) the separated hydrocarbons are recycled to the solvent phase passing to the turbine type agitator and settling chamber of the last stage and (9) the olefin is expelled from the said solvent phase, from which substantially all of the hydrocarbon except the desired olefin was expelled, by heating to a sufficiently high temperature to vaporize the olefin, the improvement which comprises increasing the speed of agitation in each turbine-type agitator succeeding the feed stage in the direction of hydrocarbon flow and maintaining the speed of the agitation in each turbine-type agitator succeeding the feed stage in the direction of solvent flow at substantially the same rate as that in the final stage following the feed stage in the direction of hydrocarbon flow.



2,459,452
CLAMP
Kenneth Reiner, Los Angeles, and Armand Braga, Eagle Rock, Calif.; said Braga assignor to said Reiner
Application July 24, 1946, Serial No. 685,995
10 Claims. (Cl. 132—46)



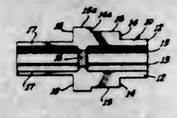
1. In a clamp of the kind described, the combination of two members having clamping jaws, said members having correlated means integral respectively with said members, said means engaging each other and enabling the said members to rock upon each other toward an open position, one of said members having a resilient integral extension projecting toward the clamping jaws, engaging the other member and urging the jaws toward their closed position.

for receiving the compressed air which balances

operating therein, an inlet valve chamber through which motive fluid is delivered to said cylinder to operate said piston, an inlet valve in said chamber controlling the opening through

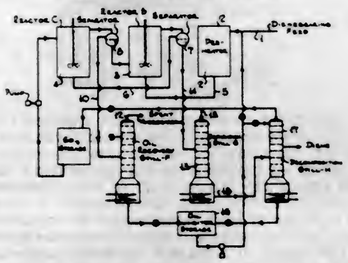
ing a mixture of said mono-olefin and steam at a reaction temperature through a bed consisting of a thin first layer of said dehydrogenating catalyst

2,459,453
EXPANDING ARBOR
William K. Rieber, Los Angeles, Calif.
Application June 1, 1945, Serial No. 597,113
10 Claims. (Cl. 279—2)



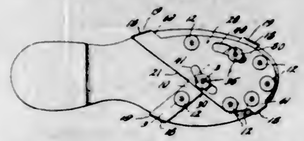
1. An expanding arbor which comprises a plurality of fingers of arcuate cross section resiliently held in spaced parallel relation about a common fulcrum disposed intermediate their ends and forming a substantially complete tubular shell around said fulcrum, whereby radial movement of said fingers on one side of said fulcrum causes reciprocal movement of said fingers on the other side of said fulcrum.

2,459,454
CONCENTRATION OF PIPERYLENE
Richard F. Robey, Cranford, N. J., assignor to Standard Oil Development Company, a corporation of Delaware
Application December 29, 1945, Serial No. 638,520
2 Claims. (Cl. 260—681.5)



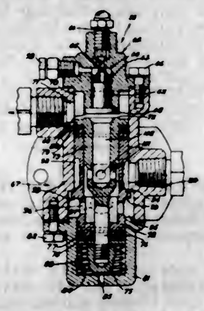
1. A continuous process for recovering piperylene from a mixture of hydrocarbons containing five carbon atoms to the molecule by reacting piperylene with liquid sulfur dioxide to form piperylene monosulfone comprising the steps of passing an anti-oxidant treated hydrocarbon mixture containing piperylene in sequence through a first and second reaction zone, contacting the mixture in the first reaction zone with an excess of a liquid sulfur dioxide phase containing dissolved piperylene monosulfone formed in the second reaction zone, passing the reaction products from the first reaction zone to a first separation zone wherein the reaction products separate into a piperlyene monosulfone phase and an unreacted hydrocarbon phase, passing the unreacted hydrocarbon phase to the second reaction zone, contacting the unreacted hydrocarbon phase in the second reaction zone with an excess of anti-oxidant treated liquid sulfur dioxide, maintaining the unreacted hydrocarbon phase and liquid sulfur dioxide in the second reaction zone at a reaction temperature of about 100° C., passing the reaction products from the second reaction zone to a second separation zone wherein the reaction products separate into said liquid sulfur dioxide phase containing dissolved piperylene monosulfone which is passed to the first reaction zone and a second unreacted hydrocarbon phase, removing said second unreacted hydrocarbon phase from the second separation zone for recovery of hydrocarbons therefrom, and passing the piperylene monosulfone phase from the first separation zone to a decomposition zone in which the piperylene monosulfone is decomposed to piperlyene and sulfur dioxide.

2,459,455
DETACHABLE SHOE CLEAT
Melvin A. Robinson, Washington, D. C.
Application November 3, 1947, Serial No. 783,731
5 Claims. (Cl. 36—7.7)



1. A detachable shoe cleat comprising a pair of elements: one a sole plate, the other an elongated strip swingably mounted on the sole plate; said strip being mounted on and extending across said plate with end portions protruding therefrom; calks carried by said plate; the plate and strip each having two sole engaging clips, said sole plate having two arcuate slots guiding the relative swingable movement between said elements, said strip having two openings, one coincident with each of said slots, means passing through each of said coincident slots and openings, said means serving to assemble said elements, and means coacting with said last named means to secure said elements firmly in adjusted position.

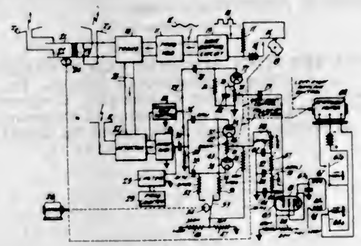
2,459,456
FLUID PRESSURE VALVE
Edward A. Rockwell, Cleveland, Ohio
Original application June 4, 1943, Serial No. 489,713. Divided and this application April 6, 1944, Serial No. 529,866
10 Claims. (Cl. 121—46.5)



1. A modulator valve, provided with a casing, having a connection to a supply of compressed air, a hydraulically operated connection for operating the valve, a plunger, having a cylinder, operated from the hydraulic connection, an outlet valve member connected to said plunger, a plunger valve having an element, provided with a discharge chamber, cooperating with the outlet valve member to control the exhaust, and a plunger sleeve fixedly connected to the plunger valve element having an inlet valve thereon, said plunger sleeve having a chamber around the same

for receiving the compressed air which balances the plunger sleeve in both directions from the casing and being provided with a chamber within the same communicating with the discharge chamber within the plunger valve element.

2,459,457
COMPARATOR CIRCUITS FOR RADIO LOCATORS
Royden C. Sanders, Jr., Hightstown, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application March 20, 1944, Serial No. 527,292
16 Claims. (Cl. 343—7)



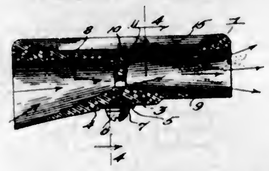
12. In combination, a radio locator system comprising a transmitter for transmitting a radio signal to a reflecting object and a receiver for receiving said signal after reflection from said object, said system also comprising a directive antenna system and means for angularly displacing its region of maximum field strength during successive switching periods to each side of the region defining the equi-signal axis, a rectifier connected to rectify the output of said receiver during one of said switching periods, an output impedance unit for said rectifier, switching means for making said rectifier pass current through said impedance unit during said one antenna switching period, means for establishing a comparison voltage during the next antenna switching period whereby a square wave voltage having an alternating-current axis at a certain voltage level appears across said output impedance unit when the region defining the equi-signal axis is directed toward but to one side of said reflecting object and whereby a square wave voltage having an alternating-current axis at a different voltage level appears across said impedance unit when said region defining the equi-signal axis is directed to the opposite side of said reflecting object, a filter connected to smooth out said square wave to obtain its direct-current component, a reversible motor, relay means for controlling the direction and amount of rotation of said motor in accordance with the direct-current output of said filter, means for controlling the direction in which said equi-signal axis region is pointed, and a servo connection between said motor and said last means for turning said antennas toward said reflecting object in response to said equi-signal axis region pointing to one side of said object.

2,459,458
TRAILER TOW-POLE AND HITCH
Philip J. Schmitz, Sleepy Eye, Minn.
Application April 7, 1947, Serial No. 739,737
1 Claim. (Cl. 280—33.14)

A towing hitch of the character described comprising, an elongated open ended cylindrical tube, internal and external threads formed inwardly for a spaced distance from each of said ends, an elongated circular rod slidably carried within and extending from each end beyond said tube, a pair of circular collars carried about said rod each at an equally spaced distance inward from the adjacent end of said tube, a pair of coil springs carried one about each end of said rod without and in abutment with the adjacent collar, a threaded coupling secured about each end of said tube, a

reducer carried by each coupling abutting with and compressing said springs against said collars while permitting the sliding extension of said rod, means carried by one end of said rod adapting it to be quickly detachably coupled to a powered vehicle, and means carried by that end of said tube opposite said rod end adapted to be rigidly secured to the steering tongue of a trailer wagon in the manner and for the purpose described.

2,459,459
SELF-EMPTYING ASH TRAY FOR AUTOMOBILES
Elliston P. Seaman, Williamsport, Pa.
Application July 1, 1946, Serial No. 680,662
1 Claim. (Cl. 206—19.5)



An ash disposal receptacle for automotive vehicles comprising a unitary body having a recess in its upper surface forming an ash tray, a longitudinally extending oppositely tapered bore in said body beneath said tray having air adit and exit portions, an integral apertured rib in said body and separating said portions, said tray having an opening in the bottom thereof communicating with said exit portion only, and means for removably attaching said receptacle to a quartered window of the automotive vehicle, said means including a longitudinally recessed seat at the lower edge of said body for engagement with a side and lower edge of a quartered window, a spring clip, and a pin engageable with the lower end of said rib for retaining said clip upon said body.

2,459,460
CASE FOR CIRCLE SAWS
Arthur R. Segal, Milwaukee, Wis.
Application September 20, 1947, Serial No. 775,282
5 Claims. (Cl. 206—46)

3. A protective case for a circle saw having teeth provided with carbide tips wider at their cutting faces than the thickness of the saw, comprising: a substantially flat body section having a circular well formed in one face of a diameter to receive the saw and of a depth substantially equal to the thickness of the body of the saw and consequently less than the edge-to-edge dimension of the carbide tips measured across the face of the tips; a cover flatwise applicable to said face of the body section to close said well; and securing means for drawing the cover tightly down toward

said face of the body section so as to cause the

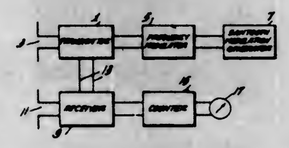
said signal potentials for changing said ratio,

its cyanide content, and subjecting the liquor, at

tending return bend therein and terminating in a downwardly extending portion passing through

side of the cover and the bottom of the well and thereby preclude shifting of the saw in the case.

2,459,461
FREQUENCY MODULATION DISTANCE INDICATOR
Ray G. Shankweiler, Cranbury, and Daniel Blitz, Princeton, N. J., assignors to Radio Corporation of America, a corporation of Delaware
Application June 23, 1945, Serial No. 601,128
3 Claims. (Cl. 343—14)

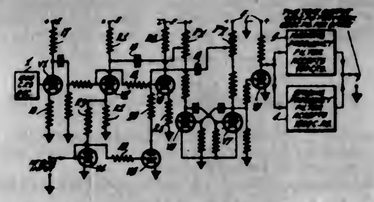


1. A distance measuring system including means for transmitting a high-frequency signal to an object whose distance is to be measured, means for varying cyclically the frequency of operation of said transmitter between two values f_1 and f_2 as a sawtooth function of time at a rate f_m, with the periods of increase of frequency much longer than the periods of decrease of frequency, means adjacent said transmitting means for receiving said signal as transmitted and after reflection by said object, and responsive thereto to provide a beat signal only during increase in frequency of said signal both as transmitted and after reflection, a frequency responsive indicator having a time lag t_L, and means for applying said beat signal to said indicator, wherein

$$t_L = 2\frac{f_2 - f_1}{f_2 + f_1} f_m$$

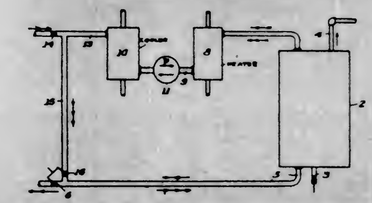
2,459,462
TWO-TONE KEYER
Eugene R. Shenk, Brooklyn, N. Y., assignor to Radio Corporation of America, a corporation of Delaware
Application March 16, 1946, Serial No. 655,004
9 Claims. (Cl. 250—36)

1. In a signalling system, a source of alternating voltage of substantially fixed frequency the durations of the alternations of which, above and below respectively a base value, are of a first ratio, a source of signalling potentials the magnitude of which changes, means coupled to said source of alternating voltage and controlled by said signal potentials for changing said ratio, and wave filters, arranged to select alternating



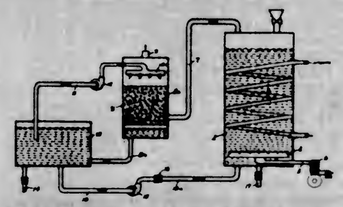
voltages of different frequencies, coupled to said source of alternating voltage.

2,459,463
GAS TREATING METHOD AND APPARATUS
George L. Simpson, Coraopolis Heights, Pa., assignor to Delaware Engineering Corporation, Pittsburgh, Pa., a corporation of Delaware
Application May 5, 1944, Serial No. 534,211
6 Claims. (Cl. 34—13)



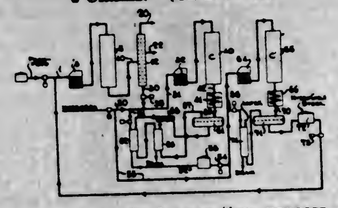
5. The method of reconditioning a gas dryer, which dryer comprises an adsorber unit having a gas inlet end and a gas outlet end, said method comprising the steps of first supplying heated gas to the unit with the gas being continuously changed and with the heated gas flowing into the outlet end of the dryer and emerging from the inlet end of the dryer, and thereafter continuously recirculating cooled gas through the unit, the same gas being recycled and entering the inlet end thereof and leaving the unit at the dry gas discharge end thereof.

2,459,464
DETOXIFICATION OF CYANIDE-CONTAINING INDUSTRIAL WASTE LIQUORS
Allen S. Smith, Ann Arbor, Mich., assignor to Blaw-Knox Company, Pittsburgh, Pa., a corporation of New Jersey
Application November 6, 1945, Serial No. 626,989
8 Claims. (Cl. 23—150)



1. The process of detoxifying a waste cyanide liquor which comprises adjusting the composition of said liquor to such extent as may be necessary to give it a pH of from 5 to 8 and ensure the presence therein of ammonium ion in concentration greater than is chemically equivalent to its cyanide content, and subjecting the liquor, at a temperature not substantially below 60° C., to oxidizing conditions effective to decompose most of its cyanide content, with formation of ammonia and carbon dioxide.

2,459,465
TWO-STAGE HYDROGENATION TREATMENT FOR HYDROCARBON OILS
Warren M. Smith, Baton Rouge, La., assignor to Standard Oil Development Company, a corporation of Delaware
Application May 11, 1945, Serial No. 593,124
3 Claims. (Cl. 196—53)



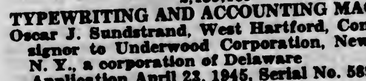
1. A two-stage hydrogenation process which comprises feeding a hydrogen-containing gas and a gas oil containing aromatics, sulfur and nitrogen to a reaction zone maintained at a temperature of from 700 to 900° F. under a pressure of from about 200 to 1000 pounds per square inch, and containing a sulfactive catalyst selected from the group consisting of the sulfides of metals of groups VI and VIII of the periodic system and mixtures of such sulfides, permitting the said gas oil to remain resident in the reaction zone for a sufficient period of time to convert the nitrogen and sulfur compounds in the said feed stock to volatile compounds, withdrawing the reaction products from said reaction zone, removing volatile nitrogen and sulfur compounds therefrom, passing the substantially sulfur and nitrogen free product to a second reaction zone where it is contacted with hydrogen and a sulfur-sensitive catalyst at temperatures of from 500 to 700° F. while under pressures of from about 200 to 1000 pounds per square inch for a sufficient period of time to effect simple hydrogenation of olefins and aromatics in the said oil, and recovering from the said second zone a product of lower aromaticity than the original feed stock, but having substantially the same boiling range as the original feed stock.

2,459,466
MEASURING SCOOP OR LADLE
Charles C. Spreen, Detroit, Mich., assignor to Richard W. Lewis, Walled Lake, Mich.
Application May 14, 1946, Serial No. 669,728
1 Claim. (Cl. 73—426)

A measuring scoop or ladle comprising a bowl having a flat handle integral therewith and projecting rearward therefrom with its upper face flush with the upper edge of the bowl, a tongue struck downward from a center portion of said handle forming a slot therein, said tongue being parallel to the handle in a plane below the same, a wiper bar extending transversely of said handle directly in rear of said bowl and having a rearwardly extending portion with an upwardly extending return bend therein and terminating in a downwardly extending portion passing through said slot, and a coil spring sleeved upon said tongue with its rear end abutting against said downwardly extending portion whereby said upwardly extending return bend may be operated by the thumb or finger of a hand grasping the handle to move said wiper across the upper face of said bowl against the resilient pressure of said spring.

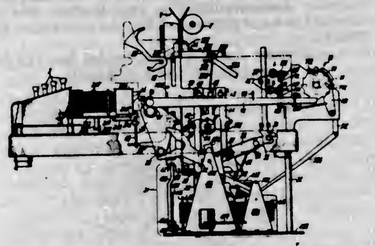
2,459,467
POLYAZO BENZIDINE DYES
Fritz Straub, Kaiseraugst, near Basel, and Jakob Brassel, Basel, Switzerland, assignors to Ciba Limited, Basel, Switzerland, a Swiss firm
No Drawing. Application August 23, 1943, Serial No. 499,706. In Switzerland September 2, 1942
15 Claims. (Cl. 260—159)

1. A dyestuff of the formula



wherein R_1 and R_2 stand for radicals of coupling components selected from the class consisting of coupling components of the benzene, naphthalene and pyrazolone series, x stands for an alkoxy group, and R_2 contains a hydroxyl group in a position vicinal to the azo group.

2,459,468
ACCOUNTING MACHINE
Oscar J. Sundstrand, West Hartford, Conn., assignor to Underwood Corporation, a corporation of Delaware
Application June 24, 1941, Serial No. 399,461
13 Claims. (Cl. 235—60.29)



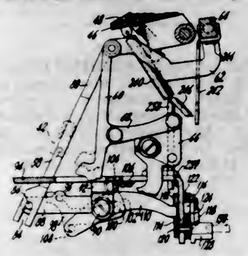
1. In a machine of the class described, two separate groups of type bars, indexing mechanism for each group of type bars, a totalizer, adding actuators arranged to enter numbers in the totalizer by actuating the totalizer in one direction only, subtracting actuators arranged to enter numbers in the totalizer by actuation of the totalizer in a reverse direction only, means for connecting said adding actuators only with the type bars of one group for movement therewith and means for connecting said subtracting actuators only with the type bars of the other group for movement therewith.

2,459,469
TYPEWRITING AND ACCOUNTING MACHINE
Oscar J. Sundstrand, West Hartford, Conn., assignor to Underwood Corporation, New York, N. Y., a corporation of Delaware
Application April 23, 1945, Serial No. 589,766
20 Claims. (Cl. 235—59)

1. A machine of the class described comprising a register and actuating mechanism for the reg-

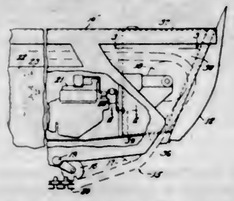
a silica hydrogel activated with minor amounts

ister, relatively movable to shift the actuating mechanism in an advance direction into and out of the zone of a register and from denomination to denomination of the register and to return relatively the actuating mechanism and the register, locking means normally in unlocking condition for preventing relative return movement from being imparted to the register and the actuating mechanism when the actuating mechanism



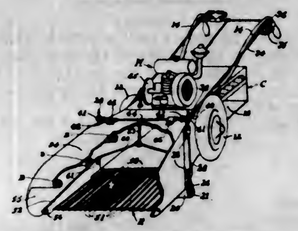
is in the zone of a register and means controlled by the relative positions of the register and the actuating mechanism and in accordance with the digit entering action of the actuating mechanism for shifting said locking means into locking condition when the actuating mechanism is in the zone of a register after a digit has been entered in the register and for maintaining said locking means in locking condition until the differential mechanism leaves the register zone.

2,459,470
MOTOR VEHICLE FUEL TANK
Benjamin A. Swennes, Rockford, Ill., assignor, by mesne assignments, to the United States of America as represented by the Secretary of the Navy
Application April 5, 1944, Serial No. 529,630
4 Claims. (Cl. 280—5)



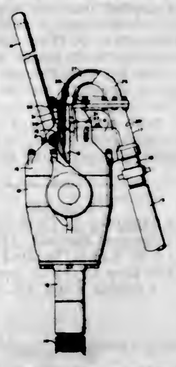
1. In a vehicle, the combination of a vehicle body, means for propelling said vehicle and including a motor in said body, said body having a well therein comprising side walls and a bottom formed by certain structural portions of the body, a tank for motor fuel disposed in said well and having sheet metal sides and a bottom which lie adjacent and parallel to the walls and the bottom of the well, sheets of yielding material between said walls and the adjacent sides of said tank and between the bottom of the well and the bottom of the tank for cushioning the tank from shocks from the walls and bottom of the well or from racking of the opposite walls of the well with respect to each other and for supporting the tank with respect to the structural portions forming the well, fuel conveying means connected between said tank and said motor, and means which permits relative movement of the tank and fuel conveying means with respect to said structural portions.

2,459,471
CRANBERRY PICKING MACHINE
Eugene L. Tebbetts, Holliston, Mass., assignor of one-half to Harold E. Cole, Boston, Mass.
Application December 19, 1946, Serial No. 717,217
7 Claims. (Cl. 56—328)



6. A machine of the class described comprising supporting means, a scoop supported by said means embodying a rake having two outside teeth at opposite sides and other teeth intermediate thereof, said outside teeth being pivotally attached to said scoop at their front half portions, all of said teeth being connected at their rear portions, and movable mechanism supported by said supporting means and operably connected to said outside teeth adapted upon actuation to raise and lower portions of said teeth, said intermediate teeth extending to a point approximately laterally opposite the points of attachment of said outside teeth to said scoop.

2,459,472
ROTARY SWIVEL
Guglielmo R. Tremolada, Los Angeles, Calif., assignor to Emsco Derrick & Equipment Company, Los Angeles, Calif., a corporation of California
Application March 23, 1945, Serial No. 584,372
19 Claims. (Cl. 255—25)

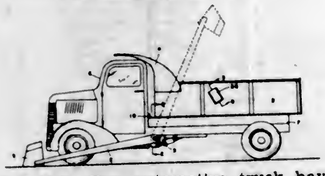


1. In a rotary swivel, the combination of: a shell and a rotatable body, said shell having a laterally projecting hollow wall, the interior of which communicates with the interior of said shell so as to form an oil chamber, and a mud inlet duct supported by said hollow wall at one side of said shell and having the outer end thereof prepared for connection to a rotary hose, whereby the weight of said rotary hose will be transmitted directly to the side of said shell, and said body having a mud passage therein for connection to the upper end of a string of drill pipe;

a swivel fluid connection at the upper end of said passage; and a detachable mud conveying member removably secured on the top portion of said shell for conveying mud from said mud inlet duct member to said swivel fluid connection said mud conveying member being removable from its operative position without disconnection of said inlet duct member from said shell.

3. In a swivel fluid connection unit for a rotary swivel, the combination of: a cylindric wash pipe having a ring of rubbery material on one end thereof, said ring providing a forwardly faced shoulder, said wash pipe having a cylindric layer of hard material on its other end; a clamping ring to engage said shoulder; and a packing element surrounding said layer of hard material on said wash pipe, said packing element comprising a shell forming a packing space, a packing means in said space and a compressing ring of rubbery material in the outer end of said space, said compressing ring having a cylindric wall to engage the wall of said shell, an inwardly directed sealing lip at the outer end of said compressing ring and an inwardly directed sealing lip at the inner end of said compressing ring, there being a bead on the inner end of said compressing ring to engage said packing means.

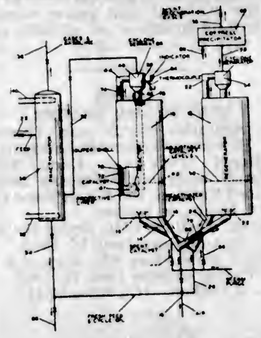
2,459,473
SELF-LOADING AUTOMOTIVE TRUCK
Lester L. Troutman, El Monte, Calif.
Application October 30, 1946, Serial No. 706,622
2 Claims. (Cl. 214—78)



1. A self-loading automotive truck having a chassis and a dump body mounted thereon, brackets depending from the chassis, a shaft extending through the brackets and the opposite sides of the chassis, arms rigidly secured respectively to the outer ends of the shaft, a scoop connected to the outer ends of the arms and adapted to be extended forwardly of the truck to pick up material and to be lifted by the arms over the front of the truck to deposit the material in the dump body, said shaft having a large gear thereon between the brackets, a double acting fluid cylinder device connected to the chassis and having a rack adapted to be extended onto the large gear to rotate the same, said gear having a projection offset from the side of the same, a booster cylinder device connected to the chassis below the double acting cylinder adapted to engage the projection of the large gear when the scoop is in its lowered position ahead of the truck, and adapted to assist the double acting cylinder device to effect the upward rotation of the arms to lift the scoop.

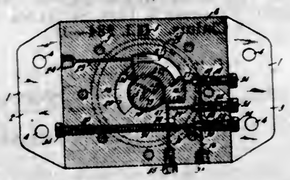
2,459,474
PROCESS UTILIZING MOVING SOLID CATALYST
John D. Upham, Bartlesville, Okla., assignor to Phillips Petroleum Company, a corporation of Delaware
Application June 1, 1943, Serial No. 489,276
3 Claims. (Cl. 196—52)

1. In a catalytic conversion process wherein a moving powdered porous catalyst prepared from a silica hydrogel activated with minor amounts of alumina is utilized, the method of preventing the introduction of extraneous matter into the reaction system through erosion or corrosion of portions of the apparatus caused by action of the moving catalyst, while maintaining a desired substantially constant level of catalytic activity, which comprises preparing a hydrated silica having a substantially higher silica content than that used in preparing said mobile catalyst, activating same with minor amounts of alumina, applying the thus treated hydrogel under about 1000 pounds pressure to the surface of an apparatus element normally erodable by action of the moving catalyst, slowly heating the thus-applied material to a temperature above those employed in



the conversion to produce a hard, dense compacted protective coating for said element having little catalytic activity at the surface compared to said mobile catalyst but having substantial catalytic activity when comminuted, contacting said powdered porous catalyst with reactants at conversion conditions, effecting movement of said powdered porous catalyst such that said protective coating is eroded to an extent sufficient to provide at least a portion of the make-up powdered catalyst required in said process in the form of catalytic powder abraded from said coating, and removing from the process an amount of powdered catalyst at least equivalent to the make-up catalyst thus supplied, to maintain a desired level of catalytic activity.

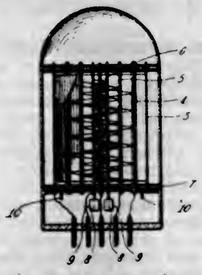
2,459,475
DIFFERENTIAL PRESSURE FLUID SERVOMOTOR
Fred K. van Almelo, Nassau, N. Y.
Application December 2, 1943, Serial No. 512,657
2 Claims. (Cl. 121—44)



1. A fluid motor of the differential pressure type adapted for use as a closure operator comprising a body, a shaft mounted to oscillate therein, vanes connected to said shaft and disposed in two axially

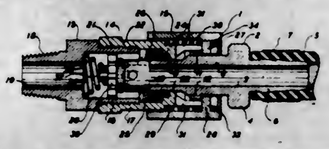
spaced pairs with the vanes in each pair symmetricaly disposed with respect to the axis of said shaft to form a balanced shaft-vane assembly; said body being provided with separate chambers for each vane within which said vanes are closely fitted but may oscillate with said shaft, and also with separate passages for conveying fluid under pressure to and from each of said chambers, respectively; said passages communicating with said chambers on opposite sides of the respective vanes therein; whereby the fluid pressure on one pair of said vanes will function, as a force couple, to turn said shaft in a direction opposite the force couple created by the fluid pressure on the other pair of said vanes; the combined areas of the vanes forming one of said pairs being substantially in excess of the combined areas of the vanes forming the other of said pairs; whereby with equal unit fluid pressure on all said vanes said shaft will turn in one direction.

2,459,476
ELECTRODE SPACER
Johannes Antonius Maria van Liempt, Frits Prakke, Hendricus Johannes Landsbergen, and Jules Henri Marie van Uden, Eindhoven, Netherlands, assignors, by mesne assignments, to Hartford National Bank and Trust Company, Hartford, Conn., as trustee
Application April 26, 1946, Serial No. 665,012
In Germany June 16, 1942
Section 1, Public Law 690, August 8, 1946
Patent expires June 16, 1962
6 Claims. (Cl. 250—27.5)



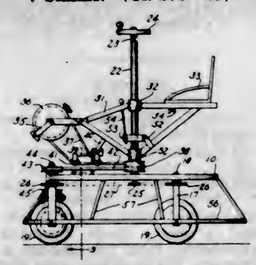
1. An electric discharge tube comprising an envelope, electrodes within the envelope, and means maintaining a predetermined spacing between said electrodes comprising a metallic member within the envelope having surface portions coated with a superficial insulating layer.

2,459,477
VALVE COUPLING
John Van Schuyver, Los Angeles, Calif.
Application February 5, 1946, Serial No. 645,567
2 Claims. (Cl. 284—18)



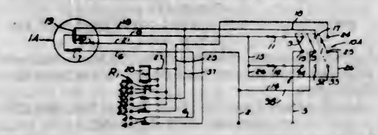
1. In a valvular coupling device consisting of a pair of complementary parts, one part comprising a male insert having a passage therethrough from end to end, and the other part comprising a female receiver having a passage therethrough from end to end, the insert having means at one end for making connection with a fluid conductor and the other end adapted to enter the receiver, the end adapted to enter the receiver consisting of a projected teat-like element with spaced radial projected fingers spaced from the ends thereof, the receiver including a body having means at one end for making connection with a fluid conductor, a slidable outer sleeve with inwardly directed fingers at the other end thereof, resilient means for continuously urging the sleeve in a direction away from the other end of the receiver, valve means in the passage of the receiver adapted to be opened by the teat-like end of the insert, spaced axially directed arms extending from the body within the sleeve providing slide-ways between them for the fingers, the distal ends of the arms having inturned flanges, said slide-ways being sized to guide the fingers of the insert and the fingers of the sleeve so that the sleeve can readily reciprocate and the fingers of the insert enter the receiver to be latched behind the flanges of the arms when the sleeve is retracted.

2,459,478
VEHICLE
Kenneth J. Watson, North Hollywood, Calif.
Application May 29, 1947, Serial No. 751,195
7 Claims. (Cl. 272—29)



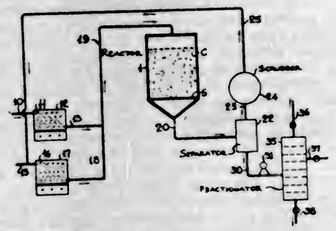
7. A vehicle comprising a base, wheels supporting said base, a frame supported on said base for rotation thereon, driving means carried by said frame, means operatively connecting said driving means with said base and at least one of said wheels to render said driving means effective to rotate said frame relative to said base or drive said vehicle, and means operatively connected between said frame and said base to selectively render said driving means effective to drive said vehicle or rotate said frame.

2,459,479
SPLIT-PHASE MOTOR REVERSING CIRCUIT
Clarence E. Weinland, Pasadena, Calif., assignor to General Tire and Rubber Company of California, Pasadena, Calif., a corporation of California
Application September 27, 1946, Serial No. 699,676
4 Claims. (Cl. 318—207)



1. In a reversing circuit means for a so-called split-phase motor having a starting winding and a running winding together with a switch member operable to open position to disconnect the starting winding when the motor has attained a predetermined running condition, and pole-changing switch means; circuit means including relay means having an actuating coil electrically connected to said switch member and adapted to cause energization of said starting and running windings upon closing said switch means when said switch member is closed; and contact means associated with said relay means and adapted upon operation of said relay means to retain energization of said running winding independent of said switch member so long as said switch means remains closed; said actuating coil being connected to said starting winding through said switch member whereby operation of said switch member to open position opens a circuit connection between said actuating coil and said starting winding when said motor has attained said predetermined running condition.

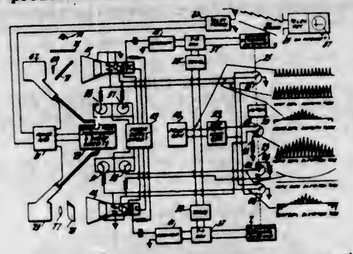
2,459,480
METHOD OF CONDITIONING A CATALYST FOR USE IN HYDROFORMING OF NAPHTHAS
Albert B. Welty, Jr., Mountainside, and Clinton H. Holder, Cranford, N. J., assignors to Standard Oil Development Company, a corporation of Delaware
Application August 11, 1945, Serial No. 610,343
8 Claims. (Cl. 196—50)



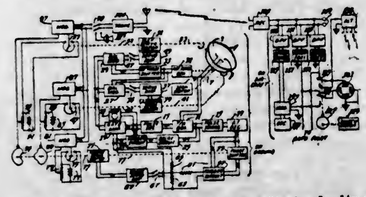
1. The method of hydroforming a virgin naphtha which comprises contacting said naphtha at elevated temperatures and pressure and in the presence of added hydrogen with a catalyst consisting essentially of a heavy metal oxide selected from the class of group V and group VI heavy metal oxides, carried on a suitable support, the said catalyst before use having been subjected to a series of about 720 cycles of oxidation and reduction at an elevated temperature.

2,459,481
INSTRUMENT LANDING SYSTEM
Irving Wolff and Philip J. Herbst, Princeton, N. J., assignors to Radio Corporation of America, a corporation of Delaware
Application October 18, 1945, Serial No. 623,106
9 Claims. (Cl. 343—6)

6. An instrument ground approach system for aircraft including means for producing a map-like visual indication of the azimuth and range of an aircraft with reference to a predetermined point on the ground, means for producing a further visual indication of the elevation and range of said craft with reference to said point; means for varying the relationship to range of said second indication as a predetermined function of said elevation, whereby said two indications of range correspond only when said craft is in a predetermined line, and means for superimposing said two visual indications to provide a single composite image.

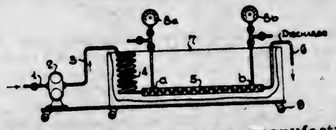


2,459,482
INSTRUMENT LANDING SYSTEM
Donald S. Bond, Philadelphia, Pa., assignor to Radio Corporation of America, a corporation of Delaware
Application November 30, 1945, Serial No. 632,061
7 Claims. (Cl. 343—6)



6. A system for guiding aircraft, including, at a ground station, a radio locator system providing substantially continuously information as to the direction and range of an aircraft from said ground station, means responsive to said range information to modify said direction information in accordance with the characteristics of a predetermined flight path, means for converting said modified direction information into characteristic signals, and means for transmitting said signals to said aircraft.

2,459,483
CONTINUOUS METHOD FOR DETERMINING THE APPARENT VISCOSITY OF A GREASE
John C. Zimmer, Union, and Alan Beerbower, Westfield, N. J., assignors to Standard Oil Development Company, a corporation of Delaware
Application December 6, 1944, Serial No. 566,904
2 Claims. (Cl. 73—55)

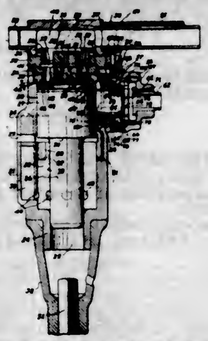


1. In a continuous grease manufacturing process, a method of continuously determining the apparent viscosity of a freshly prepared grease in a flowing stream which comprises passing a portion of the grease from said stream in streamline flow and under constant temperature and constant volume rate continuously through a flow-retarding device of measurable length and radius, so that the rate of shear will be in the

end to end, and the other part comprising a split-phase motor having a starting winding and

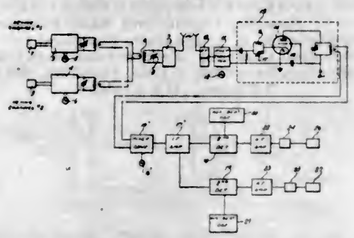
range of 10–1000 reciprocal seconds, and measuring the difference in pressure between two points spaced substantially apart along the flow-retarding device.

2,459,484
ROCK DRILL
Paul A. Bancel, Montclair, J. D. Ditson, Phillipsburg, and Alfred D. Karr, Newark, N. J., assignors to Ingersoll-Rand Company, New York, N. Y., a corporation of New Jersey
Application October 20, 1945, Serial No. 623,532
12 Claims. (Cl. 121—18)



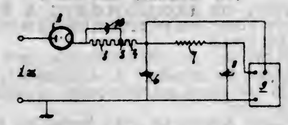
1. A pressure fluid actuated rock drill, comprising a casing having a piston chamber and an exhaust port therefor, a reciprocatory piston in the piston chamber having a pressure surface subjected to the force of an elastic medium compressed by the piston in one end of the piston chamber for moving said piston in one direction, valve means for controlling the flow of compression from the other end of the piston chamber, and a valve controlled by the piston for admitting pressure fluid into the said other end of the piston chamber for moving the piston in the opposite direction.

2,459,485
MULTIPLEX RADIO SYSTEM
Forrest A. Bartlett, Gardena, Calif., assignor to Press Wireless, Inc., Chicago, Ill., a corporation of Delaware
Application August 30, 1944, Serial No. 551,848
6 Claims. (Cl. 250—9)



1. In a signalling system of the carrier frequency-shift type, means to transmit from a common transmitter a plurality of carrier frequencies each representing a different signal and with the frequency difference between the carriers confined to the audio-frequency band, receiving means for said carriers comprising means to convert said carriers into corresponding intermediate frequency carriers, means to subject said intermediate frequency carriers to selective harmonic amplification to produce carriers having a frequency spacing which is a multiple of said frequency difference, means to reconvert said amplified harmonics to corresponding intermediate frequency carriers while preserving said multiplied frequency spacing, and detector means to detect in separate channels the signal modulations in the said reconverted intermediate frequency carriers.

2,459,486
POWER SUPPLY SYSTEM
Hendrikus Gerardus Alphonsus Bax, Eindhoven, Netherlands, assignor to Hartford National Bank and Trust Company, Hartford, Conn., as trustee
Application December 4, 1946, Serial No. 714,692
In the Netherlands September 28, 1945
Section 1, Public Law 690, August 8, 1946
Patent expires September 28, 1965
5 Claims. (Cl. 171—97)



5. A power supply for furnishing a filtered direct voltage to a load and adapted for connection to the terminals of an alternating current or direct current line, said power supply comprising a rectifier tube having a low internal resistance, a resistance element, a filter capacitance, said tube being connected in series with said element and said capacitance to said line terminals, and a by-pass condenser shunted across a portion of said resistance element, the unshunted portion of said element having a value substantially equal to the internal resistance of said tube, the shunted portion of said element having a value at which substantially the same magnitude of direct voltage is established across said load both in the case of connection to an alternating current line and in the case of connection to a direct current line.

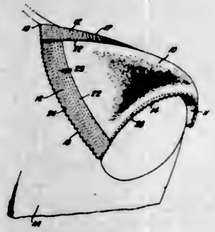
2,459,487
ELECTRIC DISCHARGE DEVICE
James E. Beggs, Scotia, N. Y., assignor to General Electric Company, a corporation of New York
Application March 27, 1946, Serial No. 657,408
8 Claims. (Cl. 250—27.5)

1. An electric discharge device including an envelope, a plurality of electrodes supported within said envelope including an anode, a cathode, a control grid, means supporting said anode from one end of said envelope, means supporting said control grid from the other end of said envelope, said envelope including a metal side wall insulated with respect to the supports for said anode and control grid and connected with said cathode with respect to high frequency voltages, a heater element in heat exchange relation with said cathode, and a plurality of terminals sealed through the side wall of said envelope and connected respectively with the terminals of said heater element and said cathode for supplying direct current voltages thereto.

2,459,488
POLYVINYL ACETAL RESINS
Keith F. Beal, Berwyn, and Clifford J. B. Thor, Western Springs, Ill., assignors to The Visking Corporation, Chicago, Ill., a corporation of Virginia
No Drawing. Application April 18, 1945, Serial No. 589,084
4 Claims. (Cl. 260—73)

1. A thermoplastic, water-insoluble polyvinyl acetal resin comprising the reaction product of a polyvinyl alcohol and an aldehyde selected from the class consisting of n-propoxyacetaldehyde, n-butoxyacetaldehyde, iso-butoxyacetaldehyde, sec-butoxyacetaldehyde and diethylmethoxyacetaldehyde, said resin being at least 80% acetalized and having at room temperature an elongation of at least 100% and a tensile strength of at least 1500 lbs. per square inch whereby said resin is self-plasticized.

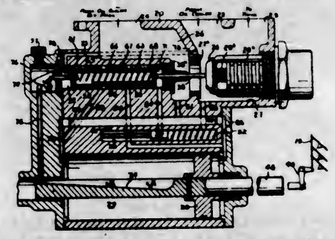
2,459,489
SHOULDER PAD
Samuel Bloom, Brooklyn, N. Y.
Original application August 7, 1946, Serial No. 689,000, now Patent No. 2,425,227, dated August 5, 1947. Divided and this application August 2, 1947, Serial No. 765,789
4 Claims. (Cl. 2—268)



1. A molded shoulder pad composed of a substantially triangular flexible fabric bottom fitted to the wearer's shoulder with the apex of the triangle at the neck line, an overlying molded felt top shaped to the desired contour and an intermediate filling of wadding sewn to said fabric base with shirring at the side opposite said apex, said filling being of increasing thickness from the edges adjoining the apex of the pad to the base of said pad with a wedge cut from the lower face thereof extending from said base towards the apex to permit the bottom of the pad to assume a concavity conforming to the convexity of the shoulder while the top may assume a convexity conforming to that of the molded felt top, and lines of stitching joining the felt top to the fabric base along the three sides thereof.

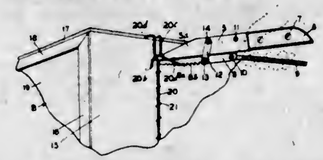
2,459,490
THERMOSTATIC SHUTTER CONTROLLER
Harry T. Booth, Glencoe, Ill., assignor to United Aircraft Products, Inc., Dayton, Ohio, a corporation of Ohio
Application December 5, 1942, Serial No. 467,993
5 Claims. (Cl. 257—2)

1. A controller for scavenged oil from an internal combustion engine which is returned to an oil reservoir under pressure, comprising, a thermostatically controlled valve beyond the cooler and its warm-up jacket for controlling the proportion of oil flow through a cooler and its by-pass warm-up jacket in the returned flow to the reservoir, means for controlling the passage of air through the cooler, an operating cylinder having a piston therein for operating said air controlling means, means for operating said piston in the operating cylinder by the passage of the scavenged oil under pressure into opposite ends of the operating cylinder and controlling the flow of the oil therefrom, said oil flow control means including a longitudinally



movable selector valve composed of two elements, a connection between one of said selector valve elements and the operating cylinder piston whereby the two members are proportionately moved with respect to each other, means for moving the other member by movements of said thermostatically controlled valve in accordance with the temperature of the scavenged oil as it is returned to the reservoir, and interacting means between the two members of the selector valve whereby the first-named member will follow the movements of said second member in response to passage of oil therethrough from one end or the other of the operating cylinder.

2,459,491
WIRE BOUND BOX CLOSING TOOL
George T. Boyd and Henry T. Boyd, Albert Lea, Minn., assignors of one-fourth to Gerard A. Thompson, Minneapolis, Minn., and one-fourth to Robert I. Davies, Albert Lea, Minn.
Application April 2, 1946, Serial No. 658,950
3 Claims. (Cl. 140—123)



1. A wire bound box closing tool comprising a fulcrum bar having a forward portion terminating in a notched forward end and having a handle forming rear end, a wire hooking bar extending longitudinally of said fulcrum bar along one side thereof and having a number of wire receiving notches in its outer edge, said forward portion of the fulcrum bar tapering forwardly toward the side adjacent which said wire hooking bar extends, means guidably mounting said hooking bar on said fulcrum bar for longitudinal sliding movement and a hand-grip lever operable from the rear end of said fulcrum bar for longitudinally sliding said hooking bar relative to said fulcrum bar.

2,459,492

to said control wires, circuit means for connect-

inder secured to one side of said U-shaped frame,
a piston within said cylinder, a piston rod slid-

2,459,498
COFFEE MAKER
Robert T. Cameron, Knoxville, Tenn.

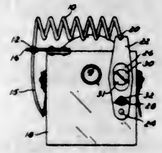
2,459,492
ALUMINUM COPPER ALLOY
Tennyson Fraser Bradbury, Darley Abbey, England, assignor to Rolls-Royce Limited, Derby, England
No Drawing. Application February 8, 1945, Serial No. 576,903. In Great Britain February 25, 1944
4 Claims. (Cl. 148—32.5)

1. An aluminium alloy of the following composition:

	Per cent of the whole
Copper	5.0 –7.0
Titanium	0.01–0.5
Manganese	0.01–1.0
Silicon and iron not exceeding together	0.8
Aluminium the remainder,	

in the worked state when subjected to the following heat treatment, namely a solution treatment of from 535 to 545° C. for a period at least of 10 hours, followed by quenching in water of a temperature above room temperature but less than 100° C. and ageing at a temperature of about 200° C. for at least 10 hours.

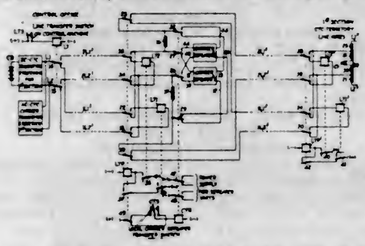
2,459,493
TUNING MEANS COMPRISING VARIABLE CONDENSER AND ADJUSTABLE INDUCTOR OF THE MECHANICALLY DEFORMABLE TYPE
William O. Bradford and Emil G. Zapor, Baltimore, Md., assignors to Bendix Aviation Corporation, South Bend, Ind., a corporation of Delaware
Application September 26, 1945, Serial No. 618,748
4 Claims. (Cl. 250—40)



1. In combination with a variable capacitor having a conductive end plate electrically connected to a rotor insulated from a stator, an inductive winding, electric insulating means mechanically securing one end of said inductive winding to said end plate, means electrically connecting said one end of said winding to said stator, and electrically conductive means carried by and electrically engaging said end plate, said conducting means being secured to the remaining end of said inductive winding and movable with respect to said end plate to vary the length of said winding.

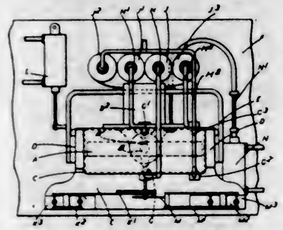
2,459,494
LINE CIRCUIT COMMUNICATION SYSTEM
Frederick W. Brixner, Gates, and William M. Barker, Greece, N. Y., assignors to General Railway Signal Company, Rochester, N. Y.
Application January 26, 1948, Serial No. 4,418
6 Claims. (Cl. 177—353)

1. In a line circuit communication system for applying communication energy to a pair of control wires at a location remote from a control office, a normal and a standby pair of line wires extending from the office to the location, manually operable means at the office for selectively applying energy to either said normal or said standby pair of line wires, normally deenergized transfer and stick relays at said location normally effective to connect said normal pair of line wires to said control wires, circuit means for connecting said transfer relay across said standby pair of line wires whereby said transfer relay is picked up upon the application of energy to said standby pair of line wires at the office by said manually operable means, circuit means for energizing said



stick relay in response to the picking up of said transfer relay, and means responsive to the picking up of said stick relay for disconnecting said transfer relay and for transferring the connection of said pair of control wires from said normal pair of line wires to said standby pair of line wires.

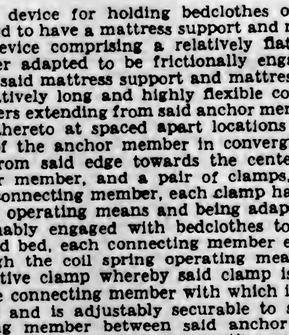
2,459,495
GYROSCOPIC CONTROL APPARATUS
John Pollock Brown, Croydon, England
Application July 14, 1944, Serial No. 544,943
In Great Britain April 30, 1943
11 Claims. (Cl. 74—5)



1. Gyroscopic apparatus for use in the control of air and other craft comprising in combination a rotor, a spindle through which the rotor is driven having on the end thereof a ball on which the rotor is carried, means for driving this spindle, a support for the spindle, a base, means by which the said support is carried by the said base so that the support is movable about at least one control axis with respect to the base, at least two jet nozzles carried on the said support and through each of which fluid can be delivered in a jet directed against a face of the rotor, and valve means for controlling the delivery of fluid thereto independently of the movement of said craft.

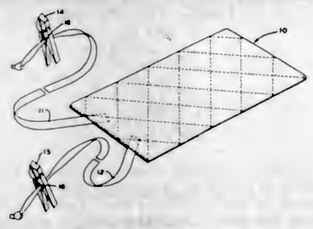
2,459,496
INSTRUMENT CAGING MECHANISM
Lysle D. Cahill, South Euclid, and Walter T. Buhl and Alfred S. Horwitz, Shaker Heights, Ohio, assignors, by mesne assignments, to Jack & Heintz Precision Industries, Inc., Cleveland, Ohio, a corporation of Delaware
Application December 5, 1945, Serial No. 632,934
5 Claims. (Cl. 74—5)

1. A caging mechanism for use with gyroscopic assemblies having a gimbal frame, comprising a substantially U-shaped mounting frame, a cylinder secured to one side of said U-shaped frame, a piston within said cylinder, a piston rod slidably extending from said piston and from said cylinder through both legs of the U-shaped frame, a sleeve fixedly secured to said U-shaped frame for guiding the piston rod, a collar on the pis-



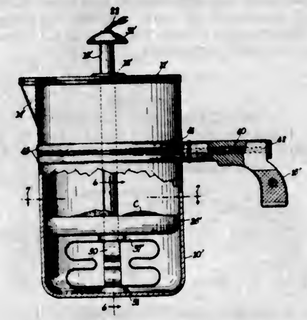
ton rod, positioned between the legs of the U-shaped frame, a spring held under compression between the collar and the sleeve for said piston rod in locked position with said gimbal frame to cage the same, and a passage in the frame for leading pressure fluid into the cylinder to overcome said spring and uncage the gyro.

2,459,497
BEDCLOTHES HOLDER
Helen D. Calabro, Lexington, Mass.
Application August 7, 1946, Serial No. 689,001
3 Claims. (Cl. 24—72.5)



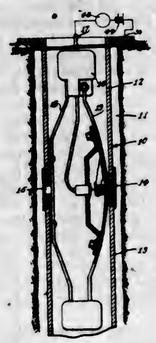
1. A device for holding bedclothes on a bed adapted to have a mattress support and mattress, said device comprising a relatively flat anchor member adapted to be frictionally engaged between said mattress support and mattress, a pair of relatively long and highly flexible connecting members extending from said anchor member and fixed thereto at spaced apart locations near an edge of the anchor member in converging relation from said edge towards the center of the anchor member, and a pair of clamps, one for each connecting member, each clamp having coil spring operating means and being adapted to be detachably engaged with bedclothes to be held on said bed, each connecting member extending through the coil spring operating means of its respective clamp whereby said clamp is slidable on the connecting member with which it is associated and is adjustably securable to said connecting member between said anchor member and the free end of the connecting member by the tieing of said connecting member to said clamp.

2,459,498
COFFEE MAKER
Robert T. Cameron, Knoxville, Tenn.
Application March 25, 1946, Serial No. 656,984
4 Claims. (Cl. 99—287)



1. In a coffee maker including a container within which coffee may be brewed and a cover therefor, in combination with said cover of an aperture centrally therethrough, a tubular handle removably inserted through said aperture in said cover and positioned centrally of said container, heating means removably supported within said handle for heating the coffee making water, agitating means within said container and operatively connected with said handle, and means supported within said container by said handle for filtering coffee grounds from the coffee brew.

2,459,499
CASING JOINT LOCATOR
Jacques H. Castel, Houston, Tex., assignor to Schlumberger Well Surveying Corporation, Houston, Tex., a corporation of Delaware
Application December 17, 1943, Serial No. 514,647
8 Claims. (Cl. 177—311)



3. A device for determining the distance between the bottom of a well and a joint in a casing therein formed of a plurality of casing sections connected by joints of different internal diameter than the internal diameters of said casing sections, comprising a support adapted to be lowered into said casing, guide means on said support engageable with said casing, an electrically actuated indicator, joint locating means associated with said guide means, electrically connected with said indicator, and responsive to variation

in the internal diameter of said casing at said

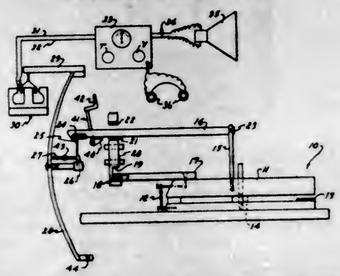
said body, adjacent to the shoulder, having a side wall which is rounded about an up and down axis

with said gear and coaxial with the pivotal connection of said arm on said body whereby rota-

chassis of the tractor, means mounted on said tractor for moving said traveler lengthwise of the chassis, a fifth wheel mounted for vertical

in the internal diameter of said casing at said joints for controlling the supply of electrical energy to actuate said indicator, bottom locating means movably mounted at the lower end of said support and movable in response to engagement thereof with the bottom of the bore hole, and a switch actuated by said bottom locating means and electrically connected to said indicator for actuating said indicator.

2,459,500
MUSICAL INSTRUMENT
John Chapo, Long Island City, N. Y.
Application March 25, 1946, Serial No. 656,995
2 Claims. (Cl. 84—408)



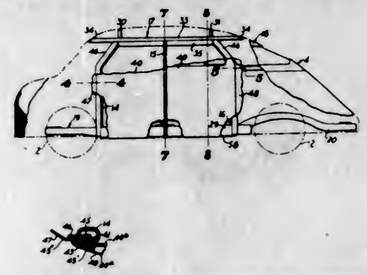
1. A musical instrument comprising a series of reeds having projecting vibratable end portions, a series of keys for actuating said reeds, a contact pad connected to each key and normally resting on each associated reed, a lifting rod for each contact pad actuated by its associated key to disengage said contact pad from the associated reed after the pad has moved over said reed, means to transmit a rubbing movement to each and every reed with the associated key to produce the tone of any reed.

2,459,501
POLYMERIC MONO-ISOOLEFINIC MATERIALS AND PROCESS OF MAKING SAME
John Melvin Coon, Verona, and John B. Rust, West Orange, N. J.
No Drawing. Application June 19, 1944, Serial No. 541,100
10 Claims. (Cl. 260—78.5)

6. The method of producing polymerization products which comprises preparing a mixture consisting of a mono-isoolefin and an unsaturated aliphatic alcohol ester of an alpha beta olefin discarboxylic acid, the alcohol being selected from the group consisting of allyl, methallyl, crotyl, butenyl, propargyl and butinyl alcohols, in the ratio of 10:1 to 10:5 by weight and subjecting said mixture while liquid to the action of a Friedel-Crafts catalyst at a temperature below —40° C. to form a soft, elastic and rubbery product.

2,459,502
DOOR DEVICE
Burnie J. Craig, Los Angeles, Calif.
Original application February 12, 1940, Serial No. 318,397. Divided and this application April 17, 1944, Serial No. 531,453
5 Claims. (Cl. 296—47)

1. An automotive vehicle construction including a body, said body having a framed door opening with one edge of the opening defined by a portion having an outwardly directed shoulder, said body, adjacent to the shoulder, having a side wall which is rounded about an up and down axis and a door, coacting guide means on the door and body to mount the door for sliding movement, said door including an outer panel which is rounded about an up and down axis at the one end which trails when the door is being closed, said door at the one end having an inwardly directed shoulder engageable with said outwardly directed body shoulder, said door having an inner panel spaced from the outer panel, said door being slidable across the framed opening in such a manner that the inwardly directed shoulder on the door may slide outwardly and clear of the rounded body side wall in a continuous path without the use of offsetting tracks or link-hinges.

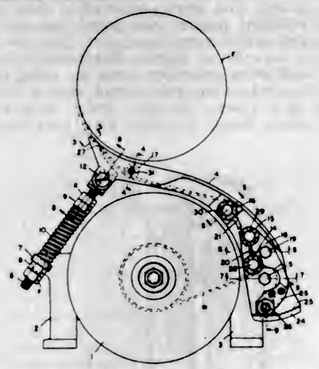


2,459,503
BRACKET
Eric T. G. Dahlstrom and Michael Caplan, Chicago, Ill., assignors to Henry Hildebrandt, Chicago, Ill.
Application June 11, 1945, Serial No. 598,842
1 Claim. (Cl. 248—262)

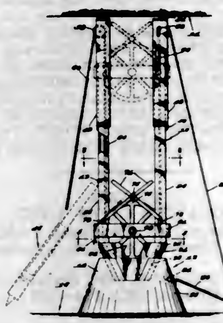
In window hanging means, a bracket support including a vertical mounting plate, a vertical arm bent forwardly therefrom and a horizontal ear bent laterally from the arm, a substantially U-shaped holder having a stop plate at one side thereof, and a pin extending through the horizontal ear and the bottom of the U-shaped holder for pivotally mounting the holder about its central axis on the horizontal ear.

2,459,504
WIRE SPREADER AND TENSIONER FOR CIRCULAR LOOMS AND THE LIKE
Anselm De Ghetto, Clifton, N. J., assignor to National Rubber Machinery Company, Akron, Ohio, a corporation of Ohio
Application February 18, 1947, Serial No. 729,388
9 Claims. (Cl. 140—133)

1. A device of the character described, comprising a body, an arm pivotally connected between its ends to said body, guide means on one end of said arm so arranged that wire or the like drawn thereover is successively subjected to bending in opposite directions, and a gear rotatable at the other end of said arm, said body being formed with a gear segment in engagement with said gear and coaxial with the pivotal connection of said arm on said body whereby rotation of said gear effects pivotal movement of said arm on said body.



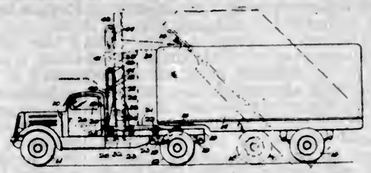
2,459,505
JACK HOIST
Huram Clyde Delph, London, Ky.
Application March 6, 1946, Serial No. 652,280
7 Claims. (Cl. 254—143)



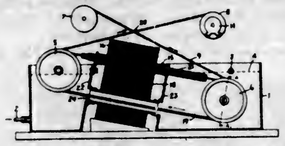
1. A jack hoist comprising a base, a pair of standards detachably secured to said base, a pivotal section on one of said standards, a cradle slidable between said standards and means carried by said standards for elevating and lowering said cradle, said means comprising a pulley on said cradle, a pulley on said pivotal standard, an anchorage on said fixed standard, and a cable operatively connected to said pulleys and terminating on said anchorage.

2,459,506
ELEVATING MECHANISM FOR FIFTH WHEELS
George R. Dempster and Harry W. Jones, Knoxville, Tenn., assignors to Dempster Brothers, Incorporated, Knoxville, Tenn., a corporation of Tennessee
Application July 15, 1946, Serial No. 683,734
10 Claims. (Cl. 298—22)

1. In a mechanism of the type described including a tractor having a chassis, a traveler mounted for fore and aft axial movement on the chassis of the tractor, means mounted on said tractor for moving said traveler lengthwise of the chassis, a fifth wheel mounted for vertical movement on said traveler and means on said traveler for imparting vertical movement to said fifth wheel.

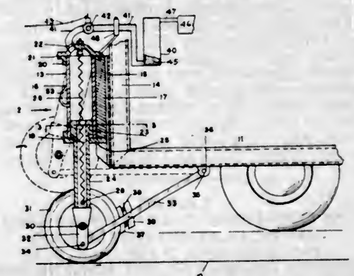


2,459,507
METHOD OF INDUCTION HEATING CONTINUOUSLY MOVING WIRE
Robert H. Denham, Scotia, N. Y., assignor to General Electric Company, a corporation of New York
Application December 18, 1944, Serial No. 568,703
4 Claims. (Cl. 219—13)



1. The method of heating electrically conducting wire which consists in passing the wire continuously in a loop having two turns at each end in electrically conducting engagement with each other while maintaining the ends of the wire in separated electrically insulating relation with each other thereby to form a loop having two electrically connected turns at opposite ends with a single wire length on one side of the loop and a double wire length on the other side of the loop, and inducing in said loop by magnetic induction a heating current flowing through said single and double wire lengths in series with each other so that heat is generated mainly in said single wire length to heat the wire to a predetermined temperature.

2,459,508
HYDRAULIC JACK FOR AUTOMOBILE TRAILERS
George J. Dourte, Long Beach, Calif.
Application March 18, 1946, Serial No. 655,232
2 Claims. (Cl. 254—86)



1. A hydraulic jack assembly comprising, a frame having a horizontal and a vertical frame

member, a cylinder pivotally connected, near its upper end, with the vertical frame member, guide means comprising a member attached to the ver-

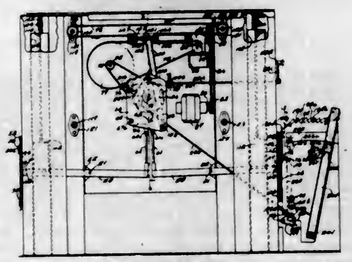
internal non-magnetic sleeve received in said bore, a permanent magnet projecting within said sleeve, a soft iron core also within said sleeve,

upsetting another portion of the arbor to form a button, and means mounting said head and said burners and upsetting means for bringing them into operative relationship.

2,459,512
PETROLEUM EXPLORATION BY SOIL ANALYSIS
Ralph H. Fash, Fort Worth, and John G. Camp-

member, a cylinder pivotally connected, near its upper end, with the vertical frame member, guide means comprising a member attached to the vertical frame member and another connected with the cylinder for resisting lateral forces, one of said members having a channel and the other a web adapted to jackknife in the channel, a piston in the cylinder, a piston rod connected at its upper end with the piston, the lower end extending through the lower end of the cylinder, an axle block secured to the lower end of the piston rod, a shaft extending transversely of the block, a wheel on each end of the shaft, a strut having one end pivoted to the axle block, between the wheels, the other end being pivoted to the horizontal frame member, forming means for resisting longitudinally acting forces, and means comprising a spring having one end connected with the lower end of the piston rod and the upper end connected with the cylinder, for normally holding piston and wheel in elevated position.

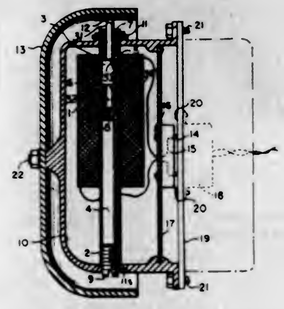
2,459,509
FILM PROCESSING MACHINE
Glen M. Dye, Ralph B. Maddock, Robert Sardeson, and Edward H. Savela, Minneapolis, Minn., assignors to Pako Corporation, Minneapolis, Minn., a corporation of Delaware
Application March 25, 1943, Serial No. 480,488
27 Claims. (Cl. 95—89)



1. A film treating machine having in combination, a plurality of aligned liquid containers, a pair of members extending along the sides respectively of said containers, each having transversely aligned upwardly extending projections at their top sides, a second pair of members extending along the sides respectively of said containers also having transversely aligned upwardly extending projections at their top sides, a film-carrying holder extending between said pairs of members carrying a film disposed in one of said containers, said holder being supported by said members in the recesses between said projections, said projections having downwardly inclined sides along which said holder will move by gravity, said inclined sides in said pairs of members being longitudinally offset and means for periodically relatively moving said pairs of members rectilinearly vertically to alternately lift said holder so that it is alternately supported by the members of said pairs and slides forwardly longitudinally on said inclined sides and is thus progressed.

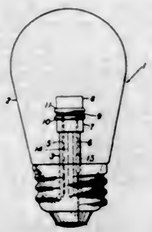
2,459,510
ALTERNATING CURRENT SOLENOID RECIPROCATING MOTOR UNIT
Jack I. Ellmann, Washington, D. C.
Application December 26, 1947, Serial No. 793,960
12 Claims. (Cl. 172—126)

1. In an alternating current reciprocating motor unit, a solenoid having an axial bore and an internal non-magnetic sleeve received in said bore, a permanent magnet projecting within said sleeve, a soft iron core also within said sleeve, a first resilient means interposed between said permanent magnet and said soft iron core, the soft iron core being axially displaceable in said sleeve and being provided with an axial extension extending to the exterior of said sleeve, the end of said sleeve through which said extension projects being provided with apertured re-



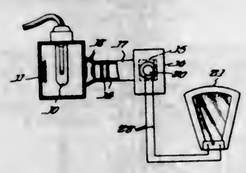
taining means, a second resilient means surrounding said extension and bearing against said retaining means and a portion of the said soft iron core nearest the end of said sleeve through which the extension projects, holding means for fixing the permanent magnet in position in the other end of said tube, said permanent magnet being substantially entirely contained within said sleeve, whereby energization of the winding of said solenoid by alternating current causes reciprocating movement of said axially displaceable core.

2,459,511
NEGATIVE GLOW LAMP
Duryea E. Elmendorf, Cleveland, Ohio, assignor to General Electric Company, a corporation of New York
Application October 4, 1946, Serial No. 701,383
8 Claims. (Cl. 176—122)



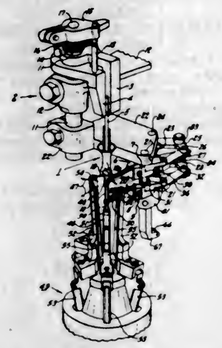
1. An electrode structure for an electric discharge device comprising in combination a vitreous stem, a pair of electrodes comprising spaced axially aligned bands of conductive material, a pair of lead-in wires fused through said stem and having transversely extending inner end portions secured to said electrodes within indentations therein.

2,459,512
PETROLEUM EXPLORATION BY SOIL ANALYSIS
Ralph H. Fash, Fort Worth, and John G. Campbell, Houston, Tex., assignors to Ralph H. Fash, trustee, Fort Worth, Tex.
Application November 6, 1944, Serial No. 562,238
17 Claims. (Cl. 250—71)



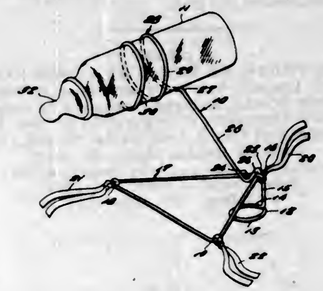
1. An oil exploration method which comprises extracting from a measured sample of earth material by a measured amount of an oil solvent the petroleum and such non-petroleum substances as are soluble in said solvent, effecting major separation of the non-petroleum component from the petroleum component in the extract by a separating procedure which includes the utilization of preferential adsorption, and arriving at an index of the petroleum content of the earth material sample by utilizing the residual soluble constituents in an extract containing them.

2,459,513
APPARATUS FOR MAKING SPIDERS FOR ELECTRIC LAMPS
John Flaws, Jr., East Cleveland, Ohio, assignor to General Electric Company, a corporation of New York
Application June 4, 1946, Serial No. 674,337
16 Claims. (Cl. 49—2)



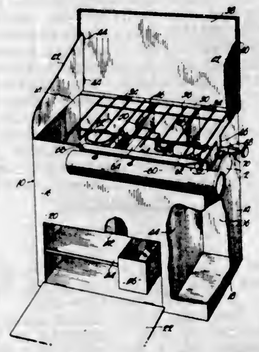
1. Apparatus for forming a spider on a vitreous arbor extending from a stem comprising a head having jaws for gripping and supporting a stem and having movable jaws readily adjustable with respect to said first-mentioned jaws for holding and positioning an end portion of an arbor extending from the stem, burners and means for heating and then upsetting a portion of the arbor to form a button, means engaging the head for adjusting the position of the movable jaws with respect to the said first-mentioned jaws to reposition said movable jaws along the arbor, and means for heating and thereafter upsetting another portion of the arbor to form a button, and means mounting said head and said burners and upsetting means for bringing them into operative relationship.

2,459,514
NURSING BOTTLE HOLDER
Howard B. Fliekinger, Ashtabula, Ohio
Application May 16, 1945, Serial No. 594,075
1 Claim. (Cl. 248—107)



In a device as described a bottle holder and a support therefor formed of a single piece of spring metal, said holder including a pair of spaced flat members of unequal size, the larger member being a triangle and constituting a base, an inclined bottle holding arm extending from one corner of the triangle, a clamp connecting the arm to said corner of the triangle, said clamp forming a resilient support for the arm, a coil spring terminating the upper end of the arm and forming a bottle holder, and cord means whereby the triangle may be secured from a plurality of points thereof.

2,459,515
PORTABLE CAMPING STOVE
Elgie C. Flinner, Kansas City, Mo.
Application January 15, 1945, Serial No. 572,805
3 Claims. (Cl. 126—38)



1. A portable camping kitchen comprising an open top case including side walls, end walls and a bottom; vertical and horizontal partitions in the case dividing the same into a number of com-

partments; a cover mounted on the case for movement to and from a position closing the top

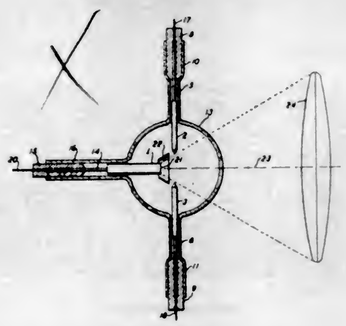
whereby an intermediate group of the slats are

in one position and to restrict passage of fluid in another position, said movable member in-

from the class consisting of those of the following formulae:

partments; a cover mounted on the case for movement to and from a position closing the top of the case; a grill swingably carried for disposition over at least a portion of the open top of the case; and a heat generating assembly proportioned to be received in one of the compartments of the case and having means for securement to the upper edge of the case when the cover is moved from the closed position, certain of the vertical partitions in the case having notches to receive the heat generating assembly when the same is supported in the operative position by the partitions below the grill.

2,459,516
HIGH-PRESSURE MERCURY VAPOR LAMP
Victor J. Francis, Aylesbury, and Evan H. Nelson, Harrow Weald, England, assignors to General Electric Company, a corporation of New York
Application July 9, 1946, Serial No. 682,176
In Great Britain March 22, 1944
Section 1, Public Law 690, August 8, 1946
Patent expires March 22, 1964
4 Claims. (Cl. 176—122)



1. In combination, a high pressure mercury vapor discharge lamp comprising an envelope, and a plurality of electrodes positioned within said envelope including a single electrode of one polarity having a free end affording an operating electrode face and a plurality of electrodes of opposite polarity having their principal axes lying in a plane transverse to the longitudinal axis of said single electrode and longitudinally spaced therefrom, the distance between any pair of electrodes between which an arc discharge passes in normal operation being less than the distance of either electrode of the pair from said envelope and said plurality of electrodes being radially and symmetrically positioned to produce with said single electrode a conical array of electric discharges.

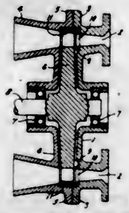
2,459,517
VENETIAN BLIND
Roy E. Gearhart, Kansas City, Mo.
Application September 4, 1944, Serial No. 552,693
8 Claims. (Cl. 160—115)

3. In a Venetian blind construction including a plurality of slats supported in vertically spaced relation on a pair of ladder tapes and having manually controlled means for simultaneously tilting all of the slats in the same direction, manually controlled means operable to tilt a lower group of the slats in one general direction, and manually controlled means operable whereby an intermediate group of the slats are tiltable to any desired degree in the opposite general direction independently of the slats thereabove.

2,459,518
PARENTERAL SOLUTIONS OF RIBOFLAVIN AND THE LIKE
Tillman D. Gerlough, Highland Park, and Emil L. Smith, New Brunswick, N. J., assignors to E. R. Squibb & Sons, New York, N. Y., a corporation of New York
No Drawing. Application June 27, 1946, Serial No. 679,857
5 Claims. (Cl. 167—81)

1. A parenteral solution essentially comprising water, a pharmacodynamically-unobjectionable indole, and a 9-polyhydroxyalkyl-iso-alloxazin in a concentration higher than that obtainable in the absence of the indole.

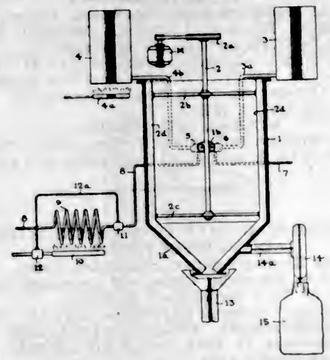
2,459,519
SPEED LIMITING ARRANGEMENTS FOR TURBINE ROTORS
Douglas H. Graham, Coventry, Bengt E. G. Forsling, Rugby, and George Tabberer, Coventry, England, assignors to General Electric Company, a corporation of New York
Application March 16, 1948, Serial No. 15,234
In Great Britain June 16, 1947
4 Claims. (Cl. 253—59)



1. In a turbine comprising a casing, a bladed rotor rotatably supported in the casing, and nozzle means for directing motive fluid through the turbine rotor, the combination of speed limiting means including a movable member supported in the casing between the nozzle means and the rotor, means adapted to locate said member axially and radially while permitting limited angular movement relative to the nozzle means, said member defining at least one opening adapted to effect free passage of motive fluid to the rotor

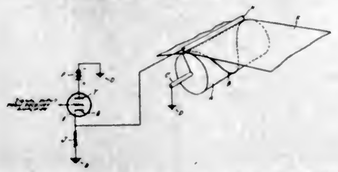
in one position and to restrict passage of fluid in another position, said movable member including an axially extending portion radially spaced from a peripheral portion of the rotor, said rotor portion being adapted to stretch radially upon attaining a predetermined speed into engagement with said axially extending portion whereby the movable member is caused to move to the fluid restricting position.

2,459,520
METHOD OF MIXING BITUMINOUS MATERIALS WITH FILLERS
Bruce D. Greenshields, New York, N. Y.
Application August 22, 1944, Serial No. 550,656
4 Claims. (Cl. 106—283)

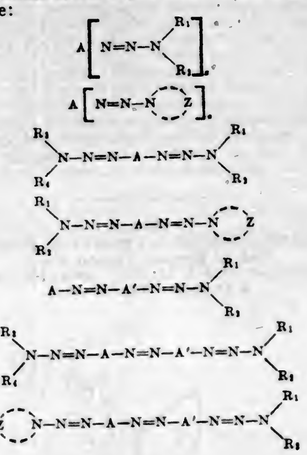


1. The method of mixing bituminous material with finely divided filler which consists in forming a water slurry of the filler material, atomizing the slurry into a cloud, heating the bituminous material to liquefy the same, atomizing the liquid bitumen by an air spray heated to a temperature of the order of 250° F., and introducing a cloud of said atomized bitumen into the same space with the atomized slurry cloud.

2,459,521
ELECTROLYTIC RECORDING
Harold G. Greig, Princeton, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application October 14, 1944, Serial No. 558,717
12 Claims. (Cl. 204—2)



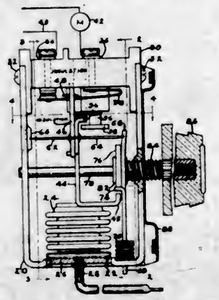
1. The process of producing colored images on a relatively stable background on only one side of a travelling fibrous carrier by the electrolytic facsimile recording method which comprises impregnating the carrier with an aqueous alkaline azo dye forming composition comprising as its essential ingredients a diazoamino compound stable to light and air oxidation in an alkaline medium and splitting under the influence of the electrolytic recording current to yield diazonium ions, said compound being selected from the class consisting of those of the following formulae:



and

wherein R_1 and R_3 are selected from the class consisting of hydrogen, aliphatic, araliphatic, cycloaliphatic and aromatic radicals, R_2 and R_4 are selected from the class consisting of aliphatic, araliphatic, cycloaliphatic and aromatic radicals, A and A' are aromatic radicals, Z represents the atoms necessary to complete a nitrogenous heterocyclic ring system, and x is selected from the class consisting of 1 and 2, a water soluble inorganic salt as the electrolyte in an amount sufficient to facilitate the passage of the electrolytic recording current, and a sufficient quantity of a coupling component to react with said diazonium ions when formed to produce an azo dye, and subjecting the so treated carrier to the action of an electrolytic recording current.

2,459,522
SWITCH FOR REFRIGERATING APPARATUS
Albert O. Grooms, Dayton, Ohio, assignor to General Motors Corporation, Dayton, Ohio, a corporation of Delaware
Application October 30, 1944, Serial No. 560,996
3 Claims. (Cl. 200—83)



1. A bellows-operated control comprising a U-

shaped metal frame, a block of electrical insulating material extending between the ends of the legs of the U-shaped frame and fastened

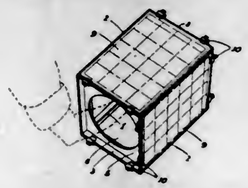
a level for sliding movement into one of said tray carrying supports, manually controlled means for moving said uppermost one of the

a flexible diaphragm and each connected at its inner ends to a common coaxial tubular member, the ends of said tubular member extending into said chambers and forming a seat for said dia-

sitions for preventing turning movement of said shafts, and an operating lever associated with each shaft and having a portion engageable with its latch device whereby initial turning move-

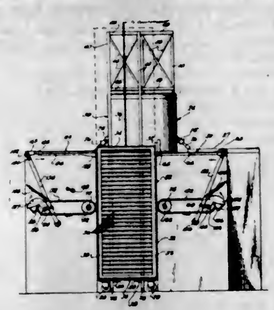
shaped metal frame, a block of electrical insulating material extending between the ends of the legs of the U-shaped frame and fastened thereto, a switch mechanism mounted upon the in-turned side of the block and having terminals extending through the block to one of the other faces; a metal bellows fastened to the yoke of the frame, a bellows follower operatively connecting said bellows and said switch mechanism, and a range adjusting means mounted upon one of the legs of the U-shaped frame for acting upon the bellows follower to vary the range of the control.

2,459,523
RECORD SHEET SUPPORTING DEVICE
Harold Hansen, Fresno, Calif.
Application March 31, 1947, Serial No. 738,474
6 Claims. (Cl. 281—44)



1. A manually portable device for supporting a plurality of record sheets exposed for selective use, the device comprising a multi-sided support, each side being a flat board adapted for engagement on the outside by a separate record sheet, means to releasably secure the record sheets to said boards, and a handle on the support in position for manual carrying of the device and rotation thereof to position the sheets uppermost selectively; the support being a box having an access opening in one end thereof, and the handle being mounted within the box.

2,459,524
TRAY MOVING APPARATUS
Merle E. Hanson, Chicago, Ill.
Application December 5, 1945, Serial No. 632,981
17 Claims. (Cl. 214—38)



5. In candy manufacturing apparatus, the combination comprising rack means having a plurality of spaced tray carrying supports, means adjacent one side of the rack for supporting a stack of empty trays, one on top of the other, with the uppermost tray in a position to be filled and at a level for sliding movement into one of said tray carrying supports, manually controlled means for moving said uppermost one of the trays from the stack toward and onto said one of the tray carrying supports in steps of selected lengths, means operable after the movement of said uppermost one of the trays onto the rack for raising said stack a distance equal to the thickness of a tray, and means for moving the rack to a position for receiving the next succeeding tray from the stack on the next succeeding tray carrying support thereof in like manner.

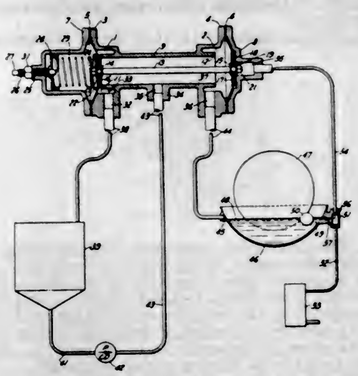
2,459,525
TRIPHENYLMETHYL BUTYL ETHER AS AN INSECTICIDE
Ingenuin Hechenbleikner, Stamford, Conn., assignor to American Cyanamid Company, New York, N. Y., a corporation of Maine
No Drawing. Original application May 31, 1940, Serial No. 338,047. Divided and this application October 23, 1944, Serial No. 560,028. In Canada April 9, 1941
5 Claims. (Cl. 167—30)

2. An insecticidal composition including a toxic amount of triphenylmethyl butyl ether and a distender.

2,459,526
1-NAPHTHYLMETHYL TETRADECYL ETHER AS AN INSECTICIDE
Ingenuin Hechenbleikner, Stamford, Conn., assignor to American Cyanamid Company, New York, N. Y., a corporation of Maine
No Drawing. Original application May 31, 1940, Serial No. 338,047. Divided and this application October 23, 1944, Serial No. 560,029. In Canada April 9, 1941
5 Claims. (Cl. 167—32)

1. A method of combating insect pests which includes exposing them to a toxic quantity of 1-naphthylmethyl tetradecyl ether.

2,459,527
VALVE FOR OVERFLOW SYSTEMS
Elmer H. Herbert, Oakland, Calif., assignor to Oliver United Filters Incorporated, Oakland, Calif., a corporation of Nevada
Application December 27, 1945, Serial No. 637,363
3 Claims. (Cl. 137—144)

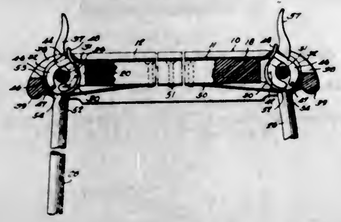


1. A valve comprising: a pair of opposed coaxial chambers each closed at its outer end with a flexible diaphragm and each connected at its inner ends to a common coaxial tubular member, the ends of said tubular member extending into said chambers and forming a seat for said diaphragms; a connecting rod extending through said tubular member for interconnecting said diaphragms so that the movement of one of said diaphragms will be imparted to the other of said diaphragms, the length of said connecting rod being substantially greater than the length of said tubular member; a port formed in each of said chambers and a port formed in said tubular member intermediate its ends; and means for subjecting one of said diaphragms to an external pressure.

2,459,528
APPARATUS FOR TAKING RADIOGRAPHS
Harry H. Hook, Los Angeles, Calif.
Application May 13, 1944, Serial No. 535,419
3 Claims. (Cl. 250—65)

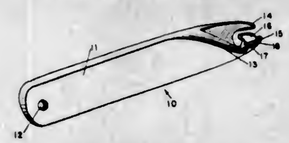
1. An insert for a cassette, said insert comprising means transparent to X-rays for supporting two intensifying screens on its opposite sides about ¼" apart.

2,459,529
TRAY TABLE
Walter E. Jogwick, Parkersburg, and Eli H. McLaughlin, Vienna, W. Va.
Application February 15, 1946, Serial No. 647,841
3 Claims. (Cl. 311—85)



1. A tray-table comprising a normally horizontal body, parallel shafts arranged beneath said body each adjacent one end thereof, a pair of legs fixed to each shaft to swing therewith, said legs being movable between inoperative positions beneath and approximately parallel to said body and operative positions projecting downwardly from said body to support said body as a table, latch devices for holding said shafts against turning movement when said legs are in said inoperative positions, a lever device adjacent each end of said body engageable with the associated latch device whereby turning movement of said lever devices will release said latch devices whereby said legs will swing downwardly by gravity to said operative positions, said latch devices being operative when said legs are in said operative positions for preventing turning movement of said shafts, and an operating lever associated with each shaft and having a portion engageable with its latch device whereby initial turning movement of said operating levers in one direction will release said latch devices, said operating levers having mechanical connection with said shafts whereby turning movement of said operating levers in said direction, after said latch device has been released, will swing said legs to said inoperative positions.

2,459,530
BAG AND CONTAINER TYING DEVICE
Lewis E. Johnston, Winter Garden, Fla.
Application November 21, 1946, Serial No. 711,265
2 Claims. (Cl. 289—17)



1. A knot-tying implement for tying closure cords of containers, wherein the ends of the closure cord are tied with a knot of the slip-knot type to produce a temporary closure of the container releasable by drawing upon the free ends of the cord, said implement comprising a generally flat body-portion having one end zone formed as a nose for positioning the closure cord end zones thereon with the latter including a portion having a convolution relation to the body proper and with such cord end zones arranged to produce the knot by movement of the applied zones relative to the direction of length of the implement, said implement having its nose zone of decreasing width toward the end of the nose with such nose zone bifurcated, the opposite side walls of the bifurcation being substantially symmetrical and spaced apart to provide an open-ended recess portion having the width of its open end sufficient to permit the free passage of a formed loop therethrough and with the recess enlarged rearwardly of such open end, one of the side walls of the recess carrying a hook formation projecting into the enlarged zone of the recess with the projected length less than the width of such enlarged zone, said hook having a rear face positioned remote from the end of the nose a distance greater than the width of the enlarged zone of the recess, whereby after the cord end zones have been applied to the nose end zone of the implement with such cord end zones extending through the recess enlarged zone in rear of the rear hook face and the applied formation tightened to place the implement in close proximity to the container, sudden withdrawal movement of the implement lengthwise will develop the knot formation with the knot bight and free cord ends external of the recess and with a closed loop mounted on the hook and releasable therefrom for free passage through the open end of the recess with the loop intact, the distance dimension of the hook rear face and the position of the implement relative to the container prior to the withdrawal movement causing the knot to be formed with its loop length and free cord end portions projecting on opposite sides of the knot bight with the projected lengths amply sufficient to maintain knot integrity in the absence of intentional release of the loop of the knot by drawing on the free ends of the cord.

2,459,531
CATALYST ABSORPTION
Edwin E. Jones, Bates City, Ohio, assignor to

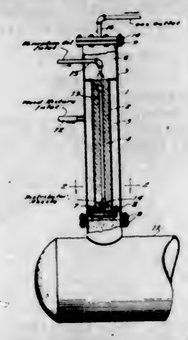
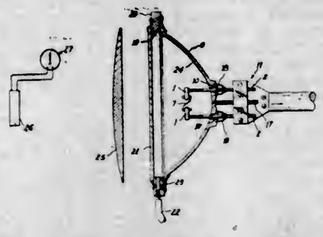
2,459,531
CATALYST ABSORPTION
Edwin K. Jones, Ponca City, Okla., assignor to Universal Oil Products Company, Chicago, Ill., a corporation of Delaware
Application January 1, 1945, Serial No. 571,007
5 Claims. (Cl. 261—94)



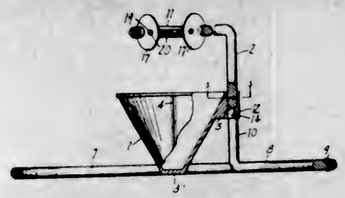
1. An apparatus for the recovery of a desired component by selective absorption comprising inner and outer shells providing thereby an inner chamber and an outer chamber, means forming said inner chamber into upper and lower sections, and to maintain separate said outer chamber from the upper section of said inner chamber, a conduit for vapor communicative with the upper portion of said outer chamber and leading to a distributing nozzle positioned in the lower end of said inner chamber, means providing gas and liquid contact in the lower section of said inner chamber, an inlet conduit for liquid connected to said outer chamber, an inlet conduit for liquid and an outlet conduit for vapor connected to the upper section of said inner chamber, each of said chambers having liquid outlet means from the lower ends thereof and discharging into a common conduit.

2,459,532
METHOD OF FOCUSING REFLECTOR-TYPE ELECTRIC DISCHARGE LAMPS
Lynn S. Ickis, East Cleveland, Ohio, assignor to General Electric Company, a corporation of New York
Application March 31, 1948, Serial No. 18,203
5 Claims. (Cl. 316—23)



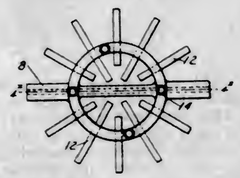
1. The method of mounting a pair of electrodes in an electric lamp envelope having a reflector surface incorporated therein which comprises the steps of holding said electrodes in predetermined spaced relation, temporarily mounting a focus-determining member in fixed relation to the gap between said electrodes, adjusting said electrodes and focus-determining member as a unit relative to said reflector surface to obtain by reflection of light from said reflecting surface an indication of the presence of said focus-determining member at the focus of said reflector surface, sealing said electrodes to said envelope in their adjusted position and removing said focus-determining member.

2,459,533
HOLDER FOR CHRISTMAS TREES, FLAGSTAFFS, AND THE LIKE
Ward M. Irvin, Battle Creek, Mich.
Application March 23, 1948, Serial No. 16,408
11 Claims. (Cl. 248—38)



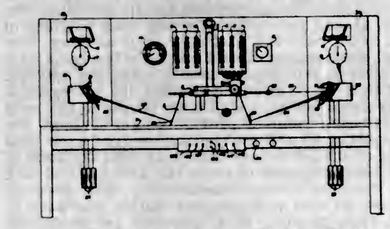
6. A holder of the class described comprising, a socket member, a loop-like base, an upright carried by said base, an annular support on said upright vertically spaced from said base, means on said upright engageable with said socket to laterally support the same from the upright while permitting it to rest on the surface on which the base is supported, a plurality of gripping elements rotatably mounted on said support member in angularly spaced relation thereon and having gripping edges eccentric to the cross section of said support, and coil spring elements connecting said gripping elements to yieldingly urge them inwardly.

2,459,534
MAGNETIC SEPARATOR FOR FLUID SYSTEMS
Thomas A. Kennedy, Erie, Pa., assignor to J. A. Zurn Mfg. Co., Erie, Pa.
Application March 23, 1945, Serial No. 584,316
4 Claims. (Cl. 210—1.5)



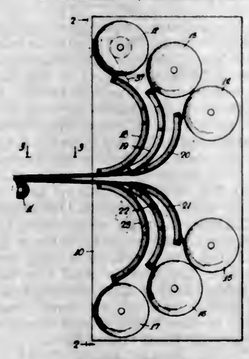
2. The combination with a fluid circulating system embodying a vertically extending collection chamber having an upper inlet port and a lower outlet port, of a supporting ring of non-magnetic material located crosswise of the chamber below the inlet port and provided with radial notches in its upper face, an overlying clamping ring on said supporting ring and a series of radially extending bar magnets mounted in said notches and secured between the rings.

2,459,535
SERVO UNIT TEST STAND
Andrew F. Kopischiansky, Maple Heights, Ohio, assignor, by mesne assignments, to Jack & Heintz Precision Industries, Inc., Cleveland, Ohio, a corporation of Delaware
Application May 14, 1945, Serial No. 593,618
7 Claims. (Cl. 73—37)



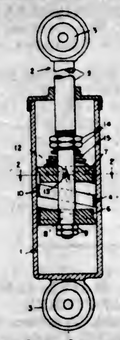
2. In a test stand for multiple cylinder and piston servo units, a plurality of hydraulic lines adapted to be connected to opposite cylinder ends of a servo unit to be tested, hydraulic pressure and relief lines, a plurality of calibrated gage glasses equal to the number of cylinder ends in the servo unit to be tested, a first plurality of solenoid valves for connecting said pressure and relief lines with said hydraulic lines so as to admit pressure in predetermined ends of the servo unit cylinders and to connect the low pressure cylinder ends to the relief lines, and a second set of solenoid valves operable to connect said gage glasses with the low pressure ends of the servo unit cylinders and to disconnect the relief lines therefrom to measure internal leakage in each of said servo unit cylinders individually.

2,459,536
METHOD AND APPARATUS FOR WINDING COILED BODIES
Ernst A. Nordberg, Southport, Conn.
Application July 21, 1945, Serial No. 606,452
9 Claims. (Cl. 242—76)



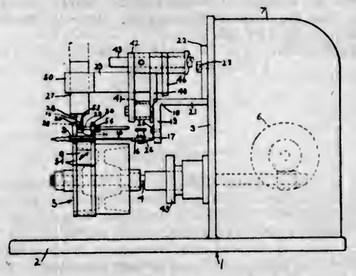
1. In the process of winding a plurality of strips in superposed relationship onto a winding arbor, the steps which consist in mounting the several strips in the form of supply reels upon superposed axes parallel to the arbor axis, arranging the edges of said reels in predetermined lateral relationships to one another, threading the strip ends into engagement with the arbor, rotating the arbor to draw selected strip lengths from said supply reels to said arbor, and guiding each strip during substantially its entire travel from supply reel to arbor along an arcuate path whose curvature is reverse with respect to the curvature of said strip on its supply reel.

2,459,537
DAMPENING DEVICES FOR SHOCK ABSORBERS AND THE LIKE
Peter B. Oberstadt, Wickliffe, Ohio
Application May 27, 1946, Serial No. 672,550
11 Claims. (Cl. 188—129)



1. A shock absorber element comprising a rod, spaced heads on said rod rotatable relative to one another, a member connected to said heads expandible in response to relative rotation of said heads in one direction, and means normally tending to rotate said heads relative to one another in said direction.

2,459,538
MACHINE FOR MARKING ON CYLINDRICAL ARTICLES
Charles F. Robbins, Keene, N. H., assignor to Markem Machine Company, Keene, N. H., a corporation of New Hampshire
Application November 14, 1944, Serial No. 563,329
6 Claims. (Cl. 101—38)



1. A machine for making imprints on cylindrical articles comprising a printing roll, a stationary holder for the cylindrical article to be printed situated directly above the printing roll and having a vertical opening extending entirely therethrough from the top to the bottom, which opening is of a size and shape to freely receive between its sides the cylindrical article to be printed with the axis of said article extending parallel to that of the printing roll, said holder being sufficiently close to the printing roll so that a cylindrical article situated between the

sides of the opening and resting on said printing roll is held from horizontal movement of translation by the sides of the opening, and means to

tially equal to the width of said transversely disposed notches in said reversely bent side edge portions, said slots in side elevation being curved

providing a reentrant flange defining an aperture and a plastic disc molded within said aperture with the edge portion of said flange embedded in the peripheral edge of said disc, which method comprises shaping a cup-shaped metallic shell

2,459,546
BABY BOTTLE HOLDER
Irving Selden, Brooklyn, N. Y.
Application February 3, 1947, Serial No. 726,147
7 Claims. (Cl. 248—103)

sides of the opening and resting on said printing roll is held from horizontal movement of translation by the sides of the opening, and means to rotate the printing roll and by the frictional engagement between it and the cylindrical article occupying said opening and resting thereon, to rotate said cylindrical article within said opening thereby to make a printed impression on the article.

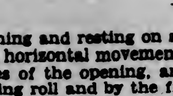
2,459,539
PREPARATION OF ALKYL-SUBSTITUTED HALOGENOSILANES
Eugene G. Rochow, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York
No Drawing. Application May 22, 1947, Serial No. 749,875
9 Claims. (Cl. 260—448.2)

1. The method of forming an alkyl-substituted halogenosilane which comprises reacting with silicon at an elevated temperature a mixture comprising (1) an ether corresponding to the general formula ROR' where R and R' are each an alkyl group having from 1 to 4 carbon atoms and (2) a hydrogen halide.

2,459,540
SEPARATION OF ALKYL-ALKOXYPHENOL MIXTURES
Robert H. Rosenwald, Western Spring, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a corporation of Delaware
No Drawing. Application October 1, 1947, Serial No. 777,369
6 Claims. (Cl. 260—613)

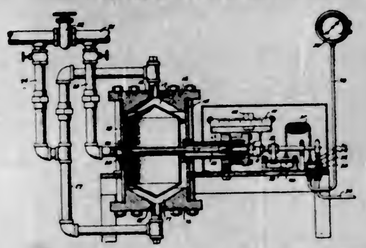
6. A process for concentrating and separating an o-tertiarybutyl-p-alkoxyphenol from a m-tertiarybutyl-p-alkoxyphenol which comprises dissolving the mixture of phenols in a water-immiscible organic solvent and thereafter contacting the resulting phenol-solvent solution with an aqueous caustic solution to form a raffinate phase and an extract phase, separating said phases and recovering said phenols from each of said phases.

2,459,541
SWIVEL RING BINDER
Alfred R. Russell, Grosse Pointe, Mich., assignor to The Burkhardt Company, Detroit, Mich., a corporation of Michigan
Application May 29, 1944, Serial No. 537,796
1 Claim. (Cl. 129—1)



In a swivel ring type binder, in combination, a plate member, reversely bent side edge portions on said plate member providing a pair of opposed and spaced channels each of partially circular cross-sectional configuration, said reversely turned side edge portions having transversely disposed notches opening onto the free edges thereof and said notches being aligned with each other transversely of the length of the said plate member, a flexible split ring member distortable under manual pressure and within the elastic limits of the material thereof to vary the distance between the free ends thereof, each free end portion of said ring member being provided with a slot in each side thereof, said slots being arranged in opposed relation with respect to each other and the slots in each of said free end portions being spaced from one another by a distance substantially equal to the width of said transversely disposed notches in said reversely bent side edge portions, said slots in side elevation being curved into conformance with the cross-sectional curvature of said reversely bent side edge portions and being of a width substantially equal to the thickness of the material of said reversely bent side edge portions whereby said free end portions may be removably received in the notched portions of said reversely bent side edge portions of said plate member and said ring member may pivot about either of said reversely bent side edge portions of said plate member when the opposite end thereof is disengaged from its correspondingly reversely bent side edge portions, the ends of said ring member providing cam surfaces engageable with the corresponding free edge portions of said reversely bent side edge portions of said plate member to force the free ends of said ring member toward one another upon pressure applied to said ring member during assembly to said plate member in a direction perpendicular to the general plane of thickness of said plate member and in a direction towards the latter.

2,459,542
DENSITY MEASURING APPARATUS
Albert J. Rosenberger, Chicago, Ill., assignor to Republic Flow Meters Company, Chicago, Ill., a corporation of Illinois
Application July 29, 1944, Serial No. 547,114
7 Claims. (Cl. 73—33)



1. Density measuring apparatus comprising a pivoted balance beam, a fluid chamber into which one end of the beam extends, a fluid displacement member secured to said one end of the beam and lying in the chamber to exert a tilting force on the beam, pressure responsive means connected to the beam to exert an opposing tilting force thereon, means controlled by tilting of the beam to produce a regulated pressure and connected to the pressure responsive means, means forming a set of ports at the opposite ends of the chamber, means forming a set of ports in the central portion of the chamber, a pipe connecting the ports at the ends of the chamber and having a flow connection at its mid point whereby flow resistance between the flow connection and the end ports will be the same, and a flow connection to the other set of ports, one of the flow connections supplying fluid to the chamber and the other connection discharging fluid therefrom.

2,459,543
BASE FOR AN ELECTRIC DEVICE
John F. Schmerheim, South Euclid, Ohio, assignor to General Electric Company, a corporation of New York
Application June 14, 1947, Serial No. 754,731
2 Claims. (Cl. 176—32)

1. A method for constructing a base structure for an electric device comprising a metallic shell

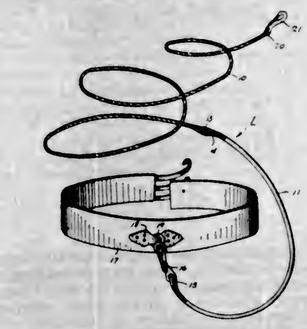
providing a reentrant flange defining an aperture and a plastic disc molded within said aperture with the edge portion of said flange embedded in the peripheral edge of said disc, which method comprises shaping a cup-shaped metallic shell to provide a deformable frusto-conical shaped

flange defining an aperture and the surface of which lies within a 30 to 60 degree angle of the vertical axis of said shell, inserting plastic molding material within said aperture and compressing said plastic molding material to deform said flange and embed said flange within the peripheral edge of said disc.

2,459,544
ALKYL NORCAMPHANYL ETHERS
Louis Schmerling, Riverside, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a corporation of Delaware
No Drawing. Application April 30, 1945, Serial No. 591,219
8 Claims. (Cl. 260—611)

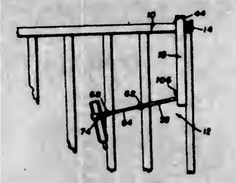
4. A process for producing an alkyl norcamphanyl ether which comprises reacting as the sole reactants in the process an alkanol and a 2-halo-bicyclo-(2,2,1)-heptane at a temperature of from about 100° to about 300° C.

2,459,545
LIFE LINE
Arthur B. Schultz, Wilmington, Del., assignor to All American Airways, Inc., a corporation of Delaware
Application April 5, 1946, Serial No. 659,779
2 Claims. (Cl. 227—49)



1. In a life line of the character described, a relatively non-elastic, non-stretchable section, fastening means carried at the free end of said section, a section made from undrawn synthetic plastic fibers joined to said first section, fastening means at the free end of said section of undrawn synthetic plastic fibers and means adapted to be worn by a person coupled with said last-named fastening means, whereby when said first-named fastening means is secured to a support and the weight of said person is applied to the line, said undrawn fibers elongate permanently and while so elongating absorb energy and serve as a shock absorber.

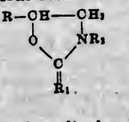
2,459,546
BABY BOTTLE HOLDER
Irving Seiden, Brooklyn, N. Y.
Application February 3, 1947, Serial No. 726,147
7 Claims. (Cl. 248—103)



1. An article support comprising a channel shaped base, a telescoping arm, a pivot for securing said arm to said base, flexible fingers swiveled at one end of said arm and means for locking said arm in predetermined pivoted positions upon said base, said last named means including an axle rotatably journaled in said channel shaped base, a drum rigidly secured to said axle, said arm detachably connected to said drum.

2,459,547
CELLULOSE OXAZOLIDONE ETHERS AND METHOD OF MAKING SAME
Frank K. Signaigo, Kenmore, N. Y., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application October 8, 1946, Serial No. 702,076
19 Claims. (Cl. 260—213)

1. A method of preparing cellulose oxazolidones wherein the oxazolidone nucleus is attached to the cellulose unit by an ether link, which comprises reacting, in the presence of alkali, a cellulosic substance selected from the class which consists of cellulose and low substituted cellulose ethers with an oxazolidone having the following general formula:



wherein
R is a halogenalkyl radical selected from the group which consists of chloroalkyl and bromoalkyl;
R_1 is selected from the group which consists of O and NH; and
R_2 is a radical selected from the group which consists of alkyl, aryl, aralkyl, and hydrogen.

2,459,548
CORN GERM REMOVAL
Philip A. Singer and Harold J. Deobald, Peoria, Ill., assignors to Allied Mills, Inc., a corporation of Indiana
Application December 6, 1944, Serial No. 566,852
6 Claims. (Cl. 127—67)

1. The method which comprises supplying only sufficient water to corn to bring the moisture content thereof to 20–30% by weight, maintaining the corn in the presence of the added moisture for a short period sufficient to distribute the moisture substantially uniformly through the corn, cracking the corn to loosen the germ, supplying additional moisture to the corn to form a starch liquid, violently agitating the corn in the presence of the added moisture to produce a

starch liquid having a higher specific gravity than that of the corn germ, and separating the germ

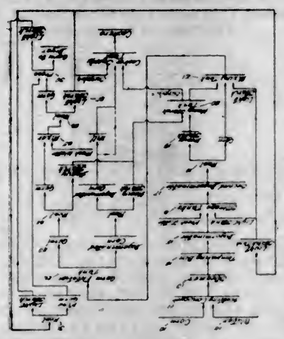
the chamber for conveying the organic material to, through, and from the bath, comprising an upper and a lower endless conveyor screen no coarser than about 80 mesh, adapted to confine and convey the organic material therebetween; the screens being mounted for movement in the

between said additional devices, and one of said additional devices being variable for shifting the phase of the electromotive force applied to the grid circuit for varying the output of the tube.

---

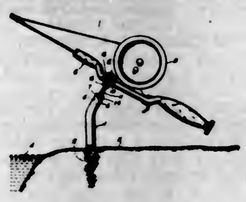
tubular member having at its bottom end a sealing section complementary to said seat and adapted to seat thereon, a fixed weight attached to said tubular member biasing it into engagement with said seat, a plurality of inner telescopically arranged valve seat members mounted within and telescoping with said tubular member and having

starch liquid having a higher specific gravity than that of the corn germ, and separating the germ



by flotation from the corn in the presence of said starch liquid.

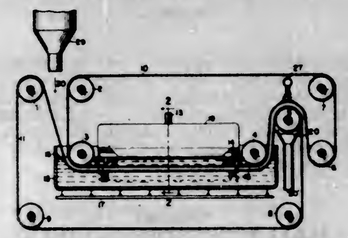
2,459,549
FISHING ROD HOLDER
J L Smith, Birmingham, Ala.
Application December 29, 1945, Serial No. 637,944
1 Claim. (Cl. 248—42)



In association with a fishing rod formed with a transversely extending aperture adjacent the handle thereof, a holder comprising a cylindrical standard terminating at one end in a pointed extremity adapted for insertion in the ground, the remaining end portion of said standard being formed with a blind, axial bore and with a pair of diametrically opposed, open-ended slots in the wall of said bore, an adapter bar having one end portion thereof removably secured in the aperture of said rod, and a transversely extending pin secured adjacent the remaining end of said bar, the pin-equipped end portion of said bar being removably receivable in said bore and said slots receiving the end portions of said pin.

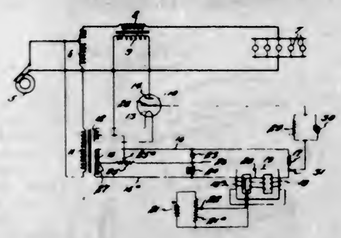
2,459,550
DESTRUCTIVE DISTILLATION OF SOLIDS IN A LIQUID BATH
Alfred J. Stamm, Madison, Wis.; dedicated to the free use of the People in the territory of the United States
Application January 10, 1947, Serial No. 721,336
7 Claims. (Cl. 202—18)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

7. An apparatus for the rapid continuous destructive distillation of subdivided solid organic material comprising; a chamber containing a molten metal bath; means mounted partly within the chamber for conveying the organic material to, through, and from the bath, comprising an upper and a lower endless conveyor screen no coarser than about 80 mesh, adapted to confine and convey the organic material therebetween; the screens being mounted for movement in the same direction longitudinally of and beneath the surface of the molten metal and for withdrawal



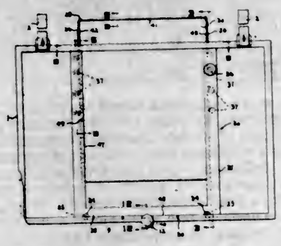
together from the bath; both screens being substantially impermeable to flow of the molten metal to prevent admixture of the molten material with the organic material confined therebetween, the upper conveyor being permeable to flow of vapor; and condenser means mounted adjacent to the surface of the molten metal to condense the vapors distilled from the organic material.

2,459,551
VOLTAGE AND PHASE CONTROL
Stephan Steinitz, New York, N. Y., assignor to Ward Leonard Electric Company, a corporation of New York
Application April 12, 1946, Serial No. 661,546
3 Claims. (Cl. 323—89)



1. Electric controlling apparatus comprising a gas filled three-element tube, an alternating current source for supplying energy to said tube, an output circuit connected in the plate circuit of said tube, impedance devices of different character from each other connected in series across said source for establishing an electromotive force out of phase with the electromotive force of said source between an intermediate point of said devices and said source, an impedance device connected between said intermediate point and said source, one side of the grid circuit of said tube being connected to an intermediate point of said last named device, additional impedance devices of different character from each other connected in series across said source for establishing an electromotive force out of phase with said source between an intermediate point of said additional devices and said source, the other side of said grid circuit being connected to a point between said additional devices, and one of said additional devices being variable for shifting the phase of the electromotive force applied to the grid circuit for varying the output of the tube.

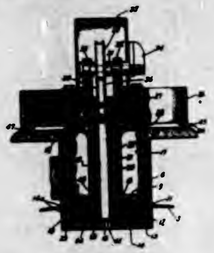
2,459,552
APPARATUS FOR PRODUCING PHOTOGRAPHIC MULTIPLE COPIES
Justus S. Stoner, El Cajon, and Alvin H. Luitjens, San Diego, Calif.
Application August 7, 1945, Serial No. 609,398
1 Claim. (Cl. 88—24)



An outfit for producing multiple photographic copies from an original by multiple exposure of a sensitized surface arranged in the focal plane of a stationary camera, comprising a movable holding plate for the original covering an area which is a multiple of the area covered by the original and which is completely covered by a non-actinic surface, said holding plate being adapted to fixedly hold and carry the original on the surface facing the camera, in a plane parallel to the focal plane at a distance at which the image of the original on the work plate covers merely a fraction of the sensitized layer in the camera, a frame holder, a frame slidably arranged therein, means for slidably holding the holding plate within said slidable frame for a longitudinal movement along said frame, the direction of movement of the frame within the frame holder being perpendicular to the direction of movement of the holding plate within the frame, means for moving said frame and for fixing it in a predetermined position within said frame holder, means for moving said holding plate within said frame and for fixing it in a predetermined position, a scale on said slidable frame, a fixed indicator marker cooperating with said scale, a further fixed scale associated with said fixed indicating marker, and a gliding marker on said last named scale, adapted to be adjusted on the latter to mark in advance the extent of the shifting movement.

2,459,553
SAFETY AND RELIEF VALVE
Earle C. Sullivan, Bridgeport, Conn., assignor to General Electric Company, a corporation of New York
Application October 31, 1945, Serial No. 625,900
2 Claims. (Cl. 137—53)

1. A pressure relief valve comprising a housing having a pressure relief passage one end of which is adapted for connection with a source of pressure, and the other end of said passage constituting a release port, a valve seat at said other end opening into said port, a valve seating on said seat to close said port, said valve having an outer tubular member having at its bottom end a sealing section complementary to said seat and adapted to seat thereon, a fixed weight attached to said tubular member biasing it into engagement with said seat, a plurality of inner telescopically arranged valve seat members mounted within and telescoping with said tubular member and having



at their lower ends sealing sections complementary to said seat and adapted to seat thereon in sealing relation, and operating means for selectively moving said tubular member and said inner members vertically out of engagement with said seat so as to vary the effective area of said valve exposed to the pressure in said passage.

2,459,554
DRAWING SCALE
Stephen V. Tomko, McKeesport, Pa.
Application December 2, 1946, Serial No. 713,592
3 Claims. (Cl. 33—138)

3. A device of the class described comprising a pair of spool housings, an inverted T-shaped connecting arm, extending between said housings adapted to keep said housings in spaced apart relation, a pair of shafts journaled in said housings for rotation, a longitudinal key on said shafts, a pair of spools, longitudinal bores having key slots in said spools adapted to receive the shafts and the keys carried by said shafts, finger knobs carried by one end of said shafts, a substantially circular nut adjustably carried by the opposite ends of said shafts, said nuts being tightened against the housings for preventing rotation of said shafts, recesses in the outer faces of said housings adapted to receive said finger knobs and circular nuts carried by the shafts, and a graduated flexible tape carried by said spools and adapted for longitudinal adjustment under said connecting arm, the lower portion of said connecting arm being transparent and bearing on the upper face of said tape.

2,459,555
LUMINESCENT MARACA
Raymond J. Tossas, New York, N. Y.
Application July 11, 1946, Serial No. 682,899
1 Claim. (Cl. 46—193)

In a sound producing instrument consisting of a pair of hemispherical transparent shells joined together so as to form a hollow spherical member and being provided with a handle, the combination of a layer of self-luminous substance attached to the inner side of one of said shells,

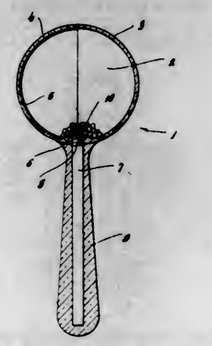
with a plurality of hard particles enclosed within said spherical member, said self-luminous sub-

2,459,557
WAVE LENGTH MODULATION
George L. Usselman, Port Jefferson, N. Y., assignor to Radio Corporation of America, a cor-

disc having a notch opening through the edge thereof facing the concave side of said fold line and extending toward the same, said notch consisting of an outer portion laterally bounded by a

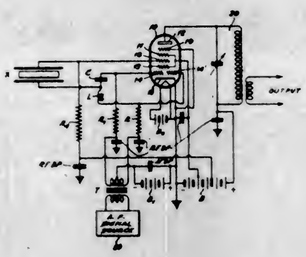
tioned adjacent the top of the can whereby the metal of the can engaged by said V-shaped face of said cutter will be forced into engagement with

with a plurality of hard particles enclosed within said spherical member, said self-luminous sub-



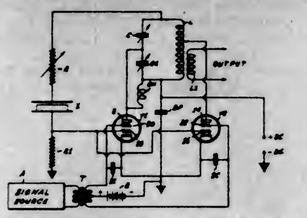
stance being soft and adapted to be transferred to said particles when the latter touch the layer.

2,459,556
ANGULAR VELOCITY MODULATION
George L. Usselman, Port Jefferson, N. Y., assignor to Radio Corporation of America, a corporation of Delaware
Application October 12, 1943, Serial No. 505,927
1 Claim. (Cl. 179—171.5)



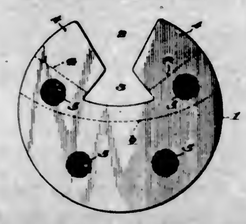
In an oscillation generating and angular velocity modulating system, an electron discharge device having electrodes including a plurality of grids, one of which serves as an anode, an anode, shielding electrodes interposed between said anode and grids, and a cathode, a piezoelectric crystal in a holder having two terminals, phase shifting networks coupling one of the crystal terminals to two of the control grids, a coupling between the other crystal terminal and said grid serving as an anode, resistive connections between said grids and the cathode of said device for supplying operating potentials to said grids to generate oscillations in said device and couplings, a tank circuit connected with the anode of said device, said tank circuit and anode being coupled to said oscillation generating couplings by the electron stream in said device, and connections for differentially modulating corresponding electrodes in said device in accordance with signals.

2,459,557
WAVE LENGTH MODULATION
George L. Usselman, Port Jefferson, N. Y., assignor to Radio Corporation of America, a corporation of Delaware
Application March 11, 1944, Serial No. 526,008
5 Claims. (Cl. 179—171.5)



1. In a wave generating and wave length modulating system, a tank circuit having parallel branches, one of which branches comprises series capacitors and the other of which branches comprises an inductor, two electron discharge devices each having an anode, a control grid and a cathode, an alternating current coupling between the anode of one device and a point on said capacitive branch intermediate the series capacitors thereof, an alternating current coupling between the anode of the other device and a point on said inductor of said inductive branch of said circuit, an alternating current coupling between the cathodes of said devices and a third point on the parallel branched tank circuit, a piezoelectric crystal in a holder having two terminals, a variable resistor connecting one terminal of said crystal holder to a fourth point on said parallel branched circuit, an alternating current circuit coupling the other terminal of said holder to the control grids of said devices, direct current biasing circuits for said control grids, direct current charging circuits for said anodes and a source of modulating potentials coupled differentially between corresponding electrodes of said devices.

2,459,558
HYGIENIC PROTECTOR APPLICABLE TO DRINKING VESSELS FOR AVOIDING CONTAMINATION BY THE MOUTH
Maruja Gonzalez Villegas de Oribe, Montevideo, Uruguay
Application March 9, 1945, Serial No. 581,846
In Uruguay January 19, 1945
1 Claim. (Cl. 65—13)



A hygienic protector applicable to drinking vessels for avoiding contamination of the mouth, comprising, a disc of deformable relatively stiff water resistant material, an arcuate fold line provided on said sheet for substantially registering with the brim of a drinking vessel after folding said sheet at an angle of at least 90° along said fold line over said brim and into said vessel, said

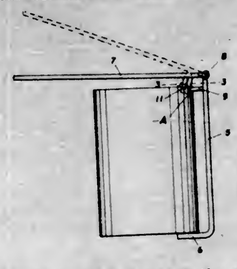
disc having a notch opening through the edge thereof facing the concave side of said fold line and extending toward the same, said notch consisting of an outer portion laterally bounded by a pair of inwardly converging edges of said sheet, and also bounded by a pair of inwardly diverging edges of said sheet and terminating in an arcuate edge spaced from and conforming substantially to the aforesaid fold line, and a pair of straight fold lines on said sheet leading outwardly at right angles from the edges of the inwardly diverging edges of the notch to the outer edge of the disc and defining flaps adapted to be bent upwardly from the portion of the disc lying within the vessel, thereby to engage the cheeks of the user to assist in holding the protector in use on the vessel and also to direct the contents of the vessel through the bottom of the notch to the lips of the user.

2,459,559
GOLF PUTTING TARGET
Robert E. Watkins, Kansas City, Mo.
Application March 31, 1945, Serial No. 585,838
1 Claim. (Cl. 273—36)

A practice golf putting cup comprising, a base having a central opening and a recessed bottom portion, a post extending through the central opening and rotatable therein, means engaging the lower end of the post for retaining the post in said opening, a plate having an upwardly extending boss adapted to engage the upper face of said base, said plate and boss having a central opening through which the post extends, means for rigidly securing the post to said boss so the post and plate will rotate together on said base, a cup member, and means mounting the cup member on said plate, said cup member extending to the side of the base substantially even therewith and adapted to be rotated around said base.

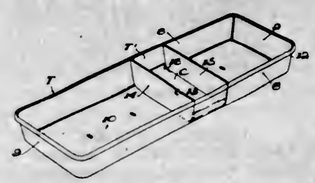
2,459,560
CAN OPENER
Oscar C. Williamson, San Francisco, Calif.
Application January 30, 1946, Serial No. 644,298
1 Claim. (Cl. 7—14.2)

In a can opener, a pair of pivoted members, one of said members being positioned parallel to the side of the can to be opened and having a foot portion underlying the can, the other of said members overlying the can and having an angularly disposed forming cutter secured thereto, one face of said cutter being V-shaped, said first mentioned member having a forming die positioned adjacent the top of the can whereby the metal of the can engaged by said V-shaped face of said cutter will be forced into engagement with



said forming die to form a spout, the apex of said spout lying within the same plane as the side of the can.

2,459,561
ADJUSTABLE AND REMOVABLE COMPARTMENT AND PARTITION FORMING DEVICE FOR TRAYS
Harvey H. Yawman, Le Roy, N. Y., assignor to Union Steel Chest Corporation, Le Roy, N. Y., a corporation of New York
Application June 29, 1944, Serial No. 542,758
5 Claims. (Cl. 220—20)



5. The combination of a tray having a bottom, side and end walls and provided with a plurality of spaced openings in its bottom, and an adjustable and removable partition forming device consisting of a bottom, integral upwardly extending spaced walls and extending transversely of the tray from one side wall to the other to form a compartment, the side edges of the upstanding walls conforming to the configuration of the side walls of the tray and the bottom of the device being provided in the space between the upstanding walls with resilient upwardly extending tongues yieldably engaging the side walls of the tray and clamping the device therein, the bottom of the device being also provided with an integral locking tab struck from the bottom of the device and adapted to be interchangeably positioned in the spaced openings in the bottom of the tray and cooperating with the resilient tongues in holding the device against accidental displacement.

2,459,562
CUP WASHER
Ludger E. La Brie, Detroit, Mich., assignor to Hydraulic Brake Company, Detroit, Mich., a corporation of California
Application August 27, 1945, Serial No. 612,944
4 Claims. (Cl. 309—33)

1. In a fluid pressure braking system, a flexible cup washer having a lip of a size greater than the diameter of the cylinder in which it is to operate, a base portion having a normal diameter of less than that of the cylinder in which it is to

operate, and a split ring surrounding a portion of the base of the flexible cup washer and having

2,459,565
DISPLAY BOX

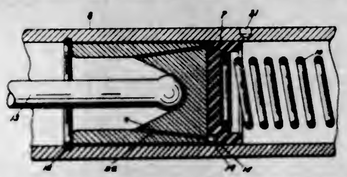
George Albert Lyon, Allenhurst, N. J.

operate, and a split ring surrounding a portion of the base of the flexible cup washer and having a normal diameter slightly less than the diameter

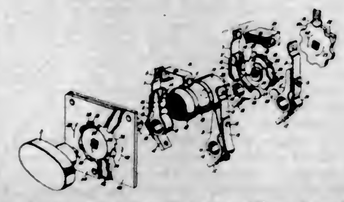


of the cylinder in which it is to operate, the rubber of the cup washer being sufficiently yielding to expand the split ring against the cylinder wall under fluid pressure.

2,459,563
FLAVORING MATERIALS
Roy F. Larson, Robert Winston Liggett, and Wayne C. Mussulman, Decatur, Ill., assignors to A. E. Staley Manufacturing Company, Decatur, Ill., a corporation of Delaware
No Drawing. Application May 19, 1947, Serial No. 749,084
11 Claims. (Cl. 99—145)

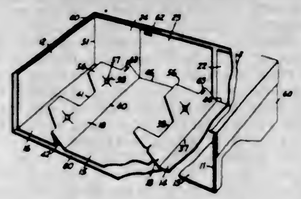
1. In the production of chemically prepared, fermented soy sauce-type condiment, the improvement which comprises fermenting a sugar-containing solution until it develops an aroma and a flavor compatible with said condiment and adding to said condiment a relatively small proportion of the fermented solution, whereby the aroma and flavor of the condiment are improved.

2,459,564
CONTROL DEVICE
Isaac R. Latta, Drexel Hill, Pa., assignor to General Electric Company, a corporation of New York
Application April 17, 1946, Serial No. 662,674
9 Claims. (Cl. 200—5)



2. An electric switch comprising a member mounted for rotation and translation, a switch adapted to be closed upon translatory movement of said member in a predetermined direction and to be opened upon reverse translatory movement of said member, a plurality of switches adapted to be closed consecutively upon rotary movement of said member in one direction and to be opened reversely upon rotary movement of the member in the opposite direction, and means for preventing rotary movement of said member in said one direction until translatory movement thereof in said predetermined direction and for preventing the opposite rotary movement of the member until the reverse translatory movement thereof comprising a ratchet device having two sets of running pawl surfaces in reverse order and a cooperating pawl mounted for movement with said member and relatively to said pawl recesses.

2,459,565
DISPLAY BOX
William Raymond Lee, San Mateo, Calif.
Application April 10, 1946, Serial No. 660,964
1 Claim. (Cl. 206—45.19)



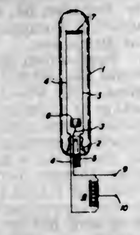
In a display filler adapted to be placed within a box, a flat sheet blank, a longitudinal side strip at each side of said blank adapted to be folded vertically with respect to said blank, alternate rectangular spacing portions parallel to said longitudinal side strips, a plurality of gusset portions separated by said spacing portions, each gusset portion being scored to form a fold line parallel with and intermediate the edges of the spacing portions adjacent thereto and separating each said gusset portion into two panels of unequal width, spaced U-shaped cuts extending from each of said fold lines into the panel of less width of said two panels with their legs terminating on said fold lines, said gusset portions being adapted to be folded along the fold lines to extend upwardly from the plane of said spacing members and to be parted along the cuts to provide a plurality of tabs extending upwardly from the upper edge of said gussets, said gusset portions and the floor of said box forming acute triangular sections generally inclined with respect to the floor of the box whereby the front face of one gusset and its plurality of tabs is substantially parallel with the rear face of the adjacent gusset and tabs, end tabs extending from those spacing portions not adjacent said longitudinal side strips adapted to be folded vertically with respect to said spacing portions, end tabs on said longitudinal side strips which are adapted to be folded inwardly when said side strips have been folded vertically to form a corner and to be secured to the vertically folded end tab extending from the adjacent spaced spacing portion.

2,459,566
PENETRATING AQUEOUS SULFUR COMPOSITION FOR THE TREATMENT OF SKIN DISORDERS SUCH AS ACNE
Slaughter Warren Lee, Princeton, N. J., assignor to Wallace Laboratories, Inc., New Brunswick, N. J., a corporation of Delaware
No Drawing. Application June 12, 1946, Serial No. 676,359
1 Claim. (Cl. 167—58)

An aqueous therapeutic solution for the treatment of acne and other skin disorders and containing sulfur in an active therapeutic form, comprising the following ingredients in amounts ranging 25% below and above the following optimum amounts:

	Parts by weight
Sulfur	0.75
Sodium alkyl benzene sulfonate	11.00
Antipyrine	5.40
Triethanolamine	10.00
Propylene glycol	56.00
Water	16.85

2,459,567
POSITIVE COLUMN LAMP
Eugene Lemmers, Cleveland Heights, Ohio, assignor to General Electric Company, a corporation of New York
Application December 21, 1946, Serial No. 717,719
4 Claims. (Cl. 176—122)

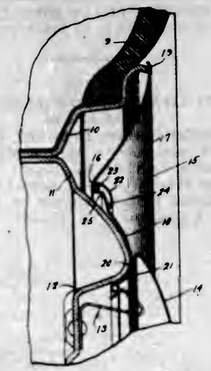


1. A positive column gaseous electric discharge lamp comprising a sealed tubular envelope the walls of which define the discharge path, an ionizable gaseous atmosphere in said envelope at a pressure of a few millimeters of mercury, an anode having a work function not materially lower than that of carbon and an activated thermionic cathode at opposite ends of said envelope, a plurality of lead-in conductors hermetically sealed through the end of said envelope adjacent said anode, one of said conductors extending to said anode and another of said conductors extending the length of the positive column to said cathode, said last mentioned cathode conductor being of bare metal exposed to the positive column, the lamp being proportioned to have a voltage gradient below a limiting value at which the anode and lead-in conductors would conduct an appreciable amount of current as a cathode.

2,459,568
METHOD OF MAKING WHEEL BALANCING WEIGHTS
George Albert Lyon, Allenhurst, N. J.
Application April 10, 1944, Serial No. 530,357
2 Claims. (Cl. 29—148)

2. The method of making wheel balancing weights adapted to be assembled with a wheel structure including an angularly shouldered annular retainer opposing in weight-receiving spaced relation an annular axially extending flange on the wheel structure so as to receive a wheel balancing weight wedged therebetween, which comprises the steps of forming soft metal into a strip of substantial length and of such rounded cross-sectional shape as to facilitate wedging assembly thereof laterally between the retaining shoulder and opposing wheel flange, bending the strip into substantially flat-lying open spiral form on a radius substantially the same as the annular flange and retaining shoulder, forming a groove longitudinally on the inner side of the strip for interlockingly engaging the retainer shoulder, and providing the strip with scorings partially severing it into individual weights adapted to be separated from the strip.

2,459,569
WHEEL COVER
George Albert Lyon, Allenhurst, N. J.
Application November 24, 1944, Serial No. 564,972
6 Claims. (Cl. 301—37)

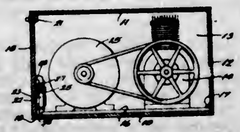


1. A cover for a wheel structure including a tire rim and a load supporting body part defining a relatively deep outwardly opening groove therebetween, a cover member comprising integral rim concealing and body concealing portions divergingly related with the annular junction thereof arranged to extend rearwardly into said groove, one of said portions having an annular shoulder protruding outwardly adjacent to said juncture, and a reinforcing ring member having inturned engagement edge means in pressed-on engagement with the juncture side of said shoulder.

2,459,570
METHOD OF REFINING SULFATE TURPENTINE
George H. McGregor, International Falls, Minn., assignor to Minnesota and Ontario Paper Company, Minneapolis, Minn.
No Drawing. Application June 27, 1947, Serial No. 757,679
5 Claims. (Cl. 92—2)

2. A method of refining crude sulphate turpentine to obtain commercially usable turpentine which comprises, extracting from said crude sulphate turpentine odor producing compounds with an aqueous solution containing sodium hydroxide, sodium carbonate and sodium sulfide.

2,459,571
CABINET WITH DEVICE FOR LOCKING AN INSTRUMENT BASE
Emery Mihalek and Charles Sxyper, Chicago, Ill., assignors to O. D. Jennings & Company, Chicago, Ill., a corporation of Illinois
Application August 23, 1945, Serial No. 612,242
8 Claims. (Cl. 312—186)



3. In a cabinet, walls forming a cabinet structure adapted to contain a unit and having an

opening therein, a closure to fit into the opening, a latch in the cabinet adjacent the opening to engage the unit and hold it in the cabinet, and

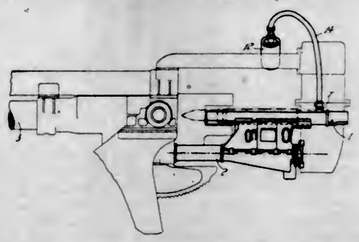
tric with and engaging said boss to prevent movement of the clip lengthwise of the hand piece, and resilient tangs engaging over the said out-

disposed within the well, said holder comprising a matte, having a view opening of less area than the well, a stiff back and means uniting the back

contact electrode and a movable electrode spaced apart in said envelope for a glow discharge therebetween, said movable electrode comprising a movable contact, a slide member carrying said

opening therein, a closure to fit into the opening, a latch in the cabinet adjacent the opening to engage the unit and hold it in the cabinet, and a pivoted operating member for the latch having an end portion formed to project into the opening to prevent insertion of the cover therein when the operating member is in latch releasing position.

2,459,572
BREECH-LOADING MECHANISM FOR ORDNANCE
Desmond Walter Molins, Deptford, London S. E. 8, England, assignor to Molins Machine Company Limited, London, England
Application March 13, 1943, Serial No. 479,119
In Great Britain August 20, 1941
4 Claims. (Cl. 89—47)



1. Breech loading mechanism for ordnance of the kind described comprising a loading tray movable between a loading position and a ramming position relative to a gun, a guide track on the loading tray, a carriage arranged to reciprocate along said guide track and adapted to act as a ram to propel a cartridge or shell into the breech on the forward stroke, an electric motor for driving said carriage mounted at a position remote from said loading tray and relative to which the loading tray can move, means for energizing the motor throughout the ramming stroke of said carriage and for automatically de-energizing the motor only after the carriage has completely rammed the cartridge or shell into the breech, and a mechanical coupling between the motor and the carriage, said coupling including a resilient torsional drive means so constructed and operatively connected to the motor and carriage as to reduce the shock on the motor and other parts when the carriage is abruptly brought to a stop at the end of a rapid ramming stroke.

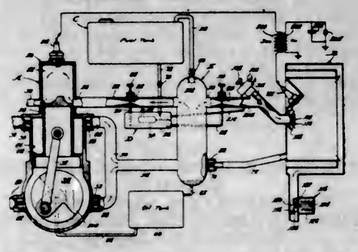
2,459,573
DENTAL DRILL SPRAY
Harry R. Morrow, Chicago, Ill.
Application November 25, 1946, Serial No. 712,098
2 Claims. (Cl. 32—28)

1. In combination with the hand piece of a dental drilling apparatus, the end portion of which includes a tool retaining chuck formed with outwardly bulging side walls and having a circular boss on the under side which surrounds a drill receiving opening, of a spray device for removable attachment to the hand piece including a resilient clip having a portion arranged concentric with and engaging said boss to prevent movement of the clip lengthwise of the hand piece, and resilient tangs engaging over the said outwardly bulged side walls.

2,459,574
FLAVORING MATERIALS
Wendell W. Meyer, Decatur, Ill., assignor to A. E. Staley Manufacturing Company, Decatur, Ill., a corporation of Delaware
No Drawing. Application May 19, 1947, Serial No. 749,087
2 Claims. (Cl. 99—145)

1. In the production of chemically prepared soy sauce-type condiment which comprises providing a base of unfermented chemically prepared liquid flavoring material, providing a sugar-containing solution and adding thereto protein hydrolytic products to the extent of 0.1 to 5 per cent based on the sugar solids, fermenting said solution until it develops an aroma and flavor compatible with said base material, and adding to said base material a relatively small proportion of said fermented solution, whereby the aroma and flavor of the condiment are improved.

2,459,575
HEATING DEVICE
George E. Neumann, St. Clair Shores, and Eugene F. Farrell, Grosse Pointe Woods, Mich., assignors to Borg-Warner Corporation, Chicago, Ill., a corporation of Illinois
Application November 5, 1943, Serial No. 509,076
6 Claims. (Cl. 237—12.1)



3. In a portable self-powered heating device comprising a heat exchanger adapted to heat ambient air and defining a combustion chamber, the combination of a prime mover, means furnishing fuel to both the prime mover and the chamber, independent air fuel ratio control means for the prime mover and the chamber, said prime mover serving as an air compressor means conducting the air under pressure to both the prime mover and the chamber for operating the same, and means comprising a cooling fan for said engine blowing air to be heated by said heat exchanger over the heat radiating surfaces of said heat exchanger, whereby the heat from the engine is contributed to the heat from the chamber in warming the said air traversing said heat exchanger.

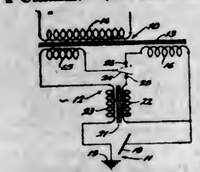
2,459,576
PICTURE MOUNT
Gordon E. Nichols, Middleboro, Mass., assignor to Winthrop-Atkins Co., Inc., Middleboro, Mass., a corporation of Massachusetts
Application November 30, 1946, Serial No. 713,197
10 Claims. (Cl. 40—152)

1. A picture mount comprising a frame member having therein a well and a picture holder

disposed within the well, said holder comprising a matte, having a view opening of less area than the well, a stiff back and means uniting the back and matte at their lateral edges, the matte and back being separable at their lower edges to provide a slot for the admission of a picture

between them, and attaching means uniting the holder to the frame, the attaching means being so constructed and arranged that the lower part of the holder may be sprung rearwardly out of the well to expose the slot for the admission of a picture.

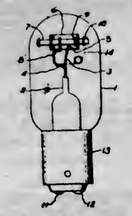
2,459,577
WELDING APPARATUS
Clayton P. Nielsen, Chicago, Ill., assignor to Mid-States Equipment Corporation, a corporation of Illinois
Application May 15, 1947, Serial No. 748,236
4 Claims. (Cl. 315—277)



1. A control system for a welding apparatus having transformer means with first and second secondaries for supplying voltage and current to the welding arc gap, comprising a relay having switch means and a pair of energizing coils, electrical connections for connecting the first transformer secondary, the switch means and the pair of energizing coils in series across the welding arc gap to apply a relatively low voltage to the welding arc gap when the welding arc is extinguished, to maintain the relay deenergized when the welding arc is extinguished and to energize the relay when the welding arc gap is closed for establishing the welding arc, and electrical connections for connecting both the first and second transformer secondaries, the switch means and one of the energizing coils in series across the welding arc gap to supply a relatively large current to the welding arc gap when the welding arc is established and to maintain the relay energized when the welding arc is established.

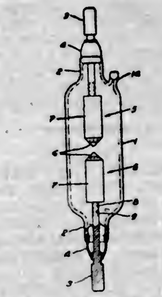
2,459,578
GLOW SWITCH
Sidney Howard Noble, Harrow Weald, England, assignor to General Electric Company, a corporation of New York
Application May 1, 1947, Serial No. 745,329
In Great Britain May 13, 1946
5 Claims. (Cl. 200—113.5)

2. A glow starter switch comprising a sealed envelope containing an ionizable medium, a fixed contact electrode and a movable electrode spaced apart in said envelope for a glow discharge therebetween, said movable electrode comprising a movable contact, a slide member carrying said movable contact and mounted for reciprocable



movement to carry said movable contact into and out of engagement with said fixed contact electrode, and a bimetallic member connected by a lost motion coupling to said slide member and arranged to be heated by the glow discharge to effect actuation of said slide member.

2,459,579
ELECTRODE STRUCTURE
Edward B. Noel, Cleveland Heights, Ohio, assignor to General Electric Company, a corporation of New York
Application August 6, 1947, Serial No. 766,560
2 Claims. (Cl. 250—27.5)



1. An electrode construction for an electric discharge device comprising a metallic body member supported by a lead-in conductor and having a truncated tapered end aligned with the discharge path of said device, a recess in said end, and a metallic arc supporting element comprising refractory metal and alkaline earth metal seated in said recess and having a tapered tip extending therefrom and forming with said end a tapered electrode face for supporting an arc discharge at the apex of said element.

2,459,580
ANIMAL TRAP
Olof H. Oleen, St. Helens, Oreg.
Application August 20, 1946, Serial No. 691,714
1 Claim. (Cl. 43—85)

A rodent trap comprising a pair of side arms, a spring connecting said arms together at one end thereof and tending to spread said arms apart, a pair of arcuate rigid jaws on the other ends of said arms extending laterally therefrom in opposed oppositely curving relation and in substantially right angular relation thereto for movement toward each other by spreading of

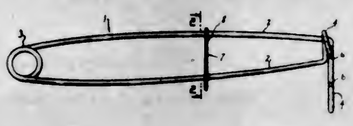
said side arms to clampingly engage a rodent passing between the same, said jaws being crossed for interlapping relation to limit spreading movement of said side arms, and a latch arm swing-

2,459,583
COMBUSTION APPARATUS
Gustave C. Peter, Wauwatosa, Wis.
Application June 29, 1944, Serial No. 542,709

ink past the same upon downward movement thereof, a stylus attached to and depending from the valve head and projecting through the central opening of the barrel, a piston rod attached to the piston body and extending toward the up-

retaining-ring having a plurality of approximately radial diffuser-type ventilating-openings

said side arms to clampingly engage a rodent passing between the same, said jaws being crossed for interlapping relation to limit spreading movement of said side arms, and a latch arm swingable on one side arm across the other side arm with a terminal hook for engaging over said

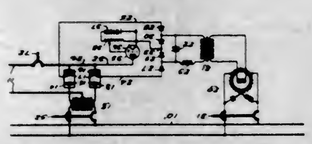


other side arm to prevent said side arms from spreading apart, said latch arm being swingable into releasing position and being provided with a right angled latch swinging arm on said hook for contact by the rodent while the rodent is between said jaws.

2,459,581
RESINOUS MIXED ESTERS CONTAINING A PENTAERYTHRITOL
Frank G. Oswald, Wilmington, Del., assignor to Hercules Powder Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application December 20, 1944, Serial No. 569,109
14 Claims. (Cl. 260—26)

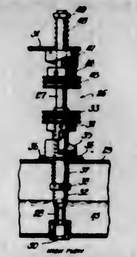
1. A stable, oil-soluble, resinous mixed ester of a pentaerythritol esterified with only a rosin acid and sebacic acid, said rosin acid being combined with all except from 0.1 to 2 of the hydroxyl groups presented by the pentaerythritol and the sebacic acid being combined with 50% to 100% of the remaining hydroxyl groups.

2,459,582
VAPOR ELECTRIC DEVICE
William E. Pakala, Forest Hills, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application March 20, 1947, Serial No. 735,991
19 Claims. (Cl. 315—201)



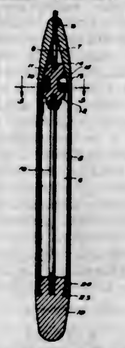
1. In an electric current translating system, for transferring electric energy between two dissimilar electric circuits, having at least a pair of alternately conducting electric valves, a control system comprising a capacitor, circuits for charging said capacitor alternately in opposite polarity, an exciting electrode in each of said valves, a discharge circuit connecting said exciting electrodes to opposite terminals of said capacitor, a common connection between said exciting electrodes, polarity responsive circuit means connected to both terminals of said capacitor, a return circuit from said common connection to an intermediate point of said polarity responsive circuit means, a controlled electric valve in said return circuit and a polarity selective device connected in series circuit relation between each of said exciting electrodes and said capacitor.

2,459,583
COMBUSTION APPARATUS
Gustave C. Peter, Wauwatosa, Wis.
Application June 29, 1944, Serial No. 542,709
4 Claims. (Cl. 251—34)



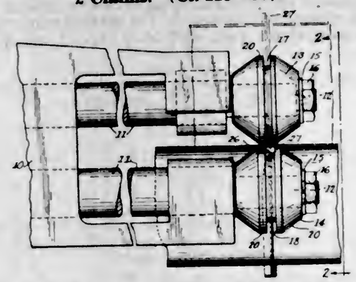
1. A fuel flow control valve adapted to be connected to a float valve container for use with a combustion apparatus of the type that employs a fuel vaporizer having means to regulate the amount of air flowing upwardly therethrough, which comprises a valve member adapted to be mounted in a wall of said container and to extend therethrough to an opposite wall having a fuel outlet therein, said valve member having an opening in one end communicating with said outlet, a flow control member slidably mounted upon said valve member and adapted to extend from within said container through said first named wall and to regulate the area of the opening in said valve member, and means connected to said control member disposed exteriorly of said first named wall to actuate said control member with respect to the opening in said valve member selectively to vary the amount of fuel permitted to flow through said opening to provide high and low fire operation of said apparatus.

2,459,584
FOUNTAIN PEN
Herbert Q. Quan, Los Angeles, Calif.
Application February 1, 1945, Serial No. 575,609
6 Claims. (Cl. 120—47)



1. A fountain pen including a hollow barrel having a central opening and an internal valve seat at its lower end, a valved barrel-refilling piston movable in the barrel and including a body having a bottom valve head arranged to cooperate with said valve seat to control the flow of ink from the barrel, said valved piston being constructed to draw ink into the barrel upon upward movement thereof and to permit passage of ink past the same upon downward movement thereof, a stylus attached to and depending from the valve head and projecting through the central opening of the barrel, a piston rod attached to the piston body and extending toward the upper end of the barrel, and means operable from the upper end of the barrel to actuate the piston rod for longitudinally adjusting or reciprocating the valved piston.

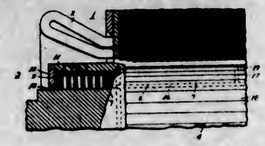
2,459,585
ROTARY DIES
Liddell G. Robinson, Corcoran, Calif.
Application February 7, 1945, Serial No. 576,593
2 Claims. (Cl. 113—37)



1. In a die device for crimping an outwardly angulated flange on one pipe section into gripping engagement with an outwardly extending flange of less diameter on a second pipe section, a pair of rotary female dies beveled toward both their axial ends, cylindrical peripheral portions located between the beveled portions, and grooved rectangular recesses extending into said cylindrical portions at approximately the mid-line of said cylindrical portions, the cylindrical portions on one die providing an anvil for work extending into the grooved recess of the other die, the grooved recess of one die being wider than that of the other die, means for rotatably supporting said dies in cooperative positions opposite each other with the anvil surfaces of one die overlapping the anvil surfaces of the other die, whereby the wider grooved recess die may be used with the other die as an anvil for making a preliminary heavy joint in heavy gauge work and the narrower grooved recess die is then used with the first die as an anvil for making the final tight joint, and in light gauge work, only the narrower grooved recess die is used with the first die as an anvil for making the complete tight joint.

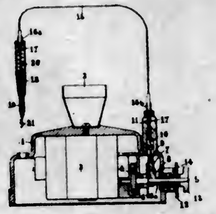
2,459,586
ROTOR VENTILATION FOR TURBOGENERATORS
Malcolm D. Ross, Pittsburgh, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application May 13, 1947, Serial No. 747,683
2 Claims. (Cl. 171—252)

1. A turbogenerator having a rotor comprising a slotted rotor-core having rotor-teeth between the rotor-slots, a concentric field-winding having coil-sides in the rotor-slots and having end-turns extending beyond each end of the rotor-core, a retaining-ring surrounding the end-turns at each end of the rotor, and an end-plate at the end of each retaining-ring, each end-plate having a centrally disposed gas-inlet opening for the admission of a gaseous ventilating-medium, and each retaining-ring having a plurality of approximately radial diffuser-type ventilating-openings



therethrough, being of widening diameters as the gaseous ventilating-medium passes out through said ventilating-openings in the retaining-rings.

2,459,587
STOCKING MENDING MACHINE
Méropée Sagnier, Paris, France
Application November 28, 1945, Serial No. 631,340
In France May 21, 1943
Section 1, Public Law 690, August 8, 1946
Patent expires May 21, 1963
3 Claims. (Cl. 66—1.5)



1. A machine for mending hosiery articles comprising a casing, a driving mechanism within said casing, a needle-carrying sleeve, a needle assembly slidably received in said sleeve, flexible connecting means between said needle and the driving mechanism and a drum stretcher secured on said casing and serving to support the article to be mended.

2,459,588
CIRCUIT INTERRUPTER
Jerome Sandin, Pittsburgh, Joseph K. Kraft, Wilkinsburg, and Herbert L. Rawlins, Pittsburgh, Pa., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application March 30, 1944, Serial No. 528,674
25 Claims. (Cl. 200—88)

1. In a multi-pole circuit breaker, relatively movable contacts for each pole, an operating

mechanism for said contacts, a trip bar common to at least two of the poles, said trip bar being operable to cause a circuit opening operation of said mechanism, electroresponsive means for each pole operable in response to predetermined

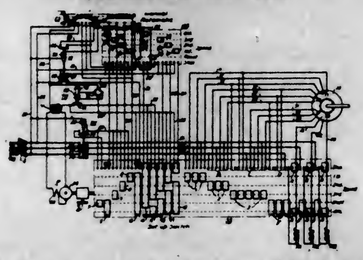
eral gores being cut so that both its warp and weft threads lie at an appreciable bias to the longitudinal center line of the gore, and stitched into the garment with the gores correspondingly

of its fulcrum point; a scraper blade mounted between the blade lever portions; a ground engaging wheel mounted on the forward extremity of each wheel portion; a spring lever extending upwardly from each rocking lever; a connecting rod extending forwardly from each spring lever;

from the cathode during the peak portion only of a half-cycle of the field within said other resonator in which it is of a polarity to add energy to the electrons, the strengths of said fields moving said liberated electrons toward said anode with a speed causing them to pass through said one reso-

mechanism for said contacts, a trip bar common to at least two of the poles, said trip bar being operable to cause a circuit opening operation of said mechanism, electroresponsive means for each pole operable in response to predetermined circuit conditions in the corresponding pole to operate said trip bar, and a single time delay device actuated by said trip bar to prevent tripping operation of said trip bar in response to sudden shocks and to inversely retard tripping operation of said trip bar by said electroresponsive means in accordance with the magnitude of an overload occurring in any pole of the breaker.

2,459,589
CONTROL SYSTEM FOR MULTISPEED ALTERNATING-CURRENT MOTORS
Walter Schaelchlin and Amos J. Winchester, Jr., Pittsburgh, Pa., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application June 2, 1947, Serial No. 751,798
8 Claims. (Cl. 318—552)



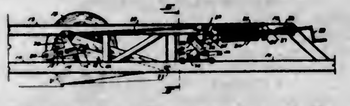
1. A motor control system comprising a multispeed alternating-current motor having a plurality of terminal groups for operating with different numbers of field poles at different respective speeds depending upon which terminal group is energized at a time, line terminals for supplying alternating current, an electromagnetic contactor having a coil circuit and having contacts controlled by said coil circuit and disposed between said line terminals and said terminal groups, a setup switch adjustable to a plurality of positions and having a plurality of contact means arranged for sequential operation and disposed between said contactor contacts and said terminal groups for connecting said contacts to one of said groups at a time depending upon the selected position of said setup switch, said setup switch having other contact means connected with said coil circuit for temporarily opening said contactor contacts during moving intervals of said setup switch from one to another position so that the interruption of the load current supplied from said line terminal to said motor occurs at said contactor contacts.

2,459,590
SLIP
Herman C. Seldin, St. Louis County, Mo., assignor to Sel-Mor Garment Co. Inc., St. Louis, Mo., a corporation of Missouri
Application February 7, 1945, Serial No. 576,519
1 Claim. (Cl. 2—73)

As an article of women's wear, a slip including a skirt portion comprised of eight gores of substantially uniform size and shape, each of which is stitched to the adjacent gores, each gore being of increasing width from its upper margin downwardly and gradually toward its lower margin so that, in assembly, the skirt portion is characterized by a pronounced flare, each of the several gores being cut so that both its warp and weft threads lie at an appreciable bias to the longitudinal center line of the gore, and stitched into the garment with the gores correspondingly biased and each gore characterized by an upper margin which is approximately rectilinear, and the gores being stitched together so as to result in a substantially horizontal waist line approximately coincident with the waist line of the wearer; a midriff or bandeau just above the skirt portion, the lower margin of the midriff being stitched to the upper margins of the several front gores along the substantially straight waistline of the garment, the upper margin of the frontal section of the midriff being cut along arcuate lines intersecting centrally of the front of the garment, and each concavely presented below one of the bust regions of the wearer, the midriff being biascut so that its warp and weft threads lie at an

acute angle to the horizontal and with the threads thereof at a substantial angle to the corresponding threads of the front gores of the skirt portion, hence being biased oppositely thereto; a brassière portion, the frontal part of which is comprised of a pair of bust-receiving pockets each formed of a doubled fabric, each pocket having a lower margin conforming to and being stitched along one of the said arcuate lines of the midriff portion, a connection between the pockets at their uppermost point of juncture; a single back panel above the rear gores of the skirt portion, joined thereto by a substantially horizontal rear waistline seam, the back panel being characterized by upwardly extended strap points and the back panel joined to both the midriff and brassière portion by side seams, and supporting shoulder straps connected at the rear to the points of the back panel and at the front of the garment to the bust pockets.

2,459,591
LAND LEVELING MACHINE
Lawrence E. Shumaker and Harold G. Davis, Denver, Colo., assignors to Eversman Mfg. Co., Denver, Colo.
Application February 14, 1947, Serial No. 728,648
4 Claims. (Cl. 37—146)



1. In a land leveling machine of the type having an elongated, rigid, horizontal frame with means for supporting the frame above the ground, at its front and rear extremities means for leveling the ground between the front and rear supports comprising: a rocking lever rotatively mounted at each side of said frame and having a wheel lever portion extending forwardly and a blade lever portion extending rearwardly

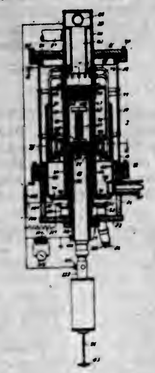
of its fulcrum point; a scraper blade mounted between the blade lever portions; a ground engaging wheel mounted on the forward extremity of each wheel portion; a spring lever extending upwardly from each rocking lever; a connecting rod extending forwardly from each spring lever; cam levers pivoted to and extending upwardly from said frame forwardly of said wheels to a hinged connection with said connecting rods; a roller riding on the rearward face of each cam lever; swinging levers extending forwardly and downwardly from each roller to a hinged connection on said frame; and spring means urging said swinging levers forwardly to cause said rollers to travel upwardly along said cam levers to force said wheels against the ground.

2,459,592
SHOE TREE
Robert H. Slavin, Dayton, Ohio
Application July 29, 1946, Serial No. 686,994
4 Claims. (Cl. 12—128.6)

1. A shoe tree of the kind described, comprising a toe member, a heel member, a rearwardly extending U-shaped toe member supporting bar pivotally connected to said toe member, a forwardly extending U-shaped heel member supporting bar fixed to said heel member, said toe member supporting bar telescopingly engaging said heel member supporting bar, means pivotally connecting said bars together at selected positions along the length thereof, an L-shaped handle fixed to the forward end of said heel supporting member extending upwardly and rearwardly therefrom, a transversely rockable bar locking member rockably carried by said handle for locking said bars against pivoting movement in aligned position and means fixed to the rear end of said handle for attaching said shoe tree to a wall bracket.

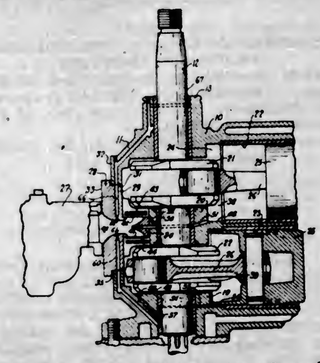
2,459,593
FEED-BACK SYSTEM FOR ELECTRONIC TUBES COMPRISING HOLLOW BODY RESONATORS
David H. Sloan, Pittsburgh, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application March 17, 1944, Serial No. 526,882
2 Claims. (Cl. 315—6)

1. An electronic tube apparatus comprising a pair of hollow body resonators adapted to have electromagnetic field oscillations established therein, an anode mounted within one of said resonators, a cathode mounted within the other of said resonators, said pair of resonators being adjacent each other with openings therein between said anode and cathode permitting a flow of electrons from said cathode to said anode, a control grid between said cathode and anode, circuit means connected to said anode and cathode for establishing a direct current potential field therebetween tending to liberate electrons from said cathode and move them toward the anode, additional circuit means connected to said grid and cathode for establishing a direct current potential field permitting electrons to be liberated from the cathode during the peak portion only of a half-cycle of the field within said other resonator in which it is of a polarity to add energy to the electrons, the strengths of said fields moving said liberated electrons toward said anode with a speed causing them to pass through said one resonator to said anode while the field therein opposes their motion and absorbs energy therefrom, and a feed-back coupling between said resonators for supplying energy from said one resonator to said



other resonator to maintain the field therein at substantially the same frequency but displaced in phase relative to the field of the second resonator, said coupling comprising a conductor connected at one end to said cathode and extending into said one resonator with the other end thereof adjacent to, but spaced from, said anode to form a capacity connected between said anode and cathode, and tuning means connected to one of said resonators for adjusting the resonant frequency thereof whereby the amount of said phase displacement may be adjusted.

2,459,594
MANIFOLD FOR TWO-CYCLE CRANKCASE COMPRESSION ENGINES
Jay W. Smith, Algonac, Mich., assignor to Chris-Craft Corporation, Algonac, Mich., a corporation of Delaware
Application January 2, 1946, Serial No. 638,642
9 Claims. (Cl. 123—73)



6. An intake manifold for internal combustion engines, comprising a body attachable to a part

of an internal combustion engine and having a passage therethrough for fuel mixture, a projection extending from the body and having discharge ports at opposite sides respectively communicating with the fuel mixture passage, a deflector carried by the projection between the

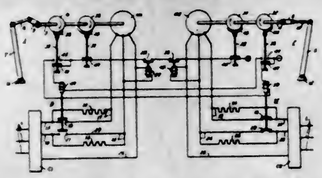
ply-circuit means associated with the second and third input-terminals for causing another impedance to be traversed by the sum of that phase and one of the other phases of the input-current, supply-circuit means associated with the third and fourth input-terminals for causing the third

tially within the orifice beyond the said one ring-shaped contact during the interruption process

2,459,601
INFANT'S COLLAPSIBLE AND PORTABLE CHAIR
John P. Tiritilli and Thomas L. Jones, Chicago, Ill.
Application January 21, 1947, Serial No. 723,406
4 Claims. (Cl. 155—31)

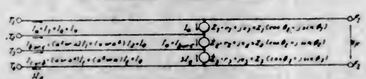
of an internal combustion engine and having a passage therethrough for fuel mixture, a projection extending from the body and having discharge ports at opposite sides respectively communicating with the fuel mixture passage, a deflector carried by the projection between the discharge ports and shaped to direct uniform quantities of fuel mixture to the discharge ports, a passage extending through the deflector for returning raw fuel mixture to said passage, and reed type valve members respectively secured to opposite sides of the projection and having portions normally closing said discharge ports.

2,459,595
BALANCED LOOM OPERATION
Frederick D. Snyder, Milton, Mass., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application April 4, 1947, Serial No. 739,414
7 Claims. (Cl. 318—74)



7. In an industrial application where a large number of like motors separately operate an equal number of like relatively heavy reciprocatory loads at about the same speed of means for operating the motors in pairs, preferably adjacent or aligned pairs, such that when one load of one motor moves in one horizontal direction the load of the other motor will move in an opposite horizontal direction, in combination, a control circuit, switching means that close said circuit when one load has moved beyond its extreme position in one direction and is returning while the other load has not yet arrived at its opposite extreme position, means, operable by the energization of the control circuit, for decreasing the energy supply for a relatively short time interval of the motor driving the leading load, and means for controlling the length of said time interval as a function of the magnitude of the lead of the leading load.

2,459,596
COMPOSITE SEQUENCE FILTER FOR CURRENT CIRCUITS
William K. Sonnemann, Roselle Park, N. J., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application April 4, 1947, Serial No. 739,469
4 Claims. (Cl. 171—97)

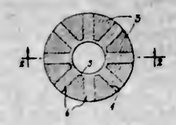


1. A sequence-segregating current-network comprising four input-terminals for a three-phase current and a return-current conductor, respectively, two output-terminals, three separate impedances having substantially no mutual reactance therebetween, supply-circuit means associated with the first and second input-terminals for causing one of said impedances to be traversed by an input-current of one phase, supply-circuit means associated with the second and third input-terminals for causing another impedance to be traversed by the sum of that phase and one of the other phases of the input-current, supply-circuit means associated with the third and fourth input-terminals for causing the third impedance to be traversed by the return-current, and output-circuit means associated with the three impedances for causing the two output-terminals to be supplied with the sum of the voltage-drops in the three impedances.

2,459,597
DI-ALKYLATED MONO-HYDROXY PHENOL
Gordon H. Stillson, Oakmont, and David W. Sawyer, Pittsburgh, Pa., assignors to Gulf Research & Development Company, Pittsburgh, Pa., a corporation of Delaware
No Drawing. Application May 16, 1945, Serial No. 594,175
2 Claims. (Cl. 260—624)

1. The process of producing 2,6-di-tertiary-butylphenol which comprises alkylating a p-halophenol with isobutylene in the presence of an alkylation catalyst to 2,6 - di - tertiary - butyl-4-halophenol, and removing the halogen therefrom by reaction with an alkali metal in the presence of anhydrous ammonia to obtain said 2,6-di-tertiary-butylphenol.

2,459,598
BEARING
Louis L. Stott, Reading, Pa., assignor to The Polymer Corporation, Reading, Pa., a corporation of Pennsylvania
Application October 5, 1945, Serial No. 620,488
4 Claims. (Cl. 308—238)



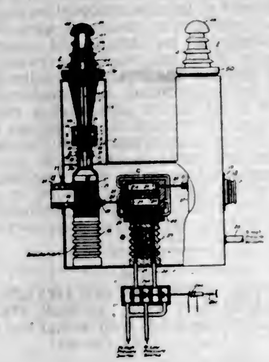
1. A bearing comprising a sleeve provided with radial perforations opening through both the inner and outer surfaces of the sleeve, and integrally molded plastic material infilling said perforations and lining the interior of the sleeve, the said plastic material comprising a synthetic linear condensation polyamide, and the thickness of the bearing lining being from about .008" to about .050".

2,459,599
CIRCUIT INTERRUPTER
Albert P. Strom, Forest Hills, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application September 20, 1944, Serial No. 554,898
8 Claims. (Cl. 200—150)

1. In a circuit interrupter of the fluid blast type, means at least partially of insulating material defining an orifice, a pair of ring-shaped contacts positioned on opposite sides of the orifice at least in the fully open circuit position of the interrupter, means for drawing an arc through the orifice with its terminal ends disposed at the ring-shaped contacts, means for rotating the arc around the ring-shaped contacts while it is positioned within the orifice, means for forcing a blast of fluid through the orifice, and an insulating fluid directing member fixed to one of the ring-shaped contacts and extending at least partially within the orifice beyond the said one ring-shaped contact during the interruption process

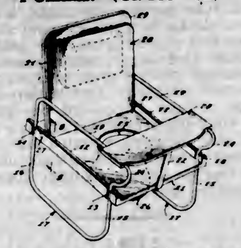
to symmetrically direct the fluid blast on all sides of the last-mentioned contact.

2,459,600
COMPRESSED GAS CIRCUIT INTERRUPTER
Albert P. Strom, Forest Hills, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application December 14, 1944, Serial No. 568,104
18 Claims. (Cl. 200—148)



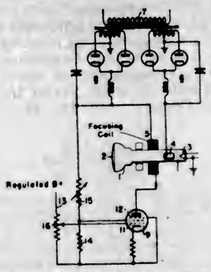
1. In a circuit interrupter of the gas-blast type, means defining a chamber filled with a gas under pressure, means defining an outlet through a wall of the chamber and carrying a stationary orifice-type contact at its inner end, a bushing extending into the chamber carrying a piston chamber at its interior end, a blast valve, a piston movable within the piston chamber and carrying the blast valve, a movable contact cooperable with the orifice-type stationary contact to draw an arc, a lost-motion mechanical connection interconnecting the movable contact and the blast valve, disconnect means disposed within the chamber and serially related to said arcing contacts, piston means for actuating the disconnect means, and independent conduit means extending through the wall of the chamber to transmit gas for actuating the piston means.

2,459,601
INFANT'S COLLAPSIBLE AND PORTABLE CHAIR
John P. Tiritilli and Thomas L. Jones, Chicago, Ill.
Application January 21, 1947, Serial No. 723,406
4 Claims. (Cl. 155—31)



4. A nursery chair comprising a generally rectangular centrally apertured base member formed with raised ribs at its side edges, a flexible moisture proof bag, means detachably securing said bag to the under surface of said base member around the central aperture therein, a closure plate pivotally secured between the rear portions of the ribs and adapted to overlie the aperture, each of the side edges of the base members being formed with a pair of notches defining vertical outwardly facing channels at their lower portions and traversing the ribs at their upper portions, a pair of frame-like side support members made of tubular metal, each side member having a pair of vertical bar portions received in the notches at a side edge of the base member, means pivotally securing said vertical bar portions at their intermediate portions to the ribs for swinging movement therearound, a tray pivotally secured to the top portion of one side member and adapted to interlock with the top portion of the other side member, means for detachably securing said tray in interlocking position, a generally rectangular back support plate pivoted to the rear portions of the ribs rearwardly of and above the pivotal axis of the closure plate, and stop means on the rear upper portions of the side members for limiting rearward swinging of said back support plate.

2,459,602
CIRCUIT FOR STABILIZING FOCUS OF MAGNETICALLY FOCUSED CATHODE-RAY TUBES
Lynn J. Ulman, Baltimore, Md., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application December 24, 1946, Serial No. 718,196
3 Claims. (Cl. 315—31)



1. In combination with means for producing an electron beam by means of an accelerating anode,

a focusing magnet for said electron beam, a power supply and means for impressing voltage therefrom on said accelerating anode, means for impressing voltage on said focusing magnet from a current source energized by said power supply

open at its bottom and having open-ended slots in two opposed depending walls to receive a reach of cable therein to thereby bridge the interior space in the housing, said housing having open-ended slots in two opposed depending walls to

2,459,607
REGULATING SYSTEM
Raymond L. Witzke, Pittsburgh, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application June 2, 1947, Serial No. 751,809

and disposed between said ring and the flange of the nut, said metal ring being initially frusto-conical shaped with the outer portion thereof in engagement with the body member and the inner portion of said ring in engagement with the gasket whereby the turning of the nut onto

a focusing magnet for said electron beam, a power supply and means for impressing voltage therefrom on said accelerating anode, means for impressing voltage on said focusing magnet from a current source energized by said power supply in series with said focusing magnet and with an electron tube having an anode, a cathode, a first control electrode adjacent said cathode and a second control electrode between said first control electrode and said anodes, means for impressing voltage derived from said supply on said second control electrode, and means for so adjusting the voltage impressed on said control electrodes that the fractional change in current energizing said focusing magnet due to changes in said power source is substantially one-half the fractional change in the voltage impressed on said accelerating anode.

2,459,603
UNIVERSAL CABLE-CLAMPING DEVICE
Leo L. Verkuil, Tottenville, Staten Island, N. Y., assignor to Edwards and Company, Inc., Norwalk, Conn., a corporation of New York
Application July 26, 1946, Serial No. 686,480
11 Claims. (Cl. 24—81)

1. A clamping device for clamping a cable and for clamping another part comprising a housing open at its bottom and having open ended slots in two opposed depending walls to receive a reach of cable therein to thereby bridge the interior space in the housing, said housing having aperture means in the top wall, two clamping levers having means pivotally supporting them from the interior of the housing and for biasing them in opposite directions, said lever arms having portions extending upwardly through said aperture means to form finger pieces for manually actuating them from the exterior of said housing and having clamping portions extending downwardly beyond the plane of the bottom of the housing for clamping a part other than said bridging cable reach, and clamping means within the housing and actuatable by said two levers respectively and of an extent to engage and clamp substantially only said bridging cable reach.

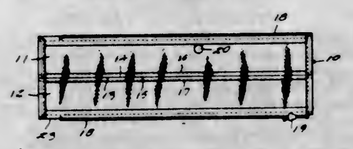
2,459,604
UNIVERSAL CABLE-CLAMPING DEVICE
Leo L. Verkuil, Tottenville, Staten Island, N. Y., assignor to Edwards and Company, Inc., Norwalk, Conn., a corporation of New York
Application July 26, 1946, Serial No. 686,481
15 Claims. (Cl. 41—81)

1. A clamping device for clamping a cable and for clamping another part comprising a housing open at its bottom and having open-ended slots in two opposed depending walls to receive a reach of cable therein to thereby bridge the interior space in the housing, said housing having open-ended slots in two opposed depending walls to receive a finger piece member in each, a clamping unit receivable into the housing through its open bottom end and comprising two pairs of clamping elements of which one pair is of a length to extend beyond said open bottom end and the other pair is of a length to engage a reach of cable bridged through the housing in said first mentioned slots, two finger piece members for said clamping unit for actuating at least one pair of clamping elements and respectively enterable into said second mentioned slots upon entry of said clamping unit into said housing, and mechanical interconnections between said finger pieces and said clamping unit held against disconnection by entry of said finger pieces respectively into said second mentioned slots.

2,459,605
INDUCTION COIL
Elmer Warnken, Colerain Township, Hamilton County, Ohio
Application December 4, 1945, Serial No. 632,676
4 Claims. (Cl. 171—242)

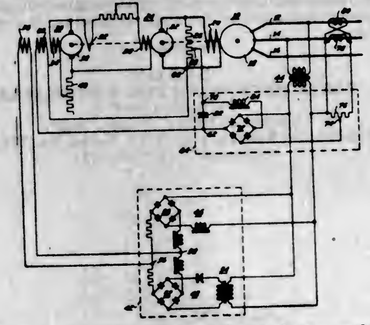
1. As a new article of manufacture, an electric coil devoid of internal supporting form comprising convolutions of insulated wire wound to hollow cylindrical formation, the convolutions thereof being fixed relative to one another by a hardened binding material to render the coil rigid and self-sustaining, notwithstanding the absence of a stationary core, and a cylindrical sleeve of insulating material having an internal diameter closely approximating the inside diameter of the coil, fixed to an end of the coil in axial alignment therewith, the innermost convolutions of the wire being included in the circumference of a coaxial imaginary cylinder which includes the inner surface of the sleeve.

2,459,606
INNER TUBE TESTING DEVICE
Louis Herbert Wink, Leesburg, Fla.
Application November 5, 1945, Serial No. 626,605
2 Claims. (Cl. 73—50)



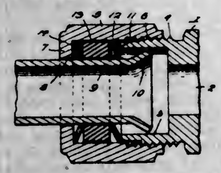
2. A device for testing inner tubes having a valve stem comprising an elongated loosely woven fabric covering having free ends and side edges, correlated inter-engaging fastening elements on the opposite side edges, including a slider therefor, one end of said fastening elements terminating in spaced relation to the adjacent end of said covering whereby said covering may be secured about a tube with the ends of said covering in overlapping relation.

2,459,607
REGULATING SYSTEM
Raymond L. Witzke, Pittsburgh, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application June 2, 1947, Serial No. 751,809
5 Claims. (Cl. 322—24)



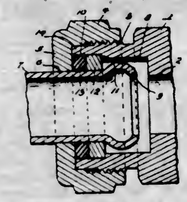
1. In a regulating system for a dynamo-electric machine disposed to supply a load circuit, in combination, an exciter for supplying the field excitation of the dynamo-electric machine, a control field winding for the exciter disposed to be directionally energized, means responsive to a change in condition of the load circuit supplied by the dynamo-electric machine disposed to control the directional energization of the control field winding, means for producing a direct current voltage which is a measure of the watts output of the dynamo-electric machine, means for producing a direct current voltage which is a measure of the voltage across the field winding of the dynamo-electric machine, and means responsive to said first direct current voltage only when said first direct current voltage is in excess of said second direct current voltage to provide excitation of the exciter to maintain the field excitation of the dynamo-electric machine at not less than a predetermined minimum value.

2,459,608
COUPLING FOR TUBES
John N. Wolfram, Cleveland, Ohio, assignor to The Parker Appliance Company, Cleveland, Ohio, a corporation of Ohio
Application January 9, 1945, Serial No. 572,026
2 Claims. (Cl. 285—122)



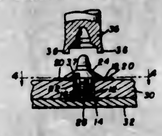
1. A coupling for tubes having an enlarged end comprising a body member, a nut having a threaded engagement therewith, said body member having a counterbore adapted to receive the enlarged end of the tube, said nut having a flange at its outer end spaced away from the end of the body member and forming an annular recess within the nut, an annular metal ring surrounding said tube and disposed between the end of the body member and the flange of the nut, a deformable ring gasket surrounding the tube and disposed between said ring and the flange of the nut, said metal ring being initially frustoconical shaped with the outer portion thereof in engagement with the body member and the inner portion of said ring in engagement with the gasket whereby the turning of the nut onto the body member will cause said ring to flatten into a plane substantially at right angles to the wall of the tube, said ring being dimensioned so as to make gripping contact with the tube when in flattened position and also cause the ring gasket to be deformed into tight sealing contact with the tube.

2,459,609
COUPLING FOR TUBES
John N. Wolfram, Cleveland, Ohio, assignor to The Parker Appliance Company, Cleveland, Ohio, a corporation of Ohio
Application February 15, 1945, Serial No. 578,076
2 Claims. (Cl. 285—122)



1. A coupling for tubes comprising a body member having a bore therethrough and a counterbore forming a recess to receive the enlarged head on a tube, said body member having a threaded portion on the outer surface thereof, a nut telescoping said body member and having a thread on the interior thereof adapted to cooperate with the thread on the body member, said nut having a flange at its outer end extending inwardly of the threaded portion and having an opening therethrough for the tube, said body member having a second counterbore providing a shoulder at its inner end, a metal ring disposed in the second counterbore and contacting with said shoulder, said ring being dimensioned so as to engage the tube in rear of the enlargement therein for securing the tube to the coupling, and a deformable sealing gasket in said second counterbore between the ring and the flange on the nut, said second counterbore being dimensioned so that the flange on the nut engages the end of the body member when the coupling is closed.

2,459,610
GOLF SHOE SPIKE OR CALK
Arthur F. Zadina, Long Island City, N. Y.
Application May 5, 1947, Serial No. 746,139
10 Claims. (Cl. 36—67.5)



10. A golf shoe spike comprising a stud having an enlargement with slots therein, a first collar engaging the under surface of said enlargement, a substantially rectangular outer sleeve attached to said first collar, a second collar, a substantially rectangular inner sleeve attached to said second collar slidably received within the bore of said

first mentioned outer sleeve, said stud having a threaded shank adjustably received within the bore of said inner sleeve, and a resilient prong integral with said first collar engaging said slots to lock said sleeves and stud in assembled posi-

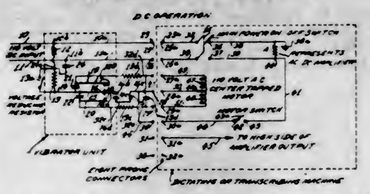
means extending through each bushing, a traverse member within said container movable into and out of bridging relation with respect to said conducting means, valve means disposed in each bushing actuated by said member to permit an

through adjacent portions of said members transversely of the axis thereof to permit angular movement therebetween, a piston reciprocably disposed in one of said knuckle members carrying a thrust member engageable with the other

tions connected in series, an auxiliary primary winding on the stator member physically displaced from the main primary winding and connected in parallel with one section of the main primary winding, a current-responsive relay for controlling the circuit of said auxiliary primary

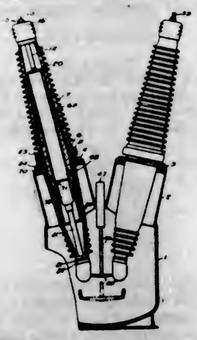
first mentioned outer sleeve, said stud having a threaded shank adjustably received within the bore of said inner sleeve, and a resilient prong integral with said first collar engaging said slots to lock said sleeves and stud in assembled position entirely from one side of the first collar.

2,459,611
INVERTER MOTOR
Arthur Leonard Anderson and Richard C. Burns, New Haven, Conn., assignors to The Soundscriber Corporation, New Haven, Conn., a corporation of Connecticut
Application August 23, 1945, Serial No. 612,276
9 Claims. (Cl. 171—97)



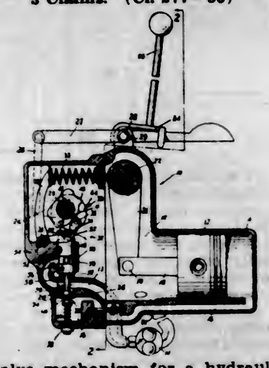
1. In an apparatus for operating an A. C. electric motor with D. C., a stator having a split field comprising four coils located at 90 degree intervals, each pair of opposed coils being connected in a separate series circuit, a center tap connected with both circuits, an inverter-vibrator having a central movable contact tuned to oscillate at 60 cycles per second connected to one terminal of a source of D. C., a pair of outer fixed contacts alternately engaged by said central movable contact and connected to the outer terminals of said separate field coil circuits, resistance means to cut in half the voltage supplied to said separate fields, and means to oscillate said central contact between said fixed contacts whereby the D. C. supply will be converted into alternating current pulses in opposite directions and combined to produce A. C. for operating said motor.

2,459,612
COMPRESSED GAS CIRCUIT INTERRUPTER
Benjamin P. Baker, Turtle Creek, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application December 22, 1944, Serial No. 569,349
8 Claims. (Cl. 200—148)



1. In a gas blast circuit interrupter, a container containing gas under pressure, two bushings extending into the container, conducting means extending through each bushing, a traverse member within said container movable into and out of bridging relation with respect to said conducting means, valve means disposed in each bushing actuated by said member to permit an exhausting of gas from the container out through each bushing, and contact means disposed within each bushing opened upon a predetermined rise of pressure as a result of opening the valve means.

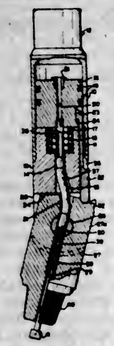
2,459,613
VALVE MECHANISM FOR A HYDRAULIC POWER UNIT
Gerald T. Baker, Neligh, Nebr.
Application February 26, 1947, Serial No. 731,135
3 Claims. (Cl. 277—53)



1. A valve mechanism for a hydraulic power unit including a casing formed with a high pressure fluid passage having a fluid discharge port at its terminal end and a fluid port intermediate its ends, said mechanism including a by-pass valve member co-axial with said intermediate port and reciprocally movable relative to said discharge port to control the flow of high pressure fluid through said discharge port, said by-pass valve being formed with a fluid passage therein having a fluid outlet opening and a fluid inlet opening which is movable into and out of registration with said fluid discharge port, a check valve for controlling the flow of fluid through said intermediate port, means for yieldably holding said check valve in a closed position therefor, and means for operating said check valve and by-pass valve in a complementary relation such that said check valve is opened by said operating means, when said by-pass valve is moved to a first position in which said fluid inlet opening is in registration with said fluid discharge port, and by the pressure of the fluid in said high pressure fluid passage when said by-pass valve is moved to a second position in which said fluid inlet opening is out of registration with said fluid discharge port, with said check valve being closed by said yieldable means on movement of said by-pass valve to a third position, intermediate said first and second positions therefor, in which third position said fluid inlet opening is in partial registration with said discharge port.

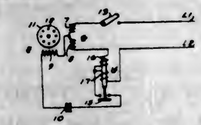
2,459,614
KNUCKLE JOINT
Cicero C. Brown, Houston, Tex.
Application October 13, 1947, Serial No. 779,576
6 Claims. (Cl. 285—93)

1. A knuckle joint, comprising, a pair of axially aligned knuckle members, a pivot pin extending through adjacent portions of said members transversely of the axis thereof to permit angular movement therebetween, a piston reciprocably disposed in one of said knuckle members carrying a thrust member engageable with the other of said knuckle members for rocking the latter about said pivot pin, a fluid conduit having one end rigidly connected to said piston and extending through said knuckle members and said pivot



pin and movable axially of said knuckle members in response to the movements of said piston, said conduit including a flexible section extending across the adjacent ends of said knuckle members, a passageway of restricted cross-sectional area through said piston communicating with said conduit, and means for admitting pressure fluid into the knuckle member containing said piston.

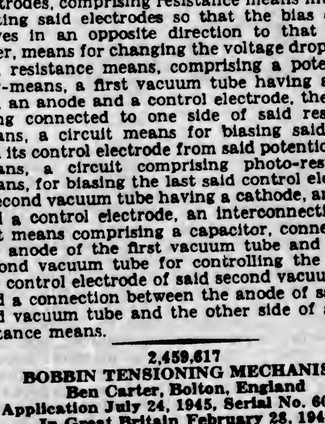
2,459,615
DUAL-VOLTAGE SINGLE-PHASE MOTOR
Lloyd W. Buchanan, Lima, Ohio, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application November 21, 1946, Serial No. 711,285
8 Claims. (Cl. 318—225)



1. A single-phase induction motor having a stator member and a rotor member, a main primary winding on said stator member, said main primary winding comprising two similar sections adapted to be connected either in series or in parallel for operation on different voltages, an auxiliary primary winding on the stator member physically displaced from the main primary winding and adapted to be connected in parallel with at least one section of the main primary winding, and a current-responsive relay having a contact connected in series with said auxiliary primary winding, said relay having an operating coil divided into two sections, means for connecting one section of said operating coil to carry the same current as one section of the main primary winding, and means for connecting the other section of the operating coil to carry the same current as the other section of the main primary winding.

4. A single-phase induction motor having a stator member and a rotor member, a main primary winding on said stator member, said main primary winding comprising two similar sections connected in series, an auxiliary primary winding on the stator member physically displaced from the main primary winding and connected in parallel with one section of the main primary winding, a current-responsive relay for controlling the circuit of said auxiliary primary winding, said relay having a contact connected in series with the auxiliary winding and having an operating coil divided into two sections, means for connecting one section of said operating coil in series with said one section of the main primary winding, and means for connecting the other section of the operating coil in series with the other section of the main primary winding.

2,459,616
CONTROL APPARATUS FOR INDUCTION HEATING SYSTEMS
Stephen L. Burgwin, Forest Hills, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application July 28, 1944, Serial No. 547,050
1 Claim. (Cl. 250—41.5)



Control apparatus of a type described comprising a pair of discharge tubes, each having a control electrode, voltage biasing means for said electrodes, comprising resistance means interconnecting said electrodes so that the bias on one moves in an opposite direction to that of the other, means for changing the voltage drop across said resistance means, comprising a potentiometer-means, a first vacuum tube having a cathode, an anode and a control electrode, the anode being connected to one side of said resistance means, a circuit means for biasing said anode and its control electrode from said potentiometer-means, a circuit comprising photo-responsive means, for biasing the last said control electrode, a second vacuum tube having a cathode, an anode and a control electrode, an interconnecting circuit means comprising a capacitor, connected to the anode of the first vacuum tube and to said second vacuum tube for controlling the bias of the control electrode of said second vacuum tube, and a connection between the anode of said second vacuum tube and the other side of said resistance means.

2,459,617
BOBBIN TENSIONING MECHANISM
Ben Carter, Bolton, England
Application July 24, 1945, Serial No. 606,845
In Great Britain February 28, 1944
9 Claims. (Cl. 242—156)

1. A bobbin carrier for a braiding machine comprising a base, an upright extending from said base, co-axial guide pulleys at the top of said upright, other co-axial guide pulleys slid-

able along said upright, their axis being generally at right angles to the axis of the first-named guide pulleys, means on the base below said upright for removably holding a bobbin, frictional

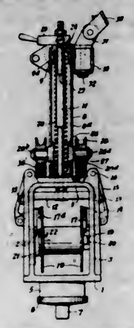
2,459,619
COMBINATION CURTAIN, DRAPERY, AND SHADE FIXTURE
Neil Chatterton, Oswego, N. Y., assignor to The

to the length of the latter while advancing the lap section at substantially the same speed in the direction in which the strip material is fed thereto, forming from said lap section and strip

parallel spaced electric fields, unaccompanied by corona discharge, between spaced pairs of electrodes connected to a source of high frequency alternating current, moving said electrodes and the resultant electric fields and advancing the

able along said upright, their axis being generally at right angles to the axis of the first-named guide pulleys, means on the base below said upright for removably holding a bobbin, frictional braking means tending to restrain rotation of



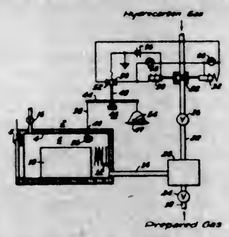
the bobbin, spring means tending to drive the said slidable guide pulleys to the bottom of said upright, an outlet guide in line with one of the slidable guide pulleys and means for releasing the braking means to facilitate removal and insertion of the bobbin.

2,459,618

HEAT-TREATING MEANS UTILIZING CONTROLLED CARBONACEOUS GASEOUS ATMOSPHERES

Harold E. Cartier, White Bear, Minn., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania

Application July 5, 1947, Serial No. 759,274
2 Claims. (Cl. 266—2)



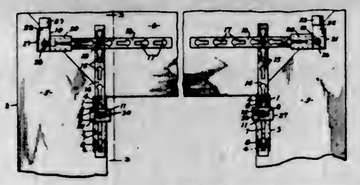
1. Apparatus of a type described comprising, in combination, a furnace having walls defining a treating chamber in which work can be heat-treated while the chamber is permeated by a gaseous atmosphere, an inlet pipe connected to said furnace, a mixing chamber connected to said inlet pipe for feeding a gaseous atmosphere to said inlet pipe, a plurality of gas-pipes to said mixing chamber through which different gases are adapted to be supplied to said mixing chamber, which gases make up the last said gaseous atmosphere, supporting means for supporting a work-sample in said treating chamber, said supporting means comprising a member passing through an opening in a wall of said furnace, weighing mechanism outside the treating chamber and associated with said member of said supporting means for weighing the work-sample, and means comprising a valve operated by changes in said weighing mechanism for changing the flow of gas through one of said gas-pipes, for changing the composition of the last said gaseous atmosphere.

2,459,619

COMBINATION CURTAIN, DRAPERY, AND SHADE FIXTURE

Neil Chatterton, Oswego, N. Y., assignor to The Neil Chatterton Associates, Oswego, N. Y., a copartnership

Application October 18, 1946, Serial No. 704,240
6 Claims. (Cl. 248—252)



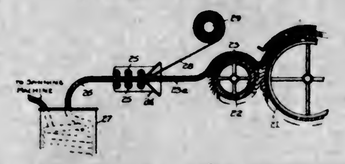
1. A fixture of the class described, comprising an anchor plate having an elongated slot formed therein and terminating at each of its opposite ends in a rearwardly offset enlarged opening for the reception of the head of a headed screw fastening, the body of the screw fastening being free to slide in the slot aforesaid and being flattened on at least two sides to prevent rotation of the screw fastening when disposed in the slot, a bracket having an opening therethrough for receiving the body of the screw fastening, a nut threadedly engaging the body of the screw fastening for clamping the bracket to the anchor plate in selective positions of adjustment lengthwise of the slot, a bar slidably mounted in the anchor plate and having a plurality of longitudinally spaced openings therein selectively registrable with the slot in the anchor plate for receiving the screw fastening, a second bar having a plurality of corresponding longitudinally spaced openings, each of which is selectively registrable with the openings in the first bar, with the second bar disposed transversely of the first bar, a screw fastening engageable through the registered openings of the bars for securing the same together, a second bracket, and another screw fastening selectively engageable with the openings in either bar for attaching the latter bracket thereto.

2,459,620

PROCESS OF MANUFACTURING TEXTILE MATERIALS

Roy Cleeland, Meadowbrook, Louis J. Kelley, Upper Darby, and Walter S. Davis, Roxborough, Pa.

Application February 12, 1946, Serial No. 647,076
2 Claims. (Cl. 28—73)



1. A process of manufacturing a wear resisting fibrous fabric containing fibrous threads bonded firmly together, which process comprises the steps of combining with a lap section obtained by carding spinnable fibers, during condensation of the lap section into a sliver, a curable strip material selected from the group consisting of the vulcanizable natural and synthetic rubbers by feeding said strip material to the lap section parallel

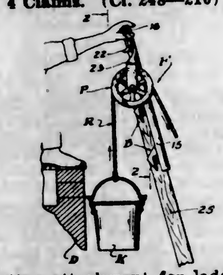
to the length of the latter while advancing the lap section at substantially the same speed in the direction in which the strip material is fed thereto, forming from said lap section and strip material a composite sliver, spinning the composite sliver into a substantially fibrous thread having the curable strip material extending along the longitudinal axis thereof, forming a fabric containing said thread, and curing said fabric under heat and pressure so as to cause a diffusion of portions of the curable strip material through adjacent fiber layers and a bonding together of adjacent threads in the fabric without any substantial impairment of the fibrous nature of the latter.

2,459,621

HOISTING ATTACHMENT FOR LADDERS

Charles L. Cobb, Los Angeles, Calif.

Application June 30, 1945, Serial No. 602,528
4 Claims. (Cl. 248—210)



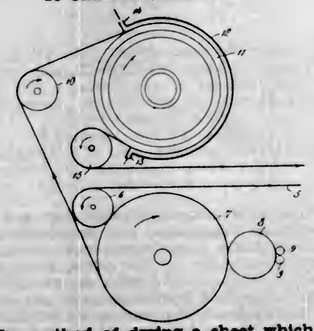
1. A hoisting attachment for ladders, including: a frame of inverted U-form; a plurality of rung-engaging brackets fixed to the parallel portions of said frame for supporting said frame on the upper end of a ladder when it is substantially vertical, and with its bight portion above said upper end; and means on the bight portion of said frame affording means from which a pulley may be suspended between said parallel portions.

2,459,622

METHOD OF AND APPARATUS FOR DRYING SHEET MATERIALS BY HIGH-FREQUENCY ELECTRIC FIELDS

Wallace P. Cohoe, Riverdale-on-Hudson, and Mitchell Wilson, New York, N. Y., assignors to Fred'k H. Levey Co., Inc., New York, N. Y., a corporation of New York

Application March 18, 1944, Serial No. 527,122
15 Claims. (Cl. 219—47)



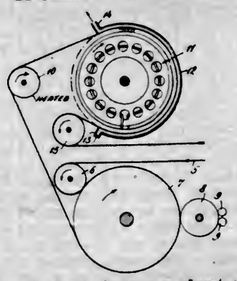
6. The method of drying a sheet which comprises maintaining a plurality of substantially parallel spaced electric fields, unaccompanied by corona discharge, between spaced pairs of electrodes connected to a source of high frequency alternating current, moving said electrodes and the resultant electric fields and advancing the sheet relatively to said electrodes over and in peripheral contact with them at a rate different from that at which the electrodes are moving, whereby the region of greatest intensity of said electric fields is caused to deviate from its normal path directly between said electrodes and to pass through said sheet.

2,459,623

METHOD AND APPARATUS FOR DRYING SHEET MATERIALS

Wallace P. Cohoe and Max R. Saslaw, New York, N. Y., assignors to Fred'k H. Levey Co., Inc., New York, N. Y., a corporation of New York

Application May 5, 1945, Serial No. 592,210
14 Claims. (Cl. 219—47)



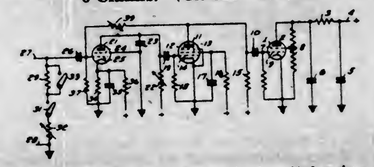
2. The method of drying a sheet which comprises establishing a plurality of parallel, spaced electric fields, unaccompanied by corona discharge, by connecting alternate parallel, spaced electrodes, in succession, to the opposite poles of a source of high frequency, alternating current which are at the same potential with respect to ground, maintaining the sheet in peripheral contact with the corresponding sides of said electrodes causing the region of greatest intensity of said electric fields to deviate from its normal path directly between said electrodes and to pass through said sheet, and causing relative movement between said sheet and said electrodes while the region of greatest intensity of said electric field is passing through said sheet.

2,459,624

CONTROL CIRCUIT

Thomas K. Collins, Jr., Fort Benton, Mont., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania

Application March 29, 1945, Serial No. 585,564
6 Claims. (Cl. 315—238)



1. In combination, an input circuit having intermittent voltage pulses impressed thereon, an electrical discharge tube having a control electrode connected to said input circuit and having an output circuit, a capacitor in said out-

put circuit, a source of voltage and an impedance serially connected to charge said capacitor, a luminous electrical discharge device having a control circuit, means for impressing a voltage varying with the voltage drop across

ble on occasional supports and comprising pairs of parallel arms rigid with the table and a clamping screw threaded through one arm in each pair.

---

is retracted in the running position of said apparatus, a second loop forming device between the projection gate and the sound detector of said apparatus, said second device comprising a support pivotally secured to said supporting plate, two rollers and an intermediate tension roller

2,459,631

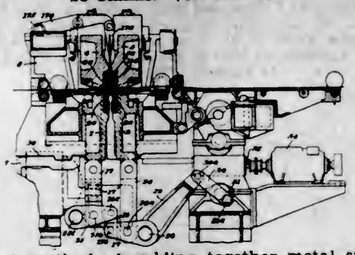
TRAIN-LINE CONTROL SYSTEM

William F. Eames, Westfield, N. J., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania

Application June 15, 1946, Serial No. 676,869
7 Claims. (Cl. 171—97)

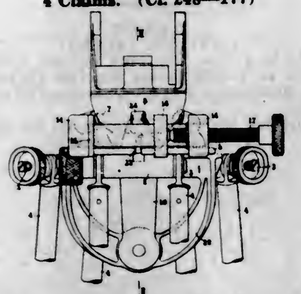
put circuit, a source of voltage and an impedance serially connected to charge said capacitor, a luminous electrical discharge device having a control circuit, means for impressing a voltage varying with the voltage drop across said impedance across said control circuit, and means for feeding back to said input circuit a voltage varying with said voltage drop.

2,459,625
WELDING TOGETHER METAL STRIP ENDS
Warren F. Copp, St. Clairsville, Ohio, assignor to Wheeling Steel Corporation, Wheeling, W. Va., a corporation of Delaware
Application November 1, 1946, Serial No. 707,141
28 Claims. (Cl. 219—4)



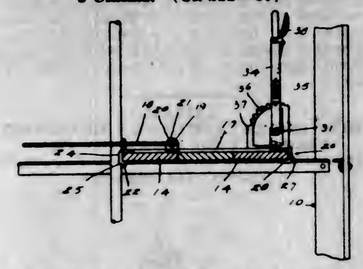
1. A method of welding together metal strip ends comprising disposing metal strip ends in non-parallel but generally coplanar relation with the metal of one strip adjacent the end thereof transversely straight and the metal of the other strip adjacent the end thereof transversely buckled, progressively forming a line flash weld joining the strip ends and before hardening of the weld relatively advancing the strip ends and turning the end of the second mentioned strip relatively to the end of the first mentioned strip to eliminate the buckle in the second mentioned strip and produce a weld which is substantially uniform along the joint.

2,459,626
TRIPOD HEAD WITH A REMOVABLE CAMERA SUPPORT
André Clément Coutant and Jacques Mathot, Paris, France
Application March 8, 1947, Serial No. 733,320
In France March 13, 1946
4 Claims. (Cl. 248—177)



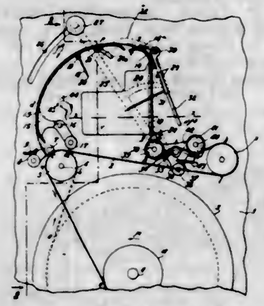
1. The combination of an annular tripod head formed with three peripheral bosses for the hinging of the legs with a circular camera-supporting table adapted to rest removably on said head, means to secure a camera on said table and fastening means adapted to secure said table on occasional supports and comprising pairs of parallel arms rigid with the table and a clamping screw threaded through one arm in each pair.

2,459,627
TUBING RACK
Drexel M. Cox, Tuleta, Tex.
Application June 30, 1947, Serial No. 758,083
3 Claims. (Cl. 211—60)



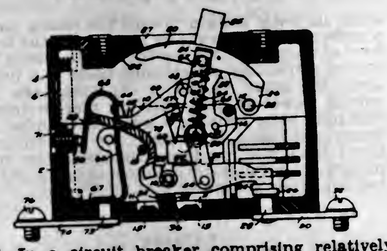
1. A pipe rack comprising a frame, a rod mounted across said frame intermediate the length thereof, pipe supporting rods pivotally mounted on said first rod, a notched member on said frame parallel to and spaced from said first rod, each of said pipe supporting rods engageable in one of said notches in said member in one position and rockable therefrom to an opposite position, a fixed clamping jaw on said frame, a movable clamping jaw carried by said frame coacting with said fixed jaw for clampingly securing said frame on a support therefor, and means rockably carried by said frame for moving said movable jaw.

2,459,628
CINEMATOGRAPH PROJECTION AND SOUND-REPRODUCING APPARATUS
Julien Antoine Descombes, Paris, France, assignor to Societe d'Etudes et de Realisation des Brevets Descombes, Paris, France
Application January 15, 1947, Serial No. 722,256
In France May 22, 1946
3 Claims. (Cl. 88—16.2)



1. In a kinematograph projection and sound reproduction apparatus, the combination of a supporting plate, a projection gate located in a plane perpendicular to said plate, a retractable presser in front of said gate, an arcuate guide located before said projection gate and enabling in its operative position and by its external convex surface a large loop to be formed in the film, said loop being floating when said arcuate guide is retracted in the running position of said apparatus, a second loop forming device between the projection gate and the sound detector of said apparatus, said second device comprising a support pivotally secured to said supporting plate, two rollers and an intermediate tension roller mounted on said support, one of said two rollers forming in the film a loop which remains floating in the retracted position of said roller, the other roller forming a presser against said sound detector, and a rocking lever pivotally mounted on said plate and provided with fingers forming movable abutments for actuating said arcuate guide, said second loop forming device and said presser in such a sequence that said presser is removed from said gate after the arcuate guide and the second loop forming device have been placed in their operative positions and returned to said gate to hold said film stationary in its position before said arcuate guide and said second loop forming device are retracted.

2,459,629
CIRCUIT BREAKER
Hiller D. Dorfman, Pittsburgh, and Gerald J. Freese, East McKeesport, Pa., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application August 10, 1945, Serial No. 610,104
10 Claims. (Cl. 200—116)

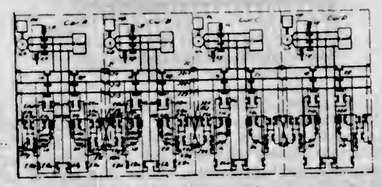


1. In a circuit breaker comprising relatively movable contacts and releasable operating mechanism for said contacts, a U-shaped bimetal element having legs of unequal length normally restraining said operating mechanism against movement, said bimetal element having one leg rigidly secured to a fixed member, and a fixed abutment cooperating with the other leg of said bimetal element to prevent movement of said bimetal in releasing direction in response to sudden shocks or jarring forces.

2,459,630
RECTIFIER
Charles S. Duncan, Wilkinsburg, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
No Drawing. Application October 29, 1945, Serial No. 625,452
4 Claims. (Cl. 175—366)

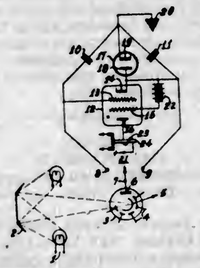
1. The method of heat treating oxidized copper units exhibiting unilateral conductivity which comprises reducing their temperature from that of oxidation to that at the end of the annealing during a period of about 3 hours, dropping to the neighborhood of 450° C. in a period in the order of 21 minutes, then dropping to a temperature in the neighborhood of 400° C. in a period in the order of 13 minutes, then dropping to about 350° C. in about one hour and 40 minutes, and remaining at the last mentioned temperature until the expiration of the three hour period whereupon the units are reduced rapidly to room temperature.

2,459,631
TRAIN-LINE CONTROL SYSTEM
William F. Eames, Westfield, N. J., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application June 15, 1946, Serial No. 676,869
7 Claims. (Cl. 171—97)



3. In a train-line control system, in combination, a plurality of cars, a generator on each car, means for driving the generators, a load circuit for each car, switching means for connecting each generator to its load circuit, means responsive to the generator voltage for controlling the operation of said switching means, a plurality of train-line conductors on each car, jumpers interconnecting the conductors on adjacent cars, additional switching means for connecting the load circuit for each car to the train-line conductors, relay means responsive to the generator voltage for so controlling the operation of said additional switching means that the load circuit on a car is connected to the generator on one of the adjacent cars through said conductors and said jumpers upon failure of the generator voltage on said car, and interlocking means on the additional switching means cooperating with said relay means in controlling the operation of said additional switching means to prevent a generator from supplying power to more than two cars at a time, said additional switching means being actuated by power received through said train-line conductors.

2,459,632
COMPARISON CONTROL SYSTEM
Ralph W. Engstrom, East Petersburg, Pa., assignor to Radio Corporation of America, a corporation of Delaware
Application December 26, 1947, Serial No. 794,006
14 Claims. (Cl. 250—41.5)



1. A comparison system comprising in combination a plurality of symmetrically arranged electrical storage devices, an energy translating device sequentially energizing each of said storage devices, and an electro-responsive device connected between said symmetrical arrangement of electrical storage devices.

2,459,633
FLUORESCENT LAMP
Clarence E. Farris, Fort Monroe, Va.
Application July 14, 1947, Serial No. 760,782

wardly toward the air inlet into the casing, means for delivering liquid to flow downwardly over the top wall of the casing and over the front face of said inlet baffle to fall as a curtain across the air

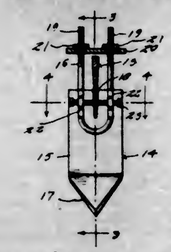
tator having an impact blade carried by said shaft within said tank, a dispersing jet carried by said agitator and having a small opening positioned at a substantial distance from the axis of rota-

transformer portions being so connected and phased that said oscillatory voltage is stepped up therein, said anode being connected to said auto-transformer at the high voltage point thereon for providing a unidirectional voltage output

2,459,633
FLUORESCENT LAMP
Clarence E. Farris, Fort Monroe, Va.
Application July 14, 1947, Serial No. 760,782
3 Claims. (Cl. 176—122)

1. A gaseous discharge tube comprising an outer evacuated envelope, a closed tube within said envelope and spaced therefrom providing a restricted space between said tube and envelope, a pair of spiral electrodes about said closed tube and within said restricted space, a thorium oxide coating about said electrodes, and a fluorescent coating about said closed tube and said electrodes.

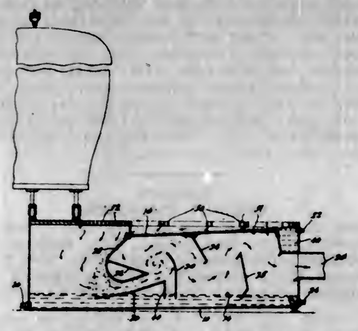
2,459,634
CORN PLANTER SHOVEL ATTACHMENT
Otley Farley, Murray, Ky.
Application November 23, 1945, Serial No. 630,222
1 Claim. (Cl. 97—225)



A shovel attachment for a corn planter sword blade comprising a shovel blade, said shovel blade formed with a V-shaped sword blade receiving opening on the upper edge thereof, upwardly extending bolts fixed on said shovel blade on opposite sides of said opening and extending upwardly beyond the upper edge of said shovel blade, threaded fittings on said blade spaced from the opposite sides of said opening and spaced rearwardly from said blade, means engaging said bolts and said sword blade for securing said shovel blade at a selected position along the length of said sword blade, and set screws engaging through said fittings engaging the opposite sides of said sword blade for holding the shovel blade locked in its selected position.

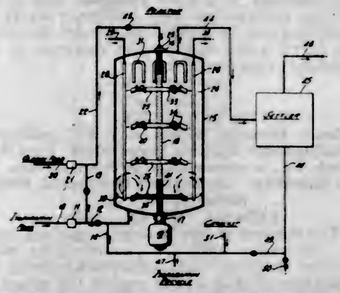
2,459,635
GAS WASHER
Orrin E. Fenn, Detroit, Mich., assignor to Peters-Dalton Inc., Detroit, Mich., a corporation of Michigan
Application August 30, 1945, Serial No. 613,559
9 Claims. (Cl. 261—118)

1. A gas washer comprising a casing defining a generally horizontally extending air passageway having an air inlet at one end and an air outlet at the opposite end, the lower portion of the casing constituting a liquid containing sump, a baffle extending downwardly from the top wall of the casing adjacent to the inlet and terminating at the bottom spaced above the liquid level in the sump, said top wall of the casing sloping downwardly toward the air inlet into the casing, means for delivering liquid to flow downwardly over the top wall of the casing and over the front face of said inlet baffle to fall as a curtain across the air inlet into the casing, a floor grill extending spaced above the top wall of the casing permitting the flow of liquid over said top wall below said grill, means for causing air to enter the casing and flow therethrough and air flow deflecting baffles disposed transversely within the casing above the liquid level therein, said inlet baffle being bent



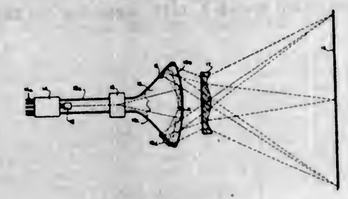
along its lower margin toward the casing outlet, a baffle extending upwardly from below the liquid level and spaced above the floor of the casing and spaced rearwardly of said inlet baffle to a height above the lower margin of the inlet baffle and curved forwardly along its top margin toward said inlet baffle forming a washing chamber between said baffles, and means for maintaining a liquid level within said casing above the lower margin of said upwardly extending baffle and below the lower margin of said inlet baffle.

2,459,636
ALKYLATION METHOD AND APPARATUS
William N. Fenney, New York, N. Y., assignor to The Texas Company, New York, N. Y., a corporation of Delaware
Application April 25, 1945, Serial No. 590,214
9 Claims. (Cl. 260—683.4)



1. Continuous alkylation apparatus of the character described, comprising a tank adapted to confine a reaction zone, a supply line at one end of said tank adapted for introducing liquid organic compound and liquid alkylation catalyst into said reaction zone, a discharge line at the opposite end of said tank adapted for the discharge of reaction products, a central hollow rotary shaft mounted within said tank, an agitator having an impact blade carried by said shaft within said tank, a dispersing jet carried by said agitator and having a small opening positioned at a substantial distance from the axis of rotation of said shaft and immediately in advance of an impact portion of said blade in the direction of rotation of said agitator, said shaft and agitator having communicating passages between the space within said hollow shaft and said jet opening, a supply line for liquid alkylating agent, a floating connection between said supply line and one end of said hollow shaft, power means connected to the other end of said shaft for rotating the same, whereby liquid alkylating agent is supplied to said hollow shaft and thence to said jet and is discharged from the latter in a manner to be immediately impacted by said blade, and a refrigeration coil mounted within said tank and closely surrounding said agitator so as to be positioned between the circular path of said jet and the wall of said tank, said refrigeration coil being spaced from the tank wall.

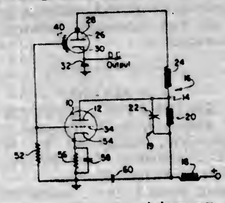
2,459,637
CATHODE-RAY IMAGE-TRANSLATING DEVICE
Henry Neil Frihart, Wilbur C. Jackson, and Fredrick B. Williams, Chicago, Ill., assignors to Motorola, Inc., a corporation of Illinois
Application November 29, 1944, Serial No. 565,770
3 Claims. (Cl. 250—164)



1. A cathode-ray image-translating device comprising, an evacuated envelope of insulation material having a concave end surface, a conductive reflecting film deposited on said concave end surface of said envelope and adapted to function as an accelerating anode, an image-forming screen deposited on said conductive film, means for developing a cathode-ray beam and scanning said screen therewith, said beam striking the concave surface of said screen, and an annular optical reflecting surface formed on the inner surface of said envelope and facing the scanned surface of said screen and effective to transmit an image from said scanned surface of said screen.

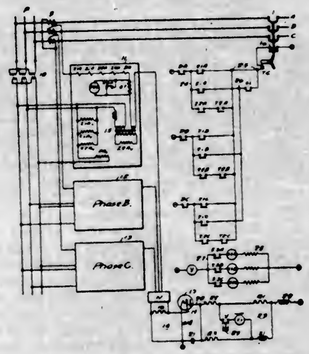
2,459,638
HIGH-VOLTAGE POWER SUPPLY
George W. Fyler, Lombard, Ill., assignor to Motorola, Inc., Chicago, Ill., a corporation of Illinois
Application April 7, 1948, Serial No. 19,482
2 Claims. (Cl. 250—36)

2. In a direct current power supply system for providing the voltage required for the anode of a cathode ray tube, the combination including an oscillator circuit providing an oscillatory voltage, an auto-transformer having two portions with one portion electrically connected into said oscillator circuit, a rectifier tube having a cylindrical glass envelope and concentric rectifying elements within said envelope, said rectifying elements including an inner cathode and an outer tubular anode spaced from said glass envelope, said auto-transformer portions being so connected and phased that said oscillatory voltage is stepped up therein, said anode being connected to said auto-transformer at the high voltage point thereon for providing a unidirectional voltage output and means for providing energy feed-back to



said oscillator circuit comprising an electrically conductive tension coiled spring adjustably mounted on the outside of said glass envelope and capacitively coupled to said tubular anode, said spring being electrically connected to said oscillator circuit and providing feedback therefor.

2,459,639
HIGH-SPEED SEQUENTIAL RELAYING SYSTEM
Shirley L. Goldsborough, Basking Ridge, N. J., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application November 8, 1945, Serial No. 627,500
19 Claims. (Cl. 175—294)



1. Terminal protective-relay equipment for controlling a terminal-located circuit-interrupter means in a section of a transmission-line of a type having an electrical line-quantity which is subject, at times, to two increments, one when a fault first occurs on the line, and the other when the fault is first cleared by a circuit-interrupter means at some point beyond the fault, as viewed from the relaying terminal, said terminal equipment comprising the combination, with said terminal-located circuit-interrupter means, of a first relaying means, for quickly responding to fault-conditions out on the protected line-section, with only sufficient sensitivity, in general, to respond to faults within the protected line-section, and for quickly effecting an opening operation of the terminal-located circuit-interrupter means, a second relaying means, for responding to fault-conditions out on the line, with sufficient sensitivity, in general, to respond to faults beyond the far end of the

protected line-section, increment - responsive means, for selectively responding to said incre-

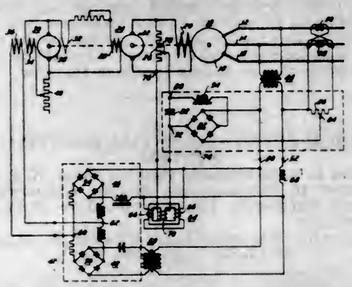
into the bore and along an angular line with respect to the axis of the bore within the bore

with a tubular conduit, a hollow stud mounted for movement about its axis in said sleeve and having

downwardly folded outer portions of said corner locking end flaps of said side wall panels being each formed with a notch and a tongue, the

protected line-section, increment - responsive means, for selectively responding to said increments in said line-quantity, and fault-detector means, operative only after a time-delay, for obtaining a joint response to said second relaying means and said increment-responsive means, and for thereupon quickly effecting an opening operation of the terminal-located circuit-interrupter means.

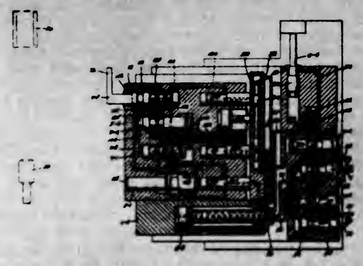
2,459,640
REGULATING SYSTEM
Samuel B. Griscom and Raymond L. Witske, Pittsburgh, Pa., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application June 2, 1947, Serial No. 751,810
7 Claims. (Cl. 322—24)



1. In a regulating system for a dynamo-electric machine disposed to supply a load circuit, in combination, a self-excited exciter for supplying the field-excitation of the dynamo-electric machine, a control field winding for the exciter disposed to be directionally energized, a voltage network comprising a non-linear impedance circuit and a linear impedance circuit connected to be simultaneously supplied from the load circuit and disposed when unbalanced to control the directional energization of the control field winding, means for producing a direct current voltage which is a measure of the watts output of the dynamo-electric machine, means for producing a direct current voltage which is a measure of the voltage across the field winding of the dynamo-electric machine, and means responsive to the differential of said direct current voltages only when said first direct current voltage is in excess of said second direct current voltage, said last responsive means being disposed in circuit relation with at least one of said impedance circuits for modifying the operation of the voltage network to maintain at least a predetermined minimum excitation of the dynamo-electric machine.

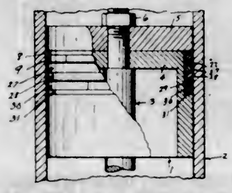
2,459,641
APPARATUS FOR DRESSING THE GRINDING WHEEL OF AN INTERNAL GRINDER
Mervil Hallead, Detroit, Mich., assignor to Superior Machine and Engineering Company, Detroit, Mich., a corporation of Michigan
Application June 13, 1945, Serial No. 599,216
25 Claims. (Cl. 125—11)

1. Dresser mechanism for an internal grinder having a rotatable wheel dressing element and a work holder adapted to support a piece of work having a cylindrical bore comprising, in combination, a wheel dressing element, a gaging element, means for advancing the gaging element along a line parallel to the axis of the bore and into the bore and along an angular line with respect to the axis of the bore within the bore into contact with the surface of the bore, and means automatically responsive to the engage-



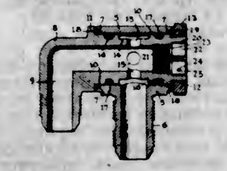
ment of the gaging element with the bore to position the wheel dressing element in alignment with the gaging element on a line parallel to the axis of the grinding wheel.

2,459,642
SEAL
Roy C. Hamilton, San Francisco, and Edward S. Rothchild, San Mateo, Calif., assignors to Rodpak Manufacturing Co., San Francisco, Calif., a corporation of Nevada
Application March 1, 1943, Serial No. 477,554
5 Claims. (Cl. 309—28)



1. In a seal of the character described, a metal ring transversely divided into separate segments, the adjacent ends of said segments being each formed with a slot opening outwardly of the same lateral side of the ring and opening outwardly of the end of each segment; a coil spring extending between each pair of adjacent ends of said segments and into the slots in said ends through the end openings of said slots; means carried by said segments integral therewith removably securing the ends of said springs in said slots.

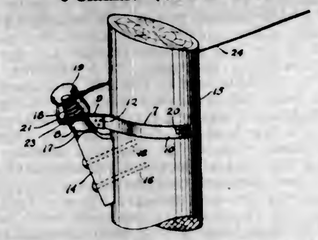
2,459,643
SWIVEL COUPLING
Emmett C. Hartley, Cleveland, Ohio, assignor to The Parker Appliance Company, Cleveland, Ohio, a corporation of Ohio
Application April 21, 1945, Serial No. 589,499
8 Claims. (Cl. 285—96.3)



1. A swivel coupling comprising a hollow sleeve having a hollow extension adapted for connection

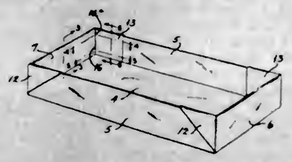
with a tubular conduit, a hollow stud mounted for movement about its axis in said sleeve and having a hollow extension adapted for connection with a tubular conduit and porting affording communication between said extensions regardless of adjusted relative positions thereof, said sleeve having outwardly flared end portions, and bevelled bearing surfaces movable with the stud and engaged in the ends of the sleeve with said flared end portions of the sleeve in a manner for constituting the sole bearing support of the stud in said sleeve.

2,459,644
DEAD-END BACK TIE
Abraham Quincy Heidebrecht, Burrton, Kans.
Application September 13, 1946, Serial No. 696,913
6 Claims. (Cl. 174—158)



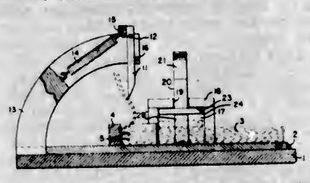
1. A dead-end back-tie adapted for attachment to an insulator bracket in supporting relationship therewith, comprising an elongated shank portion having opposed ends, one of the ends including an aperture for the reception therethrough of fastening means, and a loop portion on the shank extending from the end opposite the apertured end, said loop portion being substantially frusto-conical in shape, the axis of the loop extending upwardly and outwardly from the longitudinal axis of the shank.

2,459,645
FOLDED-BLANK BOX TRAY
Claude H. Hensley, Dallas, Tex., assignor to Gaylord Container Corporation, St. Louis, Mo., a corporation of Maryland
Application July 5, 1946, Serial No. 681,552
2 Claims. (Cl. 229—34)



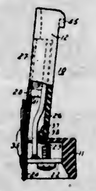
1. A rectangular folded-blank box tray comprising a bottom panel, two side wall panels having inturned end flaps, and two end wall panels disposed alongside of said inturned end flaps against the outer faces thereof and having upper marginal flaps folded downwardly over said inturned end flaps against the inner sides thereof, said end wall panels having corner locking end flaps with inner portions that are folded around said side wall panels against the outer sides thereof and outer portions that are folded downwardly over the upper edges of said side wall panels and against the inner faces thereof, the adjacent ends of said downwardly folded upper marginal flaps of said end wall panels and said downwardly folded outer portions of said corner locking end flaps of said side wall panels being each formed with a notch and a tongue, the tongue of each of said adjacent ends fitting within the notch in the other of said adjacent ends, said folded-blank box tray being made from a one-piece rectangular blank which is divided by slits and score lines into said bottom panel, said side wall panels and their end flaps and said end wall panels and their upper marginal flaps and corner locking end flaps, said adjacent ends of said upper marginal flaps and said outer portions of said corner locking end flaps being defined at each corner of said blank by a single slit which is offset laterally intermediate between its ends to provide said interfitting notches and tongues at the corresponding corner of said folded-blank box tray.

2,459,646
GUIDE CUTTER AND STUB HOLDER
Walter P. Hodges, Knoxville, Tenn.
Application July 21, 1947, Serial No. 762,447
6 Claims. (Cl. 206—40.6)



4. In a manually operated paper tearing appliance, the combination with a base and a workholder, and a slotted housing, of an inverted T-shaped presser unit reciprocable in the housing, said unit including an upright blade having spaced finger notches and projecting through the slotted housing and a horizontally disposed presser plate rigid with the blade and forming a tearing gage, a retracting spring connected to the unit, and a bowed leaf spring mounted within the housing for supporting the unit.

2,459,647
LAMP HOLDER FOR FLUORESCENT LAMPS
Charles H. Hodgkins, Fairfield, Conn., assignor to The Bryant Electric Company, Bridgeport, Conn., a corporation of Connecticut
Application August 31, 1944, Serial No. 552,119
9 Claims. (Cl. 173—328)



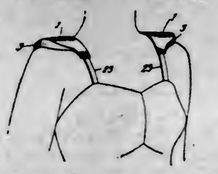
1. A lamp holder for use with tubular lamps having spaced contact pins at the ends thereof comprising, a mounting base portion having contact terminals mounted therein and an opening in the top thereof, a separate lamp-supporting portion mounted upon the base portion over the top opening, a pair of flexible contact fingers mounted upon the contact terminals in the base portion and having free ends extending into the lamp-supporting portion through said opening to be

another, and thin, flexible, round, pressure-sealing seal means bearing edgewise on one of said

and extending both inwardly and outwardly beyond the ring-support in edgewise pressure-seal-

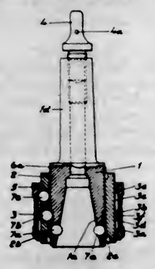
engaged by the lamp pins, and a leaf spring member mechanically connecting the base and lamp-supporting portions together, said spring member serving as a flexible joint between said portions and functioning to bias the lamp-supporting portion to a tilted position with respect to the base portion.

2,459,648
SHOULDER PAD
Anne Ingalls, Chicago, Ill.
Application January 12, 1946, Serial No. 640,740
7 Claims. (Cl. 2—268)



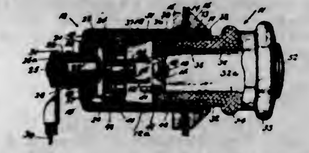
1. A shoulder pad of the class described, comprising a flexible material envelope embodying top and bottom walls having outer and end edges secured together, said bottom wall having an inner edge adjacent the inner edge of the pad and free of attachment to said top wall to form an opening affording access to the inside of the envelope, the top wall having an inner edge flap extension folded to underlie the inner marginal portion of said bottom wall to close said access opening, the pad being tapered in thickness from its outer edge toward its inner edge and said access opening, and means carried by said flap for interconnecting the pad and a shoulder strap of a garment to thereby position the pad.

2,459,649
CHUCK
Erik Torsten Wilhelm Jahrl, Orebro, Sweden
Application June 2, 1945, Serial No. 597,188
In Sweden June 8, 1944
12 Claims. (Cl. 279—75)



3. A chuck comprising a core formed with an inwardly conically tapering opening for receiving the correspondingly shaped end portion of a tool to be mounted in the chuck, a series of holes through its peripheral wall and a depression in the outer surface of the latter, a set of locking elements seated in said holes displaceable therein to engage with their inner ends depressions formed in the end portion of the tool, an inner locking sleeve surrounding said core and being axially displaceable thereon in one direction towards a locking position and in an opposite direction towards an unlocking position, an outer locking sleeve surrounding said inner locking sleeve and axially displaceable thereon.

2,459,650
CIGAR LIGHTER
Arthur A. Johnson, Bridgeport, Conn., assignor to Automatic Devices Corporation, Bridgeport, Conn., a corporation of Connecticut
Application January 17, 1936, Serial No. 59,488
7 Claims. (Cl. 219—32)



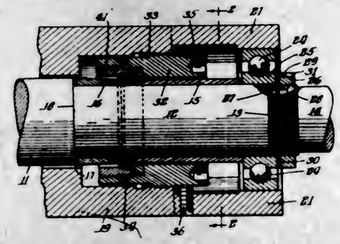
6. In an electric cigar lighter, the combination of a holding device comprising a metallic shell having a base contact insulatedly mounted therein, a removable igniting unit supported on the holding device and movable therein to operative and inoperative positions, said igniting unit having a metallic sleeve slidably engaging the shell, a body longitudinally slidable within the sleeve between limits and having a knob thereon, and an electric heating coil insulatedly mounted on the inner end of the sleeve, a ferrule surrounding the coil and electrically connected thereto, said base contact comprising a clip adapted to snap over the ferrule and thereby lock the igniting unit in operative position; and switch means including thermostatic latch contacts within the igniting unit for closing a circuit from the heating coil to the metallic sleeve to energize the coil when the body is moved to the inner limit on the sleeve.

2,459,651
SYNTHETIC RESINS DERIVED BY REACTING A CRESOL-FORMALDEHYDE CONDENSATE WITH A MONOHYDRIC ALCOHOL ESTER OF ROSIN
William D. Jones, West Lafayette, Ind., assignor to Hercules Powder Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application July 17, 1946, Serial No. 684,259
14 Claims. (Cl. 260—25)

1. A synthetic resin comprising the reaction product of a drying oil-insoluble, alkali-condensed methylphenol-formaldehyde condensate which has not passed the B stage of polymerization and a liquid monohydric alcohol ester of rosin in the weight ratio of from about 0.5 to about 2.5 parts of rosin ester per part of condensate, said methylphenol-formaldehyde condensate being the reaction product of methylphenol with from about 0.7 to about 1.3 moles of formaldehyde per mole of methylphenol, the monohydric alcohol residue of said rosin ester being free of substituents which are reactive with the methylphenol-formaldehyde condensate, said synthetic resin being characterized by substantial drying oil-insolubility, hydrocarbon insolubility and grease resistance.

2,459,652
PRESSURE SEAL
Walter Kasten, Franklin, Mich., assignor to Renniks Company, Detroit, Mich., a copartnership
Application May 10, 1945, Serial No. 593,086
1 Claim. (Cl. 286—11.13)

In a pressure-sealing construction for a bearing and a hollow housing and a circular member in said bearing and housing, said housing and circular member being rotatable relative to one another, and thin, flexible, round, pressure-sealing reed-means bearing edgewise on one of said relatively rotatable elements, and means between said housing and circular member mounting said reed-means at an oblique-angle to the axis of the element on which it edgewise bears, whereby fluid-pressure on the obtuse-angle face of said reed-means tends to flex the same into firmer engagement with the element on which it edgewise bears, the novel improvement being that the surface of said element on which said reed-means edgewise bears is tapered longitudinally of the axis of said element, that said reed-means is composed of a plurality of closely nested, truncated cone-shaped, continuous, metal reeds in direct contact with one another, and that said means mounting said reed-means is adjustable lengthwise the axis of the housing in the direction of the larger diameter of said element to compensate for wear.

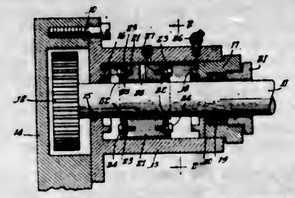


2,459,653
INSULATED CONDUCTOR
John J. Keyes, Edgewood, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application September 8, 1945, Serial No. 615,171
2 Claims. (Cl. 174—120)

1. An insulated conductor comprising, in combination, a conductor, polymerized tetrafluoroethylene applied to the conductor, an exterior layer of an inorganic fibrous material applied about the polymerized tetrafluoroethylene, and a silicone resin applied to the fibrous material to impregnate and bond the whole.

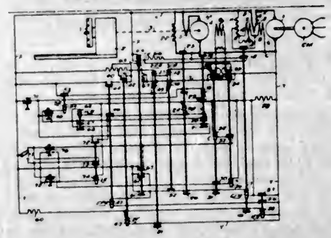
2,459,654
REED SEAL FOR ROTATING EQUIPMENT
Warren C. Kellogg and Ernest Hanshaw, Detroit, Mich., assignors to Renniks Company, Detroit, Mich., a copartnership
Application May 31, 1946, Serial No. 673,651
3 Claims. (Cl. 286—9)

1. In a pressure-seal between an internally cylindrical housing and an externally cylindrical member in said housing concentric with and spaced from one another and rotatable with relation to one another, the novel improvement that said seal includes in combination a rigid ring-support in and concentric with the annular space between said housing and member and spaced from both, a pair of annular, nested, thin, resilient, sheet-metal reeds truncated-cone shape in cross-section mounted in conforming correspondingly shaped cavities in the opposite ends of said ring-support, facing in opposite directions, and extending both inwardly and outwardly beyond the ring-support in edgewise pressure-sealing engagement with both said member and housing and with sufficient contact with the rotary element of the two to revolve on its axis, tapering rings occupying the cavities of said pair of nested



reeds at both ends of the structure, and means fastening said rings in said reeds to said ring-support for suitable mounting thereon, said ring-support and its sealing reeds being free to rotate about their axis, said reed-equipped ring-support being slidable lengthwise on said member and housing.

2,459,655
ADJUSTABLE SPEED DRIVE
George E. King and Martin H. Fisher, Pittsburgh, Pa., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application December 15, 1945, Serial No. 635,349
9 Claims. (Cl. 318—151)



1. An adjustable speed drive, comprising a direct-current motor, a generator having an armature circuit for providing voltage for said motor and field means for varying said voltage, a relay system disposed for controlling the speed of said motor and having relay means for controlling the excitation of said field means and relay means for controlling the connection of said motor with said generator armature, circuit means connecting said relay system with said armature in order to provide energization for said relay means by voltage generated by said generator, resistance means series-connected with said circuit means, and a relay connected with said armature circuit and having contact means connected with said resistance means for controlling the latter to reduce the effective resistance value when said generator is controlled by said field means to generate voltage below a given magnitude.

2,459,656
POCKET AUTOMATIC ELECTRIC LIGHTER
Donald Jack Kirschner, Miami Beach, Fla.
Application August 19, 1946, Serial No. 691,548
5 Claims. (Cl. 219—32)

1. An electric lighter including a container, a battery in said container, an electric ignition

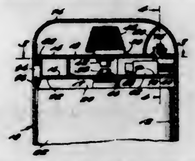
element mounted on said container, aligned and

2,459,658
DETACHABLE HANDLE

2,459,660
STRAINING DEVICE

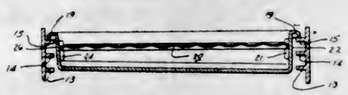
end to said base and having a free end movable between said stops and a thrust seat ar-

element mounted on said container, aligned and axially spaced contacts on said ignition element and said battery, a switch member engageable with both of said spaced contacts, a cover for said ignition element hinged to said container, and direct connecting means between said cover



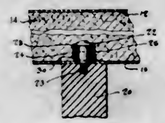
and said switch for positively moving said switch into and out of engagement with said contacts upon movement of said cover, said connecting means including a pivot for said cover, a gear on said pivot and rotatable with said cover, and a rack in mesh with said gear and reciprocable thereby for actuating said switch.

2,459,657
ADJUSTABLE BROILER
Gustav Klein, Melrose Park, Pa., assignor to Caloric Stove Corporation, Philadelphia, Pa., a corporation of Pennsylvania
Application January 7, 1948, Serial No. 971
2 Claims. (Cl. 99—393)



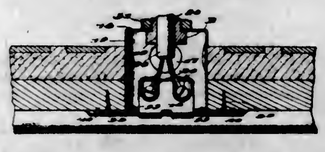
1. For use in an oven, a cooking device including a drip pan having vertical side and end walls and a bottom wall, said drip pan being adapted to be mounted in said oven in vertically adjustable relation relative to a source of heat, a grid for supporting food to be cooked above the bottom of said drip pan, said grid being of a size to pass freely between the vertical walls of said drip pan, and means for varying the height of said grid relative to said source of heat, without changing the position of said drip pan, said means including a pair of inverted T-shaped bosses projecting inwardly from each of two opposite vertical walls of said drip pan, with the bosses on one of said walls out of alignment with the other pair of said bosses, the transverse heads of said bosses being near the bottom of said drip pan and the ends of the stems of said bosses being near the top of said drip pan, said grid having notches in corresponding walls thereof, said notches corresponding, respectively, to said bosses and being large enough to permit passage of only the stems of the bosses but not the transverse heads thereof whereby when said grid is lowered, in one position, towards the bottom wall of said drip pan, the stems of said bosses register with and pass through said notches and said grid occupies a position in close proximity to the bottom of said drip pan, and whereby when said grid is lowered, end to end, in reversed position, toward the bottom wall of said drip pan, said stems of said bosses, are out of registration with said notches and said grid is supported by said stems near the top of said drip pan, said drip pan having a bottom well formed near a corner thereof for collecting liquids exuded from the food being cooked, and said grid having diagonally opposite corner notches one of which registers with said well in either position of the grid relative to the drip pan.

2,459,658
DETACHABLE HANDLE
Gustav Klein, Melrose Park, Pa., assignor to Caloric Stove Corporation, Philadelphia, Pa., a corporation of Pennsylvania
Application November 13, 1947, Serial No. 785,675
3 Claims. (Cl. 16—114)



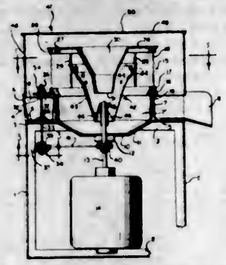
1. Means for detachably securing a handle to a panel, said means including an elongated fastening element having a head, a shank, and an end portion adapted to engage a side of said handle, a guide member including a cylindrical side wall and an apertured end wall said guide member being carried by said element with said shank extending longitudinally within said cylindrical side wall passing through the opening in said end wall, and a coil spring confined between said end wall and the head of said fastening element and urging said guide member away from said head, there being an opening in said panel through which said fastening element and said guide member may be freely inserted, said panel also having a slot adjacent to, and communicating with, said opening, the width of said slot being such that only said shank can pass through it, so that, when said fastening element and said guide member are passed through the opening in said panel and the handle is moved in the direction of said slot, said shank will pass through said slot, said panel will be interposed between the end wall of the guide member and the abutting side of the handle, and the spring will be compressed, the open end of said cylindrical wall being located near said head and having an internal diameter only very slightly greater than the diameter of the adjacent portion of said head to limit axial tilting of said guide relative to said shank.

2,459,659
CONVENIENCE OUTLET
Walter G. Kolb, Washington, D. C.
Application July 23, 1945, Serial No. 606,675
5 Claims. (Cl. 174—48)



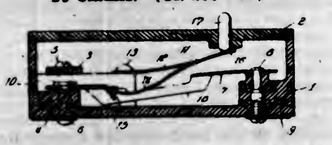
3. An outlet box and wiring device assembly comprising a cylindrical box having a closed bottom and smooth, unobstructed external walls for reception in a close fitting drilled opening in a wall, a wiring device having a mounting strap thereon, means within the diameter of the box attaching said strap across the open face of the box with the device wholly in the box and the strap ends extending radially beyond the walls thereof, and means in the extended ends of said strap to receive fastening means for attaching the assembly to a wall.

2,459,660
STRAINING DEVICE
Lila L. Lange, Chicago, Ill.
Application November 5, 1947, Serial No. 784,247
8 Claims. (Cl. 210—149)



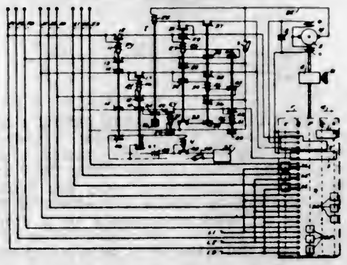
1. A fluid straining device comprising a base, a motor mounted centrally in and to said base and having an elongated drive shaft extending in a vertical plane; a cylindrical casting open at its upper end and having a bottom wall, said casting being positioned on the upper end of said base and provided with a diagonally extending peripheral wall and a vertically extending inner dividing wall, whereby to form a trough between said walls, the bottom wall within the area of said inner wall lying in a plane below that of said bottom wall of said trough and having a portion thereof lying in a diagonal plane, whereby to form a bowl; a tubular cylindrical screen cage having its wall positioned above and in line with said dividing wall and without the area of said trough; a cover plate for said screen cage having an axially positioned funnel extending downwardly and having its discharge opening located below the plane of the lower marginal edge of said screen cage; a pump comprising an impeller and a hollow casing attached thereto secured to the upper end of said drive shaft and extending into said bowl, means for rotating said pump and adapted to draw into the interior of said pump any material to be strained falling into said bowl, said pump being located partially within said bowl and partially within the inner area of said screen and spaced away therefrom, the upper end of said funnel being positioned within the upper area of said screen and the remainder of said funnel being positioned within and spaced away from said hollow casing; means for simultaneously vibrating said screen while said pump is being rotated; and a cylindrical cover housing for said screen.

2,459,661
ELECTRIC SNAP SWITCH
Allison M. MacFarland, Freeport, Ill., assignor to W. T. Neiman, Freeport, Ill.
Application July 11, 1945, Serial No. 604,382
16 Claims. (Cl. 200—67)



1. A snap switch comprising a switch base, a pair of fixed stops at least one of which is an electrical contact mounted in said base, an electrically conductive contact bar anchored at one end to said base and having a free end movable between said stops and a thrust seat arranged near said free end and facing the anchored end thereof, spring means for actuating said contact bar, said spring means comprising substantially parallel leaf spring separate compression and tension strips rigidly joined together at one end thereof, the free end of a tension strip being anchored on said base and the free end of a compression strip being stepped in the thrust seat upon said contact bar whereby vertical and longitudinal components of force are applied to said contact bar at the thrust seat, and means responsive to external manipulation for depressing the joined ends of said spring strips to actuate the switch.

2,459,662
BUS TRANSFER APPARATUS
Kurt Mahnke, Alden, N. Y., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application April 8, 1948, Serial No. 19,846
9 Claims. (Cl. 171—97)



9. Bus transfer apparatus, comprising load buses, three groups of supply buses, a selector switch attached to said load buses and supply buses and having a switch member rotatable through three positions and three sets of contact means closed in said respective positions for electrically connecting said load buses to one of said respective groups of supply buses at a time, three voltage relays connected to said respective groups of supply buses and sequentially interlocked with each other so that one of said relays when energized prevents energization of the subsequent relays and when deenergized permits energization of the next relay, a reversible motor in driving connection with said switch member and having two energizing circuits for controlling said motor to run in forward and reverse directions respectively, three pairs of control relays, the relays of each pair being mutually interlocked and having two respective control contacts connected with said two circuits respectively so that the running direction of said motor depends upon which of the two control relays is energized, each pair of control relays having two respective coil circuits for controlling said respective control contacts, said two coil circuits of each pair being controlled by a different one of said respective voltage relays so that only one of said pairs is operative at a time, and control means forming part of said switch member and being disposed in said respective coil circuits for closing and opening said coil circuits, said control means appertaining to the respective coil circuits of each pair being angularly displaced relative to each other and disposed so that in two of said three positions of said switch member either one of the coil circuits of said operative pair of control relays

is closed while in the third position both coil circuits are open, said third position for the two coil circuits of each pair of control relays being coincident with the switch portion in which said

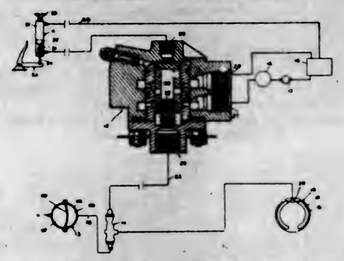
the valve chamber with the portion of smaller area exposed to said first port and with the portion of greatest area exposed to said second port.

2,459,667
CONTROL CIRCUITS
Burle C. Mason, Forest Hills, Pa., assignor to Westinghouse Electric Corporation, East Pitts-

2,459,669
REGULATING SYSTEM
Clarence L. Mershon, Lima, Ohio, assignor to Westinghouse Electric Corporation, East Pitts-

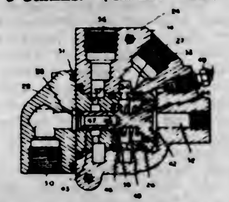
is closed while in the third position both coil circuits are open, said third position for the two coil circuits of each pair of control relays being coincident with the switch portion in which said load buses are connected to that group of supply buses whose voltage relay controls the same pair of control relays.

2,459,663
HYDRAULIC BRAKING SYSTEM
Ludwig A. Majneri, Grosse Pointe, Mich., assignor to The Warner Aircraft Corporation, Detroit, Mich., a corporation of Michigan
Application December 11, 1944, Serial No. 567,658
11 Claims. (Cl. 188—152)



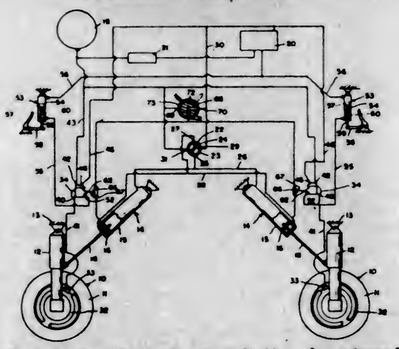
1. A hydraulic braking system having a brake provided with brake friction means, a hydraulic actuator for the brake friction means, a pressure producing device for supplying fluid under pressure to the actuator to apply the brake, a chamber adapted to receive a quantity of fluid, and means operable in response to a drop in pressure at the pressure producing device to bypass fluid from the brake actuator into said chamber.

2,459,664
HYDRAULIC VALVE
Ludwig A. Majneri, Grosse Pointe, Mich., assignor to The Warner Aircraft Corporation, Detroit, Mich., a corporation of Michigan
Application December 11, 1944, Serial No. 567,659
5 Claims. (Cl. 137—153)



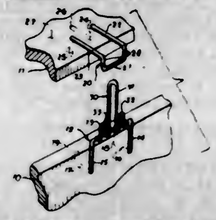
3. A power valve for hydraulic brake systems comprising a body provided with a cylindrical valve chamber and having an outlet port at one end of the chamber, a port at the opposite end of the chamber adapted for receiving a hydraulic braking fluid, spaced inlet and outlet ports in said body between the first and second ports for respectively receiving a braking fluid under a higher pressure than the first source and for exhausting braking fluid, and means in the valve chamber responsive to variations in pressure at the first port above and below a predetermined value to alternatively register the first port with the inlet and outlet ports, said means comprising a longitudinally movable valve member having portions of differential areas positioned within the valve chamber with the portion of smaller area exposed to said first port and with the portion of greatest area exposed to said second port.

2,459,665
COMBINED RETRACTING AND BRAKING SYSTEM FOR AIRCRAFT LANDING GEAR
Ludwig A. Majneri, Grosse Pointe, Mich., assignor to The Warner Aircraft Corporation, Detroit, Mich., a corporation of Michigan
Application December 26, 1944, Serial No. 569,787
14 Claims. (Cl. 244—102)



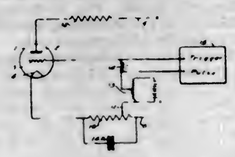
1. A hydraulic brake installation for aircraft having a retractable ground engaging wheel, comprising a brake having a hydraulic actuator, a source of fluid under relatively high pressure, a valve between the hydraulic actuator and source of fluid under relatively high pressure, and means responsive to retracting movement of the ground engaging wheel for operating said valve to connect the hydraulic actuator to said source of fluid pressure supply for applying the brake.

2,459,666
CLOSURE FASTENER
Michael Marus, Plant City, Fla.
Application May 2, 1946, Serial No. 666,622
4 Claims. (Cl. 292—246)



1. A closure fastener comprising two wire staple members having substantially straight intermediate portions, and a latch member pivoted on the intermediate portion of one of said staple members and comprising an intermediate portion of hairpin shape, and end portions wrapped about the staple member loosely enough to include the intermediate portions of both staple members therein, whereby said hairpin shaped intermediate portion of the latch member may be inserted through the other of said staple members and turned downwardly to include both staple members in the loops of the wrapped end portions of said latch.

2,459,667
CONTROL CIRCUITS
Ruric C. Mason, Forest Hills, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application January 13, 1945, Serial No. 572,668
5 Claims. (Cl. 315—237)

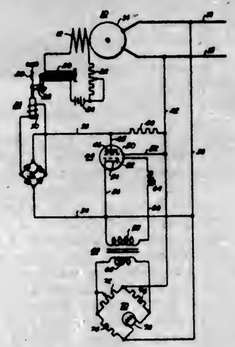


1. In combination a gaseous electrical discharge tube having an anode, a cathode and a control electrode, a source of voltage connected to supply current flow through said anode and said cathode, a first resistor connected between said cathode and said source of voltage, a capacitor and a second resistor connected in series in a circuit shunting said anode and said cathode, and a connection between said control electrode and a point on said first resistor, the portion of said first resistor between the last-mentioned point and said cathode being at least equal to 10% of the resistance of said second resistor.

2,459,668
VALVE CASING
Joseph F. Melichar, Cleveland, Ohio, assignor to The Parker Appliance Company, Cleveland, Ohio, a corporation of Ohio
Application May 11, 1944, Serial No. 535,119
1 Claim. (Cl. 285—55)

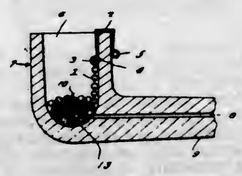
A fluid tight joint comprising a pair of interengaging parts having an annular gasket chamber therebetween, said gasket chamber comprising an outer cylindrical wall portion adjacent an end of one of said parts, an inner cylindrical wall portion in the other of said parts spaced from and parallel to said outer wall and a smooth end wall integral with said inner wall and extending radially outward from said inner wall beyond the outer wall and serving to completely close said chamber when the parts are connected with said end wall in firm metal to metal engagement with the end of the first named part, an elastic ring gasket in said chamber, said gasket and said chamber being dimensioned so that the distance between the inner and outer walls is less than the normal radial section of the gasket whereby the gasket when enclosed in said chamber will solely by its own expanding force be held in tight contact with said inner and outer walls of the chamber and whereby liquid entering the inner end of the chamber will force the gasket bodily into contact with the outer end wall of the gasket chamber, thereby causing the gasket to be further expanded laterally into tighter sealing contact with the inner and outer walls of the chamber.

2,459,669
REGULATING SYSTEM
Clarence L. Mershon, Lima, Ohio, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application March 8, 1947, Serial No. 733,346
8 Claims. (Cl. 322—28)



1. In a regulating system for maintaining a predetermined voltage across load conductors supplied by a generator having field windings, the combination comprising, a pressure responsive pile rheostat connected in circuit with the field windings to control the excitation of the generator, means disposed for operation to control the pressure applied to the pile rheostat, means disposed to be energized in response to the voltage across the load conductors to effect an operation of the pressure control means, a vacuum tube valve connected in circuit relation with said energized means to inversely affect the energization thereof as the conducting period of the valve is changed, and means responsive to deviations of the voltage across the load conductors from the predetermined value for controlling the conductivity of the valve, the valve thereby cooperating with said energized means to modify the energization thereof to compensate for changes in the pile rheostat and insure correct excitation of the generator to maintain the predetermined voltage.

2,459,670
TOBACCO PIPE ATTACHMENT
Adrian K. Morris, Jacksonville, Fla.
Application February 28, 1944, Serial No. 524,270
2 Claims. (Cl. 131—184)



1. A tobacco pipe attachment comprising a chain, a filter detachably secured on one end of the chain insertible in the bowl of a pipe, and means on the other end of the chain for securing same to the bowl, said chain being of sufficient length for a portion thereof to rest loosely on the filter in the bowl.

2,459,671
OVERHEAD VALVE TAPPET CLEARANCE ADJUSTING WRENCH
George S. Morris, North Hollywood, Calif.

handle means on the outer extremity thereof; and locking means for locking said plate against rotation when said socket wrench is in alignment with any of said nuts.

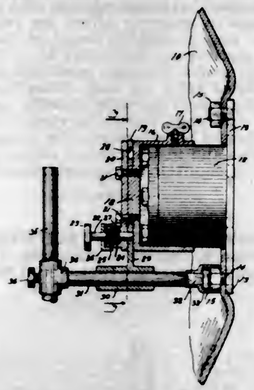
temperature, separate means for quickly solidifying the coating, means for continuously moving the strip under tension and means for controlling the tension in the strip through the ap-

the pedestal, a stem having a male thread on the end thereof adapted to pass through one side of the bracket and through the extension of the pedestal and engage with the threaded recess in

2,459,671
OVERHEAD VALVE TAPPET CLEARANCE ADJUSTING WRENCH
George S. Morris, North Hollywood, Calif.
Application June 21, 1945, Serial No. 600,751
2 Claims. (Cl. 81—56)

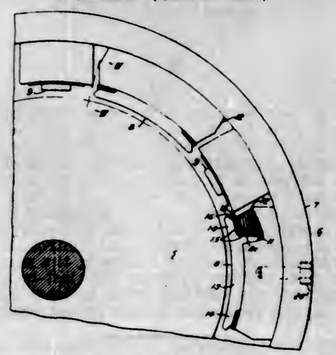
1. A device of the character described, comprising a substantially square shaped wrench head formed of upper and lower and front and rear plates, means for removably joining said plates to form the head, a socket wrench mounted in the lower plate of said head, a screw-driver perpendicular to said head having a handle attached to one end thereof, the other end thereof terminating in the socket of said socket wrench, a tubular handle bearing formed integral with said rear plate at right angles thereto, and means for rotating said screw driver, said last mentioned means comprising a handle slidably and rotatably mounted in the handle bearing and cooperating disengageable means on the inner end of the handle and on the screw-driver to rotate said screw-driver upon rotation of said handle.

2,459,672
HUB-MOUNTED WHEEL WRENCH
Jesse J. Morsch, Douglas, Wyo.
Application May 16, 1947, Serial No. 748,519
4 Claims. (Cl. 81—121)



4. A wheel wrench for removing wheel nuts from a wheel having an annular series of wheel nuts surrounding a central, projecting hub, comprising: a hub cup arranged to slip over the projecting extremity of said hub; a concentric bearing boss projecting from said cup; an annular, rotatable plate mounted on said boss; a cap member holding said plate on said boss; a wrench bearing sleeve carried by said plate; a wrench shaft slidably and rotatably mounted in said bearing sleeve parallel to the axis of said hub and in alignment with said nuts; a socket wrench on the inner extremity of said wrench shaft; and handle means on the outer extremity thereof; and locking means for locking said plate against rotation when said socket wrench is in alignment with any of said nuts.

2,459,673
DYNAMOELECTRIC MACHINE
Erich O. Mueller, Irwin, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application July 2, 1945, Serial No. 602,868
3 Claims. (Cl. 171—252)

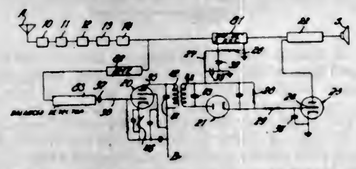


1. A dynamo-electric machine comprising a rotor member and a salient-pole stator member, a plurality of salient poles of said stator member each comprising a pole-shank portion, a coil-means on each of said pole-shank portions, a pole-face portion comprising circumferentially extending coil-supporting extensions along the full length of each longitudinal side of each of said pole-shank portions, and a coil-supporting spring-means for each of said plurality of salient poles, each spring-means comprising two longitudinally extending sheet-material strips, each extending over the full length of one of the coil-supporting extensions for that coil-means, between said coil-supporting extensions and the coil-means, each of said two longitudinally extending sheet-material strips being smoothly dished crosswise thereof, and being subjected to arching compression so as to present an almost flat coil-supporting surface when the spring-means is deflected into its compressed condition, each of said spring-means comprising means for retaining said two sheet-material strips in position on their associated salient pole.

2,459,674
CONTINUOUS TINPLATE BRIGHTENING APPARATUS
John S. Nachtman, Beaver, Pa.
Application December 30, 1939, Serial No. 311,929
14 Claims. (Cl. 266—3)

1. In apparatus for treating electroplated coatings on continuous metal strip, means for preheating the strip to a temperature below the fusing temperature of the coating thereon, separate means for briefly heating the coating to a fusing temperature, separate means for quickly solidifying the coating, means for continuously moving the strip under tension and means for controlling the tension in the strip through the apparatus, whereby a uniform smooth bright tin surface is provided on the strip.

2,459,675
INTERFERENCE REDUCING RADIO RECEIVER
Daniel E. Noble, Chicago, Ill., assignor to Motorola, Inc., a corporation of Illinois
Original application April 5, 1941, Serial No. 386,989, now Patent No. 2,343,115, dated February 29, 1944. Divided and this application April 5, 1943, Serial No. 481,821
10 Claims. (Cl. 250—20)



8. In combination with an amplitude modulation wave signal receiving system which includes a signal transmission channel and a signal responsive device, a control channel coupled to said signal transmission channel and including apparatus operative to transmit noise signals appearing in said signal channel in the total absence of a received amplitude modulated carrier signal and also operative, without any tuning of the system, to reduce the noise transmitted thereby below a predetermined value when a desired amplitude modulated signal is received, means included in said control channel for selecting noise transmitted by said apparatus, and means coupled to said noise selecting means and responsive to the noise selected by said noise selecting means for preventing said device from responding to noise or signals appearing in the system so long as the noise transmitted by said apparatus exceeds said predetermined value.

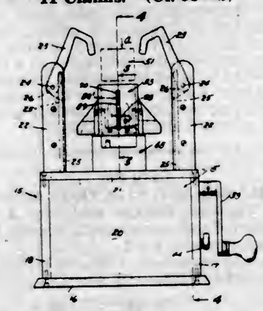
2,459,676
UNIVERSAL COUPLER FOR SUPPORTING CAMERAS ON TRIPODS
Harold J. Axtell, Rochester, N. Y.
Application January 12, 1948, Serial No. 1,765
5 Claims. (Cl. 248—177)

1. A coupling adapted to connect a camera to a tripod, said coupling having a base plate, a cylindrical boss on top of the base plate, a pedestal having a hollow cylindrical base adapted to engage with the boss and its base, said pedestal having an upward extension having two parallel male sides, a bracket having two parallel female sides extending downwardly therefrom adapted to engage with the male sides of the pedestal, a hole through one of the downwardly extending sides of the bracket, a recess in the other side of the bracket, a hole through the upward extension of the pedestal, a stem having a male thread on the end thereof adapted to pass through one side of the bracket and through the extension of the pedestal and engage with the threaded recess in the other side of the bracket to hold the bracket on the pedestal and permit the bracket to rock on the pedestal, said bracket having a cup shaped recess on top thereof, a cover for said bracket having a plate on top thereof and a hub extension downward therefrom and engaging in said cup shaped recess.

2,459,677
PROCESS FOR THE PREPARATION OF ACRYLIC ACID
Seaver A. Ballard, Orinda, and Bradford P. Geyer, Berkeley, Calif., assignors to Shell Development Company, San Francisco, Calif., a corporation of Delaware
No Drawing. Application February 15, 1947, Serial No. 728,961
4 Claims. (Cl. 260—526)

1. The cyclic process for converting acrolein to acrylic acid which comprises, eliminating carbon-to-carbon unsaturation of the acrolein by adding a molecule of acetic acid thereto at the olefinic bond, oxidizing the product of the addition to convert the formyl group thereof to carboxyl by treatment with molecular oxygen in the presence of an oxidation catalyst, and then removing the molecule of acetic acid from the oxidation product by pyrolysis thereof to obtain acrylic acid and returning the acetic acid to the first-stated step of the process.

2,459,678
CARTON OPENER
Samuel H. Berch, Beverly Hills, Calif., assignor to Arden Farms Co., Los Angeles, Calif., a corporation of Delaware
Application February 7, 1947, Serial No. 727,266
11 Claims. (Cl. 93—2)



1. A carton opening machine for use in unwrapping cartons filled with a product, and which carton is made from a one-piece blank folded to form a six-sided package having overlapping gussets on two opposing sides and a cover member formed with a tang introduced into certain of said gussets to hold the package sealed; said machine comprising a supporting plate upon which the sealed carton may be placed, a pair of guide members at opposite sides thereof between which the carton is moved onto said plate, means associated with said guide members for engaging contiguous side walls of the carton positively, a pair of unfolding fingers disposed adjacent to the two remaining opposite edges of the platform, means carried at the ends thereof

to pass into the folds beneath the gussets, a support for said supporting plate, individual

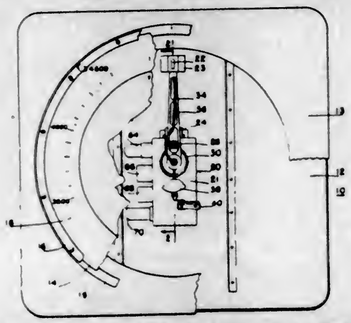
their free ends, said molding apparatus including a mold, an ejector mechanism, and means car-

axially movable sleeve, the latter sleeve member having ball retaining pockets for the balls of the

under pressure, and finally drying the resulting shape and firing it to a temperature of at least 1500° F.

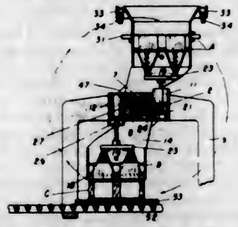
to pass into the folds beneath the gussets, a support for said supporting plate, individual pivotal connections between each of the guide members and unfolding fingers and said support, whereby said members and fingers may swing outwardly and downwardly from their normal vertical positions, and synchronized operating means for swinging said guide members and unfolding fingers outwardly and downwardly to open the carton and partially uncover the product.

2,459,679
SOUND RANGING TRAINING APPARATUS
Carlton M. Beyer and Ernest M. Bohse, San Diego, Calif., assignors to the United States of America as represented by the Secretary of the Navy
Application April 8, 1946, Serial No. 660,320
3 Claims. (Cl. 35—1)



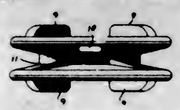
1. In a sound ranging training apparatus, means for producing a plurality of high frequency sound impulses simulating a signal and its echo, means for producing a low frequency control impulse simultaneously with said high frequency signal simulating impulse, a motor, means responsive to said low frequency impulse to start said motor, an indicator normally in a zero position rotatable by said motor, and means for deenergizing said motor when the indicator returns to said zero position after production of said high frequency echo simulating impulse.

2,459,680
MOLD FILLING AND EJECTING APPARATUS
Forrest L. Cantrall, Benicia, and John A. Carlisle, San Rafael, Calif., assignors to Shasta Volcolite Company, Benicia, Calif.
Application February 11, 1946, Serial No. 646,742
4 Claims. (Cl. 25—41)



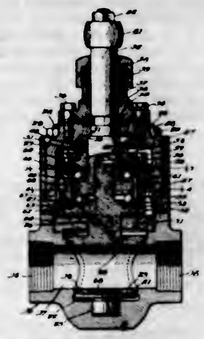
1. A molding machine comprising a pair of spaced supports, a shaft carried by said supports, spaced end-plates mounted on said shaft and serving to support a molding apparatus adjacent their free ends, said molding apparatus including a mold, an ejector mechanism, and means carried by said shaft for actuating said ejector mechanism while one of said molds is in inverted dumping position, said means including a hydraulically actuated ejector plate, slideably mounted between said end-plates.

2,459,681
DRAW CLAMP
Albert Carden, Bell, Calif.
Application October 29, 1946, Serial No. 706,428
2 Claims. (Cl. 144—297)



1. A clamp for pressing metal sheets together, comprising a pair of jaws arranged in opposed relation with respect to each other, a vertical web connected to said jaws adjacent one end thereof, said jaws diverging outwardly from said web to form a space therebetween for the reception of said sheets therein, and spaced ribs on the inner face of one of said jaws converging toward said web, the faces of said ribs being beveled to provide sharp edges thereon for engagement with the face of said sheet complemental thereto.

2,459,682
ROTARY PLUG VALVE
William D. Carrie, Lisle, Ill., assignor to Crane Co., Chicago, Ill., a corporation of Illinois
Application November 12, 1943, Serial No. 510,052
7 Claims. (Cl. 74—22)



1. An operating mechanism for a valve of the rotary type having a casing, a plug, and an actuating stem therefor substantially axially immovable, the stem having upper and lower cam surfaces the stem being journaled for rotational movement and having cam follower members comprising a sleeve and a cup-shaped portion cooperating with the upper and lower cam surfaces respectively, balls therefor, the said sleeve cooperating with the said stem and mounted for axial movement thereon while held against rotational movement, abutment means for preventing the rotational movement of the sleeve by engagement therewith, the said cup shaped portion also cooperating with the stem and having a bottom and annular wall portions, a flange member secured to the latter wall portion and engaging the

axially movable sleeve, the latter sleeve member having ball retaining pockets for the balls of the lower cam surfaces of the actuating stem, stop lugs cooperating with the wall portion of the said cup-shaped member, guide means to receive the said stop lugs, the contour of the cam surfaces of the said actuating stem determining the axial movement of the said cup-shaped portion while rotational movement thereof is inhibited by the said guide means.

2,459,683
KEY LOCKED FASTENING FOR ATTACHÉ CASES AND THE LIKE
Charles William Cheney, Soho, Birmingham, England
Application April 25, 1945, Serial No. 590,143
In Great Britain February 25, 1944
4 Claims. (Cl. 70—67)

1. In key-locked fastenings of the kind described, a bolt-member combining a casing, a bolt in the casing, bolt-locking devices within the casing, a seating in the casing for the forward end of the key to engage, a hollow stationary knob on the face of the casing and which is open at its back and has a circular and notched hole through its front wall; a revolvable key-supporting piece within the knob and hole, fixed key-selecting projections within the knob at the back of the key supporting piece, and means for hand retracting the bolt including an additional member slidable on the face of the casing and connected with the bolt.

2,459,684
ESTER LACTONES
Willard J. Croxall, Bryn Athyn, and Harry T. Neher, Bristol, Pa., assignors to Röhm & Haas Company, Philadelphia, Pa., a corporation of Delaware
No Drawing. Application September 11, 1945, Serial No. 615,708
3 Claims. (Cl. 260—344.6)

3. A method of forming esters of cis-3,6-endomethylene hexahydrophthalyl lactone which comprises heating a half ester of cis-3,6-endomethylene-Δ^4-tetrahydrophthalic acid and a monohydric aliphatic alcohol of three to twelve carbon atoms with a small proportion of water and of sulfuric acid.

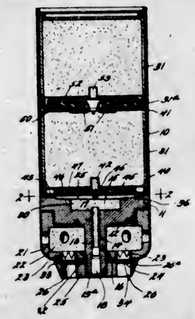
2,459,685
MANUFACTURE OF STRUCTURAL SHAPES
Arthur B. Cummins, Plainfield, N. J., assignor to Johns-Manville Corporation, New York, N. Y., a corporation of New York
Application May 3, 1944, Serial No. 533,971
2 Claims. (Cl. 106—40)

1. A method of manufacturing hard, microporous shapes which are substantially volume stable at temperatures below 1500 F. which comprises, forming crystalline hydrous magnesium silicate by reacting magnesia and finely divided micro-porous silica in the molal ratios of 1-2:3 and in the presence of water, forming a stiff aqueous paste of the resulting finely divided hydrous magnesium silicate, molding said paste under pressure, and finally drying the resulting shape and firing it to a temperature of at least 1500° F.

2,459,686
ACETOXY-ALIPHATIC AMIDES
Harold S. Davis, Riverside, Conn., assignor to American Cyanamid Company, New York, N. Y., a corporation of Maine
No Drawing. Application June 13, 1947, Serial No. 754,587
4 Claims. (Cl. 260—490)

1. A method of preparing a member of the group consisting of α-acetoxy propionamide, β-acetoxy propionamide, α-acetoxy butyramides and β-acetoxy butyramides comprising reacting the corresponding hydroxy aliphatic nitrile with glacial acetic acid and hydrogen chloride under substantially anhydrous conditions using substantially equimolar amounts of all three reactants and a temperature within the range of about 0°–50° C.

2,459,687
AERIAL SIGNAL
Josef B. Decker, Elkton, Md., assignor, by mesne assignments, to the United States of America as represented by the Secretary of the Navy
Application June 22, 1937, Serial No. 149,741
Renewed May 29, 1939
16 Claims. (Cl. 102—37.7)



1. A signal device of the kind described, including a casing having a chamber for explosive material and openings in the rear wall of said chamber, a lock nut arranged rearwardly of said rear wall and having openings therein, a sealing disk clamped between said wall and nut, said nut having a flange around the margin thereof to press against said disk, whereby a space is formed between the surface of said nut and said disk.

2,459,688
INSULATING TUBULAR COVERING AND METHOD OF MAKING THE SAME
Cornelius A. de Vyver, Chappaqua, N. Y., assignor to Johns-Manville Corporation, New York, N. Y., a corporation of New York
Application June 1, 1946, Serial No. 673,801
10 Claims. (Cl. 66—190)

1. A flexible, tubular covering composed of a felted, preformed, self-sustaining, fibrous mate-

rial forming a tubular layer, and an enclosing and confining sheath comprising a seamless

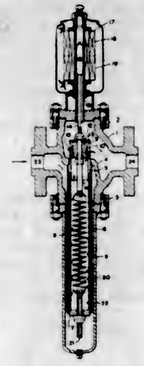
lected from the group of cycloaliphatic hydrocarbons and cycloparaffin alcohols having from 5 to

portion formed along one side with a longitudinal split so that the cylindrical portion may be ex-

into an integral seamless sheet, the strips having incorporated therein colored fluorescent pig-

rial forming a tubular layer, and an enclosing and confining sheath comprising a seamless sleeve.

2,459,689
FLUID RATE OF FLOW MEASURING APPARATUS
Paul S. Dickey, East Cleveland, and Jack F. Shannon, Euclid, Ohio, assignors to Bailey Meter Company, a corporation of Delaware
Application September 22, 1944, Serial No. 555,258
4 Claims. (Cl. 73—208)

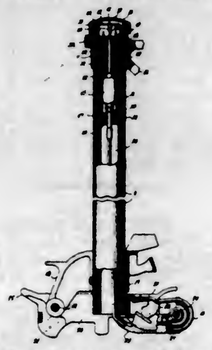


1. A fluid flow meter comprising, in combination, a housing having axially aligned inlet and outlet openings and a separating partition therebetween, a ported member secured within an opening in said partition and having an elongated tubular portion extending from one side of said partition with its axis lying in a plane perpendicular to the axes of said inlet and outlet openings, said tubular portion having openings along its length for connecting its interior in communication with the housing portion receiving fluid from said inlet opening, a valve plug positionable relative to said ported member for controlling the flow of fluid therethrough, a tension spring secured at one end to said valve plug and adjustably connected at its other end to said tubular portion, said spring extending axially through said tubular portion and operating to urge said valve plug toward its closed position, and a rate of flow transmitter supported by said housing and having a winding energized from a source of A.-C., a plurality of windings inductively coupled to said first winding, and a magnetic core piece connected to said valve plug and movable relative to said windings for varying the inductive coupling in correspondence with changes in the rate of fluid flow.

2,459,690
OXIDATION OF CYCLOALIPHATIC HYDROCARBONS AND ALCOHOLS
Thomas F. Doumani, Los Angeles, Clarence S. Coe, Long Beach, and Edward C. Attané, Jr., Inglewood, Calif., assignors to Union Oil Company of California, Los Angeles, Calif., a corporation of California
Application May 2, 1945, Serial No. 591,568
9 Claims. (Cl. 260—533)

8. A process for the preparation of organic acids which comprises establishing a vertical column of a liquid cycloaliphatic derivative selected from the group of cycloaliphatic hydrocarbons and cycloparaffin alcohols having from 5 to 8 carbon atoms, maintaining said liquid cycloaliphatic derivative at an elevated temperature and pressure, preheating nitric acid so as to decompose a portion thereof with production of a gaseous phase comprising nitrogen dioxide and an aqueous liquid phase comprising nitric acid, contacting said gaseous phase with said cycloaliphatic derivative in the upper part of said column and thereby forming a liquid nitration reaction product comprising nitrocycloaliphatic derivatives and unreacted cycloaliphatic derivatives, contacting said liquid nitration reaction product in the lower part of said column with said aqueous liquid phase comprising nitric acid, and thereby oxidizing said nitrocycloaliphatic derivatives to form organic acids.

2,459,691
HIGH-VOLTAGE CIRCUIT INTERRUPTER
Ralph H. Earle, Wauwatosa, and Roald H. Amundson, Milwaukee, Wis., assignors to Line Material Company, South Milwaukee, Wis., a corporation of Delaware
Application January 29, 1944, Serial No. 520,180
11 Claims. (Cl. 200—120)



1. A circuit interrupter comprising a body portion provided with an arc channel, interrupting means adapted to interrupt a circuit under overload and form an arc in said arc channel, gas liberating means adapted to liberate a gas when acted upon by an arc, said gas liberating means being spaced axially of said body portion from said interrupting means, said body portion being tubular and having a portion extending beyond said gas liberating means in a direction away from said interrupting means and having a permanently open end, and an expellable apertured plug through which said arc is formed and through which the liberated gas passes to extinguish said arc, said plug being normally positioned and retained in said arc channel solely by friction, said plug remaining in place in said arc channel for moderate overloads to provide a restricted passage and being expelled on heavy overloads to provide a larger passage.

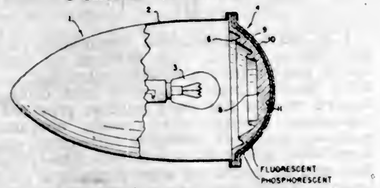
2,459,692
SUPPORT FOR NEON TUBES
Milton Fletcher, New York, N. Y.
Application December 21, 1944, Serial No. 569,207
2 Claims. (Cl. 248—50)

1. An article of the class described, comprising a clip of resilient material including a cylindrical

portion formed along one side with a longitudinal split so that the cylindrical portion may be expanded to permit the insertion and removal of one end portion of a rod, said cylindrical portion being elliptical in cross-section, and a rod having an end portion engaged in said cylindrical portion, said end portion engaged within said cylindrical portion being formed with spaced circumferential grooves dividing said end portion into sections, one of said sections being offset laterally in one direction and the other being offset laterally in the opposite direction to combine to

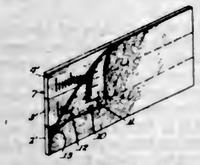
give said end portion an elliptical configuration conforming to the elliptical cross-sectional shape of said cylindrical portion, whereby said end portion of said rod is inserted into said cylindrical portion with the major axis of its elliptical formation parallel to the major axis of the elliptical cylindrical portion after which said rod is turned through ninety degrees to extend the major axis of the elliptical formation of said end portion parallel to the minor axis of the cylindrical portion to be more rigidly gripped by said cylindrical portion.

2,459,693
LAMINATED PHOSPHORESCENT FLUORESCENT ARTICLE
Joseph M. Gordon, Chicago, Ill.
Application August 14, 1944, Serial No. 549,366
6 Claims. (Cl. 250—71)



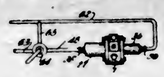
1. A signal lamp light transmitting cover comprising a transparent body at least a part of which comprises a transparent layer containing phosphorescent material overlaid on opposite sides by light-pervious fluorescent materials.

2,459,694
STRUCTURE FOR FLUORESCENT DIAL PANEL AND METHOD OF MAKING THE SAME
Joseph M. Gordon, Chicago, Ill.
Application September 2, 1944, Serial No. 552,459
3 Claims. (Cl. 250—72)



1. A fluorescent sheet of light pervious material comprising strips united together edge to edge into an integral seamless sheet, the strips having incorporated therein colored fluorescent pigments, the pigments in successive strips being of different colors, and a scale formed on each strip by an opaque film which covers one surface of the sheet and has dial mark openings therein whereby the colors of the respective scales are the different colors of the respective strips.

2,459,695
CLOSURE OPERATOR
Percy M. Griffin, Albany, N. Y., assignor to Consolidated Car-Heating Company, Inc., Albany, N. Y., a corporation of New York
Application September 21, 1943, Serial No. 503,302
4 Claims. (Cl. 121—44)



1. In a fluid actuated closure operator of the differential pressure type including a cylinder having a piston mounted for reciprocation therein, a unitary valve for reducing the rate of fluid discharge from said cylinder as said piston approaches the end of its fluid-exhausting stroke comprising an elongated element having a tubular portion and provided with means adapting it to be fixedly secured to said cylinder with said tubular portion extending therein and also with passage means for the flow of fluid therethrough to and from said cylinder, means slidably mounted in said tubular portion for reducing the effective cross-sectional area of said passage means and means, including resilient means, separate from said area-reducing means adapted to cooperate with said piston and with said area-reducing means for actuating the latter as said piston approaches the end of its fluid-exhausting stroke.

2,459,696
PROCESS FOR THE PREPARATION OF NORNICOTINE
Paul G. Haines and Abner Eisner, Philadelphia, and Charles F. Woodward, Abington, Pa., assignors to the United States of America as represented by the Secretary of Agriculture
No Drawing. Application July 12, 1944,
Serial No. 544,618
5 Claims. (Cl. 260—251)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

3. A process for manufacture of nornicotine in which the starting material is myosmine, comprising reacting the myosmine with hydrogen in the presence of a catalyst chosen from the group consisting of platinum oxide, palladium oxide, and a mixture of platinum oxide and palladium oxide, buffering the reaction mixture during the reduction to nornicotine to maintain it at pH 6 to 9, and recovering the nornicotine from the reaction mixture.

2,459,697
BROACHING MACHINE
Carl J. Halborg, New Baltimore, Mich., assignor to Colonial Broach Company, Warren Township, Macomb County, Mich., a corporation of Delaware
Application January 25, 1945, Serial No. 574,509
27 Claims. (Cl. 90—33)

6. In a surface broaching machine, a reciprocating broaching ram adapted to carry a broaching tool, a work supporting table mounted for

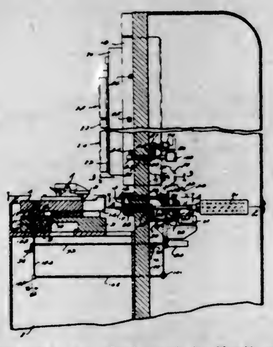
movement toward and from the path of movement of the ram, means for moving the work-

at a frequency *f*, means for developing high frequency pulses substantially at a frequency *nf*,

engagement with the interior of the channel, said spring element being connected with said key portion and adapted to maintain the latter in its clutched position while yielding under knob

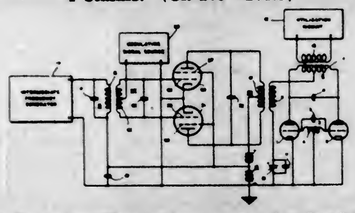
2,459,704
TELEMETRIC DEVICE
Henry H. Johnson, Glendale, Calif.
Application March 26, 1946, Serial No. 657,309

movement toward and from the path of movement of the ram, means for moving the worktable toward the ram and exerting a force on the table during the broaching stroke sufficient to overcome the thrust of the broaching tool,



means forming an abutment to limit movement of the worktable toward the ram, and means for shifting said abutment means during the broaching stroke of the ram in order to permit said first means to feed the work toward the ram during the broaching stroke.

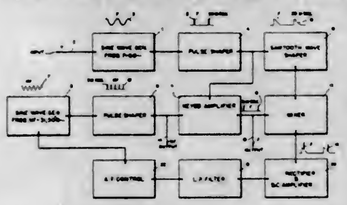
2,459,698
MODULATION SYSTEM
Clyde E. Hallmark, Fort Wayne, Ind., assignor, by mesne assignments, to Farnsworth Research Corporation, a corporation of Indiana
Application November 20, 1944, Serial No. 564,310
4 Claims. (Cl. 179—171.5)



1. In a signalling system, means for developing intermediate frequency energy modulated in accordance with a signal, power converting means having an output circuit including a resonant network tuned to a radio frequency, means for exciting said network at said radio frequency, means for amplifying the voltage of said intermediate frequency energy, means for supplying said voltage-amplified intermediate frequency energy to said network as the primary source of power for said network, and means for deriving from said network radio frequency energy modulated in amplitude in accordance with said signal-modulated intermediate frequency.

2,459,699
SYNCHRONIZING SYSTEM
Clyde Edwin Hallmark, Fort Wayne, Ind., assignor, by mesne assignments, to Farnsworth Research Corporation, a corporation of Indiana
Application February 1, 1946, Serial No. 644,872
11 Claims. (Cl. 250—36)

1. A synchronizing system comprising means for developing low frequency pulses substantially at a frequency f, means for developing high frequency pulses substantially at a frequency nf, where n is an integer, means rendered operative only by said low frequency pulses for selecting groups of said high frequency pulses at recurring time intervals equal to the reciprocal of said frequency f, means for shaping said low fre-



quency pulses to develop a pedestal wave having the same frequency as said low frequency pulses, means for mixing said selected groups of high frequency pulses with said pedestal wave to derive a frequency control signal, and means for controlling the frequency of one of said pulses in accordance with said frequency control signal.

2,459,700
CONTROL VALVE
Elmer E. Harper, Monrovia, Calif.; Esther Pardee Harper executrix of Elmer E. Harper, deceased
Application June 7, 1944, Serial No. 539,049
2 Claims. (Cl. 251—126)

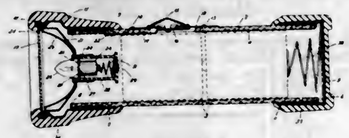
1. A valve construction comprising, a valve seat having a thin edge defining an upwardly facing valve orifice, a rocking valve having operative floating movement over said orifice and formed with a flat body portion provided with depending counterweight means operative to maintain said body portion in fulcruming engagement with said thin edge at one side of the orifice, and an operating arm forming a rigid extension from said body portion and projecting therefrom along a line substantially below the level of said orifice.

2,459,701
MECHANICAL INSTRUMENT HOLDER
Elmer E. Harper, deceased, late of Monrovia, Calif., by Esther Pardee Harper, executrix, Monrovia, Calif.
Application July 16, 1945, Serial No. 605,384
1 Claim. (Cl. 120—19)

Mechanical holder means of the type described comprising, a body member in pencil form and constructed with a channel portion having a longitudinal slot and providing a longitudinal instrument bore having an end outlet opening, and a propelling device operative along said slot and comprising a knob provided with a spring element projecting through the slot into position for engaging and propelling the instrument along said channel, and also a key portion adapted for rocking into and out of clutching

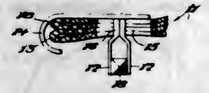
engagement with the interior of the channel, said spring element being connected with said key portion and adapted to maintain the latter in its clutched position while yielding under knob pressure to permit rocking of said key portion out of clutching engagement with the interior of the channel.

2,459,702
FLASH LAMP
Harry T. Hipwell and Harry H. Hipwell, Pittsburgh, Pa.
Application May 20, 1946, Serial No. 671,098
1 Claim. (Cl. 240—10.66)



The combination with a flash lamp case for supporting battery cells, of a removable cap member for the forward end of the case, having an annular groove at its forward end, a lens and a lamp-supporting shell having annular edge portions fitting in the groove and thereby held in unitary relation with the cap, a reflector disposed within the shell, a sleeve extending into the rear ends of the reflector and the shell and having a groove which receives the adjacent edges of the reflector and the shell, to thereby support the reflector, the sleeve having an interiorly formed bead adjacent to the groove, a lamp socket having a shoulder seating against the bead and removable through the rear end of the sleeve, and adapted to carry a lamp bulb which can be passed through the sleeve, and a cap insertable through the rear end of the sleeve, in circumferential relation to the lamp socket and with its forward end abutting the rear side of the said shoulder.

2,459,703
CUFF LINK FOR FRENCH TYPE CUFFS
Viola T. Howard, Saylesville, R. I., assignor to Swank, Inc., a corporation of Delaware
Application June 10, 1948, Serial No. 32,192
7 Claims. (Cl. 24—97)

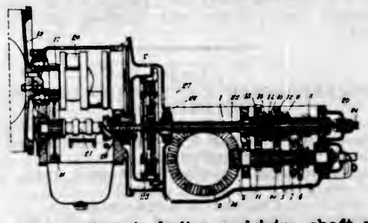


1. A cuff link comprising a first head member having a first portion in generally a single plane to engage one outer surface of a cuff with an end portion extending transversely to said first portion and then back over said first portion beyond a perpendicular to said plane at the joint of juncture of said plane with said transverse end portion to extend about the edges of the cuff and over the opposite outer surface thereof, a post secured at one of its ends to said head member to pass through all of the buttonholes of the cuff and a second head member at the other end of the post to extend over the said opposite outer surface of the cuff to assist in retaining the post in the buttonholes of the cuff, said second head member being spaced from said first head member when in holding position in the cuff.

2,459,704
TELEMETRIC DEVICE
Henry H. Johnson, Glendale, Calif.
Application March 26, 1946, Serial No. 657,309
5 Claims. (Cl. 177—351)

1. In a telemetric device, a support of magnetic material having a bottom flange, a top plate of magnetic material attached to said support which is almost parallel to but slopes gradually in a longitudinal direction with respect to the bottom flange, a magnetic member movable between said bottom flange and said top plate, and a pair of coils mounted on said movable magnetic member.

2,459,705
TRANSMISSION SYSTEM FOR AUTOMOBILE VEHICLES
Maurice Francois Alexandre Julien, Paris, France
Application March 9, 1945, Serial No. 581,893
In France June 9, 1943
5 Claims. (Cl. 74—326)
Section 1, Public Law 690, August 8, 1946
Patent expires June 9, 1963



1. In a system including a driving shaft and a driven part, a change speed transmission for transmitting the movement from the first of said shafts to the other with at least two different gear ratios the higher of which is at most equal to 1 to 1, this transmission comprising, in combination, a change speed gear of the type including an input shaft and an output shaft having their axes at a distance from each other, with gears carried by said shafts for directly interconnecting them, said change speed gear being constructed to give at least two different gear ratios one of which is higher than 1 to 1 and the other at most equal to 1 to 1, reducing gear means for coupling the input shaft of said change speed gear with said driving shaft and means for coupling the output shaft of said gear with said driven part, the gear ratio of said reducing gear means and the two gear ratios of said change speed gear being so chosen that the products of the first by the other two, respectively, are equal to the two gear ratios to be obtained for the whole change speed transmission system.

2,459,706
PREPARATION OF AMIDES
John A. King, Albany, N. Y., assignor, by mesne assignments, to Winthrop-Stearns Inc., New York, N. Y., a corporation of Delaware
No Drawing. Application December 8, 1945, Serial No. 633,875
7 Claims. (Cl. 260—561)

1. A process for preparing carboxylic acid

amides which comprises heating together at an elevated temperature in excess of 100° C. an aqueous mixture comprising essentially sulfur, ammonia, and a member of the group consisting

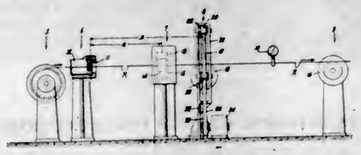
less than their normal maximum volume, and means responsive to variations in the load on the system for controlling the flow of air through said bleeding means.

relation to a patient's mouth comprising a block of material formed with two bores in close, substantially parallel relation, said block comprising an arm extending substantially perpendicularly to the axis of said bores, said arm comprising at

rockable on said post, a driven lathe head on said lathe for rotatably supporting a work piece, said carriage having means for supporting a cutting tool to act on work supported by said head, a cam follower pivotally carried by said carriage, a cam secured on said main frame on one side of said

amides which comprises heating together at an elevated temperature in excess of 100° C. an aqueous mixture comprising essentially sulfur, ammonia, and a member of the group consisting of alkyl mercaptans, aralkyl mercaptans, secondary alcohols, and tertiary alcohols.

2,459,707
METHOD AND APPARATUS FOR GRINDING ROD AND WIRE
Dartrey Lewis, Trenton, N. J., assignor to John A. Roebling's Sons Company, Trenton, N. J., a corporation of New Jersey
Application April 21, 1947, Serial No. 742,808
6 Claims. (Cl. 51—75)



3. Apparatus for grinding rod and the like which comprises a grinder, means for pulling the rod through the grinder, means for restraining the rod from twisting at fixed points on each side of the grinder, and means for continuously applying a unidirectional twist to the rod at a point adjacent the grinder and between said fixed points.

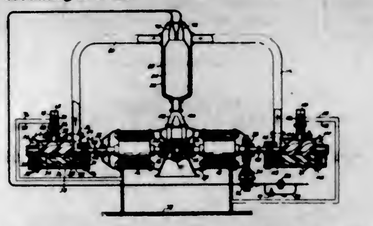
2,459,708
DISPERSIONS OF PROTEINS IN AQUEOUS DETERGENTS
Harold P. Lundgren, Berkeley, Calif., assignor to the United States of America as represented by the Secretary of Agriculture
No Drawing. Application April 4, 1947, Serial No. 739,353
6 Claims. (Cl. 106—161)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. A composition consisting essentially of an aqueous dispersion of approximately equal parts by weight of a protein and a detergent selected from the group consisting of alkyl aryl sulphonates and alkyl sulphates.

4. A composition consisting essentially of an aqueous dispersion of substantially equal parts of egg white solids and sodium isopropyl naphthalene sulphonate.

2,459,709
GAS TURBINE SYSTEM EMBODYING ROTARY POSITIVE DISPLACEMENT COMPRESSOR APPARATUS
Alf Lysholm, Stockholm, Sweden, assignor, by mesne assignments, to Jarvis C. Marble, Leslie M. Merrill, and Percy H. Batten, as trustees
Original application March 28, 1936, Serial No. 71,363, now Patent No. 2,358,815, dated September 26, 1944. Divided and this application August 25, 1943, Serial No. 500,010
In Sweden March 28, 1935
7 Claims. (Cl. 290—2)

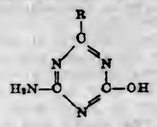
1. In a gas turbine system of the continuous combustion type, means for compressing air to be used as a constituent of motive fluid for expansion in the system comprising a rotary positive displacement compressor, means for bleeding the compression spaces of said compressor to retard the time of commencement of compression in said spaces until their volume has been reduced to less than their normal maximum volume, and means responsive to variations in the load on the system for controlling the flow of air through said bleeding means.



7. A system as set forth in claim 1 in which said bleeding means comprises electrically actuated valve means operative in response to the electrical load on the system.

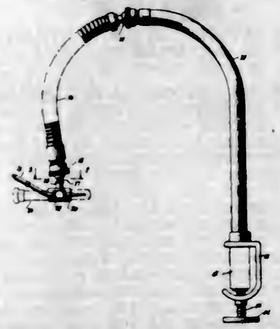
2,459,710
METHOD OF PREPARING GUANAMINES
Johnstone S. Mackay, Old Greenwich, and Joseph H. Paden, Stamford, Conn., assignors to American Cyanamid Company, New York, N. Y., a corporation of Maine
No Drawing. Application July 9, 1946, Serial No. 682,284
7 Claims. (Cl. 260—249.5)

1. A method of preparing a guanamine which comprises heating a guanide of the formula



where R is a member of the group consisting of hydrogen, an aliphatic hydrocarbon radical and an aromatic hydrocarbon radical, in the presence of added ammonia under pressure at a temperature within the range of substantially 250°–500° C., and recovering the thus-formed guanamine.

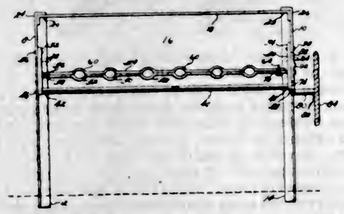
2,459,711
DENTAL UNIT
William J. Meier, New York, N. Y.
Application May 21, 1945, Serial No. 594,991
1 Claim. (Cl. 248—226)



In a dental unit, the combination of means for supporting a light and an air nozzle in operative

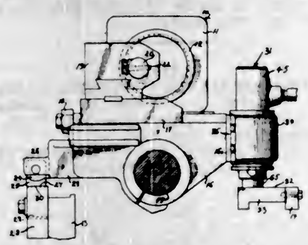
relation to a patient's mouth comprising a block of material formed with two bores in close, substantially parallel relation, said block comprising an arm extending substantially perpendicularly to the axis of said bores, said arm comprising at its outer end means for angularly adjustable engagement with a support means said block farther comprising separate clamp means in operative relation to each of said bores.

2,459,712
RESTRAINING DEVICE
Charles F. Messina and Michael M. Messina, Central Valley, N. Y.
Application August 2, 1946, Serial No. 688,012
6 Claims. (Cl. 70—16)



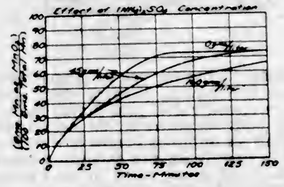
1. A device for securing prisoners, comprising a frame securable to the chassis of an automobile and supportable inside the automobile, left and right side safety bar brackets pivoted at one end to said frame, a fixed handcuff bar secured at its ends to said left and right safety bar brackets intermediate their ends, and having a plurality of spaced wrist receiving depressions formed therein, a movable handcuff bar pivoted at one end to one end of said fixed handcuff bar and having a plurality of upwardly curved portions corresponding to said depressions in the fixed handcuff bar, for confining the wrists of the prisoners therebetween, said fixed and movable handcuff bars having aligned apertures at their ends remote from their pivotal engagement, a latch pin insertable through said apertures for locking said handcuff bars together, and a safety pin for holding said latch pin in place.

2,459,713
HYDRAULIC CAM ADJUSTER
Chester C. Meore and Carl F. King, Jr., Aurora, Ill., assignors to Stephens-Adamson Mfg. Co., Aurora, Ill., a corporation of Illinois
Application February 20, 1946, Serial No. 648,934
6 Claims. (Cl. 77—3)



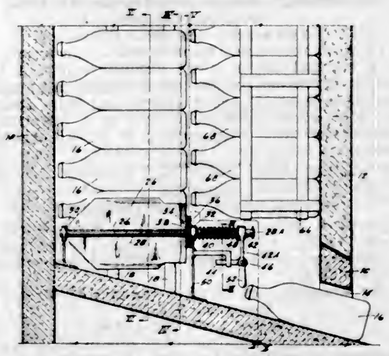
1. A profile or contour forming lathe which comprises a main frame, a lathe post supported by said main frame, a lathe carriage slidable and rockable on said post, a driven lathe head on said lathe for rotatably supporting a work piece, said carriage having means for supporting a cutting tool to act on work supported by said head, a cam follower pivotally carried by said carriage, a cam secured on said main frame on one side of said post, a plate having a flat accurately finished surface secured on said main frame on the other side of said post, a fluid pressure actuated jack on said carriage, a cam follower pivoted on the ram of said jack and acting on said plate, and means for maintaining fluid under constant pressure in said jack to rock the tool carriage and hold both cam followers in constant engagement with the cam and accurately finished surface of the plate respectively.

2,459,714
PREPARATION OF OXIDES OF MANGANESE
Ralph W. Moulton, Seattle, Wash., assignor to Manganese Products, Inc., Seattle, Wash., a corporation of Washington
Application June 10, 1944, Serial No. 539,685
1 Claim. (Cl. 23—145)



The process of preparing oxides of manganese, comprising: preparing a solution of manganese sulfate with an ammonium hydroxide concentration above 3 N, subjecting the solution to a partial pressure of oxygen above ten p. s. i. absolute at a temperature below 30° C., and maintaining an ammonium sulfate concentration less than 45 grams per liter.

2,459,715
VENDING APPARATUS
Lewis T. Newman, Memphis, Tenn.
Application July 14, 1947, Serial No. 760,849
7 Claims. (Cl. 312—48)



6. In a vending machine which includes a magazine for holding a plurality of articles for

successive gravity discharge, a rotary element journalled adjacent the discharge end of said magazine, and releasable means for latching said element against rotation, said element including blades shiftable by rotation of said element into

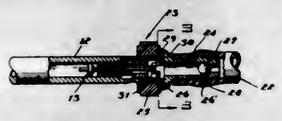
2,459,719
CONCRETE WALL FORM
Joseph J. Pirz, Flushing, N. Y.
Application October 30, 1946, Serial No. 706,640
4 Claims. (Cl. 25—131)

a resilient fibrous strip gasket, and wrapping a thin, flexible heat and solvent resistant tape comprising tetrafluor-ethylene polymer in tightly fitting relation over all exposed surfaces of the strip as a core, and sealing lapped edges of the tape to

ance means coupled to said second device for deriving a square wave output signal from said second device, and means for supplying an input signal to said multivibrator.

successive gravity discharge, a rotary element journalled adjacent the discharge end of said magazine, and releasable means for latching said element against rotation, said element including blades shiftable by rotation of said element into restraining relation with respect to said articles, means for frictionally resisting turning movement of said element, and means responsive to said turning movement for progressively reducing said frictional resistance.

2,459,716
TIRE PUMP CONNECTION
John M. Nickelsen, Ann Arbor, and Henry W. Emerick, Monroe, Mich., assignors to Monroe Auto Equipment Company, Monroe, Mich., a corporation of Michigan
Application April 29, 1946, Serial No. 665,759
2 Claims. (Cl. 284—18)



1. A pump fitting for use in connection with a pneumatic tire having a valve stem embodying a normally closed valve, said fitting including an elongated body adapted to be detachably connected to an air pump by means of a suitable conduit and having an axially extending passageway therethrough, a check valve in said passageway for controlling the flow of air therethrough, a cap internally threaded for threadably engaging the tire valve stem and secured to one end of said body for rotation relative thereto, an annular sealing gasket secured between said body end and said cap so as to seal the joint therebetween, and a projection formed integrally on said gasket and projecting into said cap so as to engage and open the valve in the tire valve stem when the cap is threaded on the latter.

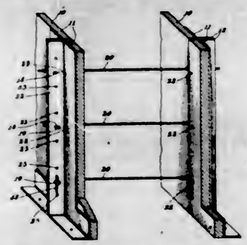
2,459,717
ORGANIC LUBRICANT COMPOSITION
George L. Perry, Berkeley, Calif., assignor to Shell Development Company, San Francisco, Calif., a corporation of Delaware
No Drawing. Application January 23, 1946, Serial No. 642,986
13 Claims. (Cl. 252—48.6)

12. A composition comprising a major amount of a mineral oil, a minor amount sufficient to inhibit corrosion, of an alkyl dibasic aliphatic acid of at least 16 carbon atoms, and from about 0.01% to about 0.1% by weight of a sulfurized unsaturated fatty acid having at least 8 carbon atoms.

2,459,718
LUBRICATING COMPOSITION
Emmett R. Barnum and George L. Perry, Berkeley, Calif., assignors to Shell Development Company, San Francisco, Calif., a corporation of Delaware
No Drawing. Application January 25, 1946, Serial No. 643,461
3 Claims. (Cl. 252—48.6)

1. A mineral lubricating oil having incorporated therewith from 0.01% to 0.05% of sulfurized oleic acid having a sulfur content of from 12.4% to 25.8%.

2,459,719
CONCRETE WALL FORM
Joseph J. Pirz, Flushing, N. Y.
Application October 30, 1946, Serial No. 706,640
4 Claims. (Cl. 25—131)



1. A concrete form comprising in combination a pair of form walls, each wall made up of unit sections assembled edge to edge, each section comprising a panel and an apertured reinforcement flange projecting from the edge thereof, and tie wires extending across the pouring space and projecting through opposite sections of the two walls, the projecting end of each tie wire extending in a single loop through registering apertures of adjacent continuously contactive projecting flanges of adjoining sections and secured therein to secure the sections together and to space said form walls.

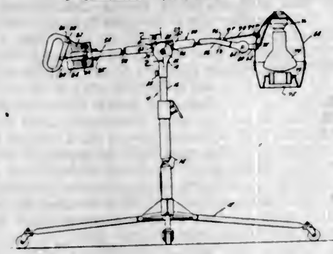
2,459,720
FOLDED FABRIC GASKET AND METHOD OF MANUFACTURE
Emil J. Poltorak, Somerville, N. J., assignor to Johns-Manville Corporation, New York, N. Y., a corporation of New York
Application March 19, 1945, Serial No. 583,543
2 Claims. (Cl. 288—33)

1. A gasket comprising a fibrous fabric strip having its ends joined and having each lateral edge folded outwardly at one side thereof to form a ring, a thin flexible heat and solvent resistant tape of polytetrafluor ethylene having one surface thereof coated with adhesive and affixed longitudinally to the inner surface of the ring, the lateral edges of said tape being folded in lapped relation with the lapped outer surfaces of the fabric ring, the thus-jacketed ring being again folded along its center line and rolled to form a multiple ply ring gasket.

2,459,721
METHOD OF MANUFACTURING GASKETS
Emil J. Poltorak, Somerville, N. J., assignor to Johns-Manville Corporation, New York, N. Y., a corporation of New York
Application January 26, 1946, Serial No. 643,590
4 Claims. (Cl. 154—33.1)

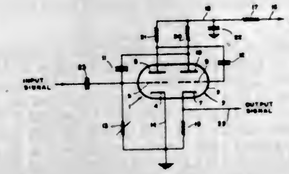
1. That method of forming a heat and solvent resistant ring gasket which comprises, forming a resilient fibrous strip gasket, and wrapping a thin, flexible heat and solvent resistant tape comprising tetrafluor-ethylene polymer in tightly fitting relation over all exposed surfaces of the strip as a core, and sealing lapped edges of the tape to form a completely enclosing jacket for the gasket.

2,459,722
BOOM LIGHT
Edison Avery Price, New York, N. Y., assignor to Display Lighting Incorporated, New York, N. Y., a corporation of New York
Application March 12, 1947, Serial No. 734,109
5 Claims. (Cl. 248—124)



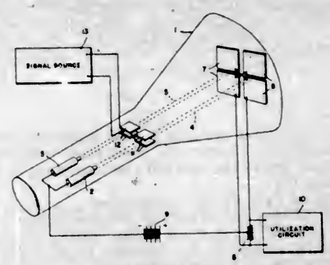
1. A boom light and support therefor, the boom comprising an elongated, hollow tubular rod, a housing pivotally secured to one end thereof, a light bulb within the housing, a counterweight at the other end of the rod, a handle pivotally secured by one end thereof to the counterweight, a cable connection from the handle spaced from the pivotally secured end thereof to the housing extending through the hollow rod, whereby swinging movement of the handle about its pivot is transmitted directly through the cable to the housing so as to cause pivoting movement of the housing in response thereto.

2,459,723
PULSE AND SQUARE WAVE GENERATOR
Joseph D. Schantz, Fort Wayne, Ind., assignor, by mesne assignments, to Farnsworth Research Corporation, a corporation of Indiana
Application August 26, 1944, Serial No. 551,320
13 Claims. (Cl. 250—36)



10. A square wave generator comprising a multivibrator including a first electric discharge device and a second electric discharge device, each of said devices having a cathode, a grid and an anode, means for supplying operating potentials to said cathodes and to said anodes, impedance means for coupling the anode of each of said devices to the grid of the other device, means coupled to said impedance means to impart to said first device a finite time constant, second impedance means coupled to said second device having a nominally infinite time constant, third impedance means coupled to said second device for deriving a square wave output signal from said second device, and means for supplying an input signal to said multivibrator.

2,459,724
ASTATIC CATHODE-RAY TUBE
Paul J. Selgin, Fort Wayne, Ind., assignor, by mesne assignments, to Farnsworth Research Corporation, a corporation of Indiana
Application November 27, 1946, Serial No. 712,566
7 Claims. (Cl. 250—27)



1. Signaling apparatus comprising, a source of signals, an output circuit for said signals, a cathode ray device comprising means for producing two electron beams, deflecting systems located adjacent to the respective paths of said beams and connected to said signal source in a manner to cause said beams to be deflected in response to said signals to the same degree but in opposite senses, an electron collecting system including two target electrodes located in the respective paths of said electron beams, and means coupling said target electrodes differentially to said output circuit in a manner whereby signal-produced variations in the electron collection by said electron collecting system is additive in said output circuit.

2,459,725
PREPARATION OF DI(HYDROXY METHYL) DITHIOBIURET
Russell L. Sperry, Glendora, Calif., assignor to American Cyanamid Company, New York, N. Y., a corporation of Maine
No Drawing. Application December 6, 1946, Serial No. 714,653
3 Claims. (Cl. 260—552)

1. 1,5 Di(hydroxy methyl) dithiobiuret.

2,459,726
COMPUTING LINKAGE
Antonin Svoboda, Cambridge, Mass., assignor, by mesne assignments, to the United States of America as represented by the Secretary of the Navy
Application January 15, 1946, Serial No. 641,345
2 Claims. (Cl. 235—61.5)

1. A mechanical computer for computing the expression

$$Y=\frac{1}{(1+.0402X)^3}$$

comprising a support, a first swinging member pivoted to said support, a second swinging member pivoted to said support, a slide member

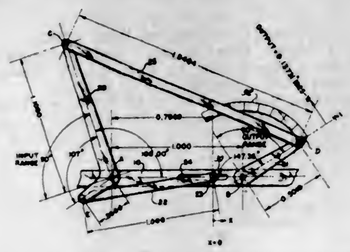
slidably mounted on said support, a first link operatively connecting one end of said second swinging member and said slide member, and a

2,459,728
BULK ICE-CREAM CONTAINER
Hubert B. Tillery, Kansas City, Mo.

2,459,730
MEASURING SYSTEM WITH CAPACITOR HAVING CHARACTERISTICS OF AN IN-

a cable wound thereon, a ball member secured to the end of said cable, a ball clamping device carried by the drawbar of the implement, said

slidably mounted on said support, a first link operatively connecting one end of said second swinging member and said slide member, and a second link operatively connecting said first and



second swinging members, said links and swinging members having the following relative dimensions where the basis of measurement is taken as unity (1):

Length of first swinging member	.5010
Length of second swinging member from the pivot point thereof to one end	.2500
Length of second swing member from the pivot point to the opposite end	1.1080
Angle included lines connecting the pivot point of said second swinging member and the opposite ends thereof	107°
Length of said first link	1.000
Length of said second link	1.9404

the pivot points of said swinging members being so disposed with respect to each other that angular displacement of said first swinging member is proportional to

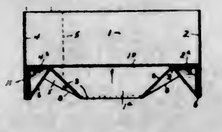
$$\frac{1}{(1+.0402X)^3}$$

where X represents the displacement of said slide member from the zero position thereof.

2,459,727
BULK ICE-CREAM CONTAINER
Hubert B. Tillery, Kansas City, Mo.
Application March 7, 1946, Serial No. 652,624
2 Claims. (Cl. 229—6)

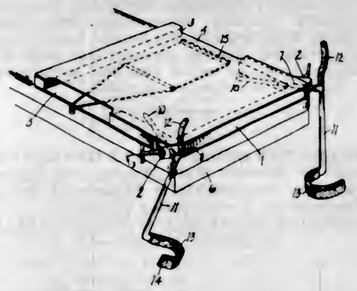
1. In a box of the character described, comprising sides composed of a rectangular strip bent transversely along parallel lines to provide eight faces forming an octagon, said strip also being bent back inwardly along a longitudinal line to provide eight integral faces, alternate ones of which are bent along diagonal lines to provide four isosceles triangular surfaces having their bases along said longitudinal line, constituting "locks," the other four faces being rectangular and being held in bent over positions by said "locks," and a bottom having an octagon form to fit into the octagon when assembled and having downwardly bent-over flaps to rest in the groove formed by said bent over rectangular faces and said "locks."

2,459,728
BULK ICE-CREAM CONTAINER
Hubert B. Tillery, Kansas City, Mo.
Application March 7, 1946, Serial No. 652,625
2 Claims. (Cl. 229—16)



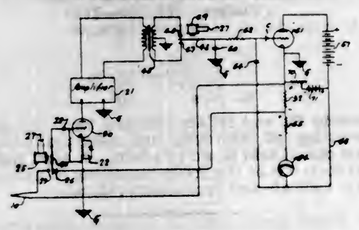
1. A box side-forming blank comprising an uncut rectangular strip divided transversely by parallel spaced-apart bend lines into four faces and a connecting flap and divided longitudinally by a fold line which extends from end to end of the strip parallel to an adjacent edge of the same, said strip having diagonal bend lines adjacent the meeting points of said transverse and longitudinal lines and forming about said points four right angle triangles one side of each of which lies in the adjacent transverse bend line and another side of each of which lies in said longitudinal fold line while the hypotenuse of each triangle connects the adjacent transverse bend line with the longitudinal fold line.

2,459,729
SURGICAL TABLE
Harry T. Treace, Kalamazoo, Mich., assignor to Orthopedic Frame Company, Kalamazoo, Mich.
Application April 22, 1947, Serial No. 742,994
9 Claims. (Cl. 311—11)



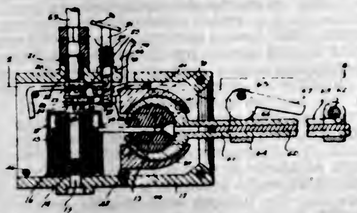
1. A surgical appliance for holding the hips of a patient in fixed position comprising a U-shaped lower frame member having outwardly diverging projections in the lower corners thereof, an upper frame member spaced from the upper end of said lower frame member, a top panel of non-metallic material joining said frame members, a flat bottom panel joining said frame members on the bottom sides thereof and adapted to rest upon a surgical table, said corner projections of said lower frame member defining outwardly diverging bores parallel to the planes of said panels and slots opening to said bores along the bottom surface thereof, shaft members positioned in said bores, screw clamps for drawing the sides of said slots together to clamp said shafts in said bores, and torsion bars secured perpendicularly to the ends of said shafts, said torsion bars having outwardly offset and inwardly curved ends above said shafts and inwardly offset and outwardly opening hook portions on the lower ends thereof.

2,459,730
MEASURING SYSTEM WITH CAPACITOR HAVING CHARACTERISTICS OF AN INFINITE CAPACITY
Albert J. Williams, Jr., Philadelphia, Pa., assignor to Leeds and Northrup Company, Philadelphia, Pa., a corporation of Pennsylvania
Application June 30, 1944, Serial No. 542,899
7 Claims. (Cl. 171—95)



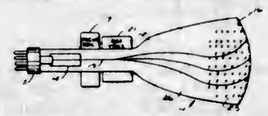
3. A measuring system comprising an input circuit to which there may be applied a direct current electromotive force whose magnitude is to be measured, means for converting said direct current into alternating current, means including an amplifier for amplifying said alternating current, said amplifier having an output circuit, means included in said output circuit for rectifying said alternating current, a direct current amplifier having input and output circuits, means for minimizing residual unbalance in the system comprising an integrating capacitor connected to said input circuit, means for applying said rectified alternating current to said capacitor thereby to vary the charge on said capacitor, means included in both of said last-named input and output circuits and responsive to the output current for varying the potential on one side of said capacitor as its charge is increased or decreased to impart to it the characteristic of an infinite capacity, means in said first-named input circuit for producing in response to said last-named output current an electromotive force of polarity opposite to said applied electromotive force, and means for measuring the magnitude of said last-named output current to obtain an indication of the magnitude of said applied direct current electromotive force.

2,459,731
AUTOMATIC TRACTOR AND IMPLEMENT HITCH
Ralph R. Wymore, Oberlin, Kans.
Application January 23, 1948, Serial No. 3,857
4 Claims. (Cl. 280—33.15)



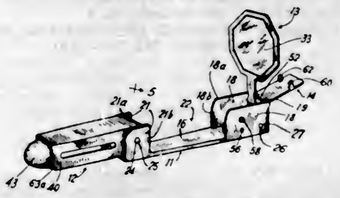
1. A hitching apparatus for connecting a wheeled implement or the like to a tractor, comprising a housing secured to the rear portion of the tractor, a pair of opposing pivoted jaws in said housing, a windlass in said housing having a cable wound thereon, a ball member secured to the end of said cable, a ball clamping device carried by the drawbar of the implement, said ball clamping device fitting between said opposing jaws, a driving member rotatably mounted on said housing, and manually operable clutch means for at times connecting said driving member to said windlass.

2,459,732
ELECTRICAL SYSTEM
William E. Bradley, Swarthmore, Pa., assignor, by mesne assignments, to Philco Corporation, Philadelphia, Pa., a corporation of Pennsylvania
Application March 26, 1946, Serial No. 657,175
15 Claims. (Cl. 250—157)



1. In combination with a cathode ray tube having a fluorescent screen, a magnetic structure providing within said tube a plurality of continuous and fixed magnetic fields, one of said fields being of predetermined uniform configuration and being disposed adjacent said fluorescent screen and the other field being of non-uniform configuration, said first field producing a keystone effect at said screen with the horizontal lines bowed and the second field producing a compensation for the bowing of the horizontal lines.

2,459,733
COMBINATION LIP ROUGE APPLICATOR AND MIRROR
Donald Macy, New York, N. Y., assignor of one-half to Samuel B. Ohlbaum, New York, N. Y.
Application July 9, 1945, Serial No. 603,764
7 Claims. (Cl. 132—79)



1. A device of the character described comprising an elongated body, having a bottom wall, and a pair of side walls at its front end, a lip stick applicator pivoted on and between said side walls, spring means to rotate said applicator to a position where it projects forwardly from said body, said applicator being swingable through an angle substantially 180° onto said body, said body being formed with a rear wall and a pair of side walls adjacent said rear wall, a mirror hinged to said last-mentioned pair of side walls about an axis parallel to and spaced from the pivotal axis for said applicator, and spring means to swing said mirror upwardly, said mirror being swingable forwardly against said body, said lip rouge applicator being adapted to overlie said mirror when said mirror is swung down against said body.

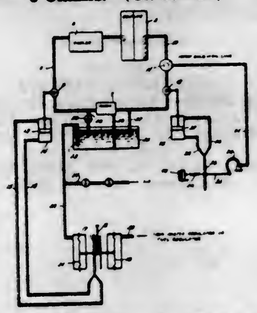
2,459,734
CONTROL FOR HYDRAULIC COUPLINGS
James D. McCracken, Chicago, Ill., assignor to

2,459,736
THIAZYL SULFENAMIDES
George E. P. Smith, Jr., and Edward L. Carr, Akron, Ohio, assignors to The Firestone Tire

vertical adjustable rod having weight receiving means thereon, said depending rods projecting

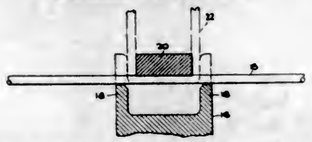
adapted to form vulcanizates having increased blowout resistance, which includes mixing a 0.5 to 10 per cent aqueous solution of a soluble aluminum salt with an aqueous disperaion of a synthetic rubber of the group consisting

2,459,724
CONTROL FOR HYDRAULIC COUPLINGS
James D. McCracken, Chicago, Ill., assignor to Askania Regulator Company, Chicago, Ill., a corporation of Illinois
Application August 31, 1942, Serial No. 456,806
3 Claims. (Cl. 60—54)



1. In combination with a hydraulic coupling having a pipe circuit for supplying and returning the operating fluid, a pump and a cooler in said circuit connected in series with the coupling; a sump carrying the operating fluid into which excess returned fluid is delivered; a supply valve in the circuit between the pump and the cooler; an automatic regulator for said valve having an air bubbling device connected to said sump to operate the regulator in response to variations of air pressure in the air bubbling pipe; and a temperature controlled valve in the fluid return portion of said circuit responsive to the temperature of the returning fluid to control the circulation of fluid through the cooler.

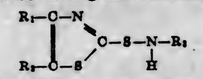
2,459,735
METHOD OF MANUFACTURE OF SNAP HOOKS
Archibald L. McKinnon, St. Catharines, Ontario, Canada, assignor to Columbus McKinnon Chain Corporation, Tonawanda, N. Y.
Application February 5, 1945, Serial No. 576,293
5 Claims. (Cl. 29—148)



1. The method of forming a hook from wire-like stock comprising cutting a length of stock, then cold bending the latter into U-shape by ramming it intermediately of its ends between a concave die and a press block, then cold pressing the extending leg portions of the stock inwardly and around the press block to form the legs to extend outwardly in substantially side-by-side relation having their inner ends substantially in contact and their outer ends slightly spread apart then cold-bending the outer spread ends of the legs reversely to provide a pair of hooked leg formations, then forcing the spread ends of the legs into firm mutual contact by means of a pair of opposed electrodes and then applying an electric current to said electrodes thereby welding the hooked leg ends together while providing beneficial heat treatment of the cold-bent portions of the stock.

2,459,736
THIAZYL SULFENAMIDES
George E. P. Smith, Jr., and Edward L. Carr, Akron, Ohio, assignors to The Firestone Tire & Rubber Company, Akron, Ohio, a corporation of Ohio
No Drawing. Original application May 26, 1943, Serial No. 488,555. Divided and this application January 23, 1948, Serial No. 4,075
4 Claims. (Cl. 260—302)

4. A substance having the formula,



wherein R_1 and R_2 are selected from the group consisting of hydrogen and alkyl radicals, at least one of said R_1 and R_2 being an alkyl radical, and R_3 is one of the group consisting of hydrogen, alkyl radicals and cyclo-alkyl radicals.

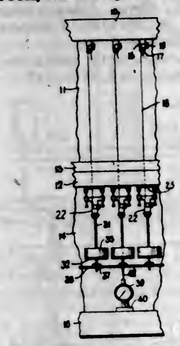
2,459,737
AIRPLANE LANDING GEAR
Raymond W. Allen, Akron, Ohio, assignor to The Firestone Tire & Rubber Company, Akron, Ohio, a corporation of Ohio
Application July 9, 1943, Serial No. 494,107
3 Claims. (Cl. 305—10)

1. An endless band track of the class described comprising a pliable rubber-like body portion having numerous parallel, longitudinally extending, radially inwardly projecting, endless ribs on the entire inner face of the track, said ribs defining grooves therebetween, said ribs and grooves having a facing of rubberized fabric, vulcanized thereto said body being reinforced across a major portion of its entire width with at least two layers of closely spaced small wire cables, said cables being made up of a plurality of strands of fine wire.

2,459,738
CORD TESTING APPARATUS
Irven B. Prettyman and George P. Bosomworth, Akron, and Duncan C. Milner, Barberton, Ohio, assignors to The Firestone Tire & Rubber Company, Akron, Ohio, a corporation of Ohio
Application October 20, 1943, Serial No. 507,218
1 Claim. (Cl. 73—15.4)

A cord testing machine of the class described including means for simultaneously testing a plurality of cords under substantially identical conditions, said means comprising a closed compartment having means for circulation of heated air therethrough and control of humidity therein, a plurality of cord clamping members attached to the top portion of the compartment and a corresponding number of cord clamping members disposed below the floor of said compartment, said clamping members being arranged in pairs of an upper and a lower clamp adapted to anchor the end portions of a cord extending therebetween, the bottom wall of said compartment having small holes therethrough through which holes the lower portion of the cords being tested extend, the clamps disposed below said floor, each comprising two spaced parallel vertical rods upon which a test weight element is slidably mounted, said weight elements each having a depending

vertical adjustable rod having weight receiving means thereon, said depending rods projecting

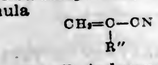


downwardly through a guide plate below said weight receiving means.

2,459,739
ELASTOMERIC COPOLYMER MIXED WITH PHENOL-ALDEHYDE RESIN
Frank J. Groten, Montclair, and Robert J. Reid, Fair Lawn, N. J., assignors to The Firestone Tire and Rubber Company, Akron, Ohio, a corporation of Ohio
No Drawing. Application April 1, 1944, Serial No. 529,170
2 Claims. (Cl. 260—43)

1. Process which comprises coagulating, from the latex in which it was polymerized, an elastomeric copolymer of a compound having the formula

with from 10% to 75%, based on the total weight of copolymerized compounds, of a compound having the formula

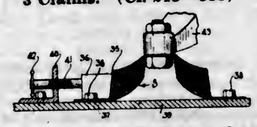


in which formulae R, independently in each occurrence, represents a substituent selected from the group consisting of hydrogen and the methyl radical, R' represents a substituent selected from the group consisting of hydrogen and methyl and chloro radicals, and R'' represents a substituent selected from the group consisting of hydrogen and methyl, ethyl, propyl and chloro radicals, and thereafter directly, without subjection to heat-drying, milling the resultant wet curd with an uncured thermosetting resinous condensate of an aldehyde with a compound selected from the group consisting of phenol, the cresols and mixtures of phenol with a cresol, to yield a homogeneous compound, said resinous condensate being employed to the extent of from 10% to 900%, based on the weight of elastomeric copolymer.

2,459,740
METHOD OF MAKING AND COMPOUNDING SYNTHETIC RUBBER
Robert L. Bebb, Akron, Ohio, assignor to The Firestone Tire & Rubber Company, Akron, Ohio, a corporation of Ohio
No Drawing. Application April 15, 1944, Serial No. 531,299
4 Claims. (Cl. 260—93)

1. A method of making synthetic rubber having improved processing characteristics and adapted to form vulcanizates having increased blowout resistance, which includes mixing a 0.5 to 10 per cent aqueous solution of a soluble aluminum salt with an aqueous dispersion of a synthetic rubber of the group consisting of a rubbery polymer of a butadiene, a rubbery copolymer of butadiene and styrene, and a rubbery copolymer of butadiene and acrylonitrile, and dispersion containing as a dispersing agent a soluble soap selected from the group consisting of sodium oleate and sodium stearate, whereupon the aluminum salt coagulates the synthetic rubber and reacts with the soluble soap to form a reaction product distributed through the synthetic rubber coagulum, thereafter separating the wet coagulum from the aqueous liquor accompanying same and drying the wet coagulum to retain said reaction product uniformly distributed throughout the dried synthetic rubber.

2,459,741
RESILIENT MOUNTING
Le Roy M. Kubaugh, Akron, Ohio, assignor to The Firestone Tire & Rubber Company, Akron, Ohio, a corporation of Ohio
Original application October 27, 1942, Serial No. 463,505, now Patent No. 2,367,830, dated January 23, 1945. Divided and this application August 21, 1944, Serial No. 550,449
3 Claims. (Cl. 248—358)



2. In a device of the character described, the combination of a pair of angular elements, one of which is fixed to a supporting structure and the other is slidably positioned thereon, a U-shaped element disposed between said angular elements and in elevated relation thereto, a pair of resilient members extending from the confronting faces of the angular elements to the outwardly presented faces of the U-shaped element and bonded to said faces to provide the sole positioning means for said U-shaped element, means operatively engaging said slidable angular element for adjusting the position thereof to place said resilient members under determinate compressive stress, and means for securing the slidable angular element to the supporting structure in all positions of adjustment thereon.

2,459,742
METAL BONDED BY MEANS OF CHLORINATED RUBBER ADHESIVES CONTAINING A POLYALKYLENE POLYAMINE
Harry P. Bradley, Cuyahoga Falls, and John L. Dum, Akron, Ohio, assignors to The Firestone Tire & Rubber Co., Akron, Ohio, a corporation of Ohio
No Drawing. Application September 20, 1944, Serial No. 555,038
9 Claims. (Cl. 154—130)

1. Process of adhering an elastomer to a metallic substrate which comprises interposing, between said elastomer and substrate, a composition comprising chlorinated rubber and from about 1% to about 5%, based on the weight of chlorinated rubber, of a polyalkylene polyamine having the formula

$$NH_2\text{-}(\text{-}CR_2\text{-}CR_2\text{-}NH\text{-})_s\text{-}CR_2\text{-}CR_2\text{-}NH_2$$

wherein "R," independently in each occurrence

in the expanded formula, represents a substituent chosen from the class consisting of hydrogen, and methyl, ethyl and propyl groups, and "s" is an

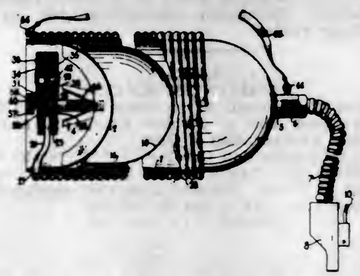
2,459,745
ART OF PROCESSING RUBBER COMPOUND
Herbert H. Waters, Akron, Ohio, assignor to The Firestone Tire & Rubber Company, Akron,

and being provided with a peripheral U flange, there being at least one ply of the fuel-cell material above, at least one other below and at least one other within the U flange, the fitting and

having one end projecting therefrom, and indicating means at the face of the case and movable in accordance with movements of the staff to indicate the lineal distance between the project-

in the expanded formula, represents a substituent chosen from the class consisting of hydrogen, and methyl, ethyl and propyl groups, and "n" is an integer from 1 to 4, and curing the assembly by means of heat.

2,459,743
FIRE EXTINGUISHER
James Edward Trainer and Sterling W. Alderfer, Akron, Ohio, assignors of one-half to The Firestone Tire & Rubber Company, Akron, Ohio, a corporation of Ohio, and one-half to The Andrews-Alderfer Processing Co. Inc., Akron, Ohio, a corporation of Ohio
Application November 25, 1944, Serial No. 565,168
1 Claim. (Cl. 169—31)

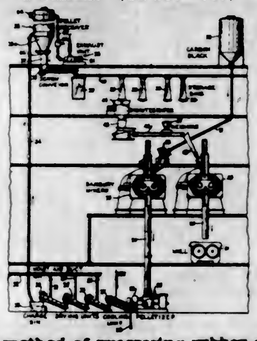


A spray device comprising a cylinder, a discharge orifice at one end of the cylinder, a piston in the cylinder, a tubing wrapped in a plurality of convolutions about the exterior of the cylinder and adapted to hold fluid under pressure, one end of the tubing being sealed, a valve housing in the base of the cylinder, the other end of the tubing being secured in the valve housing, a valve, a trigger to hold said valve in normally closed position but to open it to release the contents of the tubing, a conduit from the valve housing to the interior of the cylinder beneath the piston, and means to close the conduit so as to permit the tubing to be refilled with pressure fluid without filling the cylinder.

2,459,744
ADHESION OF RUBBER TO MAGNESIUM
John Richard Rafter, Sharon, Mass., assignor to The Firestone Tire & Rubber Company, Akron, Ohio, a corporation of Ohio
Application December 18, 1944, Serial No. 568,791
2 Claims. (Cl. 154—130)

2. A method of bonding a rubber to a metal selected from the group consisting of magnesium and its alloys, which includes applying a composition consisting essentially of a polyhydric alcohol acidified by a small percentage of concentrated sulfuric acid to a surface of the metal, baking the metal while a portion of the polyhydric alcohol still remains on the metal surface, applying to the baked surface an adhesive composition comprising a rubber derivative selected from the group consisting of chlorinated rubber, rubber hydrochloride and isomerized rubber, and then vulcanizing a rubber in contact with the treated metal surface.

2,459,745
ART OF PROCESSING RUBBER COMPOUND
Herbert H. Waters, Akron, Ohio, assignor to The Firestone Tire & Rubber Company, Akron, Ohio, a corporation of Ohio
Application March 8, 1945, Serial No. 581,685
2 Claims. (Cl. 260—767)



1. The method of processing rubber compound which comprises mixing a batch of rubber with primary compounding ingredients in the presence of heat, dividing the batch into discrete free-flowing pellets, applying dust lubricant to the pellets, spraying the pellets with water to cool the pellets, passing a current of air over and about the pellets to dry the same and effecting further cooling thereof, further drying, cooling and transferring the pellets into a storage zone by an air stream, subjecting the pellets to a disintegration operation to break up lumps of mutually adhering pellets which may have formed and subsequently milling the pellets into a single mass and concurrently introducing secondary compounding ingredients thereunto, and then employing the fully compounded material in the manufacture of commodities.

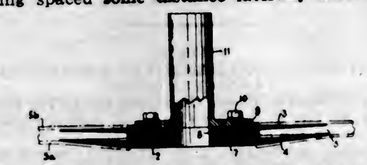
2,459,746
HEAT STABILIZATION OF VINYLIDENE CHLORIDE RESINS
Milton R. Radcliffe, Glen Rock, N. J., assignor to The Firestone Tire & Rubber Company, Akron, Ohio, a corporation of Ohio
No Drawing. Application April 9, 1945, Serial No. 587,438
13 Claims. (Cl. 260—86)

1. A composition stable against deterioration by heat in the presence of iron and compounds thereof, said composition comprising mutually incorporated a polymeric vinylidene chloride product, together with from .05% to 2.0%, based on the weight of polymeric vinylidene chloride product, of a stabilizing substance selected from the group consisting of those set forth in Table II hereinabove.

2,459,747
FUEL CELL FITTING
Henry H. Kolbe, Los Angeles, Calif., assignor to The Firestone Tire & Rubber Company, Akron, Ohio, a corporation of Ohio
Application May 25, 1945, Serial No. 595,769
1 Claim. (Cl. 285—38)

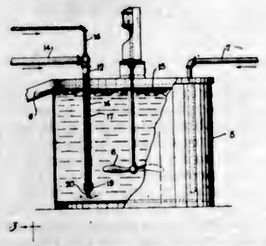
In combination a multi-ply bullet-sealing fuel cell with an opening in one wall thereof, in the opening an oil-resistant synthetic-rubber fitting having an opening therethrough and bolt-securing means embedded therein around the opening

and being provided with a peripheral U flange, there being at least one ply of the fuel-cell material above, at least one other below and at least one other within the U flange, the fitting and fuel-cell plies being vulcanized into a unitary whole, the fuel-cell material above the flange being spaced some distance laterally from the



opening in the fitting so as to provide a seat of the synthetic-rubber material for the placement of an attachment, and on the seat an attachment with an opening therein in register with the opening in the fitting and drawn directly to the fitting by bolts secured in said bolt-securing means without any intervening material between the fitting and the attachment.

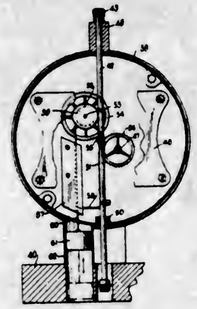
2,459,748
COAGULATION OF SYNTHETIC RUBBER LATEX
Charles Robert Johnson, Akron, Ohio, assignor to The Firestone Tire & Rubber Company, Akron, Ohio, a corporation of Ohio
Application June 28, 1945, Serial No. 602,123
3 Claims. (Cl. 260—86.5)



1. A continuous method of coagulating a rubbery butadiene-styrene copolymer latex, which comprises mixing the latex with a continuous high velocity stream of air to produce a mixture of latex droplets and air, introducing the latex-air mixture into and beneath the surface of a body of liquid coagulant for the latex consisting essentially of a water solution containing 0.2% to 3% $Al_2(SO_4)_3 \cdot 18H_2O$, separately agitating the body of coagulant as the latex-air mixture is introduced thereinto in order to prevent substantial agglomeration of freshly coagulated latex droplets and to produce copolymer crumbs in readily filterable condition, continuously removing a mixture of the crumbs and aqueous liquid from a region near the top of said body of coagulant, and separating crumbs from said aqueous liquid.

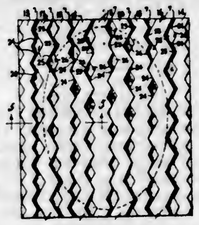
2,459,749
DIAL GAUGE
George P. Bessomwerth, Akron, Ohio, assignor to The Firestone Tire & Rubber Company, Akron, Ohio, a corporation of Ohio
Application June 29, 1945, Serial No. 602,230
2 Claims. (Cl. 33—147)

2. A dial gauge having a case having a face, a base, a central staff positioned in said case and having one end projecting therefrom, and indicating means at the face of the case and movable in accordance with movements of the staff to indicate the lineal distance between the projecting end of the staff and the base, said staff having rack teeth cut therein, a pinion meshing with said rack teeth, a pivot on which said pinion is fixed to rotate, a drum on said pivot and rotatable



therewith, said drum having connected thereto a fine wire strand, means for guiding said strand as it depends from said drum, a well defined by a sleeve and an opening in the base, said wire strand having a weight attached at its lower end, the said weight being movable vertically in the well but not contacting the sides thereof, said weight acting as a counter-balance for the central staff and its attached parts.

2,459,750
TIRE TREAD
Charles C. Dybvig, Birmingham, Mich., assignor to The Firestone Tire & Rubber Company, Akron, Ohio, a corporation of Ohio
Application July 30, 1945, Serial No. 607,809
3 Claims. (Cl. 152—209)



3. A tire construction comprising a tread portion formed with a plurality of circumferential ribs defining circumferential grooves of varying width, the lateral faces of said ribs being continuously serrated, the sides of the serrations on one side of the ribs forming greater angles with the forward direction of skid than do the sides of the serrations on the confronting sides of the laterally adjacent ribs, the height and width of said ribs relative to the width of said grooves, and the configuration of the lateral sides of said ribs being such that under nominal load in service said ribs distort until their radial outer side portions are in uniformly interrupted lateral abutment.

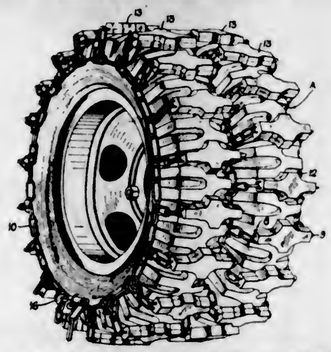
2,459,751
MOLDED RUBBER TRACTION CHAIN

around its opening which extends down into the opening in the fitting adjacent the wall thereof

2,459,755
SEAT CUSHION, MULTIPLE TYPE
Hyland C. Flint, Akron, Ohio, assignor to The

disposed ribs, said ribs extending longitudinally of said ribbon-like material in mutually spaced parallel relation.

2,459,751
MOLDED RUBBER TRACTION CHAIN
Arnold B. Skromme, Akron, Ohio, assignor to The Firestone Tire & Rubber Company, Akron, Ohio, a corporation of Ohio
Application August 1, 1945, Serial No. 608,215
3 Claims. (Cl. 152—221)

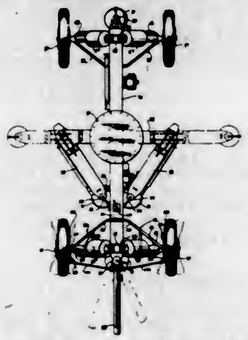


1. A detachable traction device adapted for mounting on a vehicle tire to supplement the tractive resistance of the tire, said device comprising a pair of side chains adapted to encircle the tire in the region of the base of the tread portion, means for detachably connecting the ends of said side chains, and a multiplicity of pliable traction links interconnecting said side chains at equal intervals to engage the tread portion of a tire and to be positioned transversely thereof and maintained in engagement therewith by contractile bias imparted by said side chains, each said traction link comprising an elongate molded element of vulcanized rubber-like composition provided with a metallic multiple-link chain completely embedded and vulcanized therein along the longitudinal axis of said element, said element being provided when undistorted with planate tread contacting and ground engaging surfaces and being thicker between said surfaces than the transverse dimension of the chain links and of a width at least twice the transverse dimension of said chain links.

2,459,752
FUEL-CELL CONSTRUCTION
Robert F. Wilson, San Gabriel, and Antone F. Resnicek, Alhambra, Calif., assignors to The Firestone Tire & Rubber Company, Akron, Ohio, a corporation of Ohio
Application August 13, 1945, Serial No. 610,564
2 Claims. (Cl. 285—38)

1. In combination with a fuel cell provided with a synthetic-rubber fitting with an opening therethrough and having threaded means embedded therein for the reception of bolts, an attachment with a flange around the bottom thereof seated on the fitting with bolts passing through the flange and into said threaded means in the fitting, the attachment having an opening therethrough in register with the opening in the fitting and being provided with an annular lip around its opening which extends down into the opening in the fitting adjacent the wall thereof at least to the level of the top of said threaded means embedded in the fitting to prevent the synthetic rubber of the fitting bulging into the opening through the fitting when the attachment is drawn to the fitting by the bolts.

2,459,753
STEERING MECHANISM FOR WHEELED LAND VEHICLES
Roy W. Brown, Akron, Ohio, assignor to The Firestone Tire & Rubber Company, Akron, Ohio, a corporation of Ohio
Original application July 23, 1943, Serial No. 495,947. Divided and this application April 17, 1946, Serial No. 662,816
2 Claims. (Cl. 280—103)



1. In a steering mechanism for wheeled land vehicles the combination of a vehicle frame, a pair of swingable arms pivoted to said frame on respective horizontal axes and projecting to opposite sides of the frame, each of said arms having its free end provided with an axle on which a wheel is mounted, a swiveled bracket disposed on a vertical axis at the front end of said frame, a draught bar pivotally connected to said bracket, and respective steering links pivotally connected at one end to the axle structures and at their other ends to the bracket, the last mentioned connection comprising a vertical pivot pin carried by the bracket structure, a pair of connector elements pivoted on said pin, and horizontally disposed pivotal connections between the steering links and the respective connector elements, the last mentioned pivotal connections being disposed in the same plane as the pivotal connections between the frame and the swingable arms.

2,459,754
PURIFICATION OF PHENOL SULFIDES AND PREPARATION OF METALLIC SALTS THEREOF
Harry E. Albert, Akron, Ohio, assignor to The Firestone Tire & Rubber Company, Akron, Ohio, a corporation of Ohio
No Drawing. Application May 23, 1946, Serial No. 671,908
9 Claims. (Cl. 260—429)

4. The process of purifying a phenol sulfide obtained by reacting a phenol with a sulfur chloride, comprising extracting the phenol sulfide with an aqueous solution of a sulfite of the class consisting of alkali metal sulfites and alkaline earth metal sulfites.

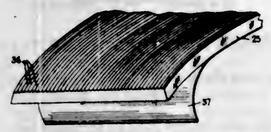
2,459,755
SEAT CUSHION, MULTIPLE TYPE
Hyland C. Flint, Akron, Ohio, assignor to The Firestone Tire & Rubber Company, Akron, Ohio, a corporation of Ohio
Application May 27, 1946, Serial No. 672,372
6 Claims. (Cl. 155—179)

5. In a seat cushion of the character described, the combination of a seat frame, a series of parallel transversely flat upwardly arched spring units each attached at one of its ends to one end of said frame, a similar series of spring units attached to the opposite end of said frame, centrally disposed clips connecting the spring units of one series to respective spring units of the other series, and a centrally disposed pier of yielding material located below said clips and yieldingly opposing downward deflection thereof.

2,459,756
BED STRUCTURE
Hyland C. Flint, Akron, Ohio, assignor to The Firestone Tire & Rubber Company, Akron, Ohio, a corporation of Ohio
Application July 5, 1946, Serial No. 681,554
6 Claims. (Cl. 5—351)

1. In a bed structure of the character described, the combination of an open rectangular base frame, an open rectangular floating frame positioned above the same, a mattress carried upon said floating frame, and series of pillars of resilient composition interposed between the base frame and floating frame on two opposite sides of said frames, said pillars having their top and bottom faces adhered to the floating frame and base frame respectively, each pillar having a lateral face in abutting relation to a depending portion of the floating frame so as to oppose lateral movement of the latter.

2,459,757
CAMELBACK MATERIAL
Thomas Q. Smith, Akron, Ohio, assignor to The Firestone Tire & Rubber Company, Akron, Ohio, a corporation of Ohio
Application July 9, 1946, Serial No. 682,201
5 Claims. (Cl. 152—187)



2. An improved tire building material comprising an elongate ribbon-like element of rubber or rubber-like material, said material being at least partially uncured, said ribbon being provided with a planate surface adapted to be applied to a tread surface of a pneumatic tire and an opposite surface adapted to be engaged by a mold, said opposite surface being provided throughout a substantial area thereof with a series of contiguously disposed ribs, said ribs extending longitudinally of said ribbon-like material in mutually spaced parallel relation.

2,459,758
BACK FOR SEATS
Hyland C. Flint, Akron, Ohio, assignor to The Firestone Tire & Rubber Company, Akron, Ohio, a corporation of Ohio
Application July 10, 1946, Serial No. 682,687
3 Claims. (Cl. 155—179)

1. In a seat back of the character described, the combination of a marginal metal supporting frame, and a resilient diaphragm-like structure attached at its margin to said frame, said diaphragm structure comprising a plurality of parallel, transversely extending flat spring units that are free at both ends, plies of textile fabric arranged on opposite sides of the spring units and bonded to the latter and to each other to maintain said spring units fixedly in determinate relation to each other, and layers of resilient foam rubber composition bonded to the respective plies of textile fabric, said diaphragm-like structure including a molded rubber attaching strip bonded to its rear face at the margin thereof, said mounting strip being so shaped as to effect interfitting with the said supporting frame.

2,459,759
N-MONOCHLOROCYCLOHEXYLAMINE
Glen Alliger, Cuyahoga Falls, Ohio, assignor to The Firestone Tire & Rubber Company, Akron, Ohio, a corporation of Ohio
No Drawing. Application September 5, 1946, Serial No. 695,051
1 Claim. (Cl. 260—563)
N-monochlorocyclohexylamine.

2,459,760
MANUFACTURE OF 2,3-DICHLORO-BUTADIENE-1,3
Robert T. O'Donnell, Montclair, N. J., assignor to The Firestone Tire & Rubber Company, Akron, Ohio, a corporation of Ohio
No Drawing. Application October 17, 1946, Serial No. 703,713
3 Claims. (Cl. 202—57)

2. Process which comprises distilling 2,3-dichlorobutadiene-1,3 through a reflux column, the metallic interior surfaces of which are coated with sodium silicate.

2,459,761
BUTADIENE-STYRENE COPOLYMER TACKIFIED WITH OXIDIZED ISOPRENE POLYMER
Henry F. Palmer, Akron, Ohio, assignor to The Firestone Tire & Rubber Company, Akron, Ohio, a corporation of Ohio
No Drawing. Application October 25, 1946, Serial No. 705,817
2 Claims. (Cl. 260—45.5)

1. The method of imparting tack to a rubbery coplymer of butadiene and styrene which comprises incorporating in 75 to 90 parts of the unvulcanized copolymer about 25 to 10 parts of unvulcanized, sticky, oxidized synthetic rubbery copolymer of 75 parts of isoprene and 25 parts of styrene.

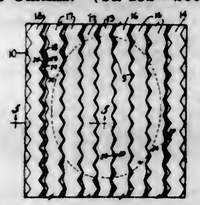
2,459,762
TIRE TREAD
Albert Hargraves, Cuyahoga Falls, Ohio, assignor to The Firestone Tire & Rubber Company,

ticles, sulphuric acid and moisture but free of such contaminations as arsenic and antimony which consists in mixing with said sulphur an acid-neutralizing material chosen from the group

ing a substantially continuous longitudinal corrugation formed therein and cross bolsters disposed transversely of the trailer body and having their ends inserted through the side wall

removed from said connector fitting to which said coupling is to be attached, said coupling

2,459,762
TIRE TREAD
Albert Hargraves, Cuyahoga Falls, Ohio, assignor to The Firestone Tire & Rubber Company, Akron, Ohio, a corporation of Ohio
Application December 24, 1946, Serial No. 718,234
5 Claims. (Cl. 152—209)



3. A tire tread construction formed with a plurality of endless circumferential ribs defining intervening grooves, the height and width of said ribs relative to the width of said grooves and the configuration of the lateral faces of said ribs being such that under normal load in service said ribs distort until their radial outer portions make lateral abutment at longitudinal intervals, the lateral faces of said ribs being uniformly and continuously serrated throughout their length, the pitch of the serrations on one side of a said groove being large and twice the pitch of small serrations on the other side of said groove, the teeth of the confronting serrations meshing under load with consecutive large pitch teeth entering alternate notches between the small pitch teeth, the altitude of the triangles forming the teeth of the large serrations relative to the depth of the notches in which they enter being such that when the tread is under load the apices of the teeth of said large serrations abut against the bottom of the notches they enter leaving the portions of said grooves between the said abutting portions unclosed forming recesses with their radially outward open ends exposed to the road surface when said tread is under load in service.

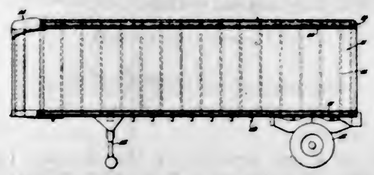
2,459,763
MANUFACTURE OF RUBBER PRODUCTS
Mark M. Heywood, Twickenham, England, assignor to The Firestone Tire & Rubber Company, Akron, Ohio, a corporation of Ohio
No Drawing. Application November 15, 1947, Serial No. 786,329. In Great Britain March 26, 1943
Section 1, Public Law 690, August 8, 1946
15 Claims. (Cl. 260—79)

1. Method of vulcanizing a substance of the group consisting of natural rubber, reclaimed rubber and synthetic rubbery conjugated diolefin polymers, which includes heating the substance and sulfur in the presence of a thiazole accelerator and an activator of the class consisting of cyclohexylammonium and dicyclohexylammonium salts of a cresol.

2,459,764
PURIFICATION OF NATIVE SULFUR
Frank M. Yelser, Buffalo, N. Y., assignor, by mesne assignments, to Niagara Research Corporation, Buffalo, N. Y.
No Drawing. Application June 14, 1945, Serial No. 599,519
2 Claims. (Cl. 23—224)

1. A method of purifying raw native sulphur containing contaminations including dirt particles, sulphuric acid and moisture but free of such contaminations as arsenic and antimony which consists in mixing with said sulphur an acid-neutralizing material chosen from the group consisting of oxygenous compounds of calcium and barium, the chosen material being added in a state in which it is capable of combining with sulphuric acid and moisture contaminations in the sulphur with the production of products which are insoluble in molten sulphur, the quantity of material which is added being in substantial excess over the quantity required for combination with said acid and moisture contaminants and thereupon conducting the sulphur in a molten state through a filter consisting in part at least of an acid-reactant metal whereby the sulphur contaminations and the added neutralizing material in combined and uncombined state are removed from the molten sulphur conducting said contaminated sulphur.

2,459,765
TRAILER BODY SIDE WALL CONSTRUCTION
James J. Black, Cincinnati, Ohio, assignor to The Trailmobile Company, a corporation of Delaware
Application April 13, 1944, Serial No. 530,851
3 Claims. (Cl. 296—28)



3. In a body for trailers or the like, a side wall formed from a laminated plastic sheet, said wall having relatively closely spaced inwardly projected corrugations formed therein, reinforcing elements inserted in the corrugations between the laminations of the sheets, a reinforcing panel member secured to the inner faces of the corrugations, and flooring members supported in relation to said side wall, said flooring members notched out so as to fit around the corrugations and said reinforcing panel counter-sunk at its lower end into said flooring.

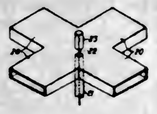
2,459,766
TRAILER BODY CONSTRUCTION
James J. Black, Cincinnati, Ohio, assignor to The Trailmobile Company, a corporation of Delaware
Application April 13, 1944, Serial No. 530,852
5 Claims. (Cl. 296—28)

1. In trailer body construction, a side wall substantially formed from a unitary corrugated plastic sheet extending for the entire height of the wall, said sheet having apertures in the lower edge thereof at spaced points along its length, a rail member extending along the lower edge of the wall on the outer surface thereof and concealing the apertures, said rail member having a substantially continuous longitudinal corrugation formed therein and cross bolsters disposed transversely of the trailer body and having their ends inserted through the side wall apertures and secured to the inner surface of the rail member corrugation.

2,459,767
MANUFACTURE OF CHLOROFLUORO METHANES
John D. Calfee, Manhasset, N. Y., and Lee B. Smith, Woodbridge, N. J., assignors to Allied Chemical & Dye Corporation, a corporation of New York
No Drawing. Application March 19, 1946, Serial No. 655,597
11 Claims. (Cl. 260—653)

9. The process which comprises heating at least monochlorinated ethylidene fluoride at temperature not less than 550° C. and not more than 950° C. in the presence of at least sufficient chlorine to form dichlorodifluoromethane.

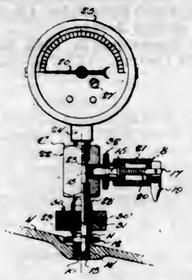
2,459,768
APPARATUS FOR THE RADIATION OR RECEPTION OF ELECTROMAGNETIC WAVES
Edward Cecil Cork and Michael Bowman-Manifold, Ealing, London, England, assignors to Electric & Musical Industries Limited, Hayes, England, a company of Great Britain
Application May 19, 1944, Serial No. 536,324
In Great Britain May 21, 1943
6 Claims. (Cl. 250—33.63)



1. Apparatus for the radiation of electromagnetic waves comprising a plurality of radiating elements each in the form of a tubular conductor having dimensions in a plane lying transversely of said conductor which in one direction are small compared with those in a direction perpendicular thereto, said radiating elements being radially arranged so that said waves will be radiated by said apparatus substantially uniformly in all directions in a plane and each of said radiating elements being energized by an energizing element including a portion of the inner conductor of a coaxial line disposed substantially at the center of the radially-arranged radiating elements, the outer conductor of said coaxial line being connected to said tubular conductors.

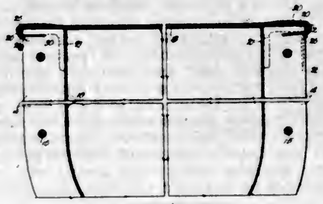
2,459,769
APPARATUS FOR TESTING PRESSURE GAUGES
William Eck, Manitowoc, Wis., assignor to Wisconsin Aluminum Foundry Company, Manitowoc, Wis., a corporation of Wisconsin
Application April 21, 1945, Serial No. 589,599
1 Claim. (Cl. 73—4)

An apparatus for testing a pressure indicator gauge on a pressure cooker without removing the same from the cooker comprising, a coupling for attachment to a valve connector fitting provided on said pressure cooker independent of the cooker gauge, a master pressure indicator gauge carried by said coupling, and an adapter fitting attached to said coupling for receiving the valve removed from said connector fitting to which said coupling is to be attached, said coupling



being provided with an orifice to release pressure within the cooker upon initial loosening of said coupling.

2,459,770
CONVEYER COVER CLAMPING AND DUST-SEALING MEANS
Edward P. Escher, Chicago, Ill., assignor to Screw Conveyor Corporation, Hammond, Ind., a corporation of Illinois
Application September 6, 1945, Serial No. 614,761
2 Claims. (Cl. 198—213)



2. Clamping and dust-sealing means for the removable cover plates of conveyor troughs having outwardly projecting flanges at their top edges, comprising U-shaped edging bands or strips removably fitted over the outer margins of said trough flanges and cover plates, and a normally curved and bow-shaped spring metal clamping strip having hook terminals for releasable engagement with said edging bands or strips at the opposite sides of the trough, with the intermediate or main body portion of said clamping strip in flattened clamping engagement with the upper face of the cover plates thereby holding said plates in cover position with said edging strips in sealing relation to the outer edges of said cover plates and trough flanges.

2,459,771
PHTHALOCYANINE SULFONAMIDO-PYRIDINES
Arthur L. Fox, Easton, Pa., assignor to General Aniline & Film Corporation, New York, N. Y., a corporation of Delaware
No Drawing. Application July 11, 1945, Serial No. 604,513
2 Claims. (Cl. 260—314.5)

1. Copper phthalocyanine containing attached to the phenylene nuclei between three and four sulfonamidopyridine groups.

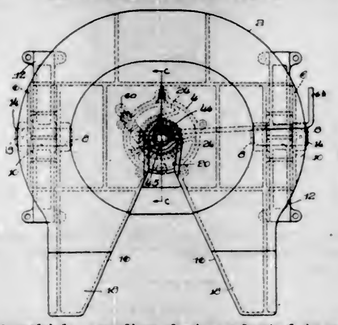
2,459,772
FIFTH WHEEL
Edmund P. Kinne, Alliance, Ohio, assignor to

penser, a water cooling unit below the dispenser, a drain fitting below the water cooling unit, an inlet connection for water to the cooling unit, a

pressed between said plate and said inboard wall for urging said plate into frictional engagement

oxy-6,9-dichloroacridine used; treating the reaction mixture with sodium hydroxide and water in amounts sufficient to produce an alkaline

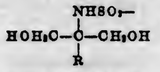
2,459,772
FIFTH WHEEL
Edmund P. Kinne, Alliance, Ohio, assignor to American Steel Foundries, Chicago, Ill., a corporation of New Jersey
Application September 25, 1944, Serial No. 555,679
24 Claims. (Cl. 280—33.05)



1. A vehicle coupling device adapted to coact with a draft pin comprising a housing having a cylindrical inner surface, a cylindrical member within said housing in engagement with said surface, said housing and said member having aligned openings centrally thereof with parallel passages extending radially therein for guiding said pin, said member having a portion in the opening thereof received within a groove around said pin, spring means for rotating said member to lock said pin with said device, and means associated with said member and housing and extending therethrough and into said groove for holding said member in a lockset position whereby said pin may be uncoupled from said members, said holding means being released from its engagement with said member upon movement of said pin into engagement therewith during coupling whereby said spring means will rotate said member to lock said pin with said device.

2,459,773
PHTHALOCYANINE POLYHYDROXYALKYLSULFONAMIDES
Raymond Lemuel Mayhew, Phillipsburg, N. J., assignor to General Aniline & Film Corporation, New York, N. Y., a corporation of Delaware
No Drawing. Application July 11, 1945, Serial No. 604,512
3 Claims. (Cl. 260—314.5)

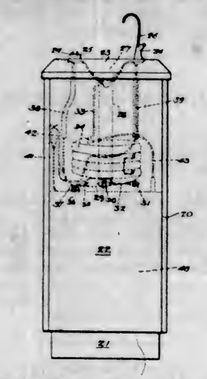
1. A copper phthalocyanine of the benzene series having attached to the phenylene nuclei up to four polyhydroxy sulfonamide groups of the formula:



wherein R is a member selected from the group consisting of methyl, ethyl and —CH_2OH.

2,459,774
WATER COOLER WITH A DRAIN ARRANGEMENT
Samuel O. Morrison, Media, Pa., assignor to Sunroc Refrigeration Company, Dover, Del., a corporation of Delaware
Application June 26, 1946, Serial No. 679,505
4 Claims. (Cl. 62—141)

1. In a water cooler, a drinking water dispenser, a water cooling unit below the dispenser, a drain fitting below the water cooling unit, an inlet connection for water to the cooling unit, a



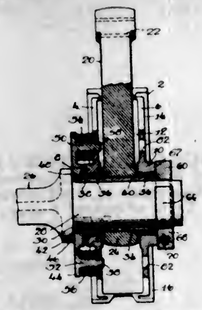
connection leading from the bottom of the cooling unit downward to the drain fitting and a connection leading upward from the drain fitting to the dispenser.

2,459,775
PROCESS OF ALKYLATION IN THE PRESENCE OF A DOUBLE FLUORIDE CATALYST
Herbert J. Passino, Englewood, N. J., assignor to The M. W. Kellogg Company, Jersey City, N. J., a corporation of Delaware
No Drawing. Application January 8, 1943, Serial No. 471,777
14 Claims. (Cl. 260—683.4)

3. A method for catalytically reacting an olefin hydrocarbon with an alkylatable non-olefin hydrocarbon which comprises contacting such reactants with each other under alkylating conditions of temperature, pressure, and space velocity in the presence of catalytic material comprising a compound of hydrogen fluoride and a fluoride selected from the group consisting of the fluorides of the alkali metals, the alkaline earth metals, and ammonium as the principal catalytically active component.

2,459,776
BRAKE HEAD BALANCING DEVICE
Walter L. Schlegel, Jr., Chicago, Ill., assignor to American Steel Foundries, Chicago, Ill., a corporation of New Jersey
Application June 18, 1945, Serial No. 600,053
25 Claims. (Cl. 188—230)

1. In a brake assembly, a brake head having spaced inboard and outboard walls, a beam provided with a shoulder and having a reduced trunnion end extending through aligned openings in said walls, a spring plate sleeved on said trunnion end in abutment with said shoulder and having spaced lugs extending into complementary openings in said inboard wall, a U-shaped retaining member having the spaced legs thereof receiving said trunnion end therebetween and extending through slots in the sides of said trunnion end, a block between said legs, a bolt and nut assembly extending through aligned openings in said legs and said block to prevent accidental disengagement of said member from said trunnion end, resilient means sleeved over said lugs and compressed between said plate and said inboard wall for urging said plate into frictional engagement with said shoulder and the outboard wall of said head into frictional engagement with said member, and stop lugs formed on said outboard wall

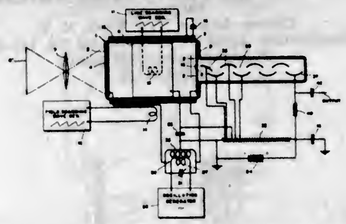


adjacent respective legs of said member, each of said stop lugs having surfaces converging toward the adjacent leg for engagement therewith to limit rotation of said plate and said head on said beam.

2,459,777
PROCESS OF MAKING QUINACRINE
Gail L. Shaw and Reuben G. Jones, Indianapolis, Ind., assignors to Eli Lilly and Company, Indianapolis, Ind., a corporation of Indiana
No Drawing. Application July 17, 1944, Serial No. 545,410
5 Claims. (Cl. 260—279)

1. The process of producing quinacrine which comprises reacting 2-methoxy-6,9-dichloroacridine and 1-diethylaminoethyl-4-aminopentane in the presence of at least one molecular equivalent of phenol relative to the amount of 2-methoxy-6,9-dichloroacridine used; treating the reaction mixture with sodium hydroxide and water in amounts sufficient to produce an alkaline aqueous layer having a specific gravity outside the range of about 1.062 to about 1.130; and separating the quinacrine as an oil.

2,459,778
IMAGE DISSECTOR
Christian C. Larson, Fort Wayne, Ind., assignor, by mesne assignments, to Farnsworth Research Corporation, a corporation of Indiana
Application July 9, 1945, Serial No. 603,981
11 Claims. (Cl. 178—7.2)



8. In a television image dissector tube having an evacuated envelope, a photosensitive cathode mounted in said envelope, an electrode in said envelope spaced from said cathode and provided with a scanning aperture, said electrode having a secondary electron emission ratio of less than unity, a secondary electron emissive surface formed on said electrode adjacent said aperture and facing said cathode, said surface having a secondary electron emission ratio of more than unity and also having an area that is small in comparison with the area of said cathode, and means for impressing an alternating voltage upon said cathode and said electrode.

152,392
DESIGN FOR A PARKING METER CASING
Carl A. Dauchy, Jr., Kansas City, Mo., assignor to Dual Parking Meter Corporation, Kansas City, Mo., a corporation of Missouri
Application August 30, 1947, Serial No. 29,139
Term of patent 7 years

152,394
DESIGN FOR A STOMACH EXERCISER OR SIMILAR ARTICLE
Ralph Dorfman, Chicago, Ill., assignor to Ralph Dorfman Co., Chicago, Ill., a corporation of Illinois
Application August 30, 1947, Serial No. 29,140
Term of patent 7 years

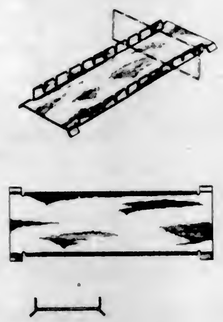
DESIGNS

JANUARY 18, 1949

152,388
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Claude Arpels, New York, N. Y.
Application April 27, 1948, Serial No. 145,987
Term of patent 3½ years
(Cl. D45—19)

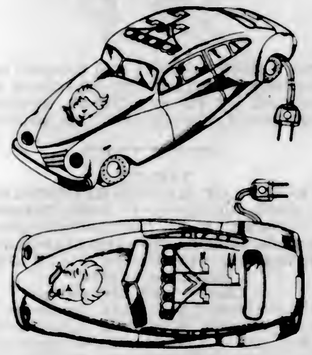
The ornamental design for a brooch or similar article, substantially as shown.

152,389
DESIGN FOR A RACK FOR MICROSCOPIC SLIDES OR SIMILAR ARTICLE
Vivian Ray Bennett, Yucca Valley, near Whitewater, Calif.
Application June 16, 1947, Serial No. 139,715
Term of patent 7 years
(Cl. D57—1)



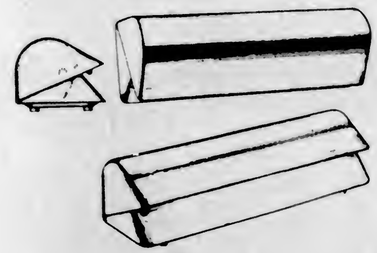
The ornamental design for a rack for microscopic slides or similar article, substantially as shown and described.

152,390
DESIGN FOR A NURSERY LAMP
Edward R. Brenner, Hollywood, Calif.
Application December 31, 1947, Serial No. 143,472
Term of patent 7 years
(Cl. D48—20)



The ornamental design for a nursery lamp, as shown.

152,391
DESIGN FOR A DISPENSER FOR A PAPER ROLL OR THE LIKE
Frank L. Broeren, Neenah, and Archie S. Krueger, Green Bay, Wis., assignors to Marathon Corporation, Rothschild, Wis., a corporation of Wisconsin
Application May 7, 1947, Serial No. 138,894
Term of patent 14 years
(Cl. D4—3)

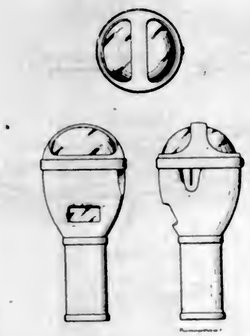


The ornamental design for a dispenser for a paper roll or the like, as shown.

152,396
DESIGN FOR A RING
Gertrude S. Cohen and Emanuel Cohen

152,398
DESIGN FOR A COMBINED BUMPER AND AUTOMOBILE GRILLE

152,392
DESIGN FOR A PARKING METER CASING
Robert F. Broussard, Houston, Tex., assignor to Duncan Meter Corporation, Chicago, Ill., a corporation of Illinois
Application June 27, 1947, Serial No. 139,967
Term of patent 14 years
(Cl. D52—3)



The ornamental design for a parking meter casing, as shown.

152,393
DESIGN FOR A DECANTER OR SIMILAR ARTICLE
John D. Buckingham, Chicago, Ill., assignor to Lucien Lelong, Inc., Chicago, Ill., a corporation of Illinois
Application December 4, 1947, Serial No. 142,951
Term of patent 14 years
(Cl. D58—6)

The ornamental design for a decanter or similar article, as shown.

152,394
DESIGN FOR A STOMACH EXERCISER OR SIMILAR ARTICLE
John J. Ceverha, Chicago, Ill.
Application June 26, 1947, Serial No. 139,932
Term of patent 14 years
(Cl. D63—1)

The ornamental design for a stomach exerciser or similar article, as shown.

152,395
DESIGN FOR AN ALPHABET FOR FORMING MONOGRAMS OR THE LIKE
Michael Chernow, New York, N. Y.
Application April 5, 1948, Serial No. 145,546
Term of patent 14 years
(Cl. D64—12)

The ornamental design for an alphabet for forming monograms or the like, substantially as shown.

152,400
DESIGN FOR AN AUTOMOBILE
Virgil M. Exner, South Bend, Ind., assignor to

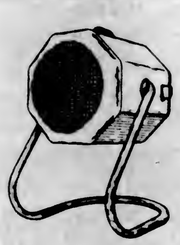
DESIGN FOR A PHONOGRAPH TONE ARM OR THE LIKE
Joseph B. Federico, New Baltimore, Mich., as-

954

152,396
DESIGN FOR A RING
Gertrude S. Cohen and Emanuel Cohen, Newark, N. J.
Application June 27, 1947, Serial No. 139,960
Term of patent 14 years
(Cl. D45—10)

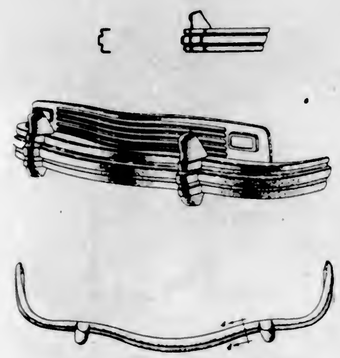
The ornamental design for a ring, as shown.

152,397
DESIGN FOR AN ELECTRIC HEATING RADIATOR
Emile Damond, Paris, France
Application January 24, 1947, Serial No. 136,376
In France January 28, 1946
Term of patent 14 years
(Cl. D81—10)



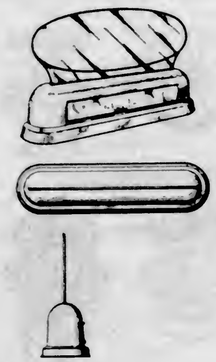
The ornamental design for an electric heating radiator, as shown and described.

152,398
DESIGN FOR A COMBINED BUMPER AND AUTOMOBILE GRILLE
Howard A. Darrin, Hollywood, Calif., assignor, by mesne assignments, to Kaiser-Fraser Corporation, Willow Run, Mich., a corporation of Nevada
Application July 26, 1946, Serial No. 131,956
Term of patent 14 years
(Cl. D14—6)



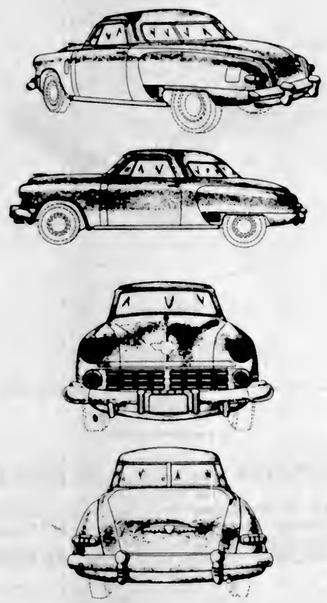
The ornamental design for a combined bumper and automobile grille, substantially as shown.

152,399
DESIGN FOR A COUNTER SIGN
Charles L. Dwinell, Kansas City, Mo.
Application January 19, 1948, Serial No. 143,874
Term of patent 14 years
(Cl. D1—12)



The ornamental design for a counter sign, as shown.

152,400
DESIGN FOR AN AUTOMOBILE
Virgil M. Exner, South Bend, Ind., assignor to The Studebaker Corporation, South Bend, Ind., a corporation of Delaware
Application October 10, 1946, Serial No. 133,869
Term of patent 7 years
(Cl. D14—3)



The ornamental design for an automobile, as shown and described.

152,401
DESIGN FOR A PHONOGRAPH TONE ARM OR THE LIKE
Joseph B. Federico, New Baltimore, Mich., assignor to The Astatic Corporation, Conneaut, Ohio, a corporation of Ohio
Application March 28, 1947, Serial No. 137,981
Term of patent 7 years
(Cl. D26—14)

The ornamental design for a phonograph tone arm or the like, as shown.

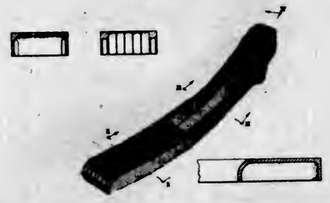
152,402
DESIGN FOR A PHONOGRAPH TONE ARM OR THE LIKE
Joseph B. Federico, New Baltimore, Mich., assignor to The Astatic Corporation, Conneaut, Ohio, a corporation of Ohio
Application March 28, 1947, Serial No. 137,983
Term of patent 7 years
(Cl. D26—14)

The ornamental design for a phonograph tone arm or the like, as shown.

152,403
DESIGN FOR A PHONOGRAPH TONE ARM OR THE LIKE
Joseph B. Federico, New Baltimore, Mich., assignor to The Astatic Corporation, Conneaut, Ohio, a corporation of Ohio
Application March 28, 1947, Serial No. 137,984
Term of patent 7 years
(Cl. D26—14)

The ornamental design for a phonograph tone arm or the like, as shown.

152,404
DESIGN FOR A PHONOGRAPH TONE ARM OR THE LIKE
Joseph B. Federico, New Baltimore, Mich., assignor to The Astatic Corporation, Conneaut, Ohio, a corporation of Ohio
Application March 28, 1947, Serial No. 137,985
Term of patent 7 years
(Cl. D26—14)



The ornamental design for a phonograph tone arm or the like, as shown.

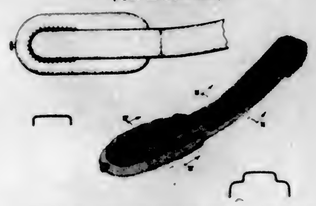
152,405
DESIGN FOR A PHONOGRAPH TONE ARM OR THE LIKE

152,406
DESIGN FOR A PHONOGRAPH TONE ARM OR THE LIKE

152,410
DESIGN FOR A PHONOGRAPH TONE ARM OR THE LIKE

152,412
DESIGN FOR A PHONOGRAPH TONE ARM OR THE LIKE

152,405
DESIGN FOR A PHONOGRAPH TONE ARM OR THE LIKE
Joseph B. Federico, New Baltimore, Mich., assignor to The Astatic Corporation, Conneaut, Ohio, a corporation of Ohio
Application March 28, 1947, Serial No. 137,986
Term of patent 7 years
(Cl. D26—14)

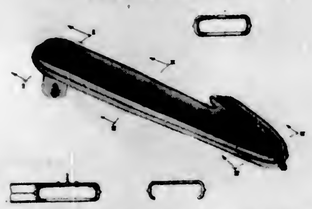


The ornamental design for a phonograph tone arm or the like, as shown.

152,406
DESIGN FOR A PHONOGRAPH TONE ARM OR THE LIKE
Joseph B. Federico, New Baltimore, Mich., assignor to The Astatic Corporation, Conneaut, Ohio, a corporation of Ohio
Application March 28, 1947, Serial No. 137,989
Term of patent 7 years
(Cl. D26—14)

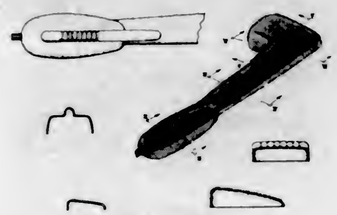
The ornamental design for a phonograph tone arm or the like, as shown.

152,407
DESIGN FOR A PHONOGRAPH TONE ARM OR THE LIKE
Joseph B. Federico, New Baltimore, Mich., assignor to The Astatic Corporation, Conneaut, Ohio, a corporation of Ohio
Application March 28, 1947. Serial No. 137,990
Term of patent 7 years
(Cl. D26—14)



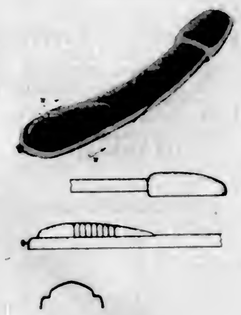
The ornamental design for a phonograph tone arm or the like, as shown.

152,408
DESIGN FOR A PHONOGRAPH TONE ARM OR THE LIKE
Joseph B. Federico, New Baltimore, Mich., assignor to The Astatic Corporation, Conneaut, Ohio, a corporation of Ohio
Application March 28, 1947, Serial No. 137,991
Term of patent 7 years
(Cl. D26—14)



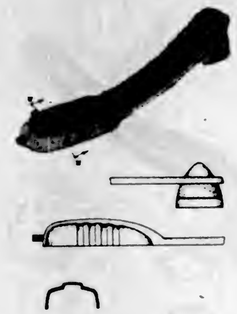
The ornamental design for a phonograph tone arm or the like, as shown.

152,409
DESIGN FOR A PHONOGRAPH TONE ARM OR THE LIKE
Joseph B. Federico, New Baltimore, Mich., assignor to The Astatic Corporation, Conneaut, Ohio, a corporation of Ohio
Application June 3, 1947, Serial No. 139,437
Term of patent 7 years
(Cl. D26—14)



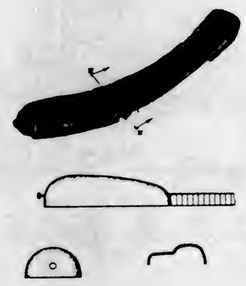
The ornamental design for a phonograph tone arm or the like, as shown.

152,410
DESIGN FOR A PHONOGRAPH TONE ARM OR THE LIKE
Joseph B. Federico, New Baltimore, Mich., assignor to The Astatic Corporation, Conneaut, Ohio, a corporation of Ohio
Application June 3, 1947, Serial No. 139,438
Term of patent 7 years
(Cl. D26—14)



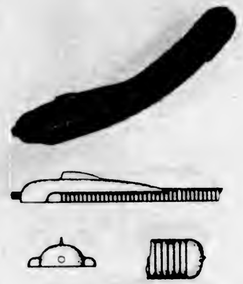
The ornamental design for a phonograph tone arm or the like, as shown.

152,411
DESIGN FOR A PHONOGRAPH TONE ARM OR THE LIKE
Joseph B. Federico, New Baltimore, Mich., assignor to The Astatic Corporation, Conneaut, Ohio, a corporation of Ohio
Application June 3, 1947, Serial No. 139,439
Term of patent 7 years
(Cl. D26—14)



The ornamental design for a phonograph tone arm or the like, as shown.

152,412
DESIGN FOR A PHONOGRAPH TONE ARM OR THE LIKE
Joseph B. Federico, New Baltimore, Mich., assignor to The Astatic Corporation, Conneaut, Ohio, a corporation of Ohio
Application June 3, 1947, Serial No. 139,440
Term of patent 7 years
(Cl. D26—14)



The ornamental design for a phonograph tone arm or the like, as shown.

152,413
DESIGN FOR A PHONOGRAPH TONE ARM OR THE LIKE
Joseph B. Federico, New Baltimore, Mich., assignor to The Astatic Corporation, Conneaut, Ohio, a corporation of Ohio
Application August 29, 1947, Serial No. 141,122
Term of patent 7 years
(Cl. D26—14)

The ornamental design for a phonograph tone arm or the like, as shown.

152,414
DESIGN FOR A PHONOGRAPH TONE ARM OR THE LIKE
Joseph B. Federico, New Baltimore, Mich., assignor to The Astatic Corporation, Conneaut, Ohio, a corporation of Ohio
Application March 28, 1947, Serial No. 137,987
Term of patent 7 years
(Cl. D26—14)

The ornamental design for a phonograph tone arm or the like, as shown.

152,415
DESIGN FOR A PHONOGRAPH TONE ARM OR THE LIKE
Joseph B. Federico, New Baltimore, Mich., assignor to The Astatic Corporation, Conneaut, Ohio, a corporation of Ohio
Application March 28, 1947, Serial No. 137,988
Term of patent 7 years
(Cl. D26—14)

The ornamental design for a phonograph tone arm or the like, as shown.

152,416
DESIGN FOR A PHONOGRAPH TONE ARM OR THE LIKE
Joseph B. Federico, New Baltimore, Mich., assignor to The Astatic Corporation, Conneaut, Ohio, a corporation of Ohio
Application June 3, 1947, Serial No. 139,436
Term of patent 7 years
(Cl. D26—14)

The ornamental design for a phonograph tone arm or the like, as shown.

152,418
DESIGN FOR A BICYCLE BELL
Wyman N. Hill, East Hampton, Conn., assignor to The N. N. Hill Brass Company, East Hampton, Conn., a corporation of Connecticut
Application November 7, 1947, Serial No. 142,378
Term of patent 7 years
(Cl. D12—1)

The ornamental design for a bicycle bell, as shown.

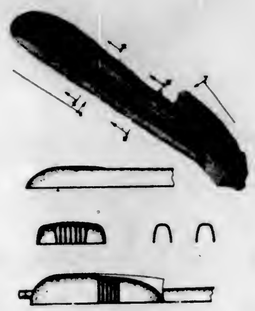
152,419
DESIGN FOR A JEWELRY PIN
Daniel Kasoff, Brooklyn, N. Y., assignor to David Grad Company, New York, N. Y., a firm
Application July 16, 1948, Serial No. 147,621
Term of patent 3½ years
(Cl. D3—1)

The ornamental design for a jewelry pin, as shown.

152,420
DESIGN FOR A JEWELRY PIN
Daniel Kasoff, Brooklyn, N. Y., assignor to David Grad Company, New York, N. Y., a firm
Application July 16, 1948, Serial No. 147,622
Term of patent 3½ years
(Cl. D3—1)

The ornamental design for a jewelry pin, as shown.

152,414
DESIGN FOR A PHONOGRAPH TONE ARM OR THE LIKE
Joseph B. Federico, New Baltimore, Mich., assignor to The Astatic Corporation, Conneaut, Ohio, a corporation of Ohio
Application August 29, 1947, Serial No. 141,123
Term of patent 7 years
(Cl. D26—14)



The ornamental design for a phonograph tone arm or the like, as shown.

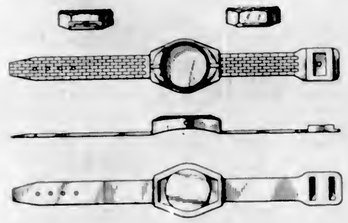
152,415
DESIGN FOR A PHONOGRAPH TONE ARM OR THE LIKE
Joseph B. Federico, New Baltimore, Mich., assignor to The Astatic Corporation, Conneaut, Ohio, a corporation of Ohio
Application August 29, 1947, Serial No. 141,124
Term of patent 7 years
(Cl. D26—14)

The ornamental design for a phonograph tone arm or the like, as shown.

152,416
DESIGN FOR A PHONOGRAPH TONE ARM OR THE LIKE
Joseph B. Federico, New Baltimore, Mich., assignor to The Astatic Corporation, Conneaut, Ohio, a corporation of Ohio
Application August 29, 1947, Serial No. 141,125
Term of patent 7 years
(Cl. D26—14)

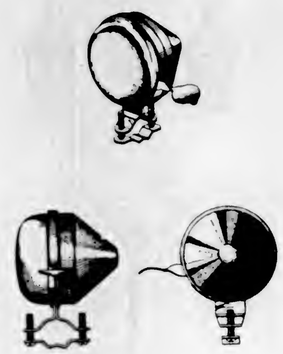
The ornamental design for a phonograph tone arm or the like, as shown.

152,417
DESIGN FOR A COMBINED WRIST WATCH CASE AND BAND
Sheldon B. Glass, Chicago, Ill.
Application April 17, 1948, Serial No. 145,789
Term of patent 14 years
(Cl. D42—8)



The ornamental design for a combined wrist watch case and band, substantially as shown.

152,418
DESIGN FOR A BICYCLE BELL
Wyman N. Hill, East Hampton, Conn., assignor to The N. N. Hill Brass Company, East Hampton, Conn., a corporation of Connecticut
Application November 7, 1947, Serial No. 142,378
Term of patent 14 years
(Cl. D72—1)



The ornamental design for a bicycle bell, substantially as shown and described.

152,419
DESIGN FOR A FLOOR POLISHER
Paul W. Johnson, Toronto, Ontario, Canada
Application May 12, 1948, Serial No. 146,329
Term of patent 3½ years
(Cl. D9—2)

The ornamental design for a floor polisher, as shown.

152,420
DESIGN FOR A JEWELRY PIN
Daniel Kasoff, Brooklyn, N. Y., assignor to David Grad Company, New York, N. Y., a firm
Application July 16, 1948, Serial No. 147,622
Term of patent 3½ years
(Cl. D45—19)

The ornamental design for a jewelry pin, substantially as shown.

152,421
DESIGN FOR A JEWELRY PIN
Daniel Kasoff, Brooklyn, N. Y., assignor to David Grad Company, New York, N. Y., a firm
Application July 16, 1948, Serial No. 147,623
Term of patent 3½ years
(Cl. D45—19)

The ornamental design for a jewelry pin, substantially as shown.

152,422
DESIGN FOR A JEWELRY PIN
Daniel Kasoff, Brooklyn, N. Y., assignor to David Grad Company, New York, N. Y., a firm
Application July 16, 1948, Serial No. 147,625
Term of patent 3½ years
(Cl. D45—19)

152,424
DESIGN FOR A JEWELRY PENDANT
Daniel Kasoff, Brooklyn, N. Y., assignor to David Grad Company, New York, N. Y., a firm
Application July 16, 1948, Serial No. 147,627
Term of patent 3½ years
(Cl. D45—19)

152,426
DESIGN FOR A PLAY HORSE OR SIMILAR ARTICLE
Jack D. Kelly, New York, N. Y.
Application June 28, 1946, Serial No. 131,141
Term of patent 3½ years
(Cl. D21—7)

152,428
DESIGN FOR A COMBINED STORAGE AND SELF-SERVING CABINET
Joseph H. Lazar, Chicago, Ill.
Application November 8, 1946, Serial No. 134,635
Term of patent 7 years
(Cl. D6—1)

152,422
DESIGN FOR A JEWELRY PIN
Daniel Kasoff, Brooklyn, N. Y., assignor to David Grad Company, New York, N. Y., a firm
Application July 16, 1948, Serial No. 147,625
Term of patent 3½ years
(Cl. D45—19)

The ornamental design for a jewelry pin, substantially as shown.

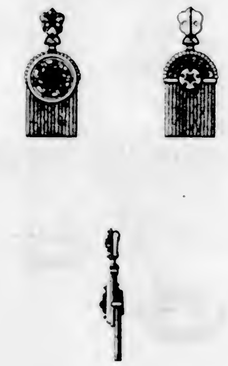
152,423
DESIGN FOR A JEWELRY PENDANT
Daniel Kasoff, Brooklyn, N. Y., assignor to David Grad Company, New York, N. Y., a firm
Application July 16, 1948, Serial No. 147,626
Term of patent 3½ years
(Cl. D45—19)

The ornamental design for a jewelry pendant, substantially as shown.

152,424
DESIGN FOR A JEWELRY PENDANT
Daniel Kasoff, Brooklyn, N. Y., assignor to David Grad Company, New York, N. Y., a firm
Application July 16, 1948, Serial No. 147,627
Term of patent 3½ years
(Cl. D45—19)

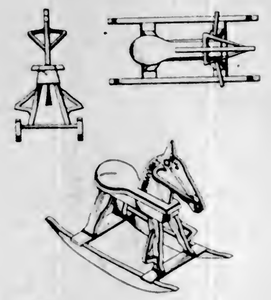
The ornamental design for a jewelry pendant, substantially as shown.

152,425
DESIGN FOR A JEWELRY PENDANT
Daniel Kasoff, Brooklyn, N. Y., assignor to David Grad Company, New York, N. Y., a firm
Application July 16, 1948, Serial No. 147,628
Term of patent 3½ years
(Cl. D45—19)



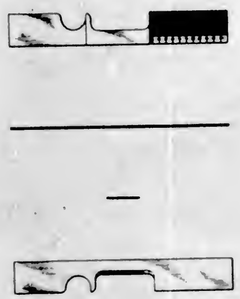
The ornamental design for a jewelry pendant, substantially as shown.

152,426
DESIGN FOR A PLAY HORSE OR SIMILAR ARTICLE
Jack D. Kelly, New York, N. Y.
Application June 28, 1946, Serial No. 131,141
Term of patent 3½ years
(Cl. D34—15)



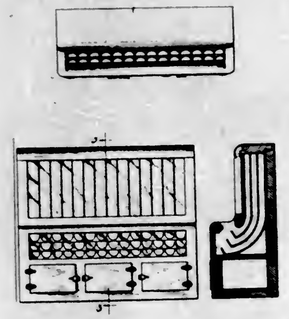
The ornamental design for a play horse or similar article, as shown.

152,427
DESIGN FOR A PUPILLARY MILLIMETER MEASURE
Michael B. Kendis, Kansas City, Mo.
Application May 26, 1947, Serial No. 139,287
Term of patent 7 years
(Cl. D52—1)



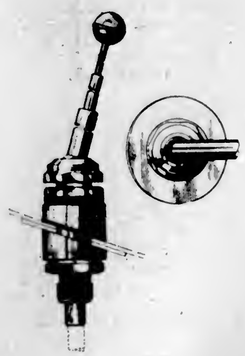
The ornamental design for a pupillary millimeter measure, as shown.

152,428
DESIGN FOR A COMBINED STORAGE AND SELF-SERVING CABINET
Joseph H. Lazar, Chicago, Ill.
Application November 8, 1946, Serial No. 134,635
Term of patent 7 years
(Cl. D80—11)



The ornamental design for a combined storage and self-serving cabinet, substantially as shown.

152,429
DESIGN FOR A COMBINED ANTENNA AND SUPPORT THEREFOR
Sidney Ludwig, Cleveland Heights, and Robert R. Cull, Brecksville, Ohio
Application January 27, 1947, Serial No. 136,457
Term of patent 7 years
(Cl. D14—6)



The ornamental design for a combined antenna and support therefor, as shown and described.

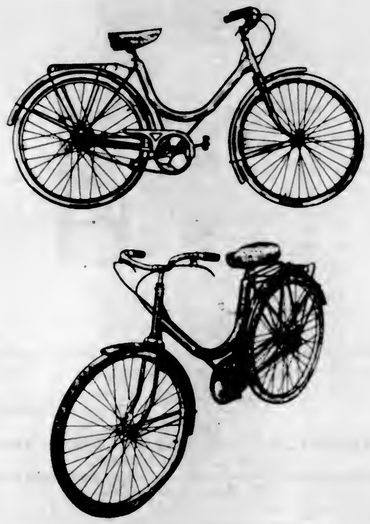
152,430
DESIGN FOR A BICYCLE
Marcel Mennesson, Neuilly-sur-Seine, France, assignor to Societe D'Apparell De Controle & D'Equipement Des Moteurs (S. A. C. E. M.)

152,432
DESIGN FOR A BINOCULAR OR THE LIKE
Willard T. Perkins, Irondequoit, N. Y., assignor to Bausch & Lomb Optical Company, Rochester, N. Y., a corporation of New York

152,434
DESIGN FOR A COMBINED NECKLACE AND EAR RINGS OR SIMILAR ARTICLE
Madge H. Pizzano and Charles W. Pizzano, Marblehead, Mass.

152,436
DESIGN FOR A DRAPEABLE UMBRELLA
Emanuel Schreck, Forest Hills, N. Y.
Application June 25, 1947, Serial No. 139,902
Term of patent 14 years
(Cl. D88—3)

152,430
DESIGN FOR A BICYCLE
Marcel Mennesson, Neuilly-sur-Seine, France, assignor to Societe D'Appareil De Controle & D'Equipement Des Moteurs (S. A. C. E. M.) S. A., Neuilly-sur-Seine, France, a society of France
Application May 10, 1946, Serial No. 129,587
In France June 15, 1943
Section 1, Public Law 690, August 8, 1946
Term of patent 14 years
(Cl. D90—8)

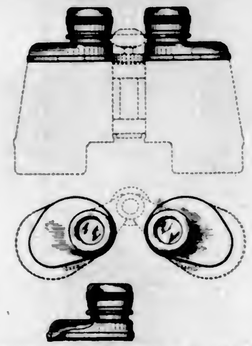


The ornamental design for a bicycle, as shown.

152,431
DESIGN FOR A BOTTLE
Jacob Payne, New York, N. Y.
Application September 12, 1947, Serial No. 141,347
Term of patent 7 years
(Cl. D58—9)

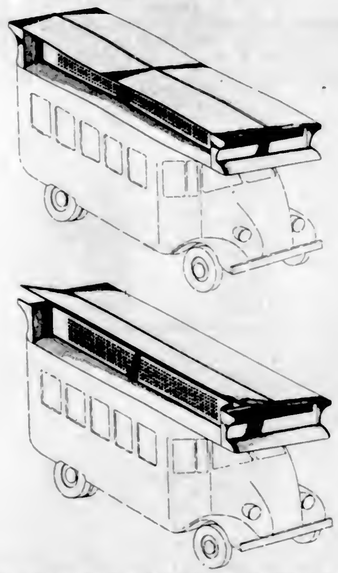
The ornamental design for a bottle, substantially as shown.

152,432
DESIGN FOR A BINOCULAR OR THE LIKE
Willard T. Perkins, Irondequoit, N. Y., assignor to Bausch & Lomb Optical Company, Rochester, N. Y., a corporation of New York
Application December 2, 1947, Serial No. 142,917
Term of patent 14 years
(Cl. D57—1)



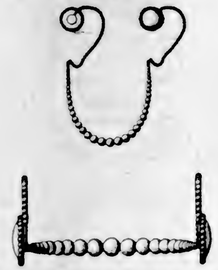
The ornamental design for a binocular or the like, substantially as shown and described.

152,433
DESIGN FOR AN ELECTRIC ADVERTISING SIGN FOR VEHICLES
George McGuire Pierce, Los Angeles, Calif.
Application May 23, 1947, Serial No. 139,248
Term of patent 14 years
(Cl. D14—27)



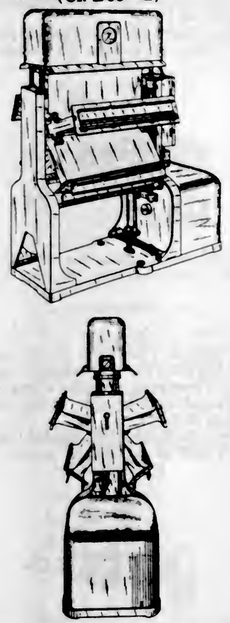
The ornamental design for an electric advertising sign for vehicles, substantially as shown and described.

152,434
DESIGN FOR A COMBINED NECKLACE AND EAR RINGS OR SIMILAR ARTICLE
Madge H. Pizzano and Charles W. Pizzano, Marblehead, Mass.
Application August 8, 1947, Serial No. 140,776
Term of patent 3½ years
(Cl. D45—16)



The ornamental design for a combined necklace and ear rings or similar article, substantially as shown.

152,435
DESIGN FOR A VACUUM PACKAGING MACHINE
Theodor M. Reimers, Chicago, Ill., assignor to Standard Cap and Seal Corporation, Chicago, Ill., a corporation of Virginia
Application May 26, 1947, Serial No. 139,292
Term of patent 7 years
(Cl. D55—1)

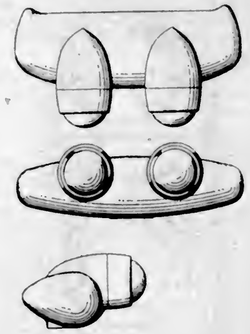


The ornamental design for a vacuum packaging machine, substantially as shown and described.

152,436
DESIGN FOR A DRAPEABLE UMBRELLA
Emanuel Schreck, Forest Hills, N. Y.
Application June 25, 1947, Serial No. 139,902
Term of patent 14 years
(Cl. D88—3)

The ornamental design for a drapeable umbrella, substantially as shown and described.

152,437
DESIGN FOR A HEADLIGHT CLUSTER FOR BICYCLE
Viktor Schreckengost, Cleveland Heights, Ohio, assignor to The Murray-Ohio Manufacturing Company, Cleveland, Ohio, a corporation of Ohio
Application September 10, 1947, Serial No. 141,287
Term of patent 7 years
(Cl. D48—32)



The ornamental design for a headlight cluster for bicycle, substantially as shown.

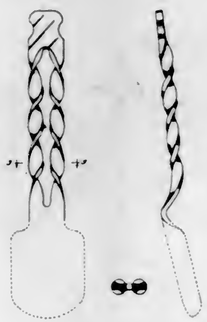
152,438
DESIGN FOR A SPOON OR ARTICLE OF

152,440
DESIGN FOR AN ASH TRAY

152,443
DESIGN FOR A FONT OF TYPE

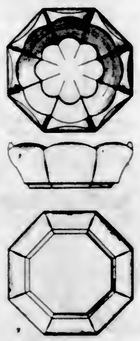
152,444
DESIGN FOR A BOAT
Clyde A. Ward, San Francisco, Calif.

152,438
DESIGN FOR A SPOON OR ARTICLE OF SIMILAR NATURE
Fred J. Skrastin, Jr., Butte, Mont.
Application January 30, 1948, Serial No. 144,182
Term of patent 7 years
(Cl. D44—29)



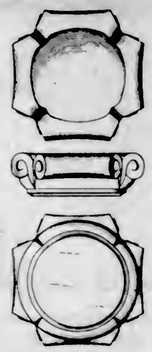
The ornamental design for a spoon or article of similar nature, substantially as shown and described.

152,439
DESIGN FOR AN ASH TRAY
Joseph B. Stier, New York, N. Y.
Application January 14, 1948, Serial No. 143,739
Term of patent 7 years
(Cl. D85—2)



The ornamental design for an ash tray, substantially as shown.

152,440
DESIGN FOR AN ASH TRAY
Joseph B. Stier, New York, N. Y.
Application January 14, 1948, Serial No. 143,741
Term of patent 14 years
(Cl. D85—2)

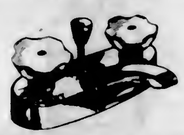


The ornamental design for an ash tray, substantially as shown.

152,441
DESIGN FOR A TUB FILLER WITH TRANSFER UNIT FOR DIVERTING WATER TO SHOWER
Amy Lenore Thomssen, Toledo, Ohio, assignor to Barnes Manufacturing Co., Mansfield, Ohio, a corporation of Ohio
Application April 30, 1947, Serial No. 138,728
Term of patent 14 years
(Cl. D4—3)

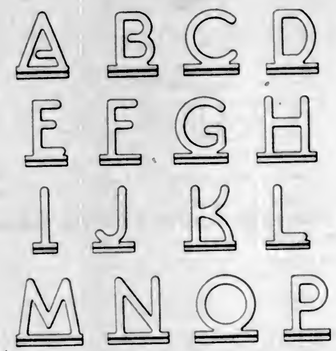
The ornamental design for a tub filler with transfer unit for diverting water to shower, as shown.

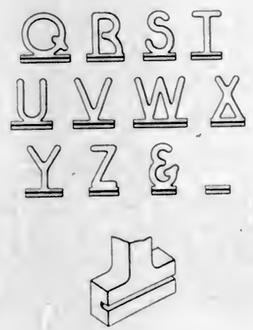
152,442
DESIGN FOR A CENTER SET LAVATORY FAUCET WITH POP-UP DRAIN CONTROL
Amy Lenore Thomssen, Toledo, Ohio, assignor to Barnes Manufacturing Co., Mansfield, Ohio, a corporation of Ohio
Application April 30, 1947, Serial No. 138,729
Term of patent 14 years
(Cl. D4—3)



The ornamental design for a center set lavatory faucet with pop-up drain control, as shown.

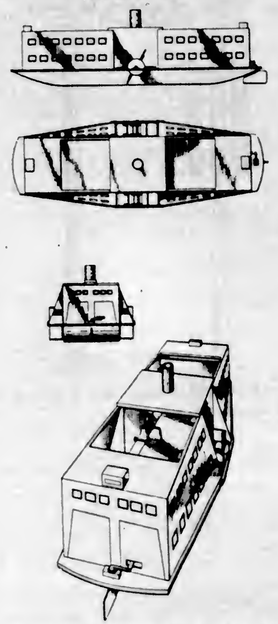
152,443
DESIGN FOR A FONT OF TYPE
John Randall Walker, Flushing, N. Y., assignor to Norcross, Inc., New York, N. Y., a corporation of New York
Application May 24, 1948, Serial No. 146,557
Term of patent 7 years
(Cl. D64—12)





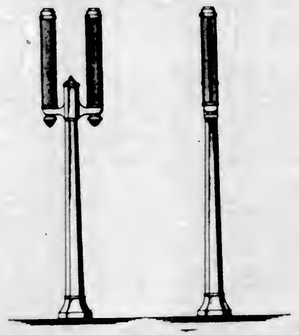
The ornamental design for a font of type, as shown.

152,444
DESIGN FOR A BOAT
Clyde A. Ward, San Francisco, Calif.
Application May 5, 1947, Serial No. 138,819
Term of patent 3½ years
(Cl. D71—1)



The ornamental design for a boat, as shown.

152,445
DESIGN FOR A STREET LIGHTING STANDARD
Alva B. Winters, Golf, Ill., assignor to Revere Electric Manufacturing Co., Chicago, Ill.
Application February 20, 1948, Serial No. 144,626
Term of patent 14 years
(Cl. D48—31)



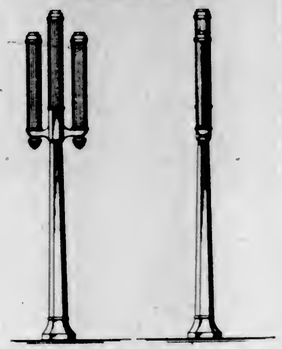
The ornamental design for a street lighting standard, as shown.

152,446
DESIGN FOR A STREET LIGHTING STANDARD

152,447
DESIGN FOR A CUFF LINK
Viola T. Howard, Saylesville, R. I., assignor to

LIST OF TRADE-MARK APPLICANTS

152,446
DESIGN FOR A STREET LIGHTING STANDARD
Alva B. Winters, Golf, Ill., assignor to Revere Electric Manufacturing Co., Chicago, Ill.
Application February 20, 1948, Serial No. 144,627
Term of patent 14 years
(Cl. D48—31)



The ornamental design for a street lighting standard, as shown.

152,447
DESIGN FOR A CUFF LINK
Viola T. Howard, Saylesville, R. I., assignor to Swank, Inc., a corporation of Delaware
Application December 16, 1948, Serial No. 150,189
Term of patent 14 years
(Cl. D17—7)

The ornamental design for a cuff link, substantially as shown.

Cleanser in powder form, All-purpose. Virginia-Carolina Chemical Corporation. 505,853, Jan. 18; Serial No. 558,830, published Oct. 5, 1948.
Detergent, Powdered. Adco, Inc. 505,806, Jan. 18; Serial No. 543,256, published July 27, 1948.
Detergents for industrial usage. Hampden Color and Chemical Company. 505,742, Jan. 18; Serial No. 533,563, published Oct. 5, 1948.
Detergents, Surface active. Oronite Chemical Company. 505,827, Jan. 18; Serial No. 549,836, published Oct. 5, 1948.
Detergents, Surface active. Oronite Chemical Company. 505,828, Jan. 18; Serial No. 549,837, published Oct. 5, 1948.
Dressing and polish, Shoe. Henderson Bros. Corporation. 278,184, Dec. 9, 1930. Republished Jan. 18.
Finishes in the nature of waterproof lacquers. Rohm & Haas Company. 253,662, renewed Mar. 5, 1949. O. G. Jan. 18.
Furniture-cleaning compound. N. S. Hillyard. 199,628, June 16, 1925. Republished Jan. 18.
Leather-dressing oils. The Pierce Company. 119,111, Oct. 23, 1917. Republished Jan. 18.
Lime, either in lump or powdered form. C. H. Gaylord. 22,273, July 16, 1918. Republished Jan. 18.
Material for cleaning and polishing metal, glass, and marble. The Matchless Metal Polish Co. 57,565, Nov. 13, 1906. Republished Jan. 18.
Material for cleaning and polishing metal, glass, and marble. The Matchless Metal Polish Co. 57,736, Nov. 27, 1906. Republished Jan. 18.
Oils for treating artificial and real leather. The Pierce Company. 167,915, May 8, 1923. Republished Jan. 18.
Pads, Cleanser, a preparation in powder form for general household cleaning, etc. The Great American Tea Company. 505,834, Jan. 18; Serial No. 550,503, published Oct. 12, 1948.
Polishing wheels. Advance Polishing Wheels, Inc. 344,175, Mar. 16, 1937. Republished Jan. 18.
Powder for cleaning silverware. R. Schrager. 505,843, Jan. 18; Serial No. 554,923, published Oct. 5, 1948.

Preparation for cleaning glass, Liquid, and a general household cleanser in powder form. The Great American Tea Company. 505,832, Jan. 18; Serial No. 550,501, published Oct. 12, 1948.
Preparation in powder form for cleaning closet bowls. The Great American Tea Company. 505,833, Jan. 18; Serial No. 550,502, published Oct. 12, 1948.
Soap. Armour and Company. 505,720, Jan. 18; Serial No. 529,852, published Oct. 5, 1948.
Soap. Armour and Company. 505,721–2, Jan. 18; Serial Nos. 529,854–5, published Oct. 5, 1948.
Soap. Armour and Company. 505,855, Jan. 18; Serial No. 560,157, published Oct. 12, 1948.
Soap. The M. Werk Company. 505,839, Jan. 18; Serial No. 552,294, published Oct. 12, 1948.
Soap and laundry soap, Granulated. P. M. Cooter. 505,738, Jan. 18; Serial No. 532,429, published Aug. 17, 1948.
Soap and washing compounds, Powdered. Scientific Supply Co., Inc. 505,823, Jan. 18; Serial No. 546,880, published Oct. 12, 1948.
Soap, dry cleaning compound, general cleaning or washing compounds, etc. U. S. Sanitary Specialties Corporation. 505,786, Jan. 18; Serial No. 541,359, published Oct. 12, 1948.
Soap powder combined with mineral ingredients. The Cudahy Packing Company. 505,836, Jan. 18; Serial No. 550,792, published Oct. 12, 1948.
Soap powder combined with mineral ingredients. The Cudahy Packing Company. 505,912, Jan. 18; Serial No. 555,802.
Soap, Toilet. Nettie Rosenstein, Inc. 505,856–7, Jan. 18; Serial Nos. 560,221–2, published Oct. 12, 1948.
Washing and cleaning compounds. F. Wilkes. 245,229, renewed Aug. 7, 1948. O. G. Jan. 18.

CLASS 5

Adhesive sheets, Pressure sensitive. Beutex Corporation. 505,670, Jan. 18; Serial No. 498,050, published Oct. 5, 1948.
Cement. Ford Motor Company. 254,900, renewed Apr. 2, 1949. O. G. Jan. 18.
Cement, Adhesive. The American Brake Shoe and Foundry Company. 368,614, June 27, 1939. Republished Jan. 18.
Chemical products derived from corn for adhesive purposes. Corn Products Refining Company. 505,681, Jan. 18; Serial No. 514,940, published Oct. 19, 1948.
Tape, Gummed sealing. Wurzburg Brothers. 432,903, Sept. 16, 1947. Republished Jan. 18.

CLASS 6

Adsorbent material, Packaged. Porocel Corporation. 505,669, Jan. 18; Serial No. 496,021, published Oct. 5, 1948.
Alcohol compound, Rubbing, vitamin B1, syrup of cocillana, mineral oil. National Package Drugs, Inc. 505,762, Jan. 18; Serial No. 537,220, published Oct. 12, 1948.
Aluminum carbonate gel, Basic. Wyeth Incorporated. 505,805, Jan. 18; Serial No. 543,247, published Oct. 5, 1948.
Aminomethylphenols, Substituted. Rohm & Haas Company. 435,061, Dec. 9, 1947. Republished Jan. 18.
Analgesic preparations. Stanback Company, Ltd. 505,815, Jan. 18; Serial No. 545,553, published Oct. 5, 1948.
Antacid preparation. Burroughs Wellcome & Co. (U. S. A.) Inc. 505,842, Jan. 18; Serial No. 552,742, published Oct. 19, 1948.
Balm, Hand and skin. Morton Manufacturing Corporation. 505,838, Jan. 18; Serial No. 551,573, published Oct. 19, 1948.
Bath salts. R. H. Clark. 505,701, Jan. 18; Serial No. 527,534, published Oct. 5, 1948.
Bleaching, cleansing, antiseptic, and germicidal compounds. Clorox Chemical Co. 505,907, Jan. 18; Serial No. 542,282.
Calamine lotion, mineral oil. Unit Laboratories, Inc. 441,860, Jan. 18; Serial No. 509,802, published Sept. 14, 1948.
Chemical composition for the prevention of corrosion. The McCambridge & McCambridge Co. 505,813, Jan. 18; Serial No. 545,383, published Oct. 5, 1948.
Chemical compound. La Compagnie Pharmaceutique Desbergers. 375,548, Feb. 20, 1940. Republished Jan. 18.
Chemical compound. Service Industries. 505,741, Jan. 18; Serial No. 533,409, published Oct. 19, 1948.
Chemical ingredients, Various compositions containing. C. J. Barton. 505,675, Jan. 18; Serial No. 510,824, published Oct. 19, 1948.
Chemical used to treat dyed goods. H. A. Metz & Co. 68,085, Mar. 10, 1908. Republished Jan. 18.
Cold remedy. M. D. Zalowitz. 441,877, Jan. 18; Serial No. 523,724, published Oct. 19, 1948.
Colognes and body powder. Avon Products, Inc. 435,002–3, Dec. 9, 1947. Republished Jan. 18.
Compositions for sizing, stiffening, and finishing thread, yarns, and other textile materials. I. G. Farbenindustrie Aktiengesellschaft. 228,362, May 31, 1927. Republished Jan. 18.

Cosmetics and toilet preparations. B. D. Glass. 441,866, Jan. 18; Serial No. 514,271, published Oct. 19, 1948.
Cream, Lemon. Morton Manufacturing Corporation. 505,761, published Oct.
Lotion, Hand. The Kendall Company. 315,767, Aug. 7, 1934. Republished Jan. 18.
Lotion, Skin. The Mennen Company. 505,804, Jan. 18; Serial No. 543,209, published Oct. 5, 1948.

Toilet preparations. A. H. Rabin. 371,166, Sept. 19, 1939. Republished Jan. 18.
Tonic, General, and mild laxative. Pan-American Drug Company, Inc. 249,777, renewed Nov. 20, 1948. O. G. Jan. 18.
Fibrous materials in sheet form. The Paraffine Companies, Inc. 381,202, Sept. 17, 1940. Republished Jan. 18.
Firebrick. Mexico Refractories Company. 505,790, Jan. 18; Serial No. 541,939, published Sept. 21, 1948.
Fire brick, fire-brick cement, and fire-clay tile. A. P.

Cosmetics and toilet preparations. B. D. Glass. 441,866, Jan. 18; Serial No. 514,271, published Oct. 19, 1948
Cream, Lemon. Morton Manufacturing Corporation. 505,689, Jan. 18; Serial No. 520,761, published Oct. 19, 1948.
Croup specific. W. W. Lee. 45,786, Aug. 29, 1905. Republished Jan. 18.
Dandruff remover, Liquid. Felts and Gunnels. 505,810, Jan. 18; Serial No. 545,114, published Oct. 5, 1948.
Dentifrice. The Procter & Gamble Company. 505,820, Jan. 18; Serial No. 546,605, published Oct. 5, 1948.
Deodorizer, bleach, etc., Liquid chemical. H. M. Sinclair, Jr. 505,694, Jan. 18; Serial No. 526,987, published Mar. 30, 1948.
Dips, Cattle, sheep, and horse. Baird & McGuire, Inc. 125,387, May 20, 1919. Republished Jan. 18.
Disinfectants and insecticides. Baird & McGuire, Inc. 232,438, Sept. 6, 1927. Republished Jan. 18.
Dispersions, Colloidal, of various types of carbon blacks in water. Binney & Smith Company. 505,887, Jan. 18; Serial No. 522,708.
Diuretics. Parke, Davis & Company. 253,360, renewed Feb. 26, 1949. O. G. Jan. 18.
Drench for veterinary use. Fort Dodge Laboratories, Inc. 441,840, Jan. 18; Serial No. 500,000, published Nov. 26, 1946.
Drug to be used in the treatment of cardiac conditions and asthma. Physicians' Drug & Supply Co. 505,849, Jan. 18; Serial No. 558,064, published Oct. 19, 1948.
Drug to be used in the treatment of thyroid diseases. Physicians' Drug & Supply Co. 505,850, Jan. 18; Serial No. 558,065, published Oct. 19, 1948.
Dyestuffs. General Dyestuff Corporation. 241,918, May 8, 1928. Republished Jan. 18.
Dyestuffs, dyes and dry colors. The Sherwin-Williams Company. 325,881, July 9, 1935. Republished Jan. 18.
Exterminator, Roach, ant, rat, and mouse. De Sota Chemical Co., Inc. 243,312, June 19, 1928. Republished Jan. 18.
Face packs. Elmo, Inc. 505,760, Jan. 18; Serial No. 537,027, published Oct. 19, 1948.
Facial creams. Elmo, Inc. 505,759, Jan. 18; Serial No. 537,026, published Oct. 19, 1948.
Fluxes, Welding and brasing. National Cylinder Gas Company. 401,928, June 15, 1943. Republished Jan. 18.
Fumigants, for use as parasiticides. Tobacco By-Products and Chemical Corporation. 441,844, Jan. 18; Serial No. 501,216, published Mar. 30, 1948.
Gum arabic solution, counter-etch, etc. Davidson Manufacturing Corporation. 505,739, Jan. 18; Serial No. 532,914, published Oct. 19, 1948.
Herb tea. J. E. Respondek. 505,746, Jan. 18; Serial No. 534,190, published Oct. 19, 1948.
Hydrocarbon solvents. Velsicol Corporation. 505,693, Jan. 18; Serial No. 525,717, published Oct. 5, 1948.
Hydroxide of aluminum, Colloidal. The Wander Company. 181,317, Mar. 18, 1924. Republished Jan. 18.
Insecticide. The Frank Tea & Spice Company. 238,824, Feb. 14, 1928. Republished Jan. 18.
Insecticides. American Company of Arkansas. 248,363, July 2, 1929. Republished Jan. 18.
Insecticides. Baird & McGuire, Inc. 299,639, Dec. 13, 1932. Republished Jan. 18.
Insecticides. W. H. Bull Medicine Company. 505,713, Jan. 18; Serial No. 528,908, published Oct. 19, 1948.
Insecticides. W. D. Carpenter Co. Inc. 230,756, Aug. 2, 1927. Republished Jan. 18.
Insecticides. Penola Inc. 505,830, Jan. 18; Serial No. 550,067, published Oct. 19, 1948.
Insecticides. Talbot Manufacturing Co. 211,607, Apr. 13, 1926. Republished Jan. 18.
Insecticides and moth preventives. Sears, Roebuck and Co. 505,831, Jan. 18; Serial No. 550,086, published Oct. 19, 1948.
Insecticides, disinfectants, repellants, etc. Apothecaries Hall Company. 255,572, renewed Apr. 23, 1949. O. G. Jan. 18.
Insecticides, fungicides, germicides and the like. The Sherwin-Williams Company. 144,633, July 12, 1921. Republished Jan. 18.
Insecticides, fungicides, or disinfectants. Rohm & Haas Company. 251,904, renewed Jan. 15, 1949. O. G. Jan. 18.
Iodine preparation. R. I. Guy. 505,808, Jan. 18; Serial No. 543,701, published Oct. 12, 1948.
Iron for anemia, Hematinic. La Cie. Pharmaceutique Desbergers. 391,703, Nov. 18, 1941. Republished Jan. 18.
Koji, moyashi, diastase, etc. Takamine Ferment Company. 251,949, renewed Jan. 22, 1949. O. G. Jan. 18.
Lighter fluid. Consolidated Royal Chemical Corporation. 388,123, June 10, 1941. Republished Jan. 18.
Liniment, Medicinal. The C. F. Sauer Company. 505,771, Jan. 18; Serial No. 539,443, published Oct. 5, 1948.
Lipstick, rouge, nail polish and face powder. Avon Products, Inc. 435,075, Dec. 9, 1947. Republished Jan. 18.
Lipsticks, rouges and nail polish. Avon Products, Inc. 434,901, Dec. 9, 1947. Republished Jan. 18.
Liquid for loosening postage stamps. S. H. Uptgraff. 441,875, Jan. 18; Serial No. 519,499, published Oct. 5, 1948.
Lotion, Face. A. J. Krank Company. 280,107, Feb. 10, 1931. Republished Jan. 18.
Lotion, Hand. The Kendall Company. 315,767, Aug. 7, 1934. Republished Jan. 18.
Lotion, Skin. The Mennen Company. 505,804, Jan. 18; Serial No. 543,209, published Oct. 5, 1948.
Lotions, Face. W. Savlou. 505,848, Jan. 18; Serial No. 557,982, published Oct. 12, 1948.
Lozenges, Medicated. Hudson's Eumenthol Chemical Company Pty. Limited. 505,817, Jan. 18; Serial No. 545,627, published Oct. 5, 1948.
Powder, Toilet, talcum powder, medicated, powder, etc. The Mennen Company. 505,807, Jan. 18; Serial No. 543,311, published Oct. 5, 1948.
Medical preparation. K. Mallard. 389,678, Aug. 19, 1941. Republished Jan. 18.
Medicaments. Societe des Usines Chimiques Rhone-Poulenc. 506,766, Jan. 18; Serial No. 538,049, published Oct. 5, 1948.
Medicinal oil. National Remedy Co. 70,641, re-renewed Sept. 22, 1948. O. G. Jan. 18.
Medicinal preparation containing vitamin A. Lilly Eli and Company. 441,839, Jan. 18; Serial No. 499,247, published Mar. 11, 1947.
Moth preventative and insecticide. Galree Products Co., Inc. 505,724, Jan. 18; Serial No. 530,397, published Oct. 5, 1948.
Ointment. Yodol Company. 441,865, Jan. 18; Serial No. 514,077, published Sept. 23, 1947.
Ointment, Fungicidal and fungicidal powder. W. C. Dabney, Jr. 505,845, Jan. 18; Serial No. 557,120, published Oct. 12, 1948.
Ointments. L. P. Phillippi. 246,886, renewed Sept. 18, 1948. O. G. Jan. 18.
Paraffin, Chemically treated. Cobar Laboratories, Inc. 505,711, Jan. 18; Serial No. 528,773, published Oct. 5, 1948.
Petrolatum, Liquid, also known as white oil. Standard Oil Company of California. 505,847, Jan. 18; Serial No. 557,697, published Oct. 12, 1948.
Pharmaceutical preparations of amino acids and polypeptides from hydrolysed protein foods. The Arlington Chemical Company. 505,846, Jan. 18; Serial No. 557,335, published Oct. 12, 1948.
Pharmaceutical product. La Compagnie Pharmaceutique Desbergers. 374,966, Jan. 30, 1940. Republished Jan. 18.
Photographic developers, and photographic accelerators. H. S. Wellcome. 71,460, re-renewed Nov. 24, 1948. O. G. Jan. 18.
Powder, Toilet, cold cream, eau de cologne, etc. Société Anonyme des Laboratoires Innoxa. 175,655, renewed Nov. 6, 1943. O. G. Jan. 18.
Preparation for treatment of ivy, sumac and oak poisoning, etc. E. H. Acree. 505,783, Jan. 18; Serial No. 540,758, published Aug. 31, 1948.
Preparation for use on grate surfaces and for the prevention and removal of soot and fire scale deposits in boilers. The Bird-Archer Company. 336,486, July 7, 1936. Republished Jan. 18.
Preparations exhibiting antispasmodic and antihistaminic activity. Hoffman-La Roche Inc. 441,876, Jan. 18; Serial No. 521,132, published Nov. 11, 1947.
Purgative tea. A. Sicre. 23,951, re-renewed Dec. 26, 1943. O. G. Jan. 18.
Remedy for eruptional skin diseases. Emergency Laboratories. 74,724, Aug. 3, 1909. Republished Jan. 18.
Rodenticide. Thompson-Hayward Chemical Company. 434,015, Nov. 4, 1947. Republished Jan. 18.
Rouge, Dry, cream rouge, lipsticks and nail polish. Lehn & Fink Products Corporation. 505,826, Jan. 18; Serial No. 549,261, published June 22, 1948.
Sedative, antispasmodic analgesic and hypnotic. A. Buisson. 161,755, renewed Nov. 21, 1942. O. G. Jan. 18.
Sedative containing phenobarbital, Mild. The National Drug Company. 433,996, Nov. 4, 1947. Republished Jan. 18.
Shampoo. Whitehall Pharmacal Company. 505,841, Jan. 18; Serial No. 552,526, published Oct. 5, 1948.
Shampoos; hair waving solutions; hair rinses, etc., Hair. Samuel Bonat & Bro., Inc. 505,768, Jan. 18; Serial No. 538,596, published Oct. 19, 1948.
Solder, Liquid radiator. J. Goldner. 505,727, Jan. 18; Serial No. 530,932, published Sept. 28, 1948.
Solvent for use in duplicating processes. Ditto, Incorporated. 505,818, Jan. 18; Serial No. 546,374, published Oct. 5, 1948.
Special device coated with DDT crystals. J. W. Lawlor. 441,846, Jan. 18; Serial No. 501,991, published Oct. 19, 1948.
Starch, Laundry. The Perfex Company. 505,691, Jan. 18; Serial No. 523,418, published Oct. 12, 1948.
Sulfonamide preparation. American Cyanamid Company. 505,851, Jan. 18; Serial No. 558,265, published Oct. 19, 1948.
Sulfonamide preparation. Smith, Kline & French Laboratories. 505,844, Jan. 18; Serial No. 556,922, published Oct. 5, 1948.
Sulfonamide preparation for veterinary use. American Cyanamid Company. 505,852, Jan. 18; Serial No. 558,266, published Oct. 19, 1948.
Sulphur. Stauffer Chemical Company. 505,824, Jan. 18; Serial No. 547,786, published Aug. 31, 1948.
Toilet preparation, Semi-solid. H. S. Wellcome. 71,267, re-renewed Nov. 10, 1948. O. G. Jan. 18.

Toilet preparations. A. H. Rabin. 371,166, Sept. 19, 1939. Republished Jan. 18.
Tonic, General, and mild laxative. Pan-American Drug Company, Inc. 249,777, renewed Nov. 20, 1948. O. G. Jan. 18.
Tonics. Battle Creek Drugs, Inc. 333,669, Mar. 31, 1936. Republished Jan. 18.
Vaginal jellies, Therapeutic. Ortho Pharmaceutical Corporation. 440,382, Aug. 31, 1948. Amended. O. G. Jan. 18.
Vaginal jelly. Holland-Rantos Company, Inc. 505,674, Jan. 18; Serial No. 509,343, published Oct. 5, 1948.
Vanishing and massage cream. A. J. Krank Mfg. Co. 170,745, July 24, 1923. Republished Jan. 18.
Vitamin preparation. Sharp & Dohme, Incorporated. 505,794, Jan. 18; Serial No. 542,358, published Oct. 5, 1948.
Vitamin preparations, chemicals and pharmaceuticals. Stayner Corporation. 505,676, Jan. 18; Serial No. 512,463, published Sept. 14, 1948.
Volatile liquid. Davies, Rose & Company, Limited. 255,197, renewed Apr. 16, 1949. O. G. Jan. 18.
Water softener with incidental cleansing properties. The Morton S. Pine Co. 505,772, Jan. 18; Serial No. 539,561, published Sept. 21, 1948.
Welding compound. H. L. P. Manufacturing Company. 505,789, Jan. 18; Serial No. 539,051, published Oct. 5, 1948.
Wetting agents, emulsifiers, Chemical. Advance Solvents & Chemical Corporation. 441,871, Jan. 18; Serial No. 517,687, published Oct. 12, 1948.

CLASS 7

Ribbon composed of a plurality of parallel cotton threads or strands. Freydberg Bros., Inc. 378,766, June 18, 1940. Republished Jan. 18.
Rope. Compania De Jarcia De Matanzas, S. A. 431,281, July 15, 1947. Republished Jan. 18.
Rope and twine. Compania De Jarcia De Matanzas, S. A. 176,594, Nov. 27, 1923. Republished Jan. 18.
Rope, binder and other twines. Ramoer, Erbsloh and Company. 106,501, Oct. 19, 1915. Republished Jan. 18.

CLASS 8

Ash receivers, and trays, cigarette holders, etc. Ovington's Gift Shop, Inc. 398,290, Oct. 20, 1942. Republished Jan. 18.
Pipes and tobacco pouches, Smoking. Newman Bros. 505,867, Jan. 18; Serial No. 501,760.
Pipes, ashtrays, ash receivers, etc., Smoker's. John Hudson Moore, Inc. 505,898, Jan. 18; Serial No. 534,145.
Scarfpins, watch chains, cuff links, etc. Ovington Bros. Company. 156,826, July 11, 1922. Republished Jan. 18.

CLASS 10

Fertilizer. Ruhm Phosphate & Chemical Company. 505,696, Jan. 18; Serial No. 527,199, published Sept. 28, 1948.
Fertilizer, Ammonium nitrate. Spencer Chemical Company. 505,895, Jan. 18; Serial No. 531,157.
Fertilizers. Agricultural Minerals Company. 505,829, Jan. 18; Serial No. 549,865, published Aug. 24, 1948.
Fertilizers. Pacific Chemical and Fertilizer Company. 505,825, Jan. 18; Serial No. 548,099, published Sept. 28, 1948.
Fertilizers. J. R. Simplot. 505,698, Jan. 18; Serial No. 527,437, published Sept. 28, 1948.
Fertilizers, J. R. Simplot. 505,699–700, Jan. 18; Serial Nos. 527,467–8, published Sept. 28, 1948.
½ monopotassium phosphate and ½ diammonium phosphate for a starter solution. Victor Chemical Works. 505,708, Jan. 18; Serial No. 528,543, published Sept. 28, 1948.
Peat moss. Peat Moss Sales Corporation. 505,677, Jan. 18; Serial No. 513,200, published Sept. 7, 1948.
Plant food or fertilizer. Geo. Talt & Sons, Inc. 505,726, Jan. 18; Serial No. 530,591, published Sept. 28, 1948.
Plant foods. Planters Cotton Oil & Fertilizer Co. 391,523, Nov. 11, 1941. Republished Jan. 18.

CLASS 11

Carbon paper and typewriter ribbons. Codo Manufacturing Corp. 505,684, Jan. 18; Serial No. 517,456, published Oct. 5, 1948.
Ink, Indorsing-machine. The American Perforator Co. 249,674, renewed Nov. 20, 1948. O. G. Jan. 18.

CLASS 12

Aggregate, lightweight concrete aggregate, etc., Lightweight plaster. Dant & Russell, Inc. 505,773, Jan. 18; Serial No. 539,668, published Sept. 7, 1948.
Building and roofing materials, Waterproof and weatherproof. The Paraffine Paint Co. 57,538, Nov. 13, 1906. Republished Jan. 18.
Building material. The Logan-Long Company. 295,718, July 12, 1932. Republished Jan. 18.
Building paper, thermal and acoustical insulating paper, etc. The Paraffine Companies, Inc. 286,057, Aug. 11, 1931. Republished Jan. 18.
Door and parts thereof, Garage. Curtis Companies Incorporated. 397,210, Aug. 25, 1942. Republished Jan. 18.
Fibrous materials in sheet form. The Paraffine Companies, Inc. 381,202, Sept. 17, 1940. Republished Jan. 18.
Firebrick. Mexico Refractories Company. 506,790, Jan. 18; Serial No. 541,939, published Sept. 21, 1948.
Fire brick, fire-brick cement, and fire-clay tile. A. P. Green Fire Brick Company. 505,910, Jan. 18; Serial No. 544,078.
Firebricks. McFeely Brick Company. 434,708, Dec. 2, 1947. Republished Jan. 18.
Heat insulation materials, Reflective. Silvercote Products, Inc. 505,707, Jan. 18; Serial No. 528,317, published Aug. 31, 1948.
Insulation materials, Thermal reflective. Silvercote Products, Inc. 505,683, Jan. 18; Serial No. 516,796, published Aug. 31, 1948.
Lath, Metal. Wheeling Corrugating Company. 505,764, Jan. 18; Serial No. 537,529, published Sept. 7, 1948.
Plastic, asphalt or coal-tar materials. The Sherwin-Williams Company. 374,429, Jan. 9, 1940. Republished Jan. 18.
Plywood. Southern Box and Lumber Company. 505,668, Jan. 18; Serial No. 495,517, published Sept. 7, 1948.
Rail sections. The West Virginia Rail Company. 255,442, renewed Apr. 23, 1949. O. G. Jan. 18.
Roofing and building paper. Safepack Mills. 250,552, renewed Dec. 11, 1948. O. G. Jan. 18.
Roofing and building-papers, Waterproof. The Paraffine Paint Co. 75,095, Aug. 31, 1909. Republished Jan. 18.
Roofing, building paper, and insulating paper, Prepared. The Paraffine Companies, Inc. 273,570, Aug. 5, 1930. Republished Jan. 18.
Windows and door frames. Carr, Adams & Collier Company. 505,816, Jan. 18; Serial No. 545,582, published Sept. 21, 1948.

CLASS 13

Aluminum cooking utensils and household goods. Aluminum Goods Mfg. Company. 122,123, July 2, 1918. Republished Jan. 18.
Bolts and screws. Buffalo Bolt Company. 73,356, renewed Apr. 13, 1949. O. G. Jan. 18.
Cooking and table hollow-ware, Base metal. G. S. Slough. 375,040, Feb. 6, 1940. Republished Jan. 18.
Couplings and feed valves, Pipe. C. S. Plaut. 402,124, June 29, 1943. Republished Jan. 18.
Faucets, and overflow valves, Kitchen, bath, and laundry. Barnes Manufacturing Co. 506,587, Jan. 18; Serial No. 522,333.
Faucets, plumbing valves, shower bath fittings, etc. Mueller Co. 381,450, Sept. 24, 1940. Republished Jan. 18.
Faucets, Sink. Barnes Manufacturing Co. 506,586, Jan. 18; Serial No. 522,325.
Nozzles, H. B. Sherman. 65,949, Oct. 29, 1907. Republished Jan. 18.
Pipe fittings, Brass and iron. H. Mueller Manufacturing Company. 66,513, Dec. 10, 1907. Republished Jan. 18.
Pipe, Non-ferrous. Mueller Co. 290,835, Jan. 19, 1932. Republished Jan. 18.
Posts, Metallic fence. B. Anderson. 255,936, renewed Apr. 30, 1949. O. G. Jan. 18.
Pots and urns, Coffee. The Coleman Lamp and Stove Company. 322,606, Mar. 12, 1935. Republished Jan. 18.
Pots and coffee urns, Coffee. The Coleman Lamp and Stove Company. 321,973, Feb. 19, 1935. Republished Jan. 18.
Screws, Wood. Continental Wood Screw Co. 177,255, Dec. 11, 1923. Republished Jan. 18.
Tableware. Franklin Silver Plate Company. 167,680, May 8, 1923. Republished Jan. 18.
Traps and filters, Combination. The Hotstream Heater Company. 345,588, May 4, 1937. Republished Jan. 18.
Valve, cocks, pressure regulators, and tapping machines. H. Mueller Manufacturing Company. 30,910, Nov. 30, 1897. Republished Jan. 18.
Waste and overflows and parts of same, Combined. H. Mueller Manufacturing Company. 85,269, Feb. 6, 1912. Republished Jan. 18.

CLASS 14

Castings and forgings, welding rods, railroad frogs, etc. American Brake Shoe Company. 505,811, Jan. 18; Serial No. 520,666, published Nov. 2, 1948.
Castings, Metal. Arwood Precision Casting Corp. 505,884, Jan. 18; Serial No. 520,849.
Copper sheet, copper in rolls, copper wire, etc. Copper Range Company. 505,756, Jan. 18; Serial No. 535,490, published Sept. 28, 1948.
Electrodes composed of metal, Cutting. Eutectic Welding Alloys Corporation. 505,821, Jan. 18; Serial No. 546,684, published Sept. 21, 1948.
Gear blanks, iron forgings, steel castings, Solid forged, etc. Standard Steel Works Company. 164,829, Feb. 27, 1923. Republished Jan. 18.
Iron and upon tool steels, machinery steels, etc. Wheelock, Lovejoy & Company, Inc. 229,183, June 21, 1927. Republished Jan. 18.
Metals, Ferrous, and ferrous metal castings and forgings. The American Brake Shoe and Foundry Company. 373,742, Dec. 19, 1939. Republished Jan. 18.
Metals, Ferrous, and ferrous metal castings and forgings. The American Brake Shoe and Foundry Company. 373,934, Dec. 26, 1939. Republished Jan. 18.

Metals, Noncorrosive. The Scholl Mfg. Co., Inc. 252,370, renewed Feb. 5, 1949. O. G. Jan. 18.
Nickel alloy. The Carpenter Steel Company. 441,870, Jan. 18; Serial No. 517,117, published Sept. 21, 1948.
Powder of iron or other base metal. George Cohen Sons

Paints, paint enamels, lacquers, etc. The Sherwin-Williams Company. 324,587, May 21, 1935. Republished Jan. 18.
Paints, paint enamels, lacquers, etc. The Sherwin-Williams Company. 370,582, Aug. 29, 1939. Republished Jan. 18.

Bowling pins. Monumental Bowling and Billiard Supply Company. 441,852, Jan. 18; Serial No. 506,183, published Oct. 8, 1948.
Dice, dice shakers, dominoes, etc. G. E. Koppe. 249,951, Nov. 27, 1928. Republished Jan. 18.
Ferrules, Fishing pole. Western Grinders. 505,888, Jan.

Rasors and razor blades, Mechanical. Stahly, Inc. 505,706, Jan. 18; Serial No. 528,115, published Sept. 28, 1948.
Remote control devices, Mechanical. M. R. C. Limited. 360,963, Oct. 4, 1938. Republished Jan. 18.
Rings and rolled shells for crushers. Standard Steel

Metals, Noncorrosive. The Scholl Mfg. Co., Inc. 252,370, renewed Feb. 5, 1949. O. G. Jan. 18.
Nickel alloy. The Carpenter Steel Company. 441,870, Jan. 18; Serial No. 517,117, published Sept. 21, 1948.
Powder of iron or other base metal. George Cohen Sons & Company, Limited. 505,761, Jan. 18; Serial No. 537,157, published Sept. 21, 1948.
Rods and metal alloys, Welding. The American Brake Shoe and Foundry Company. 374,363, Jan. 9, 1940. Republished Jan. 18.
Rods or wire. Metallizing Engineering Co. Inc. 505,795, Jan. 18; Serial No. 542,614, published Sept. 21, 1948.
Rods or wire. Metallizing Engineering Co. Inc. 505,798–9, Jan. 18; Serial Nos. 542,618–19, published Sept. 21, 1948.
Rods or wires. Metallizing Engineering Co. Inc. 505,796, Jan. 18; Serial No. 542,615, published Sept. 21, 1948.
Sheets of metal, Perforated. The Sight Light Corporation. 441,867, Jan. 18; Serial No. 514,308, published Sept. 21, 1948.
Sheets, rods, and wire, Brass, copper, and nonferrous alloy, and silver solder. Chase Brass & Copper Co., Incorporated. 505,789, Jan. 18; Serial No. 541,916, published Sept. 21, 1948.
Sheets, strips, bars, Ferrous, etc. Inland Steel Company. 505,666, Jan. 18; Serial No. 494,273, published Sept. 21, 1948.
Steel. Inland Steel Company. 505,718, Jan. 18; Serial No. 529,264, published Sept. 21, 1948.
Steel in sheet form, Galvanized. Inland Steel Company. 505,770, Jan. 18; Serial No. 539,322, published Sept. 21, 1948.
Steel, Sheet, and enameling iron sheets. The Niles Rolling Mill Company. 505,705, Jan. 18; Serial No. 537,719, published Sept. 21, 1948.
Steel used for die blocks, hot and cold trimmer dies, hot and cold coining dies, etc. A. Finkl & Sons Company. 505,667, Jan. 18; Serial No. 494,490, published Sept. 21, 1948.
Wire or rod. Metallizing Engineering Co. Inc. 505,797, Jan. 18; Serial No. 542,617, published Sept. 21, 1948.
Wire, Stapling. Chicago Steel & Wire Company. 241,836, May 8, 1928. Republished Jan. 18.

CLASS 15

Candles. B. S. Ballard. 414,524, June 12, 1945. Republished Jan. 18.
Greases, Valve lubricating. Rockwell Manufacturing Company. 505,899, Jan. 18; Serial No. 534,365.
Naphtha, benzin, gasolene, etc. Standard Oil Company. 103,125, Mar. 16, 1915. Republished Jan. 18.
Naphthas and gasoline, Stove and lamp. The Pure Oil Company. 505,858, Jan. 18; Serial No. 563,751, published Oct. 19, 1948.
Oil, Motor fuel, fuel oil, lubricating oils, etc. The Ohio Oil Company. 505,751, Jan. 18; Serial No. 534,804, published Oct. 5, 1948.
Oil, Motor lubricating. Frontier Oil Refining Corporation. 505,692, Jan. 18; Serial No. 523,893, published Oct. 12, 1948.
Oil, Motor lubricating. Illinois Farm Supply Company. 505,690, Jan. 18; Serial No. 522,009, published Sept. 14, 1948.
Oils and greases, Lubricating. Central Petroleum Company. 505,665, Jan. 18; Serial No. 485,751, published Sept. 7, 1948.
Oils and greases, Lubricating. The Ohio Oil Company. 505,748, Jan. 18; Serial No. 534,460, published Sept. 14, 1948.
Oils and greases, Lubricating. The Pure Oil Company. 505,697, Jan. 18; Serial No. 527,282, published Sept. 7, 1948.
Oils for machinery, Lubricating. International Harvester Company. 505,672, Jan. 18; Serial No. 504,618, published Sept. 14, 1948.
Oils, Lubricating motor. The Ohio Oil Company. 505,750, Jan. 18; Serial No. 534,803, published Oct. 5, 1948.
Oils, Motor lubricating. Pennsylvania Refining Company. 505,757, Jan. 18; Serial No. 536,280, published Oct. 19, 1948.

CLASS 16

Colors, Dry, and pigments and ingredients of colors. The Sherwin-Williams Company. 317,828, Oct. 9, 1934. Republished Jan. 18.
Enamel, Paint. The Paraffine Companies, Inc. 317,946, Oct. 9, 1934. Republished Jan. 18.
Paint, Aluminum. John R. Sullivan. 380,074, Aug. 6, 1940. Republished Jan. 18.
Paint enamel, Acid resisting. E. Scherer. 441,889, Jan. 18; Serial No. 508,443.
Paint, Flat undercoat. The Paraffine Companies, Inc. 176,544, Nov. 27, 1923. Republished Jan. 18.
Paint in paste form. The Sherwin-Williams Company. 407,671, June 20, 1944. Republished Jan. 18.
Paint, stains, varnishes, Mixed and dry. California Paint Company. 149,862, Dec. 27, 1921. Republished Jan. 18.
Paint, Waterproof roof. Union Chemical & Oil Co. 427,101, Jan. 28, 1947. Republished Jan. 18.
Paints, paint enamels, lacquers, etc. The Sherwin-Williams Company. 278,147, Dec. 9, 1930. Republished Jan. 18.
Paints, paint enamels, lacquers, etc. The Sherwin-Williams Company. 324,587, May 21, 1935. Republished Jan. 18.
Paints, paint enamels, lacquers, etc. The Sherwin-Williams Company. 370,582, Aug. 29, 1939. Republished Jan. 18.
Paints, Ready-mixed. Valentine & Company. 261,569–70, Sept. 17, 1929. Republished Jan. 18.
Paints, Ready-mixed. Valentine & Company. 280,636, Feb. 24, 1931. Republished Jan. 18.
Paints, Ready mixed liquid, paste, and emulsified, paint-enamels, etc. The Paraffine Companies, Inc. 368,660, June 27, 1939. Republished Jan. 18.
Paints, varnishes, lacquers, etc. The Sherwin-Williams Company. 286,574, Sept. 1, 1931. Republished Jan. 18.

CLASS 17

Cigars. Jose Escalante & Co. 301,845, Feb. 28, 1933. Republished Jan. 18.
Cigars. I. Lewis Cigar Manufacturing Company. 152,860, Mar. 7, 1922. Republished Jan. 18.
Cigars. I. Lewis Cigar Manufacturing Company. 153,227, Mar. 14, 1922. Republished Jan. 18.
Cigars. I. Lewis Cigar Manufacturing Company. 313,810, June 12, 1934. Republished Jan. 18.
Cigars. S. S. Pierce Co. 32,739, re-renewed Apr. 18, 1949. O. G. Jan. 18.

CLASS 19

Airplanes and airplane structural parts. Spartan Aircraft Company. 253,547–9, renewed Feb. 26, 1949. O. G. Jan. 18.
Casings, Rigid and semirigid. General Textile Mills, Inc. 418,501, Jan. 1, 1946. Republished Jan. 18.
Parachutes. General Textile Mills, Inc. 402,088, June 29, 1943. Republished Jan. 18.
Rowboats and motor boats. H. Cohn. 365,624, Mar. 14, 1939. Republished Jan. 18.
Sills for refrigerator car doors and the like. The American Brake Shoe and Foundry Company. 362,527, Nov. 22, 1938. Republished Jan. 18.
Vehicle wheels and truck caster wheels. The American Brake Shoe and Foundry Company. 403,270, Sept. 14, 1943. Republished Jan. 18.
Wagons, Distributing, dumping wagons, and road oil distributors. American Road Machinery Company. 230,294, July 19, 1927. Republished Jan. 18.

CLASS 20

Floor coverings, Prepared. The Paraffine Companies, Inc. 211,469, Apr. 13, 1926. Republished Jan. 18.

CLASS 21

Conductors, Insulated electrical. The Acme Wire Company. 72,677–9, Feb. 9, 1909. Republished Jan. 18.
Controllers, Pressure responsive electric. The Hotstream Heater Company. 411,192, Jan. 9, 1945. Republished Jan. 18.
Electromagnets. The Acme Wire Company. 73,129, Mar. 16, 1909. Republished Jan. 18.
Extension cords, Retractable. Cordage, Incorporated. 415,518–19, Aug. 7, 1945. Republished Jan. 18.
Fixtures and parts thereof, Electric lighting. R & W Wiley, Inc. 505,860, Jan. 18; Serial No. 489,889.
Heating units, Electrical, etc. Tuttle & Kift, Inc. 503,865, Nov. 16, 1948. Corrected. O. G. Jan. 18.
Lamps with shades, Electric. Ovington's Gift Shop, Inc. 398,176, Oct. 13, 1942. Republished Jan. 18.
Position indicator for elevators, Electric. Elevator Supplies Co., Inc. 214,612, June 29, 1926. Republished Jan. 18.
Resistors, Electrical, resistance units, parts thereof and attachments therefor. Wilkor Products, Inc. 505,880, Jan. 18; Serial 517,759.
Sound amplifying and transmitting systems and parts thereof, Intercommunicating. Webster Electric Company. 434,723, Dec. 2, 1947. Republished Jan. 18.
Tape, Electrical insulating. Manhattan Coil Corporation. 505,881, Jan. 18; Serial No. 518,019.
Varnishes, Insulating, and insulating tape. The Paraffine Companies, Inc. 275,645, Sept. 23, 1930. Republished Jan. 18.
Wire, Insulated electric. The Acme Wire Company. 364,271–2, Jan. 24, 1939. Republished Jan. 18.
Wire, Insulated electric. The Acme Wire Company. 364,764, Feb. 14, 1939. Republished Jan. 18.
Wire, Insulated electric. The Whitney Blake Company. 435,055–6, Dec. 9, 1947. Republished Jan. 18.

CLASS 22

Bait in the nature of a lure, Animal. Animal Trap Company of America. 441,873, Jan. 18; Serial No. 517,880, published Sept. 21, 1948.
Baits, Artificial. James Heddon's Sons. 230,453, July 26, 1927. Republished Jan. 18.
Balls used in games, Metal. S K F Industries, Inc. 505,716, Jan. 18; Serial No. 529,091, published Sept. 21, 1948.
Balls used in games, Metal. S K F Industries, Inc. 505,717, Jan. 18; Serial No. 529,094, published Sept. 21, 1948.
Bowling balls. The Brunswick-Balke-Collender Company. 441,855, Jan. 18; Serial No. 506,729, published Oct. 8, 1946.

Bowling pins. Monumental Bowling and Billiard Supply Company. 441,852, Jan. 18; Serial No. 506,183, published Oct. 8, 1946.
Dice, dice shakers, dominoes, etc. G. E. Koppe. 249,951, Nov. 27, 1928. Republished Jan. 18.
Ferrules, Fishing pole. Western Grinders. 505,888, Jan. 18; Serial No. 522,964.
Fishhooks. Driscoll-Bruck Company, Ltd. 377,845, May 14, 1940. Republished Jan. 18.
Fishing reels. Langley Corporation. 505,903, Jan. 18; Serial No. 540,685.
Fishing rods. James Heddon's Sons. 505,905, Jan. 18; Serial No. 541,838.
Fishing trolls. L. M. Davis. 418,761, Jan. 8, 1946. Republished Jan. 18.
Game, Drawing room. A. H. Cohen. 505,705, Jan. 18; Serial No. 528,086, published Sept. 21, 1948.
Golf balls, golf clubs, basketballs, etc. A. G. Spalding & Bros. Inc. 505,779, Jan. 18; Serial No. 540,212, published Sept. 21, 1948.
Playing cards and playing card cases, poker chips, etc. Ovington's Gift Shop, Inc. 398,177, Oct. 13, 1942. Republished Jan. 18.
Sporting goods. Healthways. 441,837, Jan. 18; Serial No. 497,541, published Sept. 21, 1948.
Tableware. Franklin Silver Plate Company. 167,680, May 8, 1923. Republished Jan. 18.
Tennis balls, hand balls, and shuttlecocks. Pennsylvania Rubber Company. 421,765, June 18, 1946. Republished Jan. 18.
Tennis rackets, badminton rackets, squash rackets, etc. A. G. Spalding & Bros. Inc. 505,777, Jan. 18; Serial No. 540,210, published Sept. 21, 1948.
Tennis rackets, squash rackets, and badminton rackets. A. G. Spalding & Bros. Inc. 505,778, Jan. 18; Serial No. 540,211, published Sept. 21, 1948.
Toy model kits. Crafto Inc. 441,853, Jan. 18; Serial No. 506,427, published Sept. 21, 1948.
Toys. Artoys Inc. 441,841, Jan. 18; Serial No. 500,729, published Sept. 21, 1948.
Toys, Stuffed. J. Swedlin, Inc. 441,879, Jan. 18; Serial No. 524,027, published Sept. 21, 1948.

CLASS 23

Bearings, Composition, machinery shaft couplings, and slides. The American Brake Shoe and Foundry Company. 351,296, Oct. 26, 1937. Republished Jan. 18.
Bearings, Composition, machinery shaft couplings and slides. The American Brake Shoe and Foundry Company. 368,737, June 27, 1939. Republished Jan. 18.
Bits, Auger. The Irwin Auger Bit Company. 358,155, June 28, 1938. Republished Jan. 18.
Blocks, Vibration-control and noise-control. Jardin Associates, Inc. 441,851, Jan. 18; Serial No. 505,753, published Sept. 28, 1948.
Churns, Electric. Alabama Appliance Company, Inc. 372,414, Oct. 31, 1939. Republished Jan. 18.
Cooking utensils and household goods, Aluminum. Aluminum Goods Mfg. Company. 122,123, July 2, 1918. Republished Jan. 18.
Dairy products processing equipment. The Creamery Package Mfg. Company. 505,702, Jan. 18; Serial No. 527,591, published Sept. 28, 1948.
Driving axles for vehicles. Mack Manufacturing Corporation. 441,859, Jan. 18; Serial No. 509,227, published Sept. 28, 1948.
Evaporators, various types of condensers, Various types of. Whiting Corporation. 441,857, Jan. 18; Serial No. 508,560, published Sept. 28, 1948.
Farm implements of all kinds, Cockshutt Plow Company, Limited. 441,880, Jan. 18; Serial No. 524,376, published Oct. 5, 1948.
Fire extinguishers, Portable hand, and automatic fire extinguishers. Burnoyl Heating Corporation. 248,039, Oct. 16, 1928. Republished Jan. 18.
Fuel pumps, brake lining equipment. Atlas Supply Company. 505,735, Jan. 18; Serial No. 531,759, published Sept. 28, 1948.
Knives, forks, spoons, etc., Base metal. Georg Jensen, Inc. 505,671, Jan. 18; Serial No. 504,360, published Sept. 28, 1948.
Knives having square, sharp, round, or beveled points, Shoe, lip knives, skiving knives, etc. 505,788, Jan. 18; Serial No. 541,783, published Oct. 5, 1948.
Lathes, Metal working. Gisholt Machine Company. 505,678, Jan. 18; Serial No. 513,881, published June 22, 1948.
Litter carriers, Hog feed and overhead conveyor type, rotary wheel hog oilers, milking machines, etc. Sears, Roebuck and Co. 441,831, Jan. 18; Serial No. 465,082, published Oct. 5, 1948.
Mechanisms, Engine starting. Bendix Aviation Corporation. 425,926, Dec. 10, 1946. Republished Jan. 18.
Mining machines, hoisting mechanism, and rotary engines. Sullivan Machinery Company. 164,992, Feb. 27, 1923. Republished Jan. 18.
Mixer strainers. Automatic Wire Goods Mfg. Co. Inc. 441,883, Jan. 18; Serial No. 525,177, published Oct. 5, 1948.
Power units, Hydraulic. Blackhawk Mfg. Co. 422,172, July 9, 1946. Republished Jan. 18.
Pumps, grease guns, and blowers, and parts thereof. Fulflo Specialties Company. 255,148, renewed Apr. 16, 1949. O. G. Jan. 18.
Razors and razor blades, Mechanical. Stahly, Inc. 505,706, Jan. 18; Serial No. 528,116, published Sept. 28, 1948.
Remote control devices, Mechanical. M. R. C. Limited. 360,963, Oct. 4, 1938. Republished Jan. 18.
Rings and rolled shells for crushers. Standard Steel Works Company. 166,037, Mar. 27, 1923. Republished Jan. 18.
Rock crushers, elevators, conveyers, etc. The Good Roads Machinery Company, Inc. 208,520, Feb. 2, 1926. Republished Jan. 18.
Rocking machines, Vehicle. Moto-Sway Corporation of America. 327,290, Aug. 20, 1935. Republished Jan. 18.
Rollers, Ink transfer. Bingham Brothers Company. 505,889–90, Jan. 18; Serial Nos. 524,290–1.
Rollers, Printers' composition coated rollers, offset and lithograph rollers, etc. Rapid Roller Co. 387,820, June 3, 1941. Republished Jan. 18.
Rolling device. The Sherwin-Williams Company. 399,867, Feb. 2, 1943. Republished Jan. 18.
Screw machine attachment for a lathe. Dunn Engineering Company. 441,849, Jan. 18; Serial No. 505,564, published Sept. 28, 1948.
Sewage treatment equipment, gas safety devices. Pacific Flush-Tank Company. 505,695, Jan. 18; Serial No. 527,141, published Sept. 28, 1948.
Sewing machines, Running stitch machines for glove sewing and ornamental stitching and parts and accessories, etc. American Machine and Foundry Company. 441,863, Jan. 18; Serial No. 512,305, published Sept. 28, 1948.
Sirens, Mechanical. The Sireno Company, Inc. 505,723, Jan. 18; Serial No. 530,033, published Sept. 28, 1948.
Skiving-machines and machines for drilling iron and steel. Fortuna Machine Company. 67,254, Jan. 28, 1908. Republished Jan. 18.
Soda fountains. Robert M. Green & Sons, Inc. 505,719, Jan. 18; Serial No. 529,638, published Sept. 28, 1948.
Tableware. Franklin Silver Plate Company. 167,680, May 8, 1923. Republished Jan. 18.
Tire inflation and fire extinguishing unit. Power-Pak Products Inc. 441,848, Jan. 18; Serial No. 502,841, published Mar. 25, 1947.
Tool for drilling, tapping, and reaming in metal and other material working, Combination. Mueller Co. 377,734, May 14, 1940. Republished Jan. 18.
Turntables. H. H. Mack. 368,863, July 4, 1939. Republished Jan. 18.
Type-character-bearing elements for use in typographical machines. Intertype Corporation. 505,876, Jan. 18; Serial No. 513,252.
Valve cocks, pressure regulators, and tapping machines. H. Mueller Manufacturing Company. 30,910, Nov. 30, 1897. Republished Jan. 18.
Wrenches and wrench sets. Blackhawk Mfg. Co. 419,119, Feb. 5, 1946. Republished Jan. 18.
Wrenches, Socket, box wrenches, open end wrenches, etc. Blackhawk Mfg. Co. 424,871, Oct. 29, 1946. Republished Jan. 18.
Yarders, loaders, and locomotives. Skagit Steel & Iron Works. 505,803, Jan. 18; Serial No. 543,041, published Oct. 12, 1948.

CLASS 24

Washing machines. Horton Manufacturing Company. 363,564, Jan. 3, 1939. Republished Jan. 18.

CLASS 26

Gages, Strain, strain indicating and recording instruments. The Baldwin Locomotive Works. 410,180, Nov. 14, 1944. Republished Jan. 18.
Photometers. Frober Faybor Company. 349,248, Aug. 24, 1937. Republished Jan. 18.
Regulating apparatus, Thermostatically controlled. The Coleman Company, Inc. 423,229, Aug. 27, 1946. Republished Jan. 18.
Spectacles, spectacle-frames, and mountings for eyeglasses. Martin-Copeland Company. 128,449, Jan. 6, 1920. Republished Jan. 18.

CLASS 27

Broussard, Robert F.

Dwinell, Charles L., Kansas City, Mo. Counter sign. 152,399, Jan. 18.

Exner, Virgil M., assignor to The Studebaker Corporation, South Bend, Ind. Automobile. 152,400, Jan. 18.

Federico, Joseph B., New Baltimore, Mich., assignor to The Astatic Corporation, Conneaut, Ohio. Phonograph tone arm or the like. 152,401, Jan. 18.

Federico, Joseph B., New Baltimore, Mich., assignor to The Astatic Corporation, Conneaut, Ohio. Phonograph tone arm or the like. 152,402, Jan. 18.

Federico, Joseph B., New Baltimore, Mich., assignor to The Astatic Corporation, Conneaut, Ohio. Phonograph tone arm or the like. 152,403, Jan. 18.

Federico, Joseph B., New Baltimore, Mich., assignor to The Astatic Corporation, Conneaut, Ohio. Phonograph tone arm or the like. 152,404, Jan. 18.

Federico, Joseph B., New Baltimore, Mich., assignor to The Astatic Corporation, Conneaut, Ohio. Phonograph tone arm or the like. 152,405, Jan. 18.

Federico, Joseph B., New Baltimore, Mich., assignor to The Astatic Corporation, Conneaut, Ohio. Phonograph tone arm or the like. 152,406, Jan. 18.

Federico, Joseph B., New Baltimore, Mich., assignor to The Astatic Corporation, Conneaut, Ohio. Phonograph tone arm or the like. 152,407, Jan. 18.

Federico, Joseph B., New Baltimore, Mich., assignor to The Astatic Corporation, Conneaut, Ohio. Phonograph tone arm or the like. 152,408, Jan. 18.

Federico, Joseph B., New Baltimore, Mich., assignor to The Astatic Corporation, Conneaut, Ohio. Phonograph tone arm or the like. 152,409, Jan. 18.

Federico, Joseph B., New Baltimore, Mich., assignor to The Astatic Corporation, Conneaut, Ohio. Phonograph tone arm or the like. 152,410, Jan. 18.

Federico, Joseph B., New Baltimore, Mich., assignor to The Astatic Corporation, Conneaut, Ohio. Phonograph tone arm or the like. 152,411, Jan. 18.

Federico, Joseph B., New Baltimore, Mich., assignor to The Astatic Corporation, Conneaut, Ohio. Phonograph tone arm or the like. 152,412, Jan. 18.

Federico, Joseph B., New Baltimore, Mich., assignor to The Astatic Corporation, Conneaut, Ohio. Phonograph tone arm or the like. 152,413, Jan. 18.

Federico, Joseph B., New Baltimore, Mich., assignor to The Astatic Corporation, Conneaut, Ohio. Phonograph tone arm or the like. 152,414, Jan. 18.

Federico, Joseph B., New Baltimore, Mich., assignor to The Astatic Corporation, Conneaut, Ohio. Phonograph tone arm or the like. 152,415, Jan. 18.

Federico, Joseph B., New Baltimore, Mich., assignor to The Astatic Corporation, Conneaut, Ohio. Phonograph tone arm or the like. 152,416, Jan. 18.

Glass, Sheldon B., Chicago, Ill. Combined wrist watch case and band. 152,417, Jan. 18.

Grad, David, Company, assignee: *See*—
Kasoff, Daniel.

Hill, N. N., Brass Company, The, assignee: *See*—
Hill, Wyman N.

Hill, Wyman N., assignor to The N. N. Hill Brass Company, East Hampton, Conn. Bicycle bell. 152,418, Jan. 18.

Howard, Viola T., Saylesville, R. I., assignor to Swank, Inc. Cuff link. 152,447, Jan. 18.

Johnson, Paul W., Toronto, Ontario, Canada. Floor polisher. 152,419, Jan. 18.

Kaiser-Frazer Corporation, assignee: *See*—
Darrin, Howard A.

Kasoff, Daniel, Brooklyn, assignor to David Grad Company, New York, N. Y. Jewelry pin. 152,420, Jan. 18.

Kasoff, Daniel, Brooklyn, assignor to David Grad Company, New York, N. Y. Jewelry pin. 152,421, Jan. 18.

Kasoff, Daniel, Brooklyn, assignor to David Grad Company, New York, N. Y. Jewelry pin. 152,422, Jan. 18.

Kasoff, Daniel, Brooklyn, assignor to David Grad Company, New York, N. Y. Jewelry pendant. 152,423, Jan. 18.

Kasoff, Daniel, Brooklyn, assignor to David Grad Company, New York, N. Y. Jewelry pendant. 152,424, Jan. 18.

Kasoff, Daniel, Brooklyn, assignor to David Grad Company, New York, N. Y. Jewelry pendant. 152,425, Jan. 18.

Kelly, Jack D., New York, N. Y. Play horse or similar article. 152,426, Jan. 18.

Kendis, Michael B., Kansas City, Mo. Pupillary millimeter measure. 152,427, Jan. 18.

Krueger, Archie S.: *See*—
Broeren, Frank L., and Krueger.

Lazar, Joseph H., Chicago, Ill. Combined storage and self-serving cabinet. 152,428, Jan. 18.

Lelong, Lucien, Inc., assignee: *See*—
Buckingham, John D.

Ludwig, Sidney, Cleveland Heights, and R. R. Cull, Brecksville, Ohio. Combined antenna and support therefor. 152,429, Jan. 18.

Marathon Corporation, assignee: *See*—
Broeren, Frank L., and Krueger.

Mennesson, Marcel, assignor to Societe d'Appareil de Controle & d'Equipment des Moteurs (S. A. C. E. M.) S. A., Neuilly-sur-Seine, France. Bicycle. 152,430, Jan. 18.

Murray-Ohio Manufacturing Company, The, assignee: *See*—
Schreckengost, Viktor.

Norcross, Inc., assignee: *See*—
Walker, John R.

Payne, Jacob, New York, N. Y. Bottle. 152,431, Jan. 18.

Perkins, Willard T., Irondequoit, assignor to Bausch & Lomb Optical Company, Rochester, N. Y. Binocular or the like. 152,432, Jan. 18.

Pierce, George M., Los Angeles, Calif. Electric advertising sign for vehicles. 152,433, Jan. 18.

Pizzano, Charles W.: *See*—
Pizzano, Madge H. and C. W.

Pizzano, Madge H. and C. W., Marblehead, Mass. Combined necklace and ear rings or similar article. 152,434, Jan. 18.

Reimers, Theodor M., assignor to Standard Cap and Seal Corporation, Chicago, Ill. Vacuum packaging machine. 152,435, Jan. 18.

Revere Electric Manufacturing Co., assignee: *See*—
Winters, Alva B.

Schreck, Emanuel, Forest Hills, N. Y. Drapeable umbrella. 152,436, Jan. 18.

Schreckengost, Viktor, Cleveland Heights, assignor to The Murray-Ohio Manufacturing Company, Cleveland, Ohio. Headlight cluster for bicycle. 152,437, Jan. 18.

Skrastin, Fred J., Jr., Butte, Mont. Spoon or article of similar nature. 152,438, Jan. 18.

Societe d'Appareil de Controle & d'Equipment des Moteurs (S. A. C. E. M.) S. A., assignee: *See*—
Mennesson, Marcel.

Standard Cap and Seal Corporation, assignee: *See*—
Reimers, Theodor M.

Stier, Joseph B., New York, N. Y. Ash tray. 152,439, Jan. 18.

Stier, Joseph B., New York, N. Y. Ash tray. 152,440, Jan. 18.

Studebaker Corporation, The, assignee: *See*—
Exner, Virgil M.

Swank, Inc., assignee: *See*—
Howard, Viola T.

Thomassen, Amy L., Toledo, assignor to Barnes Manufacturing Co., Mansfield, Ohio. Tub filler with transfer unit for diverting water to shower. 152,441, Jan. 18.

Thomassen, Amy L., Toledo, assignor to Barnes Manufacturing Co., Mansfield, Ohio. Center set lavatory faucet with pop-up drain control. 152,442, Jan. 18.

Walker, John R., Flushing, assignor to Norcross, Inc., New York, N. Y. Font of type. 152,443, Jan. 18.

Ward, Clyde A., San Francisco, Calif. Boat. 152,444, Jan. 18.

Winters, Alva B., Golf, assignor to Revere Electric Manufacturing Co., Chicago, Ill. Street lighting standard. 152,445, Jan. 18.

Winters, Alva B., Golf, assignor to Revere Electric Manufacturing Co., Chicago, Ill. Street lighting standard 152,446, Jan. 18.

LIST OF PATENTEES

TO WHOM

PATENTS WERE ISSUED ON THE 18TH DAY OF JANUARY, 1949

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Adams, Ralph D., Inglewood, assignor of one-half to T. A. Feeney, Los Angeles, Calif. Tiltable bin. 2,459,301, Jan. 18.
Adel Precision Products Corp., assignee: *See*—
Kremiller, Arthur E.
Aerial Products, Inc., assignee: *See*—
Dwyer, Martin, and Edwards.
Aetna Ball & Roller Bearing Company, assignee: *See*—
Rosner, Joseph J.
Agriculture, the United States of America as represented by the Secretary of, assignee: *See*—
Dimick, Keene P., Alderton, Lewis, Lightbody, and Fevold.
Guthrie, John D.
Haines, Paul G., Elsner, and Woodward.
Johnson, Gestur, and Boggs.
Lundgren, Harold P.
Tint, Howard, and Murray.
Ahrens, George L., Scotch Plains, N. J., assignor to Standard Oil Development Company. Segregation of C_8 hydrocarbons by extractive and azeotropic distillation. 2,459,403, Jan. 18.
Air Reduction Company, Incorporated, assignee: *See*—
Tyrner, Joseph M.
Aktiebolaget Kamyr, assignee: *See*—
Richter, Johan C. F. C.
Aktiebolaget Separator, assignee: *See*—
Bjornstjerna, Curt R. A. M.
Aktiebolaget Separator-Nobel, assignee: *See*—
Engel, Bruno K., and Palmqvist.
Albert, Harry E., assignor to The Firestone Tire & Rubber Company, Akron, Ohio. Purification of phenol sulfides and preparation of metallic salts thereof. 2,459,754, Jan. 18.
Alderfer, Sterling W.: *See*—
Trainer, James E., and Alderfer.
Alderton, Gordon: *See*—
Dimick, Keene P., Alderton, Lewis, Lightbody, and Fevold.
All American Airways, Inc., assignee: *See*—
Schultz, Arthur B.
Allen, Raymond W., assignor to The Firestone Tire & Rubber Company, Akron, Ohio. Airplane landing gear. 2,459,737, Jan. 18.
Allied Chemical & Dye Corporation, assignee: *See*—
Calfee, John D., and Smith.
Allied Mills, Inc., assignee: *See*—
Singer, Philip A., and Deobald.
Alliger, Glen, Cuyahoga Falls, assignor to The Firestone Tire & Rubber Company, Akron, Ohio. N-monochlorocyclohexylamine. 2,459,759, Jan. 18.
Allis-Chalmers Manufacturing Company, assignee: *See*—
Johnston, Gorman J.
American Cyanamid Company, assignee: *See*—
Cullian, John F., and Lytle.
Davis, Harold S.
Denton, John J., and Howard.
Erickson, John G.
Hechenbleikner, Ingenuin.
Jefts, Albert W., and Schmidlein.
MacKay, Johnstone S., and Paden.
Sperry, Russell L.
Thurston, Jack T.
American Enka Corporation, assignee: *See*—
Van de Mei, Anne.
American Steel Foundries, assignee: *See*—
Kinne, Edmund P.
Schlegel, Walter L., Jr.
American Steel and Wire Company, The, of New Jersey: *See*—
Harris, Arch W., and Ward.
American Viscose Corporation, assignee: *See*—
Aronson, David.
Sisson, Wayne A.
Thompson, Donald C.
Amundson, Roald H.: *See*—
Earle, Ralph H., and Amundson.
Anderson, Arthur L., and R. C. Burns, assignors to The Soundscriber Corporation, New Haven, Conn. Inverter motor. 2,459,611, Jan. 18.
Anderson, James A., Jr., Goose Creek, Tex., assignor to Standard Oil Development Company. Method and apparatus for controlling multicomponent separation process in accordance with light absorption characteristics. 2,459,404, Jan. 18.
Anderson, Olof V., Cowesett, R. I. Key ring. 2,459,405, Jan. 18.
Anderson, Richard T., Stacy, Minn. Door latch. 2,459,354, Jan. 18.
Anderson, Warren D., Glenbrook, assignor to Norma-Hoffmann Bearings Corporation, Stamford, Conn. Oscillating raceway grinder and grinding raceways. 2,459,406, Jan. 18.
Andrews-Alderfer Processing Co. Inc., The, assignee: *See*—
Trainer, James E., and Alderfer.
Arden Farms Co., assignee: *See*—
Berch, Samuel H.
Arsaux, Max W., Paw Paw, Mich. Oarlock extension. 2,459,355, Jan. 18.
Arne, Christian, Chicago, Ill. Lock gate system. 2,459,140, Jan. 18.
Aronson, David, Pine Bluff, Ark., assignor to American Viscose Corporation, Wilmington, Del. Concentration of salts having minimum solubilities at temperatures above those of the initial solutions. 2,459,302, Jan. 18.
Ashcraft, Ernest G., Chicago, Ill. Variable differential transformer. 2,459,210, Jan. 18.
Askania Regulator Company, assignee: *See*—
McCracken, James D.
Attane, Edward C., Jr.: *See*—
Doumani, Thomas F., Coe, and Attane.
Aubert, Fred B., Detroit, Mich. Electric controlling system. 2,459,356, Jan. 18.
Austenal Laboratories, Incorporated, assignee: *See*—
Zahn, Eric H.
Automatic Device Corporation, assignee: *See*—
Johnson, Arthur A.
Axtell, Harold J., Rochester, N. Y. Universal coupler for supporting cameras on tripods. 2,459,676, Jan. 18.
Bailey Meter Company, assignee: *See*—
Dickey, Paul S., and Shannon.
Baker, Benjamin P., Turtle Creek, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Compressed gas circuit interrupter. 2,459,612, Jan. 18.
Baker, Gerald T., Neligh, Nebr. Valve mechanism for a hydraulic power unit. 2,459,613, Jan. 18.
Baker, Thomas A., Logansport, Ind. Fluid metering system. 2,459,303, Jan. 18.
Ballard, Seaver A., Orinda, and B. P. Geyer, Berkeley, assignors to Shell Development Company, San Francisco, Calif. Preparation of acrylic acid. 2,459,677, Jan. 18.
Balleisen, Charles E., Arlington, Va. Acceleration of beech bolts in machine guns. 2,459,141, Jan. 18.
Balley, Ronald A.: *See*—
Bickle, Harry M., and Balley.
Bancel, Paul A., Montclair, J. D. Ditson, Phillipsburg, and A. D. Karr, Newark, N. J., assignors to Ingersoll-Rand Company, New York, N. Y. Rock drill. 2,459,484, Jan. 18.
Barker, William M.: *See*—
Brixner, Frederick W., and Barker.
Barnum, Emmett R., and G. L. Perry, Berkeley, assignors to Shell Development Company, San Francisco, Calif. Lubricating composition. 2,459,718, Jan. 18.
Bartlett, Forrest A., Gardena, Calif., assignor to Press Wireless, Inc., Chicago, Ill. Multiplex radio system. 2,459,485, Jan. 18.
Bates Manufacturing Company, The, assignee: *See*—
Franz, Frederick.
Bates, Mortimer F., Brooklyn, N. Y., assignor to The Sperry Corporation. Electrical test apparatus. 2,459,142, Jan. 18.
Batten, Percy H., assignee, trustee: *See*—
Boestad, Gustav K. W.
Lysholm, Alf.
Battley, Edwin R., and G. E. McCoy, Montreal, Quebec, Canada. Refrigerant container for refrigerator cars. 2,459,211, Jan. 18.
Bax, Hendrikus G. A., Eindhoven, Netherlands, assignor to Hartford National Bank and Trust Company, Hartford, Conn., as trustee. Power supply system. 2,459,486,
Beal, Keith F., Berwyn, and C. J. B. Thor, Western Springs, assignors to The Visking Corporation, Chicago, Ill. Polyvinyl acetal resins. 2,459,488, Jan. 18.
Beanland, Charles P., Chelmsford, England, assignor to Radio Corporation of America. Diversity radio receiving system. 2,459,259, Jan. 18.
Beaver, Charles J., Bowdon, and E. L. Davey, Timperley, assignors to W. T. Glover & Company Limited, Manchester, England. Jointing of conductors of electric cables. 2,459,212, Jan. 18.
Beaver, Daniel C., Mason City, Iowa. Roofer's knife. 2,459,407, Jan. 18.
Bebb, Robert L., assignor to The Firestone Tire & Rubber Company, Akron, Ohio. Making and compounding synthetic rubber. 2,459,740, Jan. 18.
Beerbower, Alan: *See*—
Zimmer, John C., and Beerbower.

Beggs, James E., Scotia, N. Y., assignor to General Electric Company. Electric discharge device. 2,459,487, Jan. 18.
Beirise, John C., Dayton, Ohio. Emergency control lock. 2,459,143, Jan. 18.
Bell, Richard A., Penn Wynne, assignor, by mesne assignments, to Philco Corporation, Philadelphia, Pa. Bomb fin structure. 2,459,357, Jan. 18.
Bell Telephone Laboratories, Incorporated, assignee: *See*—
Burton, Everett T.
Bellamy, Robert A., Oklahoma City, Okla. Cloth clip. 2,459,213, Jan. 18.
Bendix Aviation Corporation, assignee: *See*—
Bradford, William O., and Zapor.
Berch, Samuel H., Beverly Hills, assignor to Arden Farms Co., Los Angeles, Calif. Carton opener. 2,459,678, Jan. 18.
Beyer, Carlton M., and E. M. Bolze, San Diego, Calif., assignors to the United States of America, as represented by the Secretary of the Navy. Sound ranging training apparatus. 2,459,679, Jan. 18.
Bickle, Harry M., Middlesex, and R. A. Balley, London, assignors, by mesne assignments, to H. M. Bickle, Heaton, Middlesex, England. Spark plug. 2,459,214, Jan. 18.
Bicknell, John A., Westbrook, Maine, assignor to S. D. Warren Company, Boston, Mass. Prolonging the useful life of aqueous aluminum-casein coating composition. 2,459,408, Jan. 18.
Birkhead, Boswell M., Ola, Ark. Lumber stacking machine. 2,459,358, Jan. 18.
Birtman Electric Company, assignee: *See*—
Spraklin, Charles H.
Björnstjerna, Curt R. A. M., assignor to Aktiebolaget Separator, Stockholm, Sweden. Purifying used oils. 2,459,409, Jan. 18.
Black, James J., assignor to The Trailmobile Company, Cincinnati, Ohio. Trailer body side wall construction. 2,459,765, Jan. 18.
Black, James J., assignor to The Trailmobile Company, Cincinnati, Ohio. Trailer body construction. 2,459,766, Jan. 18.
Blake, Marion E., and R. A. Gartman, Fairhope, Ala. Olican with drip catcher having a weight operated return valve. 2,459,215, Jan. 18.
Blank, Frederick, New York, N. Y. Medical vial stopper for insuring sterile needle punctures. 2,459,304, Jan. 18.
Blaw-Knox Company, assignee: *See*—
Smith, Allen S.
Blitz, Daniel: *See*—
Shankweiler, Ray G., and Blitz.
Bloom, Samuel, Brooklyn, N. Y. Shoulder pad. 2,459,489, Jan. 18.
Boestad, Gustav K. W., Lidingo, Sweden, assignor, by mesne assignments, to J. C. Marble, L. M. Merrill, and P. H. Batten, as trustees. Multiple separator centrifuge. 2,459,145, Jan. 18.
Boggs, Mildred M.: *See*—
Johnson, Gestur, and Boggs.
Bolze, Ernest M.: *See*—
Beyer, Carlton M., and Bolze.
Bommer, Max: *See*—
Hauser, Herman, and Bommer.
Bond, Donald S., Philadelphia, Pa., assignor to Radio Corporation of America. Instrument landing system. 2,459,482, Jan. 18.
Booth, Eustace R., Staines, assignor of one-half to S. Marks, Feltham, England. Drafting machine. 2,459,216, Jan. 18.
Booth, Harry T., Glencoe, Ill., assignor to United Aircraft Products, Inc., Dayton, Ohio. Thermostatic shutter controller. 2,459,490, Jan. 18.
Borg-Warner Corporation, assignee: *See*—
Carnagua, Harold L., and Swift.
Neumann, George R., and Farrell.
Bosomworth, George P.: *See*—
Prettyman, Irven B., Bosomworth, and Milner.
Bosomworth, George P., assignor to The Firestone Tire & Rubber Company, Akron, Ohio. Dial gauge. 2,459,749, Jan. 18.
Bowman, Robert S.: *See*—
Slagle, Kenneth H., and Bowman.
Bowman, Robert S., assignor to Jones & Laughlin Steel Corporation, Pittsburgh, Pa. Purification of gammapicoline. 2,459,146, Jan. 18.
Bowman, Robert S., assignor to Jones & Laughlin Steel Corporation, Pittsburgh, Pa. Purification of betapicoline. 2,459,359, Jan. 18.
Bowman-Manifold, Michael: *See*—
Cork, Edward C., and Bowman-Manifold.
Boyd, George T. and H. T., Albert Lea, assignors of one-fourth to G. A. Thompson, Minneapolis, and one-fourth to R. I. Davies, Albert Lea, Minn. Wire bound box closing tool. 2,459,491, Jan. 18.
Boyd, Henry T.: *See*—
Boyd, George T. and H. T.
Bradbury, Tennyson F., Darley Abbey, assignor to Rolls-Royce Limited, Derby, England. Aluminium copper alloy. 2,459,492, Jan. 18.
Bradford, William O., and E. G. Zapor, Baltimore, Md., assignors to Bendix Aviation Corporation, South Bend, Ind. Tuning means comprising variable condenser and adjustable inductor of the mechanically deformable type. 2,459,493, Jan. 18.
Bradley, Harry P., Cuyahoga Falls, and J. L. Dum, assignors to The Firestone Tire & Rubber Co., Akron, Ohio. Metal bonded by means of chlorinated rubber adhesives containing a polyalkylene polyamine. 2,459,742, Jan. 18.
Bradley, William E., Swarthmore, assignor, by mesne assignments, to Philco Corporation, Philadelphia, Pa. Electrical system. 2,459,732, Jan. 18.
Braga, Armand: *See*—
Reiner, Kenneth, and Braga.
Brandl, Willi, Zurich, Switzerland. Apparatus for making infusions. 2,459,305, Jan. 18.
Brandon, Richard C., Elisabeth, N. J., assignor to Standard Oil Development Company. Azeotropic distillation of 2,3-dimethylbutadiene from methyl pentadiene. 2,459,410, Jan. 18.
Brassel, Jakob: *See*—
Straub, Fritz.
Briggs & Stratton Corporation, assignee: *See*—
Jacobi, Edward N.
Brixner, Frederick W., Gates, and W. M. Barker, Greece, assignors to General Railway Signal Company, Rochester, N. Y. Line circuit communication system. 2,459,494, Jan. 18.
Brown, Carl D., assignor to Draper Corporation, Hopedale, Mass. Picker stick guide for looms. 2,459,411, Jan. 18.
Brown, Cicero C., Houston, Tex. Knuckle joint. 2,459,614, Jan. 18.
Brown, George H., Princeton, N. J., assignor to Radio Corporation of America. High-frequency electrical bonding apparatus for bonding wide layers of dielectric materials. 2,459,260, Jan. 18.
Brown, John P., Croydon, England. Gyroscopic control apparatus. 2,459,495, Jan. 18.
Brown, Roy W., assignor to The Firestone Tire & Rubber Company, Akron, Ohio. Steering mechanism for wheeled land vehicles. 2,459,753, Jan. 18.
Browne, Donald B., Harpenden, England, assignor to General Motors Corporation, Detroit, Mich. Fuel lever indicator system. 2,459,261, Jan. 18.
Bruce, William F., Penfield, assignor to Wyeth Incorporated, Philadelphia, Pa. Lactone derivatives of 2-pyridone compounds. 2,459,360, Jan. 18.
Bryant Chucking Grinder Company, assignee: *See*—
Ljunggren, Thor H.
Bryant Electric Company, The, assignee: *See*—
Hodgkins, Charles H.
Buchanan, Lloyd W., Lima, Ohio, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Dual-voltage single-phase motor. 2,459,615, Jan. 18.
Buffington, Alan P., assignor, by mesne assignments, to Philco Corporation, Philadelphia, Pa. Oscillation generator and frequency multiplier. 2,459,262, Jan. 18.
Buhl, Walter T.: *See*—
Cahill, Lysle D., Buhl, and Horowitz.
Builders Iron Foundry, assignee: *See*—
Cary, Francis H.
Burckhalter, Joseph H.: *See*—
Rawlins, Albert L., Holcomb, Jones, Tendick, and Burckhalter.
Burgess, Wilfrid M., Cohoes, N. Y. Disintegrating cartridge belt. 2,459,147, Jan. 18.
Burgwin, Stephen L., Forest Hills, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Control apparatus for induction heating systems. 2,459,616, Jan. 18.
Burkhardt Company, The, assignee: *See*—
Russell, Alfred R.
Burns, Richard C.: *See*—
Anderson, Arthur L., and Burns.
Burton, Everett T., Millburn, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Contact protection for mercury wetted switch contacts. 2,459,306, Jan. 18.
Buxton, Incorporated, assignee: *See*—
Corey, Donald W.
Byers, A. M., Company, assignee: *See*—
White, Frederick W., and Story.
CCA Products Engineering Company, assignee: *See*—
Walters, Wyeth C.
Cahill, Lysle D., South Euclid, and W. T. Buhl and A. S. Horwitz, Shaker Heights, assignors, by mesne assignments, to Jack & Heints Precision Industries, Inc., Cleveland, Ohio. Instrument caging mechanism. 2,459,496, Jan. 18.
Calabro, Helen D., Lexington, Mass. Bedclothes holder. 2,459,497, Jan. 18.
Calfee, John D., Manhasset, N. Y., and L. B. Smith, Woodbridge, N. J., assignors to Allied Chemical & Dye Corporation. Manufacture of chlorofluoro methanes. 2,459,767, Jan. 18.
California Institute Research Foundation, assignee: *See*—
Gould, Clark W., Jr.
California Packing Corporation, assignee: *See*—
Cerruti, Richard C.
Dunn, Guy A.
Callanan, Neil D., Buffalo, N. Y. Bank check. 2,459,263, Jan. 18.
Caloric Stove Corporation, assignee: *See*—
Klein, Gustav.
Cameron, Robert T., Knoxville, Tenn. Coffee maker. 2,459,498, Jan. 18.
Campbell, John G.: *See*—
Fash, Ralph H., and Campbell.

Canham, George E., West Orange, N. J., assignor to Schick Incorporated, Stamford, Conn. Self-starting impulse type electric motor. 2,459,412, Jan. 18.
Canovsky, David, New Orleans, La. Wrist band. 2,459,413, Jan. 18.
Cantrall, Forrest L., Benicia, and J. A. Carlisle, San Rafael, assignors to Shasta Volcolite Company, Benicia, Calif. Mold filling and ejecting apparatus. 2,459,680, Jan. 18.
Caplan, Michael: *See*—
Dahlstrom, Eric T. J., and Caplan.
Carden, Albert, Bell, Calif. Draw clamp. 2,459,681, Jan. 18.
Carlisle, John A.: *See*—
Cantrall, Forrest L., and Carlisle.
Carnagua, Harold E., and C. L. Swift, Muncie, Ind., assignors to Borg-Warner Corporation, Chicago, Ill. Torque responsive clutch. 2,459,361, Jan. 18.
Carnegie-Illinois Steel Corporation, assignee: *See*—
Harris, Arch W., and Ward.
Carr, Edward L.: *See*—
Smith, George E. J., Jr., and Carr.
Carrie, William D., Lisle, assignor to Crane Co., Chicago, Ill. Rotary plug valve. 2,459,682, Jan. 18.
Carrier, Egbert W., Cranford, N. J., assignor to Standard Oil Development Company. Production of soda ash. 2,459,414, Jan. 18.
Carter, Ben, Bolton, England. Bobbin tensioning mechanism. 2,459,617, Jan. 18.
Cartier, Harold E., White Bear, Minn., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Heat-treating means utilizing controlled carbonaceous gaseous atmospheres. 2,459,618, Jan. 18.
Cary, Francis H., Warwick, assignor to Builders Iron Foundry, Providence, R. I. Photographic printing apparatus having a rotary light-transmitting cylinder and an endless belt bearing against the cylinder. 2,459,362, Jan. 18.
Cashman, Aloysius F.: *See*—
Lieber, Eugene, and Cashman.
Casingena, Joseph: *See*—
Solana, Carlos G., and Casingena.
Castel, Jacques H., assignor to Schlumberger Well Surveying Corporation, Houston, Tex. Casing joint locater. 2,459,499, Jan. 18.
Celanese Corporation of America, assignee: *See*—
Esmond, William G.
Schneider, George, and Steinberger.
Cerruti, Richard C., Oakland, assignor to California Packing Corporation, San Francisco, Calif. Transfer mechanism. 2,459,264, Jan. 18.
Chamberlain, Dorothy: *See*—
Chamberlain, Jerry C.
Chamberlain, H. S., assignee: *See*—
Chamberlain, Jerry C.
Chamberlain, Jerry C., assignor of one-fourth to H. S. Chamberlain and one-fourth to D. Chamberlain, Phoenix, Ariz. Automatic transmission. 2,459,363, Jan. 18.
Chapo, John, Long Island City, N. Y. Musical instrument. 2,459,500, Jan. 18.
Charles, Robert F., South Acton, and F. W. Durgin, Natick, assignors to Dennison Manufacturing Company, Framingham, Mass. Creped paper and making. 2,459,364, Jan. 18.
Chatterton, Neil, assignor to The Neil Chatterton Associates, Oswego, N. Y. Combination curtain, drapery, and shade fixture. 2,459,619, Jan. 18.
Chatterton, Neil, Associates, The, assignee: *See*—
Chatterton, Neil.
Cheney, Charles W., Soho, Birmingham, England. Key locked fastenings for attaché cases and the like. 2,459,683, Jan. 18.
Chicago Bridge & Iron Company, assignee: *See*—
Moyer, Frederick D.
Chris-Craft Corporation, assignee: *See*—
Smith, Jay W.
Christensen, Niels A., South Euclid, Ohio. Fluid control apparatus. 2,459,148, Jan. 18.
Christie, Charles F., assignor to Eli Lilly and Company, Indianapolis, Ind. Manufacture of malonic ester. 2,459,144, Jan. 18.
Churchill, Wilmer H., Saugus, assignor to United-Carr Fastener Corporation, Cambridge, Mass. Cable and the like supporting structures. 2,459,307, Jan. 18.
Ciba Limited, assignee: *See*—
Straub, Fritz.
Ciba Limited, Swiss firm of, The, assignee: *See*—
Hauser, Hermann, and Bommer.
Cibulka, Alois, Highlands, Tex. Roof and wall structure. 2,459,415, Jan. 18.
Cleeland, Roy, Meadowbrook, L. J. Kelley, Upper Darby, and W. S. Davis, Roxborough, Pa. Manufacturing textile materials. 2,459,620, Jan. 18.
Clement, Sylvester F.: *See*—
Hewitt, Alfred G., and Clement.
Cleveland Graphite Bronze Company, The, assignee: *See*—
Luetkemeyer, Henry W., and Schaefer.
Coates, Geoffrey E., Swansea, Wales, assignor, by mesne assignments, to The Permanente Metals Corporation. Electrolytic protective surface treatment of magnesium base alloys. 2,459,365, Jan. 18.
Cobb, Charles L., Los Angeles, Calif. Hoisting attachment for ladders. 2,459,621, Jan. 18.
Coe, Clarence S.: *See*—
Doumani, Thomas F., Coe, and Attane.
Coffin, Owen T., and D. J. Raden, Los Angeles, Calif., assignors to Swift & Company, Chicago, Ill. Nicotine and beta-beta-dichlorethyl ether insecticide. 2,459,138, Jan. 18.
Cohoe, Wallace P., Riverdale-on-Hudson, and M. Wilson, assignors to Fred'k H. Levey Co., Inc., New York, N. Y. Method of and apparatus for drying sheet materials by high-frequency electric fields. 2,459,622, Jan. 18.
Cohoe, Wallace P., and M. R. Saslaw, assignors to Fred'k H. Levey Co., Inc., New York, N. Y. Method and apparatus for drying sheet materials. 2,459,623, Jan. 18.
Cole, Frank E., Manchester, W. V. Goodhue, Ipswich, and R. Heeley, Beverly, Mass., assignors to United Shoe Machinery Corporation, Flemington, N. J. Fuse setting and ramming mechanism. 2,459,308, Jan. 18.
Cole, Harold E., assignee: *See*—
Tebbetts, Eugene L.
Colgate-Palmolive-Peet Company, assignee: *See*—
Gebhart, Arthur I.
Collins Radio Company, assignee: *See*—
Wulfsberg, Paul G.
Collins, Thomas K., Jr., Fort Benton, Mont., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Control circuit. 2,459,624, Jan. 18.
Colonial Broach Company, assignee: *See*—
Halborg, Carl J.
Columbia Broadcasting System, Inc., assignee: *See*—
Schlesinger, Kurt.
Columbus McKinnon Chain Corporation, assignee: *See*—
McKinnon, Archibald L.
Consolidated Car-Heating Company, Inc., assignee: *See*—
Griffin, Percy M.
Control Instrument Company, Inc., assignee: *See*—
Payne, Herbert.
Von Glahn, William.
Coon, John M., Verona, and J. B. Rust, West Orange, N. J. Polymeric mono-isoolefinic materials and making same. 2,459,501, Jan. 18.
Coover, Harry W., J. B. Dickey, and E. B. Towne, assignors to Eastman Kodak Company, Rochester, N. Y. Anthraquinone compounds. 2,459,149, Jan. 18.
Cope, Arthur C., Englewood, N. J., assignor to Sharp & Dohme, Incorporated, Philadelphia, Pa. Alkamine esters of para amino benzoic acid. 2,459,217, Jan. 18.
Copp, Warren F., St. Clairsville, Ohio, assignor to Wheeling Steel Corporation, Wheeling, W. Va. Welding together metal strip ends. 2,459,625, Jan. 18.
Corey, Donald W., assignor to Buxton, Incorporated, Springfield, Mass. Flexible pocket receptacle. 2,459,218, Jan. 18.
Cork, Edward C., and M. B.-M. Ealing, London, assignors to Electric & Musical Industries Limited, Hayes, England. Apparatus for the radiation or reception of electromagnetic waves. 2,459,768, Jan. 18.
Corning Glass Works, assignee: *See*—
McGregor, Rob R., and Warrick.
Cotchett, Louis M., Hingham, assignor to Foster Machine Company, Westfield, Mass. Bobbin sorting apparatus. 2,459,309, Jan. 18.
Coutant, André C., and J. Mathot, Paris, France. Tripod head with a removable camera support. 2,459,626, Jan. 18.
Cox, Drexel M., Tuleta, Tex. Tubing rack. 2,459,627, Jan. 18.
Craig, Burnie J., Los Angeles, Calif. Door device. 2,459,502, Jan. 18.
Crane, Carl J., and G. V. Holloman, Dayton, C. W. Muller, Osborn, and R. K. Stout, Dayton, Ohio. Interception trainer. 2,459,150, Jan. 18.
Crane Co., assignee: *See*—
Carrie, William D.
Crosby, Elmer K., Worcester, Mass. Magnetic impulse motor. 2,459,265, Jan. 18.
Crouse, George B., Wading River, assignor, by mesne assignments, to Photo-Positive Corporation, New York, N. Y. Article for reproducing drawings on blanks. 2,459,266, Jan. 18.
Crouse-Hinds Company, assignee: *See*—
Jeffers, Walter M.
Crow, Ira R., Los Angeles, Calif. Shoe polishing bracket and tree. 2,459,310, Jan. 18.
Croxall, Willard J., Bryn Athyn, and H. T. Neher, Bristol, assignors to Röhm & Haas Company, Philadelphia, Pa. Ester lactones. 2,459,684, Jan. 18.
Cullinan, John F., and L. D. Lytle, Plainfield, N. J., assignors to American Cyanamid Company, New York, N. Y. Acid treatment of pyranthrone vat dyestuffs. 2,459,366, Jan. 18.
Cummins, Arthur B., Plainfield, N. J., assignor to Johns-Manville Corporation, New York, N. Y. Manufacture of structural shapes. 2,459,685, Jan. 18.
Curtis, Lorin W., Verona, assignor to Tung-Sol Lamp Works Inc., Newark, N. J. Sealed lighting unit and electric incandescent lamp therefor. 2,459,151, Jan. 11.
Cutler-Hammer, Inc., assignee: *See*—
Hunter, Richard B., and Pell.
Reeves, James B.
Dahlstrom, Eric T. J., and M. Caplan, assignors to Henry Hildebrandt, Chicago, Ill. Bracket. 2,459,503, Jan. 18.
Davey, Edward L.: *See*—
Beaver, Charles J., and Davey.

Davies, Robert I., assignee: *See*—
Boyd, George T. and H. T.
Davis, Adolph H., Norwood, assignor to The R. K. LeBlond Machine Tool Company, Cincinnati, Ohio. Adapter for boring bars. 2,459,416, Jan. 18.
Davis, Harold G.: *See*—
Shumaker, Lawrence E., and Davis.
Davis, Harold S., Riverside, Conn., assignor to American Cyanamid Company, New York, N. Y. Acetoxy-aliphatic amides. 2,459,686, Jan. 18.
Davis, Walter S.: *See*—
Cleeland, Roy, Kelley, and Davis.
Decker, Josef B., Elkton, Md., assignor, by mesne assignments, to the United States of America, as represented by the Secretary of the Navy. Aerial signal. 2,459,687, Jan. 18.
Deere & Company, assignee: *See*—
Hanson, Fredrick C.
De Ghetto, Anselem, Clifton, N. J., assignor to National Rubber Machinery Company, Akron, Ohio. Wire spreader and tensioner for circular looms and the like. 2,459,504, Jan. 18.
Deisinger, Delbert A., Long Branch, and R. A. Kirkman, Elberon, N. J. Electronic valve. 2,459,152, Jan. 18.
De Jarlais, Gordon M., Evansville, Ind., assignor to Seeger Refrigerator Company. Motor cooling system. 2,459,311, Jan. 18.
Delaware Engineering Corporation, assignee: *See*—
Simpson, George L.
Delph, Huram C., London, Ky. Jack hoist. 2,459,505, Jan. 18.
Dempster Brothers, Incorporated, assignee: *See*—
Dempster, George R., and Jones.
Dempster, George R., and H. W. Jones, assignors to Dempster Brothers, Incorporated, Knoxville, Tenn. Elevating mechanism for fifth wheels. 2,459,506, Jan. 18.
Denham, Robert H., Scotia, N. Y., assignor to General Electric Company. Induction heating continuously moving wire. 2,459,507, Jan. 18.
Dennison Manufacturing Company, assignee: *See*—
Charles, Robert F., and Durgin.
Denton, John J., Somerville, and K. L. Howard, Westfield, N. J., assignors to American Cyanamid Company, New York, N. Y. 1,4-di- (heterocyclic substituted) piperazines. 2,459,667, Jan. 18.
Deobald, Harold J.: *See*—
Singer, Philip A., and Deobald.
Descombes, Julien A., assignor to Societe d'Etudes et de Realisation des Brevets Descombes, Paris, France. Cinematograph projection and sound-reproducing apparatus. 2,459,628, Jan. 18.
De Vyver, Cornelius A., Chappaqua, assignor to Johns-Manville Corporation, New York, N. Y. Insulating tubular covering and making the same. 2,459,688, Jan. 18.
Dickey, Joseph B.: *See*—
Coover, Harry W., Dickey, and Towne.
Dickey, Paul S., East Cleveland, and J. F. Shannon, Euclid, Ohio, assignors to Bailey Meter Company. Fluid rate of flow measuring apparatus. 2,459,689, Jan. 18.
Differential Wheel Corporation, assignee: *See*—
Tolman, Charles P.
Dimick, Keene P., Redwood City, G. Alderton, Albany, and J. C. Lewis, Berkeley, Calif., and H. D. Lightbody and H. L. Fevold, Chicago, Ill., assignors to the United States of America as represented by the Secretary of Agriculture. Extraction and purification of subtilin. 2,459,139, Jan. 18.
Display Lighting Incorporated, assignee: *See*—
Price, Edison A.
Ditson, J. D.: *See*—
Bancel, Paul A., Ditson, and Karr.
Doctors Truss Company, assignee: *See*—
Hollingsworth, Fred.
Dodge, Ralph E., Takoma Park, Md. Portable necktie rack. 2,459,417, Jan. 18.
Dorfman, Hillier D., Pittsburgh, and G. J. Freese, East McKeesport, assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa. Circuit breaker. 2,459,629, Jan. 18.
Doumani, Thomas F., Los Angeles, C. S. Coe, Long Beach, and E. C. Attané, Jr., Inglewood, assignors to Union Oil Company of California, Los Angeles, Calif. Oxidation of cycloaliphatic hydrocarbons and alcohols. 2,459,690, Jan. 18.
Dourte, George J., Long Beach, Calif. Hydraulic jack for automobile trailers. 2,459,508, Jan. 18.
Draper Corporation, assignee: *See*—
Brown, Carl D.
Dukay Machinery Corporation, assignee: *See*—
Kellner, Paul.
Duke, James B., Lakeland, Fla., assignor to Minerals Separation North American Corporation, New York, N. Y. Concentration of nonsulfide, nonsilicate ores with nitric acid treated fatty acids. 2,459,219, Jan. 18.
Dum, John L.: *See*—
Bradley, Harry P., and Dum.
Duncan, Charles S., Wilkinsburg, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Rectifier. 2,459,630, Jan. 18.
Dunn, Guy A., Oakland, assignor to California Packing Corporation, San Francisco, Calif. Pear peeling, coring, and splitting method and apparatus. 2,459,368, Jan. 18.
Du Pont, E. I., de Nemours & Company, assignee: *See*—
Signaigo, Frank K.
Durgin, Frank W.: *See*—
Charles, Robert F., and Durgin.
Dwyer, Martin, Hewlett Harbor, and P. B. Edwards, Port Washington, assignors to Aerial Products, Inc., Merrick, N. Y. Self-contained emergency signaling device adapted to be operated automatically after being launched. 2,459,267, Jan. 18.
Dybvig, Charles C., Birmingham, Mich., assignor to The Firestone Tire & Rubber Company, Akron, Ohio. Tire tread. 2,459,750, Jan. 18.
Dye, Glen M., R. B. Maddock, R. Sardeson, and E. H. Savela, assignors to Pako Corporation, Minneapolis, Minn. Film processing machine. 2,459,509, Jan. 18.
Eames, William F., Westfield, N. J., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Trainline control system. 2,459,631, Jan. 18.
Earle, Ralph H., Wauwatosa, and R. H. Amundson, Milwaukee, assignors to Line Material Company, South Milwaukee, Wis. High-voltage circuit interrupter. 2,459,691, Jan. 18.
Eastman Kodak Company, assignee: *See*—
Coover, Harry W., Dickey, and Towne.
Easton Car & Construction Company, assignee: *See*—
Fraunfelder, George D.
Eck, William, assignor to Wisconsin Aluminum Foundry Company, Manitowoc, Wis. Apparatus for testing pressure gauges. 2,459,769, Jan. 18.
Ecusta Paper Corporation, assignee: *See*—
Levy, Robert M.
Edwards and Company, Inc., assignee: *See*—
Verkuil, Leo L.
Edwards, Philip B.: *See*—
Dwyer, Martin, and Edwards.
Eisner, Abner: *See*—
Haines, Paul G., Eisner, and Woodward.
Electric & Musical Industries Limited, assignee: *See*—
Cork, Edward C., and Bowman-Manifold.
Electric Soldering Iron Co., Inc., assignee: *See*—
Foster, Allen T.
Elkins, Lincoln F., assignor to Stanolind Oil and Gas Company, Tulsa, Okla. Borehole pressure gauge. 2,459,268, Jan. 18.
Ellis, George D., Los Angeles, Calif. Light spot and reflector means for alinement of cameras for title purposes. 2,459,418, Jan. 18.
Ellmann, Jack I., Washington, D. C. Alternating current solenoid reciprocating motor unit. 2,459,510, Jan. 18.
Ellsworth, Ralph H., assignor to The Wolwin Chair Company, Willoughby, Ohio. Reclining chair. 2,459,269, Jan. 18.
Elmendorf, Duryea E., Cleveland, Ohio, assignor to General Electric Company. Negative glow lamp. 2,459,511, Jan. 18.
Emerick, Henry W.: *See*—
Nickelsen, John M., and Emerick.
Emsco Derrick & Equipment Company, assignee: *See*—
Tremolada, Guglielmo R.
Engel, Bruno K., Hoglandstorget, and F. T. E. Palmqvist, assignors to Aktiebolaget Separator-Nobel, Stockholm, Sweden. Refining hydrocarbon oil. 2,459,419, Jan. 18.
England, John H., Wellesley Hills, assignor to Raytheon Manufacturing Company, Newton, Mass. Welding system. 2,459,153, Jan. 18.
England, John H., Wellesley Hills, assignor to Raytheon Manufacturing Company, Newton, Mass. Welding system. 2,459,154, Jan. 18.
Engstrom, Ralph W., East Petersburg, Pa., assignor to Radio Corporation of America. Comparison control system. 2,459,632, Jan. 18.
Ensign, Robert H.: *See*—
Teague, Walter D., Jr., and Ensign.
Erickson, Albert L., and J. C. Kyle, Palo Alto, Calif. Pressure cell. 2,459,155, Jan. 18.
Erickson, John G., Greenwich, Conn., assignor to American Cyanamid Company, New York, N. Y. β-amino-α-chloroacrylonitriles and preparation. 2,459,420, Jan. 18.
Escher, Edward P., Chicago, Ill., assignor to Screw Conveyor Corporation, Hammond, Ind. Conveyer cover clamping and dust-sealing means. 2,459,770, Jan. 18.
Esmond, William G., Cumberland, Md., assignor to Celanese Corporation of America. Advancing reel. 2,459,270, Jan. 18.
Espy, John A., Buechel, Ky. Centrifugal pump. 2,459,220, Jan. 18.
Essick, Bryant, Los Angeles, Calif. Liquid circulator. 2,459,312, Jan. 18.
Eversman Mfg. Co., assignee: *See*—
Shumaker, Lawrence E., and Davis.
Evertite Roof Corporation, assignee: *See*—
Sidwell, Webster S.
Fann, Isham H., Washington, D. C. Tool post for lathes. 2,459,421, Jan. 18.
Fantz, Fred C., Lima, Ohio, assignor to Midwest Piping & Supply Company, Inc., St. Louis, Mo. Handwheel. 2,459,271, Jan. 18.
Farley, Otley, Murray, Ky. Corn planter shovel attachment. 2,459,634, Jan. 18.

Farnsworth Research Corporation, assignee: *See*—
Hallmark, Clyde E.
Larson, Christian C.
Schantz, Joseph D.
Seigin, Paul J.

Farrell, Eugene F.: *See*—
Neumann, George R., and Farrell.

Farrington, Charlotte M., Flint, Mich. Combined shaft key and key extractor. 2,459,221, Jan. 18.

Farris, Clarence E., Fort Monroe, Va. Fluorescent lamp. 2,459,633, Jan. 18.

Fash, Ralph H., assignee, trustee: *See*—
Fash, Ralph H., and Campbell.

Fash, Ralph H., Fort Worth, and J. G. Campbell, Houston, assignors to R. H. Fash, trustee, Fort Worth, Tex. Petroleum exploration by soil analysis. 2,459,512, Jan. 18.

Federal Electric Products Company, Inc., assignee: *See*—
Humpage, Harold A.

Feeney, Thomas A., assignee: *See*—
Adams, Ralph D.

Fenn, Orrin E., assignor to Peters-Dalton Inc., Detroit, Mich. Gas washer. 2,459,635, Jan. 18.

Fenney, William N., assignor to The Texas Company, New York, N. Y. Alkylation method and apparatus. 2,459,636, Jan. 18.

Ferguson, Ralph M., Dayton, Ohio. Gun test range. 2,459,156, Jan. 18.

Ferguson, William C., and P. Sussenbach, St. Louis, and F. L. Limn, University City, Mo., assignors to The Preastite Engineering Company, St. Louis, Mo. Packing assembly. 2,459,370, Jan. 18.

Fevold, Harry L.: *See*—
Dimick, Keene P., Alderton, Lewis, Lightbody, and Fevold.

Wilson, Robert F., and Reznicek.

Fisher, Martin H.: *See*—
King, George E., and Fisher.

Flaws, John, Jr., East Cleveland, Ohio, assignor to General Electric Company. Apparatus for making spiders for electric lamps. 2,459,513, Jan. 18.

Fletcher, Milton, New York, N. Y. Support for neon tubes. 2,459,692, Jan. 18.

Flickinger, Howard B., Ashtabula, Ohio. Nursing bottle holder. 2,459,514, Jan. 18.

Flinner, Elgie C., Kansas City, Mo. Portable camping stove. 2,459,515, Jan. 18.

Flint, Hyland C., assignor to The Firestone Tire & Rubber Company, Akron, Ohio. Seat cushion, multiple type. 2,459,755, Jan. 18.

Flint, Hyland C., assignor to The Firestone Tire & Rubber Company, Akron, Ohio. Bed structure. 2,459,756, Jan. 18.

Flint, Hyland C., assignor to The Firestone Tire & Rubber Company, Akron, Ohio. Back for seats. 2,459,758, Jan. 18.

Food Machinery and Chemical Corporation, assignee: *See*—
Van Vleck, Forest A.

Forsling, Bengt E. G.: *See*—
Graham, Douglas H., Forsling, and Tabberer.

Foster, Allen T., Chicago, Ill., assignor to Electric Soldering Iron Co., Inc., Deep River, Conn. Adjustable soldering iron. 2,459,371, Jan. 18.

Foster Machine Company, assignee: *See*—
Cotchett, Louis M.

Fox, Arthur L., Easton, Pa., assignor to General Aniline & Film Corporation, New York, N. Y. Phthalocyanine sulfonamidopyridines. 2,459,771, Jan. 18.

Fox, Roy C., and T. N. Massey, Baltimore, Md., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa. Socket. 2,459,272, Jan. 18.

Francis, Victor J., Aylesbury, and E. H. Nelson, Harrow Weald, England, assignors to General Electric Company. High-pressure mercury vapor lamp. 2,459,516, Jan. 18.

Frans, Frederick, West Haven, Conn., assignor to The Bates Manufacturing Company, West Orange, N. J. Stapling machine. 2,459,313, Jan. 18.

Fraunfelder, George D., assignor to Easton Car & Construction Company, Easton, Pa. Tandem axle running gear for trailers or the like. 2,459,372, Jan. 18.

Freedland, Jacob, Detroit, Mich. Shock therapy mouth guard. 2,459,273, Jan. 18.

Freese, Gerald J.: *See*—
Dorfman, Hiller D., and Freese.

Frihart, Henry N., W. C. Jackson, and F. B. Williams, Chicago, Ill., assignors to Motorola, Inc. Cathode-ray image-translating device. 2,459,637, Jan. 18.

Frisby Corporation, assignee: *See*—
Frisby, Frank D.

Frisby, Frank D., assignor to Frisby Corporation, St. Louis, Mo. Piston packing ring. 2,459,157, Jan. 18.

Fry, Douglas J.: *See*—
Kendall, John D., and Fry.

Fuller, Charles H., Los Angeles, Calif. Exciting means for high-frequency display tubes. 2,459,422, Jan. 18.

Fyler, George W., Lombard, assignor to Motorola, Inc., Chicago, Ill. High-voltage power supply. 2,459,638, Jan. 18.

Galetsky, Hyman, New York, N. Y. Mandolin pick. 2,459,274, Jan. 18.

Garand, John C., Springfield, Mass. Hammer retarder for automatic firearms. 2,459,158, Jan. 18.

Gartman, Raymond A.: *See*—
Blake, Marion E., and Gartman.

Gates, John C., Indianapolis, Ind. Hand truck with stair climbing shoe. 2,459,275, Jan. 18.

Gaylord Container Corporation, assignee: *See*—
Hensley, Claude H.

Gearhart, Roy E., Kansas City, Mo. Venetian blind. 2,459,517, Jan. 18.

Gebhart, Arthur I., Union, assignor to Colgate-Palmolive-Peet Company, Jersey City, N. J. Reaction of organic compounds with hydrogen halides. 2,459,423, Jan. 18.

Geigy, J. R., A. G., assignee: *See*—
Keller, Ernst, and Zweidler.

General Aniline & Film Corporation, assignee: *See*—
Fox, Arthur L.
Mayhew, Raymond L.

General Electric Company, assignee: *See*—
Beggs, James E.

Beaver, Charles J., and Davey.

Godsey, Frank W., Jr.: *See*—
Langer, Bernard F., and Godsey.

Goldberg, Moses W., Upper Montclair, and S. Teitel, Rutherford, assignors to Hoffman-La Roche Inc., Nutley, N. J. Preparing metal salts of penicillin. 2,459,315, Jan. 18.

Goldsborough, Shirley L., Basking Ridge, N. J., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. High-speed sequential relaying system. 2,459,639, Jan. 18.

Goodhue, William V.: *See*—
Cole, Frank E., Goodhue, and Heeley.

Goodhue, William V., Ipswich, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J. Rocket launcher. 2,459,314, Jan. 18.

Goodrich, Earl F., assignor to Kirkhom Manufacturing Corporation, Grand Rapids, Mich. Core clamping means. 2,459,374, Jan. 18.

Gordon, Joseph M., Chicago, Ill. Laminated phosphorescent fluorescent article. 2,459,693, Jan. 18.

Gordon, Joseph M., Chicago, Ill. Structure for fluorescent dial panel and making the same. 2,459,694, Jan. 18.

Gould, Clark W., Jr., assignor to California Institute Research Foundation, Pasadena, Calif. Microfractionation still with capillary tube offtakes for condensate. 2,459,375, Jan. 18.

Graham, Douglas H., Coventry, B. E. G. Forsling, Rugby, and G. Tabberer, Coventry, England, assignors to General Electric Company. Speed limiting arrangements for turbine rotors. 2,459,519, Jan. 18.

Gramelspacher, Clarence U., Jasper, Ind. Manufacturing bilge barrels. 2,459,316, Jan. 18.

Granat, Leo, San Francisco, Calif. Press and die therefor. 2,459,276, Jan. 18.

Granberg, Albert J., Oakland, Calif. Fueling system. 2,459,317, Jan. 18.

Greenshields, Bruce D., New York, N. Y. Mixing bituminous materials with fillers. 2,459,520, Jan. 18.

Greig, Harold G., Princeton, N. J., assignor to Radio Corporation of America. Electrolytic recording. 2,459,521, Jan. 18.

Griffin, Percy M., assignor to Consolidated Car-Heating Company, Inc., Albany, N. Y. Closure operator. 2,459,695, Jan. 18.

Grip Nut Company, assignee: *See*—
Kass, Lawrence W.

Griscom, Samuel B., and R. L. Witzke, Pittsburgh, assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa. Regulating system. 2,459,640, Jan. 18.

Grooms, Albert O., assignor to General Motors Corporation, Dayton, Ohio. Switch for refrigerating apparatus. 2,459,522, Jan. 18.

Groten, Frank J., Montclair, and R. J. Reid, Fair Lawn, N. J., assignors to The Firestone Tire and Rubber Company, Akron, Ohio. Elastomeric copolymer mixed with phenol-aldehyde resin. 2,459,739, Jan. 18.

Gulf Research & Development Company, assignee: *See*—
Stillson, Gordon H., and Sawyer.

Guthrie, John D., New Orleans, La., assignor to The United States of America as represented by the Secretary of Agriculture. Introduction of amino groups into cellulose. 2,459,222, Jan. 18.

Haantjes, Johan, Eindhoven, Netherlands, assignor to Hartford National Bank and Trust Company, Hartford, Conn., as trustee. Device for converting a saw-tooth-shaped voltage of a comparatively low frequency into a saw-tooth-shaped current. 2,459,278, Jan. 18.

Haines, Paul G., and A. Elsner, Philadelphia, and C. F. Woodward, Abington, Pa., assignors to The United States of America as represented by the Secretary of Agriculture. Preparation of nornicotine. 2,459,696, Jan. 18.

Halbkat, Charles A.: *See*—
Wells, Lee A., and Halbkat.

Halborg, Carl J., New Baltimore, assignor to Colonial Broach Company, Warren Township, Macomb County, Mich. Broaching machine. 2,459,697, Jan. 18.

Hallead, Merrill, assignor to Superior Machine and Engineering Company, Detroit, Mich. Apparatus for dressing the grinding wheel of an internal grinder. 2,459,641, Jan. 18.

Hallinan, William W., Racine, Wis. Filter. 2,459,318, Jan. 18.

Hallinan, William W., Racine, Wis. Filter. 2,459,376, Jan. 18.

Hallinan, William W., Racine, Wis. Variable-speed pulley. 2,459,377, Jan. 18.

Hallinan, William W., Racine, Wis. Variable-speed pulley. 2,459,378, Jan. 18.

Hallmark, Clyde E., Fort Wayne, Ind., assignor, by mesne assignments, to Farnsworth Research Corporation. Modulation system. 2,459,698, Jan. 18.

Hallmark, Clyde E., Fort Wayne, Ind., assignor, by mesne assignments, to Farnsworth Research Corporation. Synchronizing system. 2,459,699, Jan. 18.

Halstead, Gerald G., and R. B. Russ, Schenectady, N. Y., assignors to General Electric Company. Electrode support structure for electric discharge devices. 2,459,277, Jan. 18.

Hamilton, Roy C., San Francisco, and E. S. Rothchild, San Mateo, assignors to Rodpak Manufacturing Co., San Francisco, Calif. Seal. 2,459,642, Jan. 18.

Hampton, Durward B., Sebastopol, Calif. Trap. 2,459,160, Jan. 18.

Hansell, Clarence W., Port Jefferson, N. Y., assignor to Radio Corporation of America. Cathode-ray oscilloscope. 2,459,319, Jan. 18.

Hansen, Harold, Fresno, Calif. Record sheet supporting device. 2,459,523, Jan. 18.

Hanson, Frederick C., Cordova, assignor to Deere & Company, Moline, Ill. Belt-tightening device. 2,459,379, Jan. 18.

Hanson, Merle E., Chicago, Ill. Tray moving apparatus. 2,459,524, Jan. 18.

Hanshaw, Ernest: *See*—
Kellogg, Warren C., and Hanshaw.

Hargraves, Albert, Cuyahoga Falls, assignor to The Firestone Tire & Rubber Company, Akron, Ohio. Tire tread. 2,459,762, Jan. 18.

Harper, Elmer E., Monrovia, Calif.; E. P. Harper, executrix of E. E. Harper, deceased. Control valve. 2,459,700, Jan. 18.

Harper, Elmer E., deceased, by E. P. Harper, executrix, Monrovia, Calif. Mechanical instrument holder. 2,459,701, Jan. 18.

Harper, Esther P., executrix: *See*—
Harper, Elmer E.

Harris, Arch W., Cleveland, Ohio, and A. H. Ward, Pittsburgh, Pa., assignors to The American Steel and Wire Company of New Jersey and Carnegie-Illinois Steel Corporation. Metal coating. 2,459,161, Jan. 18.

Harshaw Chemical Company, The, assignee: *See*—
Kremers, Harry C., and Johnson.

Hartford National Bank and Trust Company, assignee, trustee: *See*—
Bax, Hendrikus G. A.
Haantjes, Johan.
Mulder, Johannes G. W.
Van Liempt, Johannes A. M., Prakke, Landsbergen, and van Uden.

Hartley, Emmett C., assignor to The Parker Appliance Company, Cleveland, Ohio. Swivel coupling. 2,459,643, Jan. 18.

Hauser, Hermann, Binningen, and M. Bommer, Riehen, Switzerland, assignors to the Swiss fiorm of Ciba Limited. Anthrimide carbasole dyestuffs. 2,459,424, Jan. 18.

Hayes, Harvey C., Washington, D. C. Acoustical sound locating device. 2,459,162, Jan. 18.

Hechenbleikner, Ingenuin, Stamford, Conn., assignor to American Cyanamid Company, New York, N. Y. Triphenylmethyl butyl ether as an insecticide. 2,459,525, Jan. 18.

Heckenbleikner, Ingenuin, Stamford, Conn., assignor to American Cyanamid Company, New York, N. Y. 1-naphthylmethyl tetradecyl ether as an insecticide. 2,459,526, Jan. 18.

Heeley, Roland: *See*—
Cole, Frank E., Goodhue, and Heeley.

Heidebrecht, Abraham Q., Burrton, Kans. Dead-end back tie. 2,459,644, Jan. 18.

Hemminger, Charles E., Westfield, N. J., assignor to Standard Oil Development Company. Apparatus for contacting gaseous fluids with solids. 2,459,425, Jan. 18.

Henderson, Thomas J., Bayport, N. Y. Releasable shackle. 2,459,223, Jan. 18.

Hendricks, William L., Los Angeles, Calif. Magnetically operated stirrer for mixing liquids. 2,459,224, Jan. 18.

Henning, George E., and C. E. Lewis, Baltimore, Md., assignors to Western Electric Company, Incorporated, New York, N. Y. Automatic stop motion for knitting machines and the like. 2,459,426, Jan. 18.

Hensley, Claude H., Dallas, Tex., assignor to Gaylord Container Corporation, St. Louis, Mo. Folded-blank box tray. 2,459,645, Jan. 18.

Herbert, Elmer H., assignor to Oliver United Filters Incorporated, Oakland, Calif. Valve for overflow system. 2,459,527, Jan. 18.

Herbert, Philip J.: *See*—
Wolff, Irving, and Herbst.

Hercules Powder Company, assignee: *See*—
Johnson, Harold E.
Johnson, Harold E., and Spurlin.
Jones, William D.
Oswald, Frank G.

Hersam, George R.: *See*—
Holst, William H., and Hersam.

Hess, Willis C., Kenmore, assignor of one-third to L. C. Krazinski, New York, N. Y. Clothesline holder. 2,459,380, Jan. 18.

Hewitt, Alfred G., La Grange Park, and S. F. Clement, assignors to The Visking Corporation, Chicago, Ill. Flame sealing apparatus. 2,459,235, Jan. 18.

Heywood, Mark M., Twickenham, England, assignor to The Firestone Tire & Rubber Company, Akron, Ohio. Manufacture of rubber products. 2,459,763, Jan. 18.

Hickman, Clarence N., Jackson Heights, N. Y., assignor to the United States of America as represented by the Secretary of War. Thermal igniter. 2,459,163, Jan. 18.

Hickok, Willard H., assignor to The Girdler Corporation, Louisville, Ky. Controlling high-frequency heating of dielectric material. 2,459,225, Jan. 18.

Hildebrandt, Henry, assignee: *See*—
Dahlstrom, Eric T. J., and Caplan.

Hipwell, Harry H.: *See*—
Hipwell, Harry T., and Hipwell.

Hipwell, Harry T., and H. T. Hipwell, Pittsburgh, Pa. Flash lamp. 2,459,702, Jan. 18.

Hodges, Walter P., Knoxville, Tenn. Guide cutter and stub holder. 2,459,646, Jan. 18.

Hodgkins, Charles H., Fairfield, assignor to The Bryant Electric Company, Bridgeport, Conn. Lamp holder for fluorescent lamps. 2,459,647, Jan. 18.

Hoeppner, Conrad H.: *See*—
Rosen, Milton W., and Hoeppner.

Hoffman-La Roche Inc., assignee: *See*—
Goldberg, Moses W., and Teitel.

Holcomb, Walter F.: *See*—
Rawlins, Albert L., Holcomb, Jones, Tendick, and Burckhalter.

Holden, Robert W., assignor to Laminating Specialties, Inc., Burbank, Calif. Plastic coating. 2,459,279, Jan. 18.

Holder, Clinton H.: *See*—
Welty, Albert B., Jr., and Holder.

Hollingsworth, Fred, assignor to Doctors Truss Company, Grand Rapids, Mich. Truss. 2,459,381, Jan. 18.

Holloman, George C.: *See*—
Crane, Carl J., Holloman, Muller, and Stout.

Hollub, Arthur, Chicago, Ill. Demountable sealed stove pipe joint. 2,459,382, Jan. 18.

Holst, William H., U. S. Navy, and G. R. Hersam, Takoma Park, Md. Webbable, strippable coating composition. 2,459,164, Jan. 18.

Hook, Harry H., Los Angeles, Calif. Apparatus for taking radiographs. 2,459,528, Jan. 18.

Horwitz, Alfred S.: *See*—
Cahill, Lysle D., Buhl, and Horwitz.

Houghton, Joseph Y., Chevy Chase, Md. Method and apparatus for determining the three-dimensional direction of approach of an electromagnetic wave front. 2,459,165, Jan. 18.

Howard, Kenneth L.: *See*—
Denton, John J., and Howard.

Howard, Viola T., Saylesville, R. I., assignor to Swank, Inc. Cuff link for french type cuffs. 2,459,703, Jan. 18.

Hughes, Leighton E., U. S. Navy. Main feed pump recirculating line erosion control device. 2,459,166, Jan. 18.

Humpage, Harold A., Hartford, Conn., assignor, by mesne assignments, to Federal Electric Products Company, Newark, N. J. Circuit breaker. 2,459,427, Jan. 18.

Hunter, Richard B., and E. Pell, Shorewood, assignors to Cutler-Hammer, Inc., Milwaukee, Wis. Controller for alternating current motors. 2,459,320, Jan. 18.

Hydraulic Brake Company, assignee: *See*—
La Brie, Ludger E.

Ickis, Lynn S., East Cleveland, Ohio, assignor to General Electric Company. Focusing reflector-type electric discharge lamps. 2,459,532, Jan. 18.

Ilford Limited, assignee: *See*—
Kendall, John D., and Fry.

Ingalls, Anne, Chicago, Ill. Shoulder pad. 2,459,648, Jan. 18.

Ingersoll-Rand Company, assignee: *See*—
Bancel, Paul A., Ditson, and Karr.

Interior, the United States of America, as represented by the Secretary of the, assignee: *See*—
Vahrenkamp, George J.

Irvin, Ward M., Battle Creek, Mich. Holder for Christmas trees, flagstaffs, and the like. 2,459,533, Jan. 18.

Irvington Varnish and Insulator Company, assignee: *See*—
Schaufelberger, William F.

Jack & Heints Precision Industries, Inc., assignee: *See*—
Cahill, Lysle D., Buhl, and Horwitz.
Kopischiansky, Andrew F.

Jackson, Wilbur C.: *See*—
Frihart, H. Neil, Jackson, and Williams.

Jacobi, Edward N., assignor to Briggs & Stratton Corporation, Milwaukee, Wis. Air cleaner. 2,459,428, Jan. 18.

Jahrl, Erik T. W., Orebro, Sweden. Chuck. 2,459,649, Jan. 18.

Jeffers, Walter M., assignor to Crouse-Hinds Company, Syracuse, N. Y. Control apparatus for traffic signaling systems. 2,459,429, Jan. 18.

Jefts, Albert W., and J. A. Schmidlein, Stamford, Conn., assignors to American Cyanamid Company, New York, N. Y. Production of ethylene cyanohydrin. 2,459,430, Jan. 18.

Jencks, Charles D., Bristol, R. I., and R. H. Lawson, Lakeport, N. H., assignors to Walter Kidde & Company, Inc., Belleville, N. J. Winding machine. 2,459,167, Jan. 18.

Jennings, O. D., & Company, assignee: *See*—
Mihalek, Emery, and Szyper.

Jocelyn, Douglas L., Detroit, Mich. Ice tray. 2,459,168, Jan. 18.

Jogwick, Walter E., Parkersburg, and E. H. McLaughlin, Vienna, W. Va. Tray table. 2,459,529, Jan. 18.

Johns-Manville Corporation, assignee: *See*—
Cummins, Arthur B.
De Vyver, Cornelius A.
Poltorak, Emil J.

Johnson, Arthur A., assignor to Automatic Devices Corporation, Bridgeport, Conn. Cigar lighter. 2,459,650, Jan. 18.

Johnson, Charles R., assignor to The Firestone Tire & Rubber Company, Akron, Ohio. Coagulation of synthetic rubber latex. 2,459,748, Jan. 18.

Johnson, Dorothy E., Sacramento, Calif. Educational toy. 2,459,321, Jan. 18.

Johnson, Gestur, Albany, and M. M. Bogga, Berkeley, Calif., assignors to United States of America as represented by the Secretary of Agriculture. Cold processed fruit spread. 2,459,431, Jan. 18.

Johnson, Harold E., assignor to Hercules Powder Company, Wilmington, Del. Separation of cineoles from hydrocarbons of similar boiling range by azeotropic distillation with phenols. 2,459,432, Jan. 18.

Johnson, Harold E., Wilmington, and H. M. Spurlin, Marshallton, assignor to Hercules Powder Company, Wilmington, Del. Separation of cineoles from hydrocarbons of similar boiling range by azeotropic distillation with phenols. 2,459,433, Jan. 18.

Johnson, Henry H., Glendale, Calif. Telemetric device. 2,459,704, Jan. 18.

Johnson, Irwin E.: *See*—
Kremers, Harry C., and Johnson.

Johnson, Oscar A.: *See*—
Smith, Eric C., and Johnson.

Johnson's Company, assignee: *See*—
Pharo, Lee C.

Johnston, Gorman J., Bellevue, Pa., assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis. Stationary induction apparatus. 2,459,322, Jan. 18.

Johnston, Lewis E., Winter Garden, Fla. Bag and container tying device. 2,459,530, Jan. 18.

Jones, Edwin K., Ponca City, Okla., assignor to Universal Oil Products Company, Chicago, Ill. Catalyst absorption. 2,459,531, Jan. 18.

Jones, Eldon M.: *See*—
Rawlins, Albert L., Holcomb, Jones, Tendick, and Burckhalter.

Jones, Harry W.: *See*—
Dempster, George.

Jones & Laughlin Steel Corporation, assignee: *See*—
Bowman, Robert S.
Slagle, Kenneth H., and Bowman.

Jones, Reuben G.: *See*—
Shaw, Gail L., and Jones.

Jones, Thomas L.: *See*—
Tirrill, John P., and Jones.

Jones, William D., West Lafayette, Ind., assignor to Hercules Powder Company, Wilmington, Del. Synthetic resins derived by reacting a cresol-formaldehyde condensate with a monohydric alcohol ester of rosin. 2,459,651, Jan. 18.

Julien, Maurice F. A., Paris, France. Transmission system for automobile vehicles. 2,459,705, Jan. 18.

Kanhofer, Elmer R., Riverside, assignor to Universal Oil Products Company, Chicago, Ill. Distillation of hydrocarbons to remove fluorine compounds. 2,459,434, Jan. 18.

Karr, Alfred D.: *See*—
Bancel, Paul A., Ditson, and Karr.

Kass, Lawrence W., assignor to Grip Nut Company, Chicago, Ill. Brake beam safety support. 2,459,323, Jan. 18.

Kasten, Walter, Franklin, assignor to Renniks Company, Detroit, Mich. Pressure seal. 2,459,652, Jan. 18.

Keller, Ernst, and R. Zweidler, assignors to J. R. Geigy A. G. Basel, Switzerland. Substantive triazineazo dyes. 2,459,435, Jan. 18.

Kelley, Louis J.: *See*—
Roy, Cleeland, Kelley, and Davis.

Kellner, Paul, assignor to Dukay Machinery Corporation, New York, N. Y. Pan greasing machine. 2,459,324, Jan. 18.

Kellogg, M. W., Company, The, assignee: *See*—
Passino, Herbert J.

Kellogg, Warren C., and E. Hanshaw, assignors to Renniks Company, Detroit, Mich. Reed seal for rotating equipment. 2,459,654, Jan. 18.

Kendall, John D., and D. J. Fry, Ilford, assignors to Ilford Limited, Ilford, Essex, England. Production of pyrazole-5-ones. 2,459,226, Jan. 18.

Kennedy, Thomas A., assignor to J. A. Zurn Mfg. Co., Erie, Pa. Magnetic separator for fluid systems. 2,459,534, Jan. 18.

Kerr, Arthur N., Los Angeles, Calif., assignor to Phillips Petroleum Company. Underground reservoir for the storage of liquefied gases. 2,459,227, Jan. 18.

Keyes, John J., Edgewood, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Insulated conductor. 2,459,653, Jan. 18.

Kidde, Walter, & Company, Inc., assignee: *See*—
Jencks, Charles D., and Lawson.

Killen, Carroll G., Jr.: *See*—
Sparks, George R., and Killen, Jr.

King, Carl F., Jr.: *See*—
Moore, Chester C., and King, Jr.

King, George E., and M. H. Fisher, Pittsburgh, assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa. Adjustable speed drive. 2,459,655, Jan. 18.

King, John A., Albany, assignor, by mesne assignments, to Winthrop-Stearns, Inc., New York, N. Y. Preparation of amides. 2,459,706, Jan. 18.

Kinne, Edmund P., Alliance, Ohio, assignor to American Steel Foundries, Chicago, Ill. Fifth wheel. 2,459,772, Jan. 18.

Kirkhof Manufacturing Corporation, assignee: *See*—
Goodrich, Earl F.

Kirkman, Robert A.: *See*—
Deisinger, Delbert A., and Kirkman.

Kirschner, Donald J., Miami Beach, Fla. Pocket automatic electric lighter. 2,459,656, Jan. 18.

Klein, Gustav, Melrose Park, assignor to Caloric Stove Corporation, Philadelphia, Pa. Adjustable broiler. 2,459,657, Jan. 18.

Klein, Gustav, Melrose Park, assignor to Caloric Stove Corporation, Philadelphia, Pa. Detachable handle. 2,459,658, Jan. 18.

Knowles, Hugh S., River Forest, Ill., assignor to Zenith Radio Corporation. Bone conduction unit. 2,459,325, Jan. 18.

Koci, Ludvik J., assignor to Sunbeam Corporation, Chicago, Ill. Radiation thermostat control for toasters. 2,459,169, Jan. 18.

Koci, Ludvik J., assignor to Sunbeam Corporation, Chicago, Ill. Toaster control mechanism. 2,459,170, Jan. 18.

Kolb, Walter G., Washington, D. C. Convenience outlet. 2,459,659, Jan. 18.

Kolbe, Henry H., Los Angeles, Calif., assignor to The Firestone Tire & Rubber Company, Akron, Ohio. Fuel cell fitting. 2,459,747, Jan. 18.

Konicek, Frank, Baltimore, and H. J. Vennes, Towson, Md., assignors to Western Electric Company, Incorporated, New York, N. Y. Article assembling apparatus. 2,459,228, Jan. 18.

Kopischiansky, Andrew F., Maple Heights, assignor, by mesne assignments, to Jack & Heints Precision Industries, Inc., Cleveland, Ohio. Servo unit test stand. 2,459,535, Jan. 18.

Kosting, Peter E.: *See*—
Zagwyn, Theodore K.

Krasberg, Rudolf G., Chicago, Ill. Hose clamp. 2,459,436, Jan. 18.

Kreissler, Earl E., and F. C. Wilkinson, Kansas City, Mo. Adjustable ladder attachments. 2,459,437, Jan. 18.

Kremers, Harry C., Cleveland Heights, and I. E. Johnson, Cleveland, assignors, to The Harshaw Chemical Company, Elyria, Ohio. Manufacture of hydrofluoric acid. 2,459,438, Jan. 18.

Kremiller, Arthur E., Glendale, Calif., assignor to Adel Precision Products Corp. Pulsator system. 2,459,326, Jan. 18.

Kubaugh, Le Roy M., assignor to The Firestone Tire & Rubber Company, Akron, Ohio. Resilient mounting. 2,459,741, Jan. 18.

Kyle, James C.: *See*—
Erickson, Albert L., and Kyle.

Kyle, William D., Jr., Milwaukee, and C. Schindler, Wauwatosa, Wis., assignors to Line Material Company. Automatic reclosing circuit breaker. 2,459,327, Jan. 18.

La Brie, Ludger E., assignor to Hydraulic Brake Company, Detroit, Mich. Cup washer. 2,459,562, Jan. 18.

Laminating Specialties, Inc., assignee: *See*—
Holden, Robert W.

Landsbergen, Hendricus J.: *See*—
Van Llempt, Johannes A. M., Prakke, Landsbergen, and van Uden.

Lange, Lila L., Chicago, Ill. Straining device. 2,459,660, Jan. 18.

Lange, Morris, University Heights, and M. Spiegel, Shaker Heights, assignors to Superior Funeral Supply Corporation, Cleveland, Ohio. Folding support. 2,459,280, Jan. 18.

Langer, Bernard F., Pittsburgh, and F. W. Godsey, Jr., Forest Hills, assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa. Torque measuring device for shafts. 2,459,171, Jan. 18.

Larson, Christian C., Fort Wayne, Ind., assignor, by mesne assignments, to Farnsworth Research Corporation. Image dissector. 2,459,778, Jan. 18.

Larson, Frank L.: *See*—
Robbins, Sam E.
Robbins, Sam E., and Larson.

Larson, Roy F., R. W. Liggett, and W. C. Mussulman, assignors to A. E. Staley Manufacturing Company, Decatur, Ill. Flavoring materials. 2,459,568, Jan. 18.

Latta, Isaac R., Drexel Hill, Pa., assignor to General Electric Company. Control device. 2,459,664, Jan. 18.

Lawson, Robert H.: *See*—
Jencks, Charles D., and Lawson.

LeBlond, R. K., Machine Tool Company, The, assignee: *See*—
Davis, Adolph H.

Lee, Slaughter W., Princeton, assignor to Wallace Laboratories, Inc., New Brunswick, N. J. Penetrating aqueous sulfur composition for the treatment of skin disorders such as acne. 2,459,566, Jan. 18.

Lee, William R., San Mateo, Calif. Display box. 2,459,565, Jan. 18.

Leeds and Northrup Company, assignee: *See*—
Williams, Albert J., Jr.

Lehman, Edward H., assignor to W. H. Miner, Inc., Chicago, Ill. Friction shock absorber. 2,459,229, Jan. 18.

Lemmers, Eugene, Cleveland Heights, Ohio, assignor to General Electric Company. Positive column lamp. 2,459,567, Jan. 18.

Lenz, Lionel C., assignor to S. Pass, Chicago, Ill. Slip cover. 2,459,328, Jan. 18.

Leonard, Ward Electric Company, assignee: *See*—
Steinitz, Stephen.

Levey, Fred'k H., Co., Inc., assignee: *See*—
Cohoe, Wallace P., and Saalaw.
Cohoe, Wallace P., and Wilson.

Levine, Herbert B., assignee: *See*—
Solana, Carlos G., and Casingena.

Levinson, Sidney O., and F. Oppenheimer, Chicago, Ill., assignors to Michael Reese Research Foundation. Dehydration device. 2,459,329, Jan. 18.

Levy, Robert M., Brevard, N. C., assignor to Ecusta Paper Corporation. Sampling device. 2,459,383, Jan. 18.

Lewis, Clay E.: *See*—
Henning, George E., and Lewis.

Lewis, Dartrey, assignor to John A. Roebling's Sons Company, Trenton, N. J. Method and apparatus for grinding rod and wire. 2,459,707, Jan. 18.

Lewis, James C.: *See*—
Dimick, Keene P., Alderton, Lewis, Lightbody, and Fevold.

Earle, Ralph H., and Amundson.
Kyle, William D., Jr., and Schindler.

Linenthal, Jack, Chicago, Ill. Rack for neckties. 2,459,331, Jan. 18.

Lipkin, Moses R., assignor to Sun Oil Company, Philadelphia, Pa. Separation of hydrocarbons. 2,459,442, Jan. 18.

Lippert, Walter E., Jackson Heights, N. Y., assignor to Underwood Corporation. Computing machine. 2,459,441, Jan. 18.

Litten, Fred W., Zelienople, Pa. Food chopper with rotary forcer screw. 2,459,230, Jan. 18.

Ljunggren, Thor H., Charlestown, N. H., assignor to Bryant Chucking Grinder Company, Springfield, Vt. Motor-driven tool mechanism. 2,459,384, Jan. 18.

Lorber, Charles, Louisville, Ky. Combination quiz device. 2,459,231, Jan. 18.

Luetkemeyer, Henry W., Euclid, and R. A. Schaefer, assignors to The Cleveland Graphite Bronze Company, Cleveland, Ohio. Bearing. 2,459,172, Jan. 18.

Luitjens, Alvin H.: *See*—
Stoner, Justus S., and Luitjens.

Lundgren, Harold P., Berkeley, Calif., assignor to United States of America as represented by the Secretary of Agriculture. Dispersions of proteins in aqueous detergents. 2,459,708, Jan. 18.

Lyon, George A., Allenhurst, N. J. Making wheel balancing weights. 2,459,568, Jan. 18.

Lyon, George A., Allenhurst, N. J. Wheel cover. 2,459,569, Jan. 18.

Lysholm, Alf, Stockholm, Sweden, assignor, by mesne assignments, to J. C. Marble, L. M. Merrill, and P. H. Batten, as trustees. Gas turbine system embodying rotary positive displacement compressor apparatus. 2,459,709, Jan. 18.

Lytle, Lawrence D.: *See*—
Cullinan, John F., and Lytle.

Mabrey, Willis R., Olidale, Calif. Combination fruit or flower cutter and holder. 2,459,232, Jan. 18.

Mabry, Steve M., Yokena, Miss. Tray. 2,459,443, Jan. 18.

MacFarland, Allison M., assignor to W. T. Neiman, Freeport, Ill. Electric snap switch. 2,459,661, Jan. 18.

Mackay, Johnstone S., Old Greenwich, and J. H. Padea, Stamford, Conn., assignors to American Cyanamid Company, New York, N. Y. Preparing guanamines. 2,459,710, Jan. 18.

Macy, Donald, assignor of one-half to S. B. Ohlbaum, New York, N. Y. Combination lip rouge applicator and mirror. 2,459,733, Jan. 18.

Maddock, Ralph B.: *See*—
Dye, Glen M., Maddock, Sardeson, and Savela.

Magallon, Alfred, assignee: *See*—
Ruffino, Gabriel.

Mahnke, Kurt, Alden, N. Y., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Bus transfer apparatus. 2,459,662, Jan. 18.

Main, Thomas C., San Antonio, Tex., assignor to Standard Oil Development Company. Hydrocarbon synthesis. 2,459,444, Jan. 18.

Majneri, Ludwig A., Grosse Pointe, assignor to The Warner Aircraft Corporation, Detroit, Mich. Hydraulic braking system. 2,459,663, Jan. 18.

Majneri, Ludwig A., Grosse Pointe, assignor to The Warner Aircraft Corporation, Detroit, Mich. Hydraulic valve. 2,459,664, Jan. 18.

Johnson, Harold E., assignor to Hercules Powder Company, Wilmington, Del. Separation of cineoles from hydrocarbons of similar boiling range by azeotropic distillation with phenols. 2,459,432, Jan. 18.

Klein, Gustav, Melrose Park, assignor to Caloric Stove Corporation, Philadelphia, Pa. Detachable handle. 2,459,658, Jan. 18.

Levine, Herbert B., assignee: *See*—
Solana, Carlos G., and Casingena.

Majneri, Ludwig A., Grosse Pointe, assignor to The Warner Aircraft Corporation, Detroit, Mich. Combined retracting and braking system for aircraft landing gear. 2,459,665, Jan. 18.

Mall, Arthur W., Flossmoor, assignor to Mall Tool Company, Chicago, Ill. Saw sharpener. 2,459,233, Jan. 18.

Mall Tool Company, assignee: *See*—
Mall, Arthur W.

Manganese Products, Inc., assignee: *See*—
Moulton, Ralph W.

Mannila, Leo, assignee: *See*—
Wiitala, Elmer.

Marble, Jarvis C., assignee, trustee: *See*—
Boestad, Gustav K. W.
Lysholm, Alf.

Markem Machine Company, assignee: *See*—
Robbins, Charles F.

Marks, Sydney, assignee: *See*—
Booth, Eustace R.

Martin, Albert M., Park Ridge, Ill. Vertical file. 2,459,385, Jan. 18.

Marus, Michael, Plant City, Fla. Closure fastener. 2,459,666, Jan. 18.

Mason, Ruric C., Forest Hills, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Control circuits. 2,459,667, Jan. 18.

Massey, Thomas N.: *See*—
Fox, Roy C., and Massey.

Mathot, Jacques: *See*—
Coutant, André C., and Mathot.

Matthes, Samuel S., assignor to The Ohio Brass Company, Mansfield, Ohio. Trolley wire hanger. 2,459,386, Jan. 18.

Mayhew, Raymond L., Phillipsburg, N. J., assignor to General Aniline & Film Corporation, New York, N. Y. Phthalocyanine polyhydroxyalkylsulfonamides. 2,459,773, Jan. 18.

McAlvay, John C.: *See*—
Munroe, David J., and McAlvay.

McCandless, Chester N.: *See*—
McClintock, William M., and C. N. and D. E. McCandless.

McCandless, Dean E.: *See*—
McClintock, William M., and C. N. and D. E. McCandless.

McClintock, William M., New Kensington, Pa., and C. N. and D. E. McCandless, Youngstown, Ohio. Folding infant's crib. 2,459,445, Jan. 18.

McCloy, Graham S., Springfield, Mass., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Defrosting means for refrigeration apparatus. 2,459,173, Jan. 18.

McCown, William E., Haddonfield, N. J., assignor to Radio Corporation of America. Condenser. 2,459,332, Jan. 18.

McCoy, George E.: *See*—
Battley, Edwin R.

McCracken, James D., assignor to Askania Regulator Company, Chicago, Ill. Control for hydraulic couplings. 2,459,734, Jan. 18.

McDonald, Joseph F., Bronx, N. Y., assignor to Radio Corporation of America. Two-way radio equipment for lifeboat service. 2,459,281, Jan. 18.

McDougal, Taine G., Flint, K. Schwartzwalder, Holly, and A. S. Rulka, Flint, assignors to General Motors Corporation, Detroit, Mich. Resistor and spark plug embodying same. 2,459,282, Jan. 18.

McDowall, Robert, assignor to The Viking Corporation, Chicago, Ill. Flame sealing apparatus. 2,459,234, Jan. 18.

McFarland, Joseph L., Royal Oak, and M. P. Van Camp, Detroit, Mich. Probe. 2,459,174, Jan. 18.

McGregor, George H., International Falls, assignor to Minnesota and Ontario Paper Company, Minneapolis, Minn. Method of refining sulfate turpentine. 2,459,570, Jan. 18.

McGregor, Rob R., Verona, and E. L. Warrick, Pittsburgh, Pa., assignors to Corning Glass Works, Corning, N. Y. Condensing organosilicols. 2,459,387, Jan. 18.

McKee, Ralph H., New York, N. Y. Removing shine from fabrics. 2,459,236, Jan. 18.

McKinley, Floyd C., Shaker Heights, Ohio. Combined shipping and display case for bottles. 2,459,333, Jan. 18.

McKinnon, Archibald L., St. Catharines, Ontario, Canada, assignor to Columbus McKinnon Chain Corporation, Tonawanda, N. Y. Manufacture of snap hooks. 2,459,735, Jan. 18.

McLaughlin, Ell H.: *See*—
Jogwick, Walter E., and McLaughlin.

McNall, John W., East Orange, N. J., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Positive grid oscillator. 2,459,283, Jan. 18.

McQuay-Norris Manufacturing Company, assignee: *See*—
Smith, Dallas M.

Meier, William J., New York, N. Y. Dental unit. 2,459,711, Jan. 18.

Melichar, Joseph F., assignor to The Parker Appliance Company, Cleveland, Ohio. Valve casing. 2,459,668, Jan. 18.

Mentor, Eugene L., Westminster, assignor to Simplex Time Recorder Co., Gardner, Mass. Self-contained switchboard and cable connections therein. 2,459,237, Jan. 18.

Meredith, Joe H., Springfield, Mo. Roller bracket for round refrigerator or cabinet shelf. 2,459,446, Jan. 18.

Merrill, Leslie M., assignee, trustee: *See*—
Boestad, Gustav K. W.
Lysholm, Alf.

Mershon, Clarence L., Lima, Ohio, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Regulating system. 2,459,669, Jan. 18.

Messina, Charles F., and M. M. Messina, Central Valley, N. Y. Restraining device. 2,459,712, Jan. 18.

Messina, Michael M.: *See*—
Messina, Charles F., and Messina.

Micarta Fabricators, Inc., assignee: *See*—
Olson, Harry A.

Michael Reese Research Foundation, assignee: *See*—
Levinson, Sidney O., and Oppenheimer.

Mid-States Equipment Corporation, assignee: *See*—
Nielsen, Clayton P.

Midwest Piping & Supply Company, Inc., assignee: *See*—
Fants, Fred C.

Mihalek, Emery, and C. Szyper, assignors to O. D. Jennings & Company, Chicago, Ill. Cabinet with device for locking an instrument base. 2,459,571, Jan. 18.

Milliken, Humphreys, Mount Royal, Quebec, Canada. Apparatus for converting heat energy into useful work. 2,459,447, Jan. 18.

Milner, Duncan C.: *See*—
Prettyman, Irven B., Bosomworth, and Milner.

Miner, W. H., Inc., assignee: *See*—
Lehman, Edward H.

Minerals Separation North American Corporation, assignee: *See*—
Duke, James B.

Minnesota and Ontario Paper Company, assignee: *See*—
McGregor, George H.

Molins, Desmond W., Deptford, London, S. E. 8, assignor to Molins Machine Company Limited, London, England. Breech-loading mechanism for ordnance. 2,459,572, Jan. 18.

Molins Machine Company Limited, assignee: *See*—
Molins, Desmond W.

Monroe Auto Equipment Company, assignee: *See*—
Nickelsen, John M., and Emerick.

Moore, Charles G., River Forest, Ill., assignor to The Glidden Company, Cleveland, Ohio. Preparing oil acid modified alkyd material. 2,459,176, Jan. 18.

Moore, Chester C., and C. F. King, Jr., assignors to Stephens-Adamson Mfg. Co., Aurora, Ill. Hydraulic cam adjuster. 2,459,713, Jan. 18.

Moore, Wiley T., U. S. Army, Laverne, Okla., assignor to United States of America as represented by the Secretary of War. Explosive bullet. 2,459,175, Jan. 18.

Morris, Adrian, Jacksonville, Fla. Tobacco pipe attachment. 2,459,670, Jan. 18.

Morris, George S., North Hollywood, Calif. Overhead valve tappet clearance adjusting wrench. 2,459,671, Jan. 18.

Morrison, Samuel O., Media, Pa., assignor to Sunroc Refrigeration Company, Dover, Del. Water cooler with a drain arrangement. 2,459,774, Jan. 18.

Morrow, Harry R., Chicago, Ill. Dental drill spray. 2,459,573, Jan. 18.

Morsch, Jesse J., Douglas, Wyo. Hub-mounted wheel wrench. 2,459,672, Jan. 18.

Moseley, Francis L., Osborn, and L. J. Perper, Dayton, Ohio. Direct-current amplifier. 2,459,177, Jan. 18.

Motorola, Inc., assignee: *See*—
Frihart, H. Neil, Jackson, and Williams.
Fyler, George W.
Noble, Daniel E.

Moulton, Ralph W., assignor to Manganese Products, Inc., Seattle, Wash. Preparation of oxides of manganese. 2,459,714, Jan. 18.

Moyer, Frederick D., Chicago, Ill., assignor to Chicago Bridge & Iron Company. Seal for floating roofs. 2,459,178, Jan. 18.

Moyer, Wendell W., assignor to A. E. Staley Manufacturing Company, Decatur, Ill. Flavoring materials. 2,459,574, Jan. 18.

Mueller, Erich O., Irwin, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Dynamoelectric machine. 2,459,673, Jan. 18.

Mulder, Johannes G. W., Eindhoven, Netherlands, assignor to Hartford National Bank and Trust Company, Hartford, Conn., as trustee. Device comprising a current converting tube. 2,459,284, Jan. 18.

Muller, Carl W.: *See*—
Crane, Carl J., Holloman, Muller, and Stout.

Munroe, David J., and J. C. McAlvay, assignors to Webster Electric Company, Racine, Wis. Variable delivery pump. 2,459,388, Jan. 18.

Murphy, Donard, New York, N. Y. Combination toothbrush and dentifrice receptacle. 2,459,285, Jan. 18.

Murray, Charles W.: *See*—
Tint, Howard, and Murray.

Murray, William M., North Balclutha, New Zealand. Ball-and-socket vehicle coupling. 2,459,448, Jan. 18.

Mussulman, Wayne C.: *See*—
Larson, Roy F., Liggett, and Mussulman.

Nachtman, John S., Beaver, Pa. Continuous tinplate brightening apparatus. 2,459,674, Jan. 18.

National Rubber Machinery Company, assignee: *See*—
De Ghetto, Anslem.

Navy, United States of America, as represented by the Secretary of the, assignee: *See*—
Beyer, Carlton M., and Boise.
Svoboda, Antonin.
Swennes, Benjamin A.
Decker, Josef B.

Negbaur, H., & Co., assignee: *See*—
Negbaur, Harry.

Negbaur, Harry, assignor to H. Negbaur & Co., New York, N. Y. Table lighter. 2,459,238, Jan. 18.

Neher, Harry T.: *See*—
Croxall, Willard J., and Neher.

Neiman, W. T., assignee: *See*—
MacFarland, Allison M.

Nelson, Evan H.: *See*—
Francis, Victor J., and Nelson.

Neumann, George R., St. Clair Shores, and E. F. Farrell, Grosse Pointe Woods, Mich., assignors to Borg-Warner Corporation, Chicago, Ill. Heating device. 2,459,575, Jan. 18.

Newman, Henry B. L., Rockhampton, Queensland, Australia. Pipe coupling. 2,459,389, Jan. 18.

Newman, Lewis T., Memphis, Tenn. Vending apparatus. 2,459,715, Jan. 18.

Niagara Research Corporation, assignee: *See*—
Yeiser, Frank M.

Nichols, Gordon E., assignor to Winthrop-Atkins Co., Inc., Middleboro, Mass. Picture mount. 2,459,576, Jan. 18.

Nickelsen, John M., Ann Arbor, and H. W. Emerick, assignors to Monroe Auto Equipment Company, Monroe, Mich. Tire pump connection. 2,459,716, Jan. 18.

Nielsen, Clayton P., Chicago, Ill., assignor to Mid-States Equipment Corporation. Welding apparatus. 2,459,577, Jan. 18.

Noble, Daniel E., Chicago, Ill., assignor to Motorola, Inc. Interference reducing radio receiver. 2,459,675, Jan. 18.

Noble, Sidney H., Harrow Weald, England, assignor to General Electric Company. Glow switch. 2,459,578, Jan. 18.

Noel, Edward B., Cleveland Heights, Ohio, assignor to General Electric Company. Electrode structure. 2,459,579, Jan. 18.

Nordberg, Ernst A., Southport, Conn. Method and apparatus for winding coiled bodies. 2,459,536, Jan. 18.

Norma-Hoffmann Bearings Corporation, assignee: *See*—
Anderson, Warren D.

Oberstadt, Peter B., Wickliffe, Ohio. Dampening devices for shock absorbers and the like. 2,459,537, Jan. 18.

O'Donnell, Robert T., Montclair, N. J., assignor to The Firestone Tire & Rubber Company, Akron, Ohio. Manufacture of 2,3-dichlorobutadiene-1,3. 2,459,760, Jan. 18.

Ohio Brass Company, The, assignee: *See*—
Matthes, Samuel S.

Ohlbaum, Samuel B.: *See*—
Macy, Donald.

Oleen, Olof H., St. Helens, Oreg. Animal trap. 2,459,580, Jan. 18.

Oliver, Eugene H., Baytown, and C. F. Van Berg, Goose Creek, Tex., assignors, by mesne assignments, to Standard Oil Development Company, Elizabeth, N. J. Catalytic dehydrogenation of olefinic hydrocarbons while maintaining the potassium content of the catalyst. 2,459,449, Jan. 18.

Oliver United Filters Incorporated, assignee: *See*—
Herbert, Elmer H.

Olson, Harry A., Park Ridge, assignor to Micarta Fabricators, Inc., Chicago, Ill. Socket terminal mounting. 2,459,390, Jan. 18.

Oppenheimer, Franz: *See*—
Levinson, Sidney O., and Oppenheimer.

Orthopedic Frame Company, assignee: *See*—
Treace, Harry T.

Oswald, Frank G., assignor to Hercules Powder Company, Wilmington, Del. Resinous mixed esters containing a pentaerythritol. 2,459,581, Jan. 18.

Otis, Samuel S., Winnetka, Ill. Knife rack and edger. 2,459,391, Jan. 18.

Owen, William F., Daytona Beach, Fla. Nonrefillable bottle. 2,459,450, Jan. 18.

Packie, John W., Green Village, and E. M. Glazier, Elizabeth, N. J., assignors to Standard Oil Development Company. Butadiene extraction. 2,459,451, Jan. 18.

Paden, Joseph H.: *See*—
MacKay, Johnstone S., and Paden.

Pakala, William E., Forest Hills, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Vapor electric device. 2,459,582, Jan. 18.

Pako Corporation, assignee: *See*—
Dye, Glen M., Maddock, Sardeson, and Savela.

Palmer, Henry F., assignor to The Firestone Tire & Rubber Company, Akron, Ohio. Butadiene-styrene copolymer tackified with oxidized isoprene polymer. 2,459,761, Jan. 18.

Palmqvist, Fredrik T. E.: *See*—
Engel, Bruno K., and Palmqvist.

Parke, Davis & Company, assignee: *See*—
Rawlins, Albert L., Holcomb, Jones, Tendick, and Burckhalter.

Bradbury, Tennyson F.

Rosen, Milton W., and C. H. Hoeppner, Washington, D. C. Gate suppressing linear response amplifier. 2,459,181, Jan. 18.

Rosenberger, Albert J., assignor to Republic Flow Meters Company, Chicago, Ill. Density measuring apparatus. 2,459,542, Jan. 18.

Rosenwald, Robert H., Western Spring, assignor to Universal Oil Products Company, Chicago, Ill. Separation of alkyl-alkoxyphenol mixtures. 2,459,540, Jan. 18.

Ross, Josiah, Sunnyside, Long Island, N. Y. Grenade mortar and adapter. 2,459,182, Jan. 18.

Ross, Malcolm D., Pittsburgh, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Rotor ventilation for turbogenerators. 2,459,586, Jan. 18.

Roth, Frank F., Jr., Philadelphia, Pa. Fixture for hardening dies. 2,459,183, Jan. 18.

Rothchild, Edward S.: *See*—
Hamilton, Roy C., and Rothchild.

Rothe, Frank, Niagara Falls, N. Y., assignor to The Linde Air Products Company. Blanketed electric welding with a fusible trough to support the comminuted mineral composition above the bottom of the welding zone. 2,459,242, Jan. 18.

Rosner, Joseph J., assignor to Aetna Ball & Roller Bearing Company, Chicago, Ill. Pulley block and bearing assembly. 2,459,290, Jan. 18.

Ruffino, Gabriel, assignor of one-half to A. Magallon, Los Angeles, Calif. Harmonica. 2,459,184, Jan. 18.

Rulka, Alexander S.: *See*—
McDougal, Taine G., Schwartzwalder, and Rulka.

Russ, Richard B.: *See*—
Halstead, Gerald G., and Russ.

Russell, Alfred R., Grosse Pointe, assignor to The Burkhardt Company, Detroit, Mich. Swivel ring binder. 2,459,541, Jan. 18.

Russell, Valoran, Morton Grove, Ill. Flux meter. 2,459,341, Jan. 18.

Rust, John B.: *See*—
Coon, John M., and Rust.

Sackville, William, Berkeley, Calif., assignor to the United States of America as represented by the Secretary of War. Radiant energy detector. 2,459,185, Jan. 18.

Sagnier, Méropée, Paris, France. Stocking mending machine. 2,459,587, Jan. 18.

St. John, Erastus R., Forest Hills, N. Y. Tower structure. 2,459,198, Jan. 18.

Sanders, Royden C., Jr., Hightstown, N. J., assignor to Radio Corporation of America. Comparator circuits for radio locators. 2,459,457, Jan. 18.

Sandin, Jerome, Pittsburgh, J. K. Kraft, Wilkinsburg, and H. L. Rawlins, Pittsburgh, assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa. Circuit interrupter. 2,459,588, Jan. 18.

Sardeson, Robert: *See*—
Dye, Glen M., Maddock, Sardeson, and Savela.

Saslaw, Max R.: *See*—
Cohoe, Wallace P., and Saslaw.

Savela, Edward H.: *See*—
Dye, Glen M., Maddock, Sardeson, and Savela.

Sawtelle, Charles A., Rosedale Gardens, Mich. Liquid pressure brake mechanism. 2,459,394, Jan. 18.

Sawyer, David W.: *See*—
Stillson, Gordon H., and Sawyer.

Schaefer, Ralph A.: *See*—
Luetkemeyer, Henry W., and Schaefer.

Schaelchlin, Walter, and A. J. Winchester, Jr., Pittsburgh, assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa. Control system for multispeed alternating-current motors. 2,459,589, Jan. 18.

Schantz, Joseph D., Fort Wayne, Ind., assignor, by mesne assignments, to Farnsworth Research Corporation. Pulse and square wave generator. 2,459,723, Jan. 18.

Schaufelberger, William F., Pleasant Grove, N. J., assignor to Irvington Varnish and Insulator Company. Comminuted drying oil residues. 2,459,342, Jan. 18.

Schelrmann, Raphael, Warren, Ohio, now by change of name Ralph Sherman. Testing and protection of electrical distribution systems. 2,459,186, Jan. 18.

Schick Incorporated, assignee: *See*—
Canham, George E.

Schindler, Carl: *See*—
Kyle, William D., Jr., and Schindler.

Schlegel, Walter L., Jr., assignor to American Steel Foundries, Chicago, Ill. Brake head balancing device. 2,459,776, Jan. 18.

Schlesinger, Kurt, assignor to Columbia Broadcasting System, Inc., New York, N. Y. Deflection circuit for cathode-ray tubes. 2,459,187, Jan. 18.

Schlumberger Well Surveying Corporation, assignee: *See*—
Castel, Jacques H.

Schmerhelm, John F., South Euclid, Ohio, assignor to General Electric Company. Base for an electric device. 2,459,543, Jan. 18.

Schmerling, Louis, Riverside, assignor to Universal Oil Products Company, Chicago, Ill. Alkyl norcamphanyl ethers. 2,459,544, Jan. 18.

Schmidlein, Joseph A.: *See*—
Jefts, Albert W., and Schmidlein.

Schmitz, Philip J., Sleepy Eye, Minn. Trailer tow-pole and hitch. 2,459,458, Jan. 18.

Schneider, George, Montclair, N. J., and A. J. Steinberger, Jamaica, N. Y., assignors to Celanese Corporation of America. Manufacture of shaped textile materials. 2,459,291, Jan. 18.

Schultz, Arthur B., Wilmington, Del., assignor to All American Airways, Inc. Life line. 2,459,545, Jan. 18.

Schultz, George H., Elmsford, N. Y. Ductor roller control for printing presses. 2,459,188, Jan. 18.

Schults, George H., Elmsford, N. Y. Ductor roller control for printing presses. 2,459,189, Jan. 18.

Schwartz, Max W., New Castle, Pa. Refrigerated display cabinet. 2,459,243, Jan. 18.

Schwartzwalder, Karl: *See*—
McDougal, Taine G., Schwartzwalder, and Rulka.

Screw Conveyor Corporation, assignee: *See*—
Escher, Edward P.

Scrivener, Arthur, Birmingham, England. Automatically removing ferrous and other particles from liquid. 2,459,343, Jan. 18.

Seaman, Elliston P., Williamsport, Pa. Self-emptying ash tray for automobiles. 2,459,459, Jan. 18.

Seeger, Nelson V.: *See*—
Lichty, Joy G., and Seeger.

Seeger Refrigerator Company, assignee: *See*—
De Jarlais, Gordon M.

Segal, Arthur R., Milwaukee, Wis. Case for circle saws. 2,459,460, Jan. 18.

Selden, Irving, Brooklyn, N. Y. Baby bottle holder. 2,459,546, Jan. 18.

Seldin, Herman C., St. Louis County, assignor to Sel-Mor Garment Co. Inc., St. Louis, Mo. Slip. 2,459,590, Jan. 18.

Selgin, Paul J., Fort Wayne, Ind., assignor, by mesne assignments, to Farnsworth Research Corporation. Astatic cathode-ray tube. 2,459,724, Jan. 18.

Sellars, Leonard D., Culver City, Calif. Square lawn sprinkler. 2,459,244, Jan. 18.

Sel-Mor Garment Co. Inc., assignee: *See*—
Seldin, Herman C.

Sepulchre, Fernand, Paris, France. Gas producer. 2,459,344, Jan. 18.

Servel, Inc., assignee: *See*—
Smart, Arthur C.

Seward, Basil E., Elk Point, S. Dak. Tractor hitch pin device. 2,459,245, Jan. 18.

Shankweiler, Ray G., Cranbury, and D. Blits, Princeton, N. J., assignors to Radio Corporation of America. Frequency modulation distance indicator. 2,459,461, Jan. 18.

Shannon, Jack F.: *See*—
Dickey, Paul S., and Shannon.

Sharp & Dohme, Incorporated, assignee: *See*—
Cope, Arthur C.

Shasta Volcolite Company, assignee: *See*—
Cantrall, Forrest L., and Carlisle.

Shaw, Gail L., and R. G. Jones, assignors to Eli Lilly and Company, Indianapolis, Ind. Making quinacrine. 2,459,777, Jan. 18.

Shell Development Company, assignee: *See*—
Ballard, Seaver A., and Geyer.
Barnum, Emmett R., and Perry.
Perry, George L.

Shenk, Eugene R., Brooklyn, N. Y., assignor to Radio Corporation of America. Two-tone keyer. 2,459,462, Jan. 18.

Sherbondy, William A., Shaker Heights, Ohio. Holder for carfare tokens. 2,459,292, Jan. 18.

Sherman, Ralph, by change of name: *See*—
Schelrmann, Raphael.

Shonnard, John R., assignor to Times Facsimile Corporation, New York, N. Y. Signal generator or modulator. 2,459,293, Jan. 18.

Shuart, Arthur C., Evansville, Ind., assignor to Servel, Inc., New York, N. Y. Refrigerator latch. 2,459,190, Jan. 18.

Shumaker, Lawrence E., and H. G. Davis, assignors to Eversman Mfg. Co., Denver, Colo. Land leveling machine. 2,459,591, Jan. 18.

Sidwell, Webster S., assignor to Evertite Roof Corporation, Los Angeles, Calif. Shingle dipping machine. 2,459,294, Jan. 18.

Signaigo, Frank K., Kenmore, N. Y., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Cellulose oxazolidone ethers and making same. 2,459,547, Jan. 18.

Simplex Time Recorder Co., assignee: *See*—
Mentor, Eugene L.

Simpson, George L., Coraopolis Heights, assignor to Delaware Engineering Corporation, Pittsburgh, Pa. Gas treating method and apparatus. 2,459,463, Jan. 18.

Sinclair, Orie L., Wilmington, Calif. Bottle support. 2,459,246, Jan. 18.

Singer, Philip A., and H. J. Deobald, Peoria, Ill., assignors to Allied Mills, Inc. Corn germ removal. 2,459,548, Jan. 18.

Sisson, Wayne A., Silverside, assignor to American Viscose Corporation, Wilmington, Del. Drying fibrous material. 2,459,345, Jan. 18.

Skold, John F., Chicago, Ill. Combined container and holder for blocklike articles. 2,459,247, Jan. 18.

Skoog, Per F., Olympia, Wash. Apparatus for the flow manufacture of sheet material. 2,459,295, Jan. 18.

Skromme, Arnold B., assignor to The Firestone Tire & Rubber Company, Akron, Ohio. Molded rubber traction chain. 2,459,751, Jan. 18.

Slagle, Kenneth H., Mount Lebanon, and R. S. Bowman, assignors to Jones & Laughlin Steel Corporation, Pittsburgh, Pa. Separation of pyridine bases. 2,459,191, Jan. 18.

Slagle, Kenneth H., Mount Lebanon, and R. S. Bowman, assignors to Jones & Laughlin Steel Corporation, Pittsburgh, Pa. Concentration of beta-picoline. 2,459,192, Jan. 18.

Slavin, Robert H., Dayton, Ohio. Shoe tree. 2,459,592, Jan. 18.

Sloan, David H., Pittsburgh, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Feed-back system for electronic tubes comprising hollow body resonators. 2,459,593, Jan. 18.

Smith, Allen S., Ann Arbor, Mich., assignor to Blaw-Knox Company, Pittsburgh, Pa. Detoxification of cyanide-containing industrial waste liquors. 2,459,464, Jan. 18.

Smith, Dallas M., Kirkwood, assignor to McQuay-Norris Manufacturing Company, St. Louis, Mo. Piston ring. 2,459,395, Jan. 18.

Smith, Emil L.: *See*—
Gerlough, Tillman D., and Smith.

Smith, Eric H., and O. A. Johnson, assignors to Riley Stoker Corporation, Worcester, Mass. Rejector-blade wear-compensating-ring for discharge of rotary beater mill. 2,459,248, Jan. 18.

Smith, George E. P., Jr., and E. L. Carr, assignors to The Firestone Tire & Rubber Company, Akron, Ohio. Thiazyl sulfenamides. 2,459,736, Jan. 18.

Smith, J. L., Birmingham, Ala. Fishing rod holder. 2,459,549, Jan. 18.

Smith, Jay W., assignor to Chris-Craft Corporation, Algonac, Mich. Manifold for two-cycle crankcase compression engines. 2,459,594, Jan. 18.

Smith, Lee B.: *See*—
Calfee, John D., and Smith.

Smith, Lucian B., Flint, assignor to General Motors Corporation, Detroit, Mich. Ignition system. 2,459,297, Jan. 18.

Smith, Thomas Q., assignor to The Firestone Tire & Rubber Company, Akron, Ohio. Camelback material. 2,459,757, Jan. 18.

Smith, Warren M., Baton Rouge, La., assignor to Standart Oil Development Company. Two-stage hydrogenation treatment for hydrocarbon oils. 2,459,465, Jan. 18.

Smith, Willis E., Springfield, Oreg. Filler gun. 2,459,296, Jan. 18.

Snyder, Frederick D., Milton, Mass., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Balanced loom operation. 2,459,595, Jan. 18.

Societe d' Etudes et de Realisation des Brevets Descombes, assignee: *See*—
Descombes, Julien A.

Solana, Carlos G., Brooklyn, and J. Casingena, assignors to H. B. Lerine, New York, N. Y. Flocking device. 2,459,396, Jan. 18.

Sonnemann, William K., Roselle Park, N. J., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Composite sequence filters for current-circuits. 2,459,596, Jan. 18.

Soundscriber Corporation, The: *See*—
Anderson, Arthur L., and Burns.

Sparklin, Charles H., Chicago, Ill., assignor to Birtman Electric Company. Suction cleaner dust chamber having a movable wall therefor. 2,459,194, Jan. 18.

Sparks, George R., Asbury Park, and C. G. Killen, Jr., Wanamassa, N. J. Container. 2,459,193, Jan. 18.

Spencer, Percy L., West Newton, assignor to Raytheon Manufacturing Company, Newton, Mass. Electron discharge device. 2,459,195, Jan. 18.

Sperry Corporation, The, assignee: *See*—
Bates, Mortimer F.
Thomas, Thomas R.

Sperry, Russell L., Glendora, Calif., assignor to American Cyanamid Company, New York, N. Y. Preparation of di(hydroxy methyl) dithiobiuret. 2,459,725, Jan. 18.

Spiegel, Martin: *See*—
Lange, Morris, and Spiegel.

Spracher, Clifford D.: *See*—
Patterson, Edgar W., and Spracher.

Spreen, Charles C., Detroit, assignor to R. W. Lewis, Walled Lake, Mich. Measuring scoop or ladle. 2,459,466, Jan. 18.

Spurlin, Harold M.: *See*—
Johnson, Harold E., and Spurlin.

Squibb, E. R., & Sons, assignee: *See*—
Gerlough, Tillman D., and Smith.

Staley, A. E., Manufacturing Company, assignee: *See*—
Larson, Roy F., Liggett, and Mussulman.
Moyer, Wendell W.

Stamberger, Paul, Stamford, Conn. Plastic compositions made with vulcanized, polyethylene glycol esters as plasticizers. 2,459,298, Jan. 18.

Stamm, Alfred J., Madison, Wis.; dedicated to the free use of the people in the territory of the United States. Destructive distillation of solids in a liquid bath. 2,459,550, Jan. 18.

Standard Oil Development Company, assignee: *See*—
Ahrens, George L.
Anderson, James A., Jr.
Brandon, Richard C.
Carrier, Egbert W.
Hemminger, Charles E.
Lieber, Eugene, and Cashman.
Main, Thomas C.
Oliver, Eugene H., and Van Berg.
Packie, John W., and Glazier.
Robey, Richard F.
Smith, Warren M.
Welty, Albert B., Jr., and Holder.
Zimmer, John C., and Beerbower.

Stanolind Oil and Gas Company, assignee: *See*—
Elkins, Lincoln F.

Steinberger, Alfred J.: *See*—
Schneider, George, and Steinberger.

Steinitz, Stephan, New York, N. Y., assignor to Ward Leonard Electric Company. Voltage and phase control. 2,459,551, Jan. 18.

Stephens-Adamson Mfg. Co., assignee: *See*—
Moore, Chester C., and King.

Sternad, Joseph J., Cleveland, Ohio. Tricycle cart. 2,459,249, Jan. 18.

Stewart, Chandler, Jr., Dayton, Ohio, assignor to the United States of America as represented by the Secretary of War. Method of measuring characteristic impedances of fitting for coaxial connectors. 2,459,197, Jan. 18.

Stewart, William H., Beaumont, Tex., assignor to Sun Oil Company, Philadelphia, Pa. Electrical logging method and apparatus. 2,459,196, Jan. 18.

Stillson, Gordon H., Oakmont, and D. W. Sawyer, assignors to Gulf Research & Development Company, Pittsburgh, Pa. Di-alkylated mono-hydroxy phenol. 2,459,597, Jan. 18.

Stillwagon, Crawford K., assignor to Well Equipment Mfg. Corp., Houston, Tex. Double seal flange union. 2,459,250, Jan. 18.

Stillwagon, Crawford K., assignor to Well Equipment Mfg. Corp., Houston, Tex. Threadless pipe coupling. 2,459,251, Jan. 18.

Stoner, Justus S., El Cajon, and A. H. Luitjens, San Diego, Calif. Apparatus for producing photographic multiple copies. 2,459,552, Jan. 18.

Story, Edward B.: *See*—
White, Frederick W., and Story.

Stott, Louis L., assignor to The Polymer Corporation, Reading, Pa. Bearing. 2,459,598, Jan. 18.

Stout, Raymond K.: *See*—
Crane, Carl J., Holloman, Muller, and Stout.

Strahan, Charles J., Milton, Pa. Rolled toilet paper cabinet and dispenser. 2,459,262, Jan. 18.

Straub, Fritz, Kaiseraugst, near Basel, and J. Brassel, assignors to Ciba Limited, Basel, Switzerland. Polyazo benzidine dyes. 2,459,467, Jan. 18.

Strom, Albert P., Forest Hills, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Circuit interrupter. 2,459,599, Jan. 18.

Strom, Albert P., Forest Hills, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Compressed gas circuit interrupter. 2,459,600, Jan. 18.

Stutsman, Paul W., Needham, assignor to Raytheon Manufacturing Company, Newton, Mass. Arc discharge device. 2,459,199, Jan. 18.

Sullivan, Earle C., Bridgeport, Conn., assignor to General Electric Company. Safety and relief valve. 2,459,553, Jan. 18.

Sun Oil Company, assignee: *See*—
Lipkin, Moses R.
Stewart, William H.

Sunbeam Corporation, assignee: *See*—
Koci, Ludvik J.

Sundstrand, Oscar J., West Hartford, Conn., assignor to Underwood Corporation. Accounting machine. 2,459,468, Jan. 18.

Sundstrand, Oscar J., West Hartford, Conn., assignor to Underwood Corporation, New York, N. Y. Typewriting and accounting machine. 2,459,469, Jan. 18.

Sunroc Refrigeration Company, assignee: *See*—
Morrison, Samuel O.

Superior Funeral Supply Corporation, assignee: *See*—
Lange, Morris, and Spiegel.

Superior Machine and Engineering Company, assignee: *See*—
Hallead, Mervil.

Sussenbach, Paul: *See*—
Ferguson, William C., Sussenbach, and Limn.

Svoboda, Antonin, Cambridge, Mass., assignor, by mesne assignments, to United States of America as represented by the Secretary of the Navy. Computing linkage. 2,459,726, Jan. 18.

Swank, Inc., assignee: *See*—
Howard, Viola T.

Swennes, Benjamin A., Rockford, Ill., assignor, by mesne assignments, to the United States of America, as represented by the Secretary of the Navy. Motor vehicle fuel tank. 2,459,470, Jan. 18.

Swift, Clifford L.: *See*—
Carnagua, Harold E., and Swift.

Swift & Company, assignee: *See*—
Coffin, Owen T., and Raden.

Szyper, Charles: *See*—
Mihalek, Emery, and Szyper.

Tabberer, George: *See*—
Graham, Douglas H., Forsling, and Tabberer.

Teague, Walter D., Jr., Alpine, N. J., and R. H. Ensign, New York, N. Y., assignors to U. S. Slicing Machine Company, La Porte, Ind. Control apparatus for carriage drives for reciprocating carriage slicing machines. 2,459,200, Jan. 18.

Tebbetts, Eugene L., Holliston, assignor of one-half to H. E. Cole, Boston, Mass. Cranberry picking machine. 2,459,471, Jan. 18.

Teitel, Sidney: *See*—
Goldberg, Moses W., and Teitel.

Tendick, Frank H.: *See*—
Rawlins, Albert L., Holcomb, Jones, Tendick, and Burckhalter.

Texas Company, The, assignee: *See*—
Fenney, William N.

Thomas, Thomas R., Baldwin, N. Y., assignor to The Sperry Corporation. Junction seal apparatus. 2,459,201, Jan. 18.

Thompson, Donald C., Roanoke, Va., assignor to American Viscose Corporation, Wilmington, Del. Lock lid for box compartments. 2,459,346, Jan. 18.

Thompson, Gerard A., assignee: *See*—
Boyd, George T. and H. T.

Thor, Clifford J. B.: *See*—
Beal, Keith F., and Thor.

Thorson, Roy M., Richmond, Calif. Parking indicator. 2,459,202, Jan. 18.

Thurston, Jack T., Cos Cob, Conn., assignor to American Cyanamid Company, New York, N. Y. Amino aliphatic guanamines. 2,459,397, Jan. 18.

Tillery, Hubert B., Kansas City, Mo. Bulk ice-cream container. 2,459,727, Jan. 18.

Tillery, Hubert B., Kansas City, Mo. Bulk ice-cream container. 2,459,728, Jan. 18.

Times Facsimile Corporation, assignee: *See*—
Shonnard, John R.

Tint, Howard, and C. W. Murray, Salinas, Calif., assignors to United States of America as represented by the Secretary of Agriculture. Extracting rubber from plants. 2,459,369, Jan. 18.

Tiritilli, John P., and T. L. Jones, Chicago, Ill. Infant's collapsible and portable chair. 2,459,601, Jan. 18.

Tolman, Charles P., Kew Gardens, N. Y., assignor to Differential Wheel Corporation, Detroit, Mich. Dual wheel assembly. 2,459,347, Jan. 18.

Tomko, Stephen V., McKeesport, Pa. Drawing scale. 2,459,554, Jan. 18.

Ton-Tex Corporation, assignee: *See*—
Raniville, Francis F.

Tossas, Raymond J., New York, N. Y. Luminescent maraca. 2,459,555, Jan. 18.

Towne, Edmund B.: *See*—
Coover, Harry W., Dickey, and Towne.

Trailmobile Company, The, assignee: *See*—
Black, James J.

Trainer, James E., and S. W. Alderfer, assignors of one-half to The Firestone Tire & Rubber Company, and one-half to The Andrews-Alderfer Processing Co. Inc., Akron, Ohio. Fire extinguisher. 2,459,743, Jan. 18.

Treace, Harry T., assignor to Orthopedic Frame Company, Kalamazoo, Mich. Surgical table. 2,459,729, Jan. 18.

Tremolada, Guglielmo R., assignor to Emsco Derrick & Equipment Company, Los Angeles, Calif. Rotary swivel. 2,459,472, Jan. 18.

Troutman, Lester L., El Monte, Calif. Self-loading automotive truck. 2,459,473, Jan. 18.

Tung-Sol Lamp Works Inc., assignee: *See*—
Curtis, Lorin W.

Tyrner, Joseph M., assignor to Air Reduction Company, Incorporated, New York, N. Y. Reproducing apparatus. 2,459,253, Jan. 18.

Ulman, Lynn J., Baltimore, Md., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Circuit for stabilizing focus of magnetically focused cathode-ray tubes. 2,459,602, Jan. 18.

Underwood Corporation, assignee: *See*—
Lippert, Walter E.
Sundstrand, Oscar J.

Union Oil Company of California, assignee: *See*—
Doumani, Thomas F., Coe, and Attane, Jr.

Union Steel Chest Corporation, assignee: *See*—
Yawman, Harvey H.

United Aircraft Products, Inc., assignee: *See*—
Booth, Harry T.

United-Carr Fastener Corporation, assignee: *See*—
Churchill, Wilmer H.

United Shoe Machinery Corporation, assignee: *See*—
Cole, Frank E., Goodhue, and Heeley.
Goodhue, William V.
Ray, Eugene J.

U. S. Slicing Machine Company, assignee: *See*—
Teague, Walter D., Jr., and Ensign.

Universal Oil Products Company, assignee: *See*—
Jones, Edwin K.
Kanhofer, Elmer R.
Rosenwald, Robert H.
Schmerling, Louis.

Upham, John D., Bartlesville, Okla., assignor to Phillips Petroleum Company. Process utilizing moving solid catalyst. 2,459,474, Jan. 18.

Usselman, George L., Port Jefferson, N. Y., assignor to Radio Corporation of America. Angular velocity modulation. 2,459,556, Jan. 18.

Usselman, George L., Port Jefferson, N. Y., assignor to Radio Corporation of America. Wave length modulation. 2,459,557, Jan. 18.

Vahrenkamp, George J., Rolla, Mo., assignor to the United States of America as represented by the Secretary of the Interior. Production of shaped articles from fluorite. 2,459,203, Jan. 18.

Van Almelo, Fred K., Nassau, N. Y. Differential pressure fluid servomotor. 2,459,475, Jan. 18.

Van Berg, Charles F.: *See*—
Oliver, Eugene H., and Van Berg.

Van Camp, Marguerite P.: *See*—
McFarland, Joseph L., and Van Camp.

Van der Mei, Anne, Arnhem, Netherlands, assignor to American Enka Corporation, Enka, N. C. Process and apparatus for threading up continuous spinning machines. 2,459,254, Jan. 18.

Van Liempt, Johannes A. M., F. Prakke, H. J. Landsbergen, and J. H. M. van Uden, Eindhoven, Netherlands, assignors, by mesne assignments, to Hartford National Bank and Trust Company, Hartford, Conn., as trustee. Electrode spacer. 2,459,476, Jan. 18.

Van Schuyver, John, Los Angeles, Calif. Valve coupling. 2,459,477, Jan. 18.

Van Uden, Jules H. M.: *See*—
Van Liempt, Johannes A. M., Prakke, Landsbergen, and van Uden.

Van Vleck, Forest A., Placerville, assignor to Food Machinery and Chemical Corporation, San Jose, Calif. Box dumping machine. 2,459,204, Jan. 18.

Vennes, Harald J.: *See*—
Konicek, Frank, and Vennes.

Verkuil, Leo L., Tottenville, Staten Island, N. Y., assignor to Edwards and Company, Inc., Norwalk, Conn. Universal cable-clamping device. 2,459,603, Jan. 18.

Verkuil, Leo L., Tottenville, Staten Island, N. Y., assignor to Edwards and Company, Inc., Norwalk, Conn. Universal cable-clamping device. 2,459,604, Jan. 18.

Villegas de Oribe, Maruja, G. Montevideo, Uruguay. Hygienic protector applicable to drinking vessels for avoiding contamination by the mouth. 2,459,558, Jan. 18.

Visking Corporation, The, assignee: *See*—
Beal, Keith F., and Thor.
Hewitt, Alfred G., and Clement.
McDowall, Robert.

Von Glahn, William, Richmond Hill, assignor to Control Instrument Company, Inc., Brooklyn, N. Y. Switching apparatus for fire control systems. 2,459,255, Jan. 18.

Wallace Laboratories, Inc., assignee: *See*—
Lee, Slaughter W.

Walters, Wyeth C., assignor to CCA Products Engineering Company, Glendale, Calif. Compressed air treatment device. 2,459,398, Jan. 18.

War, United States of America, as represented by The Secretary of, assignee: *See*—
Hickman, Clarence N.
Moore, Wiley T.
Sackville, William.
Stewart, Chandler, Jr.

Ward, Alfred H.: *See*—
Harris, Arch W., and Ward.

Warner Aircraft Corporation, The, assignee: *See*—
Majneri, Ludwig A.

Warnken, Elmer, Colerain Township, Hamilton County, Ohio. Induction coil. 2,459,605, Jan. 18.

Warren, S. D., Company, assignee: *See*—
Bicknell, John A.

Warrick, Earl L.: *See*—
McGregor, Rob R., and Warrick.

Waters, Herbert H., assignor to The Firestone Tire & Rubber Company, Akron, Ohio. Processing rubber compound. 2,459,745, Jan. 18.

Watkins, Robert E., Kansas City, Mo. Golf putting target. 2,459,559, Jan. 18.

Watson, Kenneth J., North Hollywood, Calif. Vehicle. 2,459,478, Jan. 18.

Webb, Charles V.: *See*—
Webb, Richard and C. V.

Webb, Richard and C. V., Los Angeles, Calif. Shoe fastener. 2,459,348, Jan. 18.

Weber, Victor, Greensburg, Pa., assignor to Robertshaw-Fulton Controls Company. Motor control system with latching relays. 2,459,349, Jan. 18.

Weber, Victor, Greensburg, Pa., assignor to Robertshaw-Fulton Controls Company. Automatic reversing control for electric motors. 2,459,350, Jan. 18.

Webster Electric Company, assignee: *See*—
Munroe, David J., and McAlvay.

Weincord, Maurice, Chicago, Ill. Illuminated test device. 2,459,351, Jan. 18.

Weinland, Clarence E., assignor to General Tire and Rubber Company of California, Pasadena, Calif. Split-phase motor reversing circuit. 2,459,479, Jan. 18.

Well Equipment Mfg. Corp., assignee: *See*—
Stillwagon, Crawford K.

Wells, Lee A., and C. A. Halbkat, Houston, Tex. Mold for making plastic artificial eyes. 2,459,205, Jan. 18.

Welty, Albert B., Jr., Mountainside, and C. H. Holder, Cranford, N. J., assignors to Standard Oil Development Company. Conditioning a catalyst for use in hydroforming of naphthas. 2,459,480, Jan. 18.

West, William P., assignor to Philco Corporation, Philadelphia, Pa. Magnetic transducer with separable pole faces. 2,459,299, Jan. 18.

Western Electric Company, Incorporated, assignee: *See*—
Henning, George E., and Lewis.
Konicek, Frank, and Vennes.
Powell, Paul R.

Westinghouse Electric Corporation, assignee: *See*—
Baker, Benjamin P.
Buchanan, Lloyd W.
Burgwin, Stephen L.
Cartier, Harold E.
Collins, Thomas K., Jr.
Dorfman, Hillier D., and Freese.
Duncan, Charles S.
Eames, William F.
Fox, Roy C., and Massey.
Goldsborough, Shirley L.
Griscom, Samuel B., and Witzke.
Keyes, John J.
King, George E., and Fisher.
Langer, Bernard F., and Godsey.
Mahnke, Kurt.
Mason, Ruric C.
McCloy, Graham S.
McNall, John W.
Mershon, Clarence L.
Mueller, Erich O.
Pakala, William E.
Ross, Malcolm D.
Sandin, Jerome, Kraft, and Rawlins.
Schaelchlin, Walter, and Winchester.
Sloan, David H.
Snyder, Frederick D.
Sonnemann, William K.
Strom, Albert P.
Ulman, Lynn J.
Witzke, Raymond L.

Wheeler, Phillip Rood, Alexandria, Va. Cathode-ray tube gunsight. 2,459,206, Jan. 18.

Wheeling Steel Corporation, assignee: *See*—
Copp, Warren F.

White, Frederick W., New Brighton, and E. B. Story, Bethel Township, Allegheny County, assignors to A. M. Byers Company, Pittsburgh, Pa. Desulfurizing molten ferrous metal. 2,459,256, Jan. 18.

Wiegand, Francis J.: *See*—
Rabezzana, Hector, and Wiegand.

Wight, Sedgwick N., and O. S. Field, assignors to General Railway Signal Company, Rochester, N. Y. Airways traffic control system. 2,459,399, Jan. 18.

Wiitala, Elmer, assignor of 33⅓% to R. Wiitala and 33⅓% to L. Mannila, Kaleva, Mich. Fishing device. 2,459,401, Jan. 18.

Wiitala, Reino, assignee: *See*—
Wiitala, Elmer.

Wilkinson, Francis C.: *See*—
Kretsaler, Earl E., and Wilkinson.

Williams, Albert J., Jr., assignor to Leeds and Northrup Company, Philadelphia, Pa. Measuring system with capacitor having characteristics of an infinite capacity. 2,459,730, Jan. 18.

Williams, Frederick B.: *See*—
Frihart, H. Nell, Jackson, and Williams.

Williams, Gertrude C., Cleveland, Ohio. Leg warmer bag. 2,459,352, Jan. 18.

Williams, John C. E., Englewood, N. J., assignor to Wingfoot Corporation, Akron, Ohio. Airplane engine package and packaging the same. 2,459,400, Jan. 18.

Williamson, Oscar C., San Francisco, Calif. Can opener. 2,459,560, Jan. 18.

Wilson, Mitchell: *See*—
Cohoe, Wallace P., and Wilson.

Wilson, Robert F., San Gabriel, and A. F. Reznicek, Alhambra, Calif., assignors to The Firestone Tire & Rubber Company, Akron, Ohio. Fuel-cell construction. 2,459,752, Jan. 18.

Winchester, Amos J., Jr.: *See*—
Schaelchlin, Walter, and Winchester.

Wingfoot Corporation, assignee: *See*—
Lichty, Joy G., and Seeger.
Williams, John C. E.

Wink, Louis H., Leesburg, Fla. Inner tube testing device. 2,459,606, Jan. 18.

Winthrop-Atkins Co., Inc., assignee: *See*—
Nichols, Gordon E.

Winthrop-Stearns Inc., assignee: *See*—
King, John A.

Wisconsin Aluminum Foundry Company, assignee: *See*—
Eck, William.

Witzke, Raymond L.: *See*—
Griscom, Samuel B., and Witzke.

Witzke, Raymond L., Pittsburgh, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Regulating system. 2,459,607, Jan. 18.

Wolf, Darwin M., Long Beach, Calif. Noisemaking device. 2,459,300, Jan. 18.

Wolff, Irving, and P. J. Herbst, Princeton, N. J., assignors to Radio Corporation of America. Instrument landing system. 2,459,481, Jan. 18.

Wolfram, John N., assignor to The Parker Appliance Company, Cleveland, Ohio. Coupling for tubes. 2,459,608, Jan. 18.

Wolfram, John N., assignor to The Parker Appliance Company, Cleveland, Ohio. Coupling for tubes. 2,459,609, Jan. 18.

Wolwin Chair Company, The, assignee: *See*—
Ellsworth, Ralph H.

Wood, Halbert M., Madison, Wis. Chair, table, and desk combination. 2,459,257, Jan. 18.

Woods, Clayton W., Omaha, Nebr. Liquid filter. 2,459,353, Jan. 18.

Smith, Dallas M., Kirkwood, assignor to McQuay-Norris Manufacturing Company, St. Louis, Mo. Piston ring. 2,459,395, Jan. 18.

Steinberger, Alfred J.: *See*—
Schneider, George, and Steinberger.

Woodward, Charles F.: *See*—
Haines, Paul G., Eisner, and Woodward.
Worthington, William W., U. S. Navy, Cornwall Bridge, Conn. Material handling mechanism. 2,459,207, Jan. 18.
Wulfsberg, Paul G., assignor to Collins Radio Company, Cedar Rapids, Iowa. Modulation control system. 2,459,208, Jan. 18.
Wunsch, Benjamin, New York, assignor of one-half to I. Wunsch, Bronx, N. Y. Constructing slippers. 2,459,258, Jan. 18.
Wunsch, Isidor, assignee: *See*—
Wunsch, Benjamin.
Wyeth Incorporated, assignee: *See*—
Bruce, William F.
Wymore, Ralph R., Oberlin, Kans. Automatic tractor and implement hitch. 2,459,731, Jan. 18.
Yawman, Harvey H., assignor to Union Steel Chest Corporation, Le Roy, N. Y. Adjustable and removable compartment and partition forming device for trays. 2,459,561, Jan. 18.
Yeiser, Frank M., assignor, by mesne assignments, to Niagara Research Corporation, Buffalo, N. Y. Purification of native sulfur. 2,459,764, Jan. 18.
Zadina, Arthur F., Long Island City, N. Y. Golf shoe spike or calk. 2,459,610, Jan. 18.
Zagwyn, Theodore K., Waltham, and P. R. Kosting, Belmont, Mass. Treating vitreous fused silica. 2,459,209, Jan. 18.
Zahn, Eric H., Pound Ridge, N. Y., assignor to Austenal Laboratories, Incorporated, New York, N. Y. Mold. 2,459,402, Jan. 18.
Zapor, Emil G.: *See*—
Bradford, William O., and Zapor.
Zenith Radio Corporation, assignee: *See*—
Knowles, Hugh S.
Zimmer, John C., Union, and Alan Beerbower, Westfield, N. J., assignors to Standard Oil Development Company. Determining the apparent viscosity of a grease. 2,459,483, Jan. 18.
Zurn, J. A., Mfg. Co., assignee: *See*—
Kennedy, Thomas A.
Zweidler, Reinhard: *See*—
Keller, Ernst, and Zweidler.

LIST OF DESIGN INVENTIONS

Alphabet for forming monograms or the like. M. Chernow. 152,395, Jan. 18.
Antenna and support therefor, Combined. S. Ludwig and R. R. Cull. 152,429, Jan. 18.
Ash tray. J. B. Stier. 152,439–40, Jan. 18.
Automobile. V. M. Exner. 152,400, Jan. 18.
Bell, Bicycle. W. N. Hill. 152,418, Jan. 18.
Bicycle. M. Mennesson. 152,430, Jan. 18.
Binocular or the like. W. T. Perkins. 152,432, Jan. 18.
Boat. C. A. Ward. 152,444, Jan. 18.
Bottle. J. Payne. 152,431, Jan. 18.
Brooch or similar article. C. Arpels. 152,388, Jan. 18.
Bumper and automobile grille, Combined. H. A. Darrin. 152,398, Jan. 18.
Cabinet, Combined storage and self-serving. J. H. Lazar. 152,428, Jan. 18.
Case and band, Combined wrist watch. S. B. Glass. 152,417, Jan. 18.
Casing, Parking meter. R. F. Broussard. 152,392, Jan. 18.
Decanter or similar article. J. D. Buckingham. 152,393, Jan. 18.
Dispenser for a paper roll or the like. F. L. Broeren and A. S. Krueger. 152,391, Jan. 18.
Exerciser or similar article, Stomach. J. J. Ceverha. 152,394, Jan. 18.
Faucet with pop-up drain control, Center set lavatory. A. L. Thomssen. 152,442, Jan. 18.
Font of type. J. R. Walker. 152,443, Jan. 18.
Headlight cluster for bicycle. V. Schreckengost. 152,437, Jan. 18.
Horse or similar article, Play. J. D. Kelly. 152,426, Jan. 18.
Lamp, Nursery. E. R. Brenner. 152,390, Jan. 18.
Link, Cuff. V. T. Howard. 152,447, Jan. 18.
Measure, Pupillary millimeter. M. B. Kendis. 152,427, Jan. 18.
Necklace and ear rings or similar article, Combined. M. H. and C. W. Pizzano. 152,434, Jan. 18.
Packaging machine, Vacuum. T. M. Reimers. 152,435, Jan. 18.
Pendant, Jewelry. D. Kasoff. 152,423–5, Jan. 18.
Pin, Jewelry. D. Kasoff. 152,420–2, Jan. 18.
Polisher, Floor. P. W. Johnson. 152,419, Jan. 18.
Rack for microscopic slides or similar article. V. R. Bennett. 152,389, Jan. 18.
Radiator, Electric heating. E. Damond. 152,397, Jan. 18.
Ring. G. S. and E. Cohen. 152,396, Jan. 18.
Sign, Counter. C. L. Dwinell. 152,399, Jan. 18.
Sign for vehicles, Electric advertising. G. M. Pierce. 152,433, Jan. 18.
Spoon or article of similar nature. F. J. Skrastin, Jr. 152,438, Jan. 18.
Standard, Street lighting. A. B. Winters. 152,445–6, Jan. 18.
Tone arm or the like, Phonograph. J. B. Federico. 152,401–16, Jan. 18.
Tub filler with transfer unit for diverting water to shower. A. L. Thomssen. 152,441, Jan. 18.
Umbrella, Drapeable. E. Schreck. 152,436, Jan. 18.

LIST OF INVENTIONS

FOR WHICH

PATENTS WERE ISSUED ON THE 18TH DAY OF JANUARY, 1949

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Accounting machine. O. J. Sundstrand. 2,459,468, Jan. 18.
Acetoxy-aliphatic amides. H. S. Davis. 2,459,686, Jan. 18.
Acid treatment of pyranthrone vat dyestuffs. J. F. Cullinan and L. D. Lytle. 2,459,366, Jan. 18.
Acrylic acid, Preparation of. S. A. Ballard and B. P. Geyer. 2,459,677, Jan. 18.
Adapter for boring bars. A. H. Davis. 2,459,416, Jan. 18.
Adjustable soldering iron. A. T. Foster. 2,459,371, Jan. 18.
Adjuster, Hydraulic cam. C. C. Moore and C. F. King, Jr. 2,459,713, Jan. 18.
Advancing reel. W. G. Esmond. 2,459,270, Jan. 18.
Aerial signal. J. B. Decker. 2,459,687, Jan. 18.
Air cleaner. E. N. Jacobi. 2,459,428, Jan. 18.
Airplane engine package and packaging the same. J. C. E. Williams. 2,459,400, Jan. 18.
Airplane landing gear. R. W. Allen. 2,459,737, Jan. 18.
Air treatment device, Compressed. W. C. Walters. 2,459,398, Jan. 18.
Alkyl-alkoxyphenol mixtures, Separation of. R. H. Rosenwald. 2,459,540, Jan. 18.
Alkyl norcamphanyl ethers. L. Schmerling. 2,459,544, Jan. 18.
Alkyl-substituted halogenosilanes, Preparation of. E. G. Rochow. 2,459,539, Jan. 18.
Alkylation in the presence of a double fluoride catalyst. H. J. Passino. 2,459,775, Jan. 18.
Alkylation method and apparatus. W. N. Fenney. 2,459,636, Jan. 18.
Alloy: *See*—
Aluminum copper alloy.
Aluminium copper alloy. T. F. Bradbury. 2,459,492, Jan. 18.
Amides, Preparation of. J. A. King. 2,459,706, Jan. 18.
Amino aliphatic guanamines. J. T. Thurston. 2,459,397, Jan. 18.
Amino groups into cellulose, Introduction of. J. D. Guthrie. 2,459,222, Jan. 18.
Amino methyl phenols. A. L. Rawlins, W. F. Holcomb, E. M. Jones, F. H. Tendick, and J. H. Burckhalter. 2,459,338, Jan. 18.
Amplifier, Direct-current. F. L. Moseley and L. J. Perper. 2,459,177, Jan. 18.
Amplifier, Gate suppressing linear response. M. W. Rosen and C. H. Hoeppner. 2,459,181, Jan. 18.
Animal trap. O. H. Oleen. 2,459,580, Jan. 18.
Anthraquinone compounds. H. W. Coover, J. B. Dickey, and E. B. Towne. 2,459,149, Jan. 18.
Anthrimide carbazole dyestuffs. H. Hauser and M. Bommer. 2,459,424, Jan. 18.
Apparatus for charging fibrous material into a digester. J. C. F. C. Richter. 2,459,180, Jan. 18.
Apparatus for contacting gaseous fluids with solids. C. E. Hemminger. 2,459,425, Jan. 18.
Apparatus for converting heat energy into useful work. H. Milliken. 2,459,447, Jan. 18.
Apparatus for dressing the grinding wheel of an internal grinder. M. Hallead. 2,459,641, Jan. 18.
Apparatus for making infusions. W. Brandl. 2,459,305, Jan. 18.
Apparatus for making spiders for electric lamps. J. Flaws, Jr. 2,459,513, Jan. 18.
Apparatus for producing photographic multiple copies. J. S. Stoner and A. H. Luitjens. 2,459,552, Jan. 18.
Apparatus for taking radiographs. H. H. Hook. 2,459,528, Jan. 18.
Apparatus for testing pressure gauges. W. Eck. 2,459,789, Jan. 18.
Apparatus for the flow manufacture of sheet material. P. F. Skoog. 2,459,295, Jan. 18.
Apparatus for the radiation or reception of electromagnetic waves. E. C. Cork and M. Bowman-Manifold. 2,459,768, Jan. 18.
Applicator and mirror, Combination lip rouge. D. Macy. 2,459,733, Jan. 18.
Aqueous aluminum-casein coating composition, Prolonging the useful life of. J. A. Bicknell. 2,459,408, Jan. 18
Aqueous sulfur composition for the treatment of skin disorders such as acne, Penetrating. S. W. Lee. 2,459,566, Jan. 18.
Arbor, Expanding. W. K. Rieber. 2,459,453, Jan. 18.
Arc discharge device. P. W. Stutsman. 2,459,199, Jan. 18.
Article for reproducing drawings on blanks. G. B. Crouse. 2,459,266, Jan. 18.
Asbestos fiberizing. L. C. Pharo. 2,459,240, Jan. 18.
Ash tray for automobiles, Self-emptying. E. P. Seaman. 2,459,459, Jan. 18.

Assembling apparatus, Article. F. Konicek and H. J. Vennes. 2,459,228, Jan. 18.
Astatic cathode-ray tube. P. J. Selgin. 2,459,724, Jan. 18.
Attachment for ladders, Hoisting. C. L. Cobb. 2,459,621, Jan. 18.
Attachment in coffins or the like, Holding. O. C. Pope. 2,459,335, Jan. 18.
Baby bottle holder. I. Seiden. 2,459,546, Jan. 18.
Back for seats. H. C. Flint. 2,459,758, Jan. 18.
Back tie, Dead-end. A. Q. Heidebrecht. 2,459,644, Jan. 18.
Bag: *See*—
Leg warmer bag.
Balancing device, Brake head. W. L. Schlegel, Jr. 2,459,776, Jan. 18.
Ball-and-socket vehicle coupling. W. M. Murray. 2,459,448, Jan. 18.
Band, Wrist. D. Canovsky. 2,459,413, Jan. 18.
Barrels, Manufacturing bilge. C. U. Gramelspacher. 2,459,316, Jan. 18.
Base for an electric device. J. F. Schmerheim. 2,459,543, Jan. 18.
Bearing. H. W. Luetkemeyer and R. A. Schaefer. 2,459,172, Jan. 18.
Bearing. L. L. Stott. 2,459,598, Jan. 18.
Bedclothes holder. H. D. Calabro. 2,459,497, Jan. 18.
Bed structure. H. C. Flint. 2,459,756, Jan. 18.
Belt, Disintegrating cartridge. W. M. Burgess. 2,459,147, Jan. 18.
Belt-tightening device. F. C. Hanson. 2,459,379, Jan. 18.
β-amio-α-chloroacrylonitriles and preparation. J. G. Erickson. 2,459,420, Jan. 18.
Beta-picoline, Concentration of. K. H. Slagle and R. S. Bowman. 2,459,192, Jan. 18.
Beta-picoline, Purification of. R. S. Bowman. 2,459,359, Jan. 18.
Bin, Tiltable. R. D. Adams. 2,459,301, Jan. 18.
Binder, Swivel ring. A. R. Russell. 2,459,541, Jan. 18
Bituminous materials with fillers, Mixing. B. D. Greenshields. 2,459,520, Jan. 18.
Block and bearing assembly, Pulley. J. J. Rozner. 2,459,290, Jan. 18.
Bobbin sorting apparatus. L. M. Cotchett. 2,459,309, Jan. 18.
Bobbin tensioning mechanism. B. Carter. 2,459,617, Jan. 18.
Bolts in machine guns, Acceleration of breech. C. E. Ballelsen. 2,459,141, Jan. 18.
Bomb fin structure. R. A. Bell. 2,459,357, Jan. 18.
Bonding apparatus for bonding wide layers of dielectric materials, High-frequency electrical. G. H. Brown. 2,459,260, Jan. 18.
Bone conduction unit. H. S. Knowles. 2,459,325, Jan. 18.
Boom light. E. A. Price. 2,459,722, Jan. 18.
Borehole pressure gauge. L. F. Elkins. 2,459,268, Jan. 18.
Bottle, Nonrefillable. W. F. Owen. 2,459,450, Jan. 18.
Bottle support. O. I. Sinclair. 2,459,246, Jan. 18.
Box: *See*—
Display box.
Bracket. E. T. J. Dahlstrom and M. Caplan. 2,459,503, Jan. 18.
Bracket and tree, Shoe polishing. I. R. Crow. 2,459,310, Jan. 18.
Bracket for round refrigerator or cabinet shelf, Roller. J. H. Meredith. 2,459,446, Jan. 18.
Brake beam safety support. L. W. Kass. 2,459,323, Jan. 18.
Brake mechanism, Liquid pressure. C. A. Sawtelle. 2,459,394, Jan. 18.
Braking system, Hydraulic. L. A. Majneri. 2,459,663, Jan. 18.
Breech-loading mechanism for ordnance. D. W. Molins. 2,459,572, Jan. 18.
Broaching machine. C. J. Halborg. 2,459,697, Jan. 18.
Broiler, Adjustable. G. Klein. 2,459,657, Jan. 18.
Bulk ice-cream container. H. B. Tillery. 2,459,727–8, Jan. 18.
Bullet, Explosive. W. T. Moore. 2,459,175, Jan. 18.
Butadiene extraction. J. W. Packie and E. M. Glazier. 2,459,451, Jan. 18.
Butadiene-styrene copolymer tackified with oxidized isoprene polymer. H. F. Palmer. 2,459,761, Jan. 18.
Cabinet: *See*—
Refrigerated display cabinet.

Cabinet and dispenser, Rolled toilet paper. C. J. Strahan. 2,459,252, Jan. 18.
Cabinet with device for locking an instrument base. E. Mihalek and C. Sayper. 2,459,571, Jan. 18.
Cable and the like supporting structures. W. H. Churchill. 2,459,307, Jan. 18.
Cable-clamping device, Universal. L. L. Verkuil. 2,459,603–4, Jan. 18.
Caging mechanism, Instrument. L. D. Cahill, W. T. Buhl, and A. S. Horwitz. 2,459,496, Jan. 18.
Camelback material. T. Q. Smith. 2,459,757, Jan. 18.
Cart, Tricycle. J. J. Sternad. 2,459,249, Jan. 18.
Case for bottles, Combined shipping and display. F. C. McKinley. 2,459,333, Jan. 18.
Case for circle saws. A. R. Segal. 2,459,460, Jan. 18.
Casing, Valve. J. F. Melichar. 2,459,668, Jan. 18.
Catalyst absorption. E. K. Jones. 2,459,531, Jan. 18.
Catalyst for use in hydroforming of naphthas, Conditioning a. A. B. Welty, Jr., and C. H. Holder. 2,459,480, Jan. 18.
Catalyst, Process utilizing moving solid. J. D. Upham. 2,459,474, Jan. 18.
Catalytic dehydrogenation of olefinic hydrocarbons while maintaining the potassium content of the catalyst. E. H. Oliver and C. F. Van Berg. 2,459,449, Jan. 18.
Cathode-ray image-translating device. H. N. Frihart, W. C. Jackson, and F. B. Williams. 2,459,637, Jan. 18.
Cell, Pressure. A. L. Erickson and J. C. Kyle. 2,459,155, Jan. 18.
Cellulose oxazolidone ethers and making same. F. K. Signaigo. 2,459,547, Jan. 18.
Centrifugal pump. J. A. Espy. 2,459,220, Jan. 18.
Chain: *See*—
Molded rubber traction chain.
Chair: *See*—
Infant's collapsible and Reclining chair, portable chair.
Chair, table, and desk combination. H. M. Wood. 2,459,257, Jan. 18.
Chamber having a movable wall therefor, Suction cleaner dust. C. H. Sparklin. 2,459,194, Jan. 18.
Check, Bank. N. D. Callanan. 2,459,263, Jan. 18.
Chlorofluoro methanes, Manufacture of. J. D. Calfee and L. B. Smith. 2,459,767, Jan. 18.
Chopper with rotary forcer screw, Food. F. W. Litten. 2,459,230, Jan. 18.
Chuck. E. T. W. Jahrl. 2,459,649, Jan. 18.
Cinematograph projection and sound-reproducing apparatus. J. A. Descombes. 2,459,628, Jan. 18.
Cineoles from hydrocarbons of similar boiling range by azeotropic distillation with phenols, Separation of. H. E. Johnson. 2,459,432, Jan. 18.
Cineoles from hydrocarbons of similar boiling range by azeotropic distillation with phenols, Separation of. H. E. Johnson and H. M. Spurlin. 2,459,433, Jan. 18.
Circuit: *See*—
Control circuit.
Split-phase motor reversing circuit.
Circuit breaker. H. D. Dorfman and G. J. Freese. 2,459,629, Jan. 18.
Circuit breaker. H. A. Humpage. 2,459,427, Jan. 18.
Circuit breaker, Automatic reclosing. W. D. Kyle, Jr., and C. Schindler. 2,459,327, Jan. 18.
Circuit for cathode-ray tubes, Deflection. K. Schlesinger. 2,459,187, Jan. 18.
Circuit for stabilizing focus of magnetically focused cathode-ray tubes. L. J. Ulman. 2,459,602, Jan. 18.
Circuit interrupter. J. Sandin, J. K. Kraft, and H. L. Rawlins. 2,459,588, Jan. 18.
Circuit interrupter. A. P. Strom. 2,459,599, Jan. 18.
Circuit interrupter, Compressed gas. B. P. Baker. 2,459,612, Jan. 18.
Circuit interrupter, Compressed gas. A. P. Strom. 2,459,600, Jan. 18.
Circuit interrupter, High-voltage. R. H. Earle and R. H Amundson. 2,459,691, Jan. 18.
Circuits for radio locators, Comparator. R. C. Sanders, Jr. 2,459,457, Jan. 18.
Circulator, Liquid. B. Essick. 2,459,312, Jan. 18.
Clamp: *See*—
Draw clamp.
Hose clamp.
V-belt tensioning clamp.
Clamp. K. Reiner and A. Braga. 2,459,452, Jan. 18.
Clamping and dust-sealing means, Conveyer cover. E. P. Escher. 2,459,770, Jan. 18.
Clamping means, Core. E. F. Goodrich. 2,459,374, Jan. 18.
Cleaner: *See*—
Air cleaner.
Cleat, Detachable shoe. M. A. Robinson. 2,459,455, Jan. 18.
Clip: *See*—
Cloth clip.
Closure fastener. M. Marus. 2,459,666, Jan. 18.
Closure operator. P. M. Griffin. 2,459,695, Jan. 18.
Cloth clip. R. A. Bellamy. 2,459,213, Jan. 18.
Clothesline holder. W. C. Hess. 2,459,380, Jan. 18.
Clutch: *See*—
Torque responsive clutch.
Clutching device, V-Belt. W. W. Gettys. 2,459,373, Jan. 18.
Coating composition, Webbable strippable. W. H. Holst and G. R. Hersam. 2,459,164, Jan. 18.
Coffee maker. R. T. Cameron. 2,459,498, Jan. 18.
Coil, Induction. E. Warnken. 2,459,605, Jan. 18.
Collapsible reel. P. R. Powell. 2,459,336, Jan. 18.
Combination toothbrush and dentifrice receptacle. D. Murphy. 2,459,285, Jan. 18.
Combustion apparatus. G. C. Peter. 2,459,583, Jan. 18.
Communication system, Line circuit. F. W. Brixner and W. M. Barker. 2,459,494, Jan. 18.
Compartment and partition forming device for trays, Adjustable and removable. H. H. Yawman. 2,459,561, Jan. 18.
Computing machine. W. E. Lippert. 2,459,441, Jan. 18.
Condenser. W. E. McCown. 2,459,332, Jan. 18.
Conductor, Insulated. J. J. Keyes. 2,459,553, Jan. 18.
Contact protection for mercury wetted switch contacts. E. T. Burton. 2,459,306, Jan. 18.
Container: *See*—
Bulk ice-cream container.
Container. G. R. Sparks and C. G. Killen, Jr. 2,459,193, Jan. 18.
Container and holder for blocklike articles, Combined. J. F. Skold. 2,459,247, Jan. 18.
Container for refrigerator cars, Refrigerant. E. R. Battley and G. E. McCoy. 2,459,211, Jan. 18.
Control apparatus, Fluid. N. A. Christensen. 2,459,148, Jan. 18.
Control apparatus for carriage drives for reciprocating carriage slicing machines. W. D. Teague, Jr., and R. H. Ensign. 2,459,200, Jan. 18.
Control apparatus for induction heating systems. S. L. Burgwin. 2,459,616, Jan. 18.
Control apparatus for traffic signaling systems. W. M. Jeffers. 2,459,429, Jan. 18.
Control apparatus, Gyroscopic. J. P. Brown. 2,459,495, Jan. 18.
Control circuit. T. K. Collins, Jr. 2,459,624, Jan. 18.
Control circuits. R. C. Mason. 2,459,667, Jan. 18.
Control device. I. R. Latta. 2,459,564, Jan. 18.
Control for electric motors, Automatic reversing. V. Weber. 2,459,350, Jan. 18.
Control for hydraulic couplings. J. D. McCracken. 2,459,734, Jan. 18.
Control mechanism, Toaster. L. J. Kocl. 2,459,170, Jan. 18.
Control system, Airways traffic. S. N. Wight and O. S. Field. 2,459,399, Jan. 18.
Control system, Comparison. R. W. Engstrom. 2,459,682, Jan. 18.
Control system for multispeed alternating-current motors. W. Schaelchlin and A. J. Winchester, Jr. 2,459,589, Jan. 18.
Control system, Modulation. P. G. Wulfsberg. 2,459,208, Jan. 18.
Control system, Train-line. W. F. Eames. 2,459,631, Jan. 18.
Control system with latching relays, Motor. V. Weber. 2,459,349, Jan. 18.
Control valve. E. E. Harper. 2,459,700, Jan. 18.
Controller for alternating current motors. R. B. Hunter and E. Pell. 2,459,320, Jan. 18.
Controller, Thermostatic shutter. H. T. Booth. 2,459,490, Jan. 18.
Controlling multicomponent separation process in accordance with light absorption characteristics, Method and apparatus for. J. A. Anderson, Jr. 2,459,404, Jan. 18.
Controlling system, Electric. F. B. Aubert. 2,459,356, Jan. 18.
Convenience outlet. W. G. Kolb. 2,459,659, Jan. 18.
Cooler including control apparatus for limiting ice formation thereon, Liquid. E. C. Raney. 2,459,337, Jan. 18.
Cooler with a drain arrangement, Water. S. O. Morrison. 2,459,774, Jan. 18.
Copolymer mixed with phenol-aldehyde resin, Elastomeric. F. J. Groten and R. J. Reid. 2,459,739, Jan. 18.
Corn germ removal, P. A. Singer and H. J. Deobald. 2,459,548, Jan. 18.
Coupler for supporting cameras on tripods, Universal. H. J. Axtell. 2,459,676, Jan. 18.
Coupling: *See*—
Ball-and-socket vehicle coupling.
Pipe coupling.
Swivel coupling.
Threadless pipe coupling.
Valve coupling.
Coupling for tubes. J. N. Wolfram. 2,459,608–9, Jan. 18.
Cover: *See*—
Slip cover.
Wheel cover.
Covering and making the same, Insulating tubular. C. A. de Vyver. 2,459,688, Jan. 18.
Crib, Folding infant's. W. M. McClintock and C. N. and D. E. McCandless. 2,459,445, Jan. 18.
Cup washer. L. E. La Brie. 2,459,562, Jan. 18.
Cushion, multiple type, Seat. H. C. Flint. 2,459,755, Jan. 18.
Cutter and holder, Combination fruit or flower. W. R. Mabrey. 2,459,232, Jan. 18.
Cutter and stub holder, Guide. W. P. Hodges. 2,459,646, Jan. 18.
Cyanide-containing industrial waste liquors, Detoxification of. A. S. Smith. 2,459,464, Jan. 18.
Dampening devices for shock absorbers and the like. P. B. Oberstadt. 2,459,537, Jan. 18.
Defrosting means for refrigeration apparatus. G. S. McCloy. 2,459,173, Jan. 18.
Dehydration device. S. O. Levinson and F. Oppenheimer. 2,459,329, Jan. 18.
Demountable sealed stove pipe joint. A. Hollub. 2,459,382, Jan. 18.
Dental unit. W. J. Meier. 2,459,711, Jan. 18.

Asbestos fiberizing. L. C. Pharo. 2,459,240, Jan. 18.
Ash tray for automobiles, Self-emptying. E. P. Seaman. 2,459,459, Jan. 18.

Cabinet: *See*—
Refrigerated display cabinet.

Coffee maker. R. T. Cameron. 2,459,498, Jan. 18.

Dental unit. W. J. Meier. 2,459,711, Jan. 18.

Desulfurising molten ferrous metal. F. W. White and E. B. Story. 2,459,256, Jan. 18.
Detachable handle. G. Klein. 2,459,658, Jan. 18.
Detector for transmission lines, Fault. H. Payne. 2,459,239, Jan. 18.
Detector, Radiant energy. W. Sackville. 2,459,185, Jan. 18.
Determining the apparent viscosity of a grease, Continuous method for. J. C. Zimmer and A. Beerbower. 2,459,483, Jan. 18.
Determining the three-dimensional direction of approach of an electromagnetic wave front, Method and apparatus for. J. Y. Houghton. 2,459,165, Jan. 18.
Device comprising a current converting tube. J. G. W. Mulder. 2,459,284, Jan. 18.
Device for converting a saw tooth-shaped voltage of a comparatively low frequency into a saw tooth-shaped current. J. Haantjes. 2,459,278, Jan. 18.
Dial gauge. G. P. Bosomworth. 2,459,749, Jan. 18.
Di-alkylated mono-hydroxy phenol. G. H. Stillson and D. W. Sawyer. 2,459,597, Jan. 18.
Dies, Rotary. L. G. Robinson. 2,459,585, Jan. 18.
Di(hydroxy methyl) dithiobiuret, Preparation of. R. L. Sperry. 2,459,725, Jan. 18.
Dipping machine, Shingle. W. S. Sidwell. 2,459,294, Jan. 18.
Discharge device, Electric. J. E. Beggs. 2,459,487, Jan. 18.
Dispersions of proteins in aqueous detergents. H. P. Lundgren. 2,459,708, Jan. 18.
Display box. W. R. Lee. 2,459,585, Jan. 18.
Dissector, Image. C. C. Larson. 2,459,778, Jan. 18.
Door device. B. J. Craig. 2,459,502, Jan. 18.
Door latch. R. T. Anderson. 2,459,354, Jan. 18.
Drafting machine. E. R. Booth. 2,459,216, Jan. 18.
Draw clamp. A. Carden. 2,459,681, Jan. 18.
Drill: *See*—
Rock drill.
Drying oil residues, Comminuted. W. F. Schaufelberger. 2,459,342, Jan. 18.

Emergency control lock.
Logging method and apparatus, Electrical. W. H. Stewart. 2,459,196, Jan. 18.
Loom operation, Balanced. F. D. Snyder. 2,459,595, Jan. 18.
Lubricant composition, Organic. G. L. Perry. 2,459,717, Jan. 18.
Lubricating composition. E. R. Barnum and G. L. Perry. 2,459,718, Jan. 18.
Luminescent maraca. R. J. Tossas. 2,459,555, Jan. 18.
Machine for beveling soles. E. J. Ray. 2,459,339, Jan. 18.
Machine for marking on cylindrical articles. C. F. Robbins. 2,459,538, Jan. 18.
Machine for operating upon shoe soles. E. J. Ray. 2,459,179, Jan. 18.
Magnetic impulse motor. E. K. Crosby. 2,459,265, Jan. 18.
Malonic ester, Manufacture of. C. F. Christie. 2,459,144, Jan. 18.
Mandolin pick. H. Galetzky. 2,459,274, Jan. 18.
Manifold for two-cycle crankcase compression engines. J. W. Smith. 2,459,594, Jan. 18.
Material handling mechanism. W. W. Worthington. 2,459,207, Jan. 18.
Measuring apparatus, Density. A. J. Rosenberger. 2,459,542, Jan. 18.
Measuring apparatus, Fluid rate of flow. P. S. Dickey and J. F. Shannon. 2,459,689, Jan. 18.
Measuring characteristic impedances of fittings for coaxial connectors. C. Stewart, Jr. 2,459,197, Jan. 18.
Measuring device for shafts, Torque. B. F. Langer and F. W. Godsey, Jr. 2,459,171, Jan. 18.
Measuring system with capacitor having characteristics of an infinite capacity. A. J. Williams, Jr. 2,459,730, Jan. 18.
Mechanical instrument holder. E. E. Harper. 2,459,701, Jan. 18.
Mechanism for traversing artillery pieces. N. S. Glassman. 2,459,159, Jan. 18.
Mending machine, Stocking. M. Sagnier. 2,459,587, Jan. 18.
Metal bonded by means of chlorinated rubber adhesives containing a polyalkylene polyamine. H. P. Bradley and J. L. Dum. 2,459,742, Jan. 18.
Metal coating. A. W. Harris and A. H. Ward. 2,459,161, Jan. 18.
Metalsalts of penicillin, Preparing. M. W. Goldberg and S. Teitel. 2,459,315, Jan. 18.
Meter: *See*—
Flux meter.
Metering system, Fluid. T. A. Baker. 2,459,303, Jan. 18.
Modulation system. C. E. Hallmark. 2,459,698, Jan. 18.
Mold. E. H. Zahn. 2,459,402, Jan. 18.
Mold for making plastic artificial eyes. L. A. Wells and C. A. Halbkat. 2,459,205, Jan. 18.
Molded rubber traction chain. A. B. Skromme. 2,459,751, Jan. 18.
Mortar and adapter, Grenade. J. Ross. 2,459,182, Jan. 18.
Motor: *See*—
Dual-voltage single-phase motor. Magnetic impulse motor.
Inverter motor. Self-starting impulse type electric motor.
Motor cooling systems. G. M. De Jarlais. 2,459,311, Jan. 18.
Motor unit, Alternating current solenoid reciprocating. J. I. Ellman. 2,459,510, Jan. 18.
Motor vehicle fuel tank. B. A. Swennes. 2,459,470, Jan. 18.
Mount, Picture. G. E. Nichols. 2,459,576, Jan. 18.
Mounting: *See*—
Resilient mounting. Socket terminal mounting.
Moving apparatus, Tray. M. E. Hanson. 2,459,524, Jan. 18.
N-monochlorocyclohexylamine. G. Alliger. 2,459,759, Jan. 18.
Negative glow lamp. D. E. Elmendorf. 2,459,511, Jan. 18.
Nicotine and beta-beta-dichlorethyl ether insecticide. O. T. Coffin and D. J. Raden. 2,459,138, Jan. 18.
Noisemaking device. D. M. Wolf. 2,459,300, Jan. 18.
Normicotine, Preparation of. P. G. Haines, A. Elsner, and C. F. Woodward. 2,459,096, Jan. 18.
Nursing bottle holder. H. B. Flickinger. 2,459,514, Jan. 18.
Oarlock extension. M. W. Areaux. 2,459,355, Jan. 18.
Oil acid modified alkyd material, Preparing. C. G. Moore. 2,459,176, Jan. 18.
Olican with drip catcher having a weight operated return valve. M. E. Blake and R. A. Gartman. 2,459,215, Jan. 18.
Oils, Purifying used. C. R. A. M. Björnstjerna. 2,459,409, Jan. 18.
1,4-DI (heterocyclic substituted) piperazines. J. J. Denton and K. L. Howard. 2,459,367, Jan. 18.
1-Naphthylmethyl tetradecyl ether as an insecticide. I. Hechenbleikner. 2,459,526, Jan. 18.
Opener, Can. O. C. Williamson. 2,459,560, Jan. 18.
Opener, Carton. S. H. Berch. 2,459,678, Jan. 18.
Ores with nitric acid treated fatty acids, Concentration of nonsulfide, nonsilicate. J. B. Duke. 2,459,219, Jan. 18.
Organic compounds with hydrogen halides, Reaction of. A. I. Gebhart. 2,459,423, Jan. 18.
Organosilicols, Condensing. R. R. McGregor and E. L. Warrick. 2,459,387, Jan. 18.
Oscillators, Positive grid. J. W. McNall. 2,459,283, Jan. 18.
Oscilloscope, Cathode-ray. C. W. Hansell. 2,459,319, Jan. 18.
Overhead valve tappet clearance adjusting wrench. G. S. Morris. 2,459,671, Jan. 18.
Oxidation of cycloaliphatic hydrocarbons and alcohols. T. F. Doumani, C. S. Coe, and E. C. Attané, Jr. 2,459,690, Jan. 18.
Oxides of manganese, Preparation of. R. W. Moulton. 2,459,714, Jan. 18.
Packing assembly. W. C. Ferguson, P. Sussenbach, and F. L. Limn. 2,459,370, Jan. 18.
Pad: *See*—
Shoulder pad.
Paper and making, Creped. R. F. Charles and F. W. Durgin. 2,459,364, Jan. 18.
Parenteral solutions of riboflavin and the like. T. D. Gerlough and E. L. Smith. 2,459,518, Jan. 18.
Parking indicator. R. M. Thorson. 2,459,202, Jan. 18.
Pear peeling, coring, and splitting method and apparatus. G. A. Dunn. 2,459,368, Jan. 18.
Pen, Fountain. H. Q. Quan. 2,459,584, Jan. 18.

Petroleum exploration by soil analysis. R. H. Fash and J. G. Campbell. 2,459,512, Jan. 18.
Phenol sulfides and preparation of metallic salts thereof, Purification of. H. E. Albert. 2,459,754, Jan. 18.
Phthalocyanine polyhydroxyalkylsulfonamides. R. L. Mayhew. 2,459,773, Jan. 18.
Phthalocyanine sulfonamidopyridines. A. L. Fox. 2,459,771, Jan. 18.
Picking machine, Cranberry. E. L. Tebbetts. 2,459,471, Jan. 18.
Pin device, Tractor hitch. B. E. Seward. 2,459,245, Jan. 18.
Pipe attachment, Tobacco. A. Morris. 2,459,670, Jan. 18.
Pipe coupling. H. B. L. Newman. 2,459,389, Jan. 18.
Piperylene, Concentration of. R. F. Robey. 2,459,454, Jan. 18.
Piston packing ring. F. D. Frisby. 2,459,157, Jan. 18.
Piston ring. D. M. Smith. 2,459,395, Jan. 18.
Plastic coating. R. W. Holden. 2,459,279, Jan. 18.
Plastic compositions made with vulcanized polyethylene glycol esters as plasticizers. P. Stamberger. 2,459,298, Jan. 18.
Plug: *See*—
Spark plug.
Polyazo benzidine dyes. F. Straub and J. Brassel. 2,459,467, Jan. 18.
Polymeric materials from iso- and isothiocyanates with acrylic acids. J. G. Lichty and N. V. Seeger. 2,459,439, Jan. 18.
Polymeric mono-isoolefinic materials and making same. J. M. Coon and J. B. Rust. 2,459,501, Jan. 18.
Polyvinyl acetal resins. K. F. Beal and C. J. B. Thor. 2,459,488, Jan. 18.
Portable necktie rack. R. E. Dodge. 2,459,417, Jan. 18.
Positive column lamp. E. Lemmers. 2,459,567, Jan. 18.
Post for lathes, Tool. I. H. Fann. 2,459,421, Jan. 18.
Power supply, High-voltage. G. W. Fyler. 2,459,638, Jan. 18.
Press and die therefor. L. Granat. 2,459,276, Jan. 18.
Printing apparatus having a rotary light-transmitting cylinder and an endless belt bearing against the cylinder, Photographic. F. H. Cary. 2,459,362, Jan. 18.
Probe. J. L. McFarland and M. P. Van Camp. 2,459,174, Jan. 18.
Protector applicable to drinking vessels for avoiding contamination by the mouth, Hygienic. M. G. Villegas de Oribe. 2,459,558, Jan. 18.
Pulley, Variable-speed. W. W. Hallinan. 2,459,377–8, Jan. 18.
Pulsator system. A. E. Kremiller. 2,459,326, Jan. 18.
Pulse and square wave generator. J. D. Schantz. 2,459,723, Jan. 18.
Pump: *See*—
Centrifugal pump. Variable delivery pump.
Pump connection, Tire. J. M. Nickelsen and H. W. Emerick. 2,459,716, Jan. 18.
Pump recirculating line erosion control device, Main feed. L. E. Hughes. 2,459,166, Jan. 18.
Pumping air in air balanced pumping units. E. W. Patterson and C. D. Spracher. 2,459,334, Jan. 18.
Pyrazole-5-ones, Production of. J. D. Kendall and D. J. Fry. 2,459,226, Jan. 18.
Pyridine bases, Separation of. K. H. Slagle and R. S. Bowman. 2,459,191, Jan. 18.
Quinacrine, Making. G. L. Shaw and R. G. Jones. 2,459,777, Jan. 18.
Quiz device, Combination. C. Lorber. 2,459,231, Jan. 18.
Rack: *See*—
Portable necktie rack. Tubing rack.
Rack and edger, Knife. S. S. Otis. 2,459,391, Jan. 18.
Rack for neckties. J. Linenthal. 2,459,331, Jan. 18.
Radio equipment for lifeboat service, Two-way. J. F. McDonald. 2,459,281, Jan. 18.
Radio receiving system, Diversity. C. P. Beanland. 2,459,259, Jan. 18.
Radio system, Multiplex. F. A. Bartlett. 2,459,485, Jan. 18.
Range, Gun test. R. M. Ferguson. 2,459,156, Jan. 18.
Receiver, Interference reducing radio. D. E. Noble. 2,459,675, Jan. 18.
Receptacle: *See*—
Combination toothbrush and dentifrice receptacle. Flexible pocket receptacle.
Reclining chair. R. H. Ellsworth. 2,459,269, Jan. 18.
Rectifier. C. S. Duncan. 2,459,630, Jan. 18.
Reel: *See*—
Advancing reel. Collapsible reel.
Refrigerated display cabinet. M. W. Schwartz. 2,459,243, Jan. 18.
Refrigerator latch. A. C. Shuart. 2,459,190, Jan. 18.
Regulating system. S. B. Griscom and R. L. Witzke. 2,459,640, Jan. 18.
Regulating system. C. L. Mershon. 2,459,669, Jan. 18.
Regulating system. R. L. Witzke. 2,459,607, Jan. 18.
Rejector-blade wear-compensating-ring, for discharge of rotary beater mill. E. H. Smith and O. A. Johnson. 2,459,248, Jan. 18.
Relaying system, High-speed sequential. S. L. Goldsborough. 2,459,639, Jan. 18.
Removing ferrous and other particles from liquid, Automatically. A. Scrivener. 2,459,343, Jan. 18.
Removing shine from fabrics. R. H. McKee. 2,459,236, Jan. 18.
Reproducing apparatus. J. M. Tyrner. 2,459,253, Jan. 18.
Reservoir for the storage of liquefied gases, Underground. A. N. Kerr. 2,459,227, Jan. 18.
Resilient mounting. L. M. Kubaugh. 2,459,741, Jan. 18.
Resins derived by reacting a cresol-formaldehyde condensate with a monohydric alcohol ester of rosin, Synthetic. W. D. Jones. 2,459,651, Jan. 18.
Resistor and spark plug embodying same. T. G. McDougal, K. Schwartzwalder, and A. S. Rulka. 2,459,282, Jan. 18.
Restraining device. C. F. and M. M. Messina. 2,459,712, Jan. 18.
Retarder for automatic firearms, Hammer. J. C. Garand. 2,459,158, Jan. 18.
Retracting and braking system for aircraft landing gear, Combined. L. A. Majneri. 2,459,665, Jan. 18.
Ring: *See*—
Key ring. Piston ring.
Piston packing ring.
Rock drill. P. A. Bancel, J. D. Ditson, and A. D. Karr. 2,459,484, Jan. 18.
Roller control for printing presses, Ductor. G. H. Schultz. 2,459,188–9, Jan. 18.
Roof and wall structure. A. Cibulka. 2,459,415, Jan. 18.
Rotary plug valve. W. D. Carrie. 2,459,682, Jan. 18.
Rubber compound, Processing. H. H. Waters. 2,459,745, Jan. 18.
Rubber latex, Coagulation of synthetic. C. R. Johnson. 2,459,748, Jan. 18.
Rubber, Making and compounding synthetic. R. L. Bebb. 2,459,740, Jan. 18.
Rubber products, Manufacture of. M. M. Heywood. 2,459,763, Jan. 18.
Rubber to magnesium, Adhesion of. J. R. Rafter. 2,459,744, Jan. 18.
Safety and relief valve. E. C. Sullivan. 2,459,553, Jan. 18.
Salt solutions, Basic aluminum. V. H. Roehrich. 2,459,289, Jan. 18.
Salts having minimum solubilities at temperatures above those of the initial solutions, Concentration of. D. Aronson. 2,459,302, Jan. 18.
Sampling device. R. M. Levy. 2,459,383, Jan. 18.
Scale, Drawing. S. V. Tomko. 2,459,554, Jan. 18.
Scoop or ladle, Measuring. C. C. Spreen. 2,459,466, Jan. 18.
Seal. R. C. Hamilton and E. S. Rothchild. 2,359,642, Jan. 18.
Seal apparatus, Junction. T. R. Thomas. 2,459,201, Jan. 18.
Seal for floating roofs. F. D. Moyer. 2,459,178, Jan. 18.
Seal for rotating equipment, Reed. W. C. Kellogg and E. Hanshaw. 2,459,654, Jan. 18.
Seal, Pressure. W. Kasten. 2,459,652, Jan. 18.
Sealing apparatus, Flame. A. G. Hewitt and S. F. Clement. 2,459,235, Jan. 18.
Sealing apparatus, Flame. R. McDowall. 2,459,234, Jan. 18.
Segregation of C_5 hydrocarbons by extractive and azeotropic distillation. G. L. Ahrens. 2,459,403, Jan. 18.
Self-starting impulse type electric motor. G. E. Canham. 2,459,412, Jan. 18.
Separator centrifuge, Multiple. G. K. W. Boestad. 2,459,145, Jan. 18.
Separator for fluid systems, Magnetic. T. A. Kennedy. 2,459,534, Jan. 18.
Servomotor, Differential pressure fluid. F. K. van Almelo. 2,459,475, Jan. 18.
Servo unit test stand. A. F. Kopischiansky. 2,459,535, Jan. 18.
Shackle, Releasable. T. J. Henderson. 2,459,223, Jan. 18.
Shaped articles from fluorite, Production of. G. J. Vahrenkamp. 2,459,203, Jan. 18.
Sharpener, Saw. A. W. Mall. 2,459,233, Jan. 18.
Sheet materials by high-frequency electric fields, Method of and apparatus for drying. W. P. Gohoe and M. Wilson. 2,459,622, Jan. 18.
Sheet materials, Method and apparatus for drying. W. P. Gohoe and M. R. Saslaw. 2,459,623, Jan. 18.
Shock absorber, Friction. E. H. Lehman. 2,459,229, Jan. 18.
Shoe fastener. R. and C. V. Webb. 2,459,348, Jan. 18.
Shoe tree. R. H. Slavin. 2,459,592, Jan. 18.
Shoulder pad. S. Bloom. 2,459,489, Jan. 18.
Shoulder pad. A. Ingalls. 2,459,648, Jan. 18.
Shovel attachment, Corn planter. O. Farley. 2,459,634, Jan. 18.
Signal: *See*—
Aerial signal.
Signaling device adapted to be operated automatically after being launched, Self-contained emergency. M. Dwyer and P. B. Edwards. 2,459,267, Jan. 18.
Slip. H. C. Seidin. 2,459,590, Jan. 18.
Slip cover. L. C. Lenz. 2,459,328, Jan. 18.
Slippers, Constructing. B. Wunsch. 2,459,258, Jan. 18.
Socket. R. C. Fox and T. N. Massey. 2,459,272, Jan. 18.
Socket terminal mounting. H. A. Olson. 2,459,390, Jan. 18.
Soda ash, Production of. E. W. Carrier. 2,459,414, Jan. 18.

Solids in a liquid bath, Destructive distillation of. A. J. Stamm. 2,459,550, Jan. 18.
Sound locating device, Acoustical. H. C. Hayes. 2,459,162, Jan. 18.
Spacer, Electrode. J. A. M. van Liempt, F. Prakke, H. J. Landsbergen, and J. H. M. van Uden. 2,459,476, Jan. 18.
Spark plug. H. M. Bickle and R. A. Bailey. 2,459,214, Jan. 18.
Speed drive, Adjustable. G. E. King and M. H. Fisher. 2,459,655, Jan. 18.
Speed limiting arrangements for turbine rotors. G. H. Graham, B. E. G. Forsling, and G. Tabberer. 2,459,519, Jan. 18.
Split-phase motor reversing circuit. C. E. Weinland. 2,459,479, Jan. 18.
Spray, Dental drill. H. R. Morrow. 2,459,573, Jan. 18.
Spreader and tensioner for circular looms and the like, Wire. A. DeGhetto. 2,459,504, Jan. 18.
Sprinkler, Square lawn. L. D. Sellars. 2,459,244, Jan. 18.
Stacking machine, Lumber. B. M. Birkhead. 2,459,358, Jan. 18.
Stand: *See*—
Servo unit test stand.
Stapling machine. F. Franz. 2,459,313, Jan. 18.
Steering mechanism for wheeled land vehicles. R. W. Brown. 2,459,753, Jan. 18.
Still with capillary tube offtakes for condensate, Microfractionation. C. W. Gould, Jr. 2,459,375, Jan. 18.
Stippler. A. Power. 2,459,392, Jan. 18.
Stirrer for mixing liquids, Magnetically operated. W. L. Hendricks. 2,459,224, Jan. 18.
Stop motion for knitting machines and the like, Automatic. G. E. Henning and C. E. Lewis. 2,459,426, Jan. 18.
Stopper for insuring sterile needle punctures, Medical vial. F. Blank. 2,459,304, Jan. 18.
Stove, Portable camping. E. C. Filmer. 2,459,515, Jan. 18.
Straining device. L. L. Lange. 2,459,660, Jan. 18.
Structural shapes, Manufacture of. A. B. Cummins. 2,459,685, Jan. 18.
Structure for fluorescent dial panel and making the same. J. M. Gordon. 2,459,694, Jan. 18.
Substantive triazineazo dyes. E. Keller and R. Zweidler. 2,459,435, Jan. 18.
Subtilin, Extraction and purification of. K. P. Dimick, G. Alderton, J. C. Lewis, H. D. Lightbody, and H. L. Fevold. 2,459,139, Jan. 18.
Sulfate turpentine, Refining. G. H. McGregor. 2,459,570, Jan. 18.
Sulfur, Purification of native. F. M. Yelser. 2,459,764, Jan. 18.
Supply system, Power. H. G. A. Bax. 2,459,486, Jan. 18.
Support: *See*—
Bottle support.
Brake beam safety support. Folding support.
Support for neon tubes. M. Fletcher. 2,459,692, Jan. 18.
Supporting device, Record sheet. H. Hansen. 2,459,523, Jan. 18.
Surface treatment of magnesium base alloys, Electrolytic protective. G. E. Coates. 2,459,365, Jan. 18.
Surgical table. H. T. Treace. 2,459,729, Jan. 18.
Switch: *See*—
Electric snap switch. Glow switch.
Switchboard and cable connections therein, Self-contained. E. L. Mentor. 2,459,237, Jan. 18.
Switch for refrigerating apparatus. A. O. Grooms. 2,459,522, Jan. 18.
Switch for synchronizers and the like, Control. G. A. Ley. 2,459,330, Jan. 18.
Switching apparatus for fire control systems. W. Von Glahn. 2,459,255, Jan. 18.
Swivel coupling. E. C. Hartley. 2,459,643, Jan. 18.
Swivel, Rotary. G. R. Tremolada. 2,459,472, Jan. 18.
Synchronizing system. C. E. Hallmark. 2,459,699, Jan. 18.
Table: *See*—
Surgical table. Tray table.
Tank: *See*—
Motor vehicle fuel tank.
Target, Golf putting. R. E. Watkins. 2,459,559, Jan. 18.
Telemetric device. H. H. Johnson. 2,459,704, Jan. 18.
Test apparatus, Electrical. M. F. Bates. 2,459,142, Jan. 18.
Test device, Illuminated. M. Weincord. 2,459,351, Jan. 18.
Testing and protection of electrical distribution systems. R. Scheirmann. 2,459,186, Jan. 18.
Testing apparatus, Cord. I. B. Prettyman, G. P. Bosomworth, and D. C. Milner. 2,459,738, Jan. 18.
Testing device, Inner tube. L. H. Wink. 2,459,606, Jan. 18.
Textile materials, Manufacture of shaped. G. Schneider and A. J. Steinberger. 2,459,291, Jan. 18.
Textile materials, Manufacturing. R. Cleeland, L. J. Kelley and W. S. Davis. 2,459,620, Jan. 18.
Thermostat control for toasters, Radiation. L. J. Koci. 2,459,169, Jan. 18.
Thiazyl sulfenamides. G. E. P. Smith, Jr., and E. L. Carr. 2,459,736, Jan. 18.
Threading up continuous spinning machine, Process and apparatus for. A. van der Mel. 2,459,254, Jan. 18.
Threadless pipe coupling. C. K. Stilliwagon. 2,459,251, Jan. 18.
Tinplate brightening apparatus, Continuous. J. S. Nachtman. 2,459,674, Jan. 18.
Tire tread. C. C. Dybvig. 2,459,750, Jan. 18.
Tire tread. A. Hargraves. 2,459,762, Jan. 18.
Tool: *See*—
Wire bound box closing tool.
Tool mechanism, Motor-driven. T. H. Ljunggren. 2,459,384, Jan. 18.
Torque responsive clutch. H. E. Carnagua and C. L. Swift. 2,459,361, Jan. 18.
Tow-pole and hitch, Trailer. P. J. Schmitz. 2,459,458, Jan. 18.
Tower structure. E. R. St. John. 2,459,198, Jan. 18.

Wax esters of hydrocarbon sulfonates, Producing. E. Lieber and A. F. Cashman. 2,459,440, Jan. 18.
Weight, Releasable. S. E. Robbins and F. L. Larson. 2,459,287, Jan. 18.
Welding apparatus. C. P. Nielsen. 2,459,577, Jan. 18.
Welding system. J. H. England. 2,459,153–4, Jan. 18.
Welding together metal strip ends. W. F. Copp. 2,459,625, Jan. 18.
Welding with a fusible trough to support the comminuted mineral composition above the bottom of the welding zone, Blanketed electric. F. Rothe. 2,459,242, Jan. 18.
Wheel: *See*—
Fifth wheel.
Wheel assembly, Dual. C. P. Tolman. 2,459,347, Jan. 18.
Wheel balancing weights, Making. G. A. Lyon. 2,459,568, Jan. 18.
Wheel cover. G. A. Lyon. 2,459,569, Jan. 18.
Winding coiled bodies, Method and apparatus for. E. A. Nordberg. 2,459,536, Jan. 18.
Winding machine. C. D. Jencks and R. H. Lawson. 2,459,167, Jan. 18.
Wire bound box closing tool. G. T. and H. T. Boyd. 2,459,491, Jan. 18.
Wrench: *See*—
Hub-mounted wheel wrench.
Overhead valve tappet clearance adjusting wrench.

CLASSIFICATION OF PATENTS

ISSUED JANUARY 18, 1949

In view of the fact that the issue is being checked weekly by the Classification Division, the class and subclass in this list are correct as of this date. Where there is a discrepancy between the classification given in the patent head and the classification in this list, the classification of this list governs.

NOTE.—First number = class, second number = subclass, third number = patent number

Know Your Government!

The Constitution
The Congress
The Courts
Executive Office of the President
Department of the Treasury
Bureau of Customs
National Military Establishment
Federal Security Agency
Food and Drug Administration
Housing and Home Finance Agency
Selective Service System
Veterans' Administration

INFORMATION about these and other Federal departments and agencies is to be found in the 1948 *United States Government Manual*, an authoritative 722-page handbook covering the legislative, executive, and judicial branches of the Government. Issued annually by the Division of the Federal Register, the National Archives.

DECISIONS IN PATENT AND TRADE-MARK CASES

U. S. Court of Customs and Patent Appeals

IN RE JASPER

No. 5509. Decided December 7, 1948

[— F.2d —; — USPQ —]

1. PATENTABILITY—MAKING MULTI-LAYER HIGH PRESSURE CYLINDER.

Certain claims to a method of making a multi-layer high pressure cylinder *Held* unpatentable over the prior art.

APPEAL from the Patent Office. Serial No. 418,205.

AFFIRMED.

Elwin A. Andrus (*Lee B. Kemon* of counsel) for Jasper.

W. W. Cochran (*E. L. Reynolds* of counsel) for the Commissioner of Patents.

JOHNSON, *J.:*

This is an appeal from the decision of the Board of Appeals of the United States Patent Office affirming the action of the Primary Examiner in rejecting claims 1 and 2 in appellant's application for a patent for improvement in "Manufacture of Multi-Layer Cylinders for High Pressure Vessels." Claims 3, 4, 6, 7, and 8 were allowed.

Claim 1 is representative:

1. In the manufacture of multi-layer high pressure cylinders, the applying of a layer of sheet metal to the partially fabricated wall structure of the cylinder by tightly wrapping the layer upon said structure with the adjacent side edges of the layer constituting a longitudinal seam to be welded, pressing the layer tightly against the inner supporting structure by applying circumferential forces elastically squeezing the structure uniformly to a substantially smaller diameter, then welding the longitudinal seam in said layer, and thereafter releasing the squeezing pressure to effect an elastic return of the inner structure into said layer to thereby provide initial tensile stress in said layer and initial compressive stress in said structure.

The references relied upon are: Donnet (British), 342,945, Feb. 12, 1931; Watson, 2,219,085, Oct. 22, 1940.

The alleged invention provides a method of manufacture of multi-layer vessels whereby each layer, as it is applied from the inner layer to the outer layer, is stressed in a manner improving the stress distribution of the working load in service.

Claim 1 sets out the method of the alleged invention as applying a layer of sheet metal to the partially fabricated wall structure of the cylinder by tightly wrapping the layer upon said structure with the adjacent side edges of the layer constituting a longitudinal seam to be welded, then pressing the layer tightly against the inner supporting structure by applying circumferential forces elastically squeezing the structure uniformly to a substantially smaller diameter, then welding the longitudinal seam in said layer, and then releasing the squeezing pressure to effect an elastic return of the inner structure into said layer to provide thereby initial tensile stress in said layer and initial compressive stress in said structure.

In the Watson patent, supra, a covering is applied to a hollow shaft by applying heavy pressure by jaws of a press to the covering and then welding the edges. The jaws are formed to the dimensions desired in the finished article. After the welding, the pressure is removed. The Watson patent also describes in the specification the successive advancing of the article across the jaws of the press and the successive welding of the seam.

In the Donnet patent a layer of sheet metal is applied to a partially fabricated wall structure by two different methods. In one method he places the layer on the wall structure and applies hot hoops around the layer. When the hoops cool they ensure powerful and close application of the outer sheet metal envelope against the inner wall. The ends of the outer envelope are then welded together. In the other method the grip of the external envelope is produced by the pressure of collars by means of bolts and nuts bearing against suitable lugs.

The Examiner rejected claim 1 on Donnet, on Watson, or on Watson in view of Donnet. The Board sustained the Examiner's rejection of claim 1 on Watson or on Watson in view of Donnet.

Appellant contends that the Watson patent entirely lacks appellant's second step in claim 1 of "pressing the layer tightly against the inner supporting structure by applying circumferential forces elastically squeezing the structure uniformly to a substantially smaller diameter," and in claim 2 of "pressing the layer tightly against the inner supporting structure by applying circumferential contracting forces in successive longitudinal areas elastically squeezing the structure uniformly to a substantially smaller circumference." We do not agree with these contentions. The shaping of the jaws, as provided in the Watson patent, to the dimensions of the article will necessarily apply circumferential forces elastically squeezing the structure uniformly to a smaller dimension.

Claim 2 simply adds to the steps of claim 1 the successive squeezing and welding in successive longitudinal areas. This is old in the Watson patent and adds no patentability to claim 2.

The decision of the Board is affirmed.

AFFIRMED.

Vol. 618 • No. 4 Tuesday, January 25, 1949 Price $17.50 per year

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscriptions, $17.50 per annum, including annual index, $21.00; single numbers, 35 cents each.

PRINTED COPIES OF PATENTS are furnished by the Patent Office at 25 cents each; copies of TRADE-MARKS and DESIGNS at 10 cents each. Address orders to the Commissioner of Patents, Washington 25, D. C.

CIRCULARS OF GENERAL INFORMATION concerning PATENTS or TRADE-MARKS will be sent without cost on request to the Commissioner of Patents, Washington 25, D. C.

Discontinued as to Mayfair Bra Co., Inc., Nov. 22, 1948, and as to Stephen Jay Co., Inc., Dec. 9, 1948.

2,435,729. (See Re. 22,203.)

2,447,354, M. A. Morrill, Rotary side delivery rake, filed Dec. 7, 1948, D. C., S. D. Calif., N. Div., Doc. 768-ND, *West Coast Sales & Service Co.* v. *F. Prater & Son.* Consent judgment holding infringement; injunction granted (notice Dec. 21, 1948). Same, filed Dec. 7, 1948, D. C., N. D. Tex. (Fort Worth), Doc. 1713, *West Coast Sales & Service Co.* v. *Sargent Mfg. Co., Inc., et al.* Same, filed Dec. 8, 1948, D. C., N. D. Iowa (Fort Dodge), Doc. 416, *West Coast Sales & Service Co.* v. *Twin Draulic, et al.* Same, D. C., W. D. Mo. (Kansas City), Doc. 5462, *M. A. Morrill et al.* v. *Automatic Industries, Inc., et al.*

2,450,631, E. Buchler, Garment, filed Dec. 21, 1948, D. C., E. D. N. Y., Doc. C-9580, *Lisle Mills, Inc.*, v. *Arkay Infants Wear, Inc., et al.*

Re. 22,164. (See 2,278,437.)

Re. 22,203, Bosio & Puett, Starting gate; 2,309,952, 2,435,729, Harris & Whann, same, filed Dec. 8, 1948, D. C. Ariz. (Phoenix), Doc. 1247, *Puett Electrical Starting Gate Corp.* v. *Ingleside Turf Club, Inc., et al.*

Des. 151,423, L. P. Weil, Portable electric fountain, filed Dec. 16, 1948, D. C., E. D. Pa., Doc. 9186, *L. P. Weil* v. *F. Gedminas.*

T. M. 128,351, T. M. 199,341, The Crown Overall Mfg. Co., Overalls, filed Dec. 10, 1948, D. C., N. D. Ga. (Atlanta), Doc. 3557, *The Crown Overall Mfg. Co., Inc.*, v. *Crown Garment Co., Inc., et al.*

T. M. 199,341. (See T. M. 128,351.)

T. M. 289,764. (See T. M. 369,898.)

T. M. 365,776. (See T. M. 369,898.)

T. M. 369,898, Kitty Kelly Shoe Corp., Shoe; T. M. 365,776, Same, Traveling bags, hand bags, trunks, etc.; T. M. 289,764, Stern & Kellner, Shoes, slippers, hosiery, etc., filed Apr. 26, 1948, D. C., E. D. Mich., S. Div., Doc. 7301, *Kitty Kelly Shoe Corp.* v. *Kitty Kelly Shop.*

NOTICES

Classification Order No. 45

January 4, 1949

The following transfer is hereby ordered to take effect January 5, 1949:

Class 38, Textiles, Ironing or Smoothing, from Division 27 to Division 49.

LAWRENCE C. KINGSLAND,
Commissioner of Patents.

Adjudicated Patent

(D. C. La.) Hall Patent, No. 2,220,237, for a well cleaner, claims 1, 3, and 4 held valid. *Hall* v. *Keller*, 80 F. Supp. 763; 79 USPQ 286.

Adverse Decisions in Interferences

In interferences involving the indicated claims of the following patents final decisions have been rendered that the respective patentees were not the first inventors with respect to the claims listed.

Pat. 2,428,745, G. H. Stillson, Alkylation of phenols, decided Nov. 18, 1948, claim 6.

Pat. 2,412,481, T. O. Summers, Jr., Friction-actuated erecting mechanism, decided Dec. 16, 1948, claims 1, 2, 4, 5, 6, 7, 9, 10, and 11.

Erratum

In the notice of republication under section 12(c) of the Trade-Mark Act of 1946 of registration No. 408,772, appearing in the OFFICIAL GAZETTE of December 21, 1948, page 713, for "Blau-Knox Company" read *Blaw-Knox Company.*

Disclaimers

Re. 22,858.—*Warren D. Roth, Leo C. Brown,* and *Guy W. Phelps,* Chicago, Ill. METHOD OF MANUFACTURING ICE CREAM AND THE PRODUCT THEREOF. Patent dated Mar. 25, 1947. Disclaimer filed Dec. 16, 1948, by the assignee, *Industrial Patents Corporation.*

Hereby enters this disclaimer to that part of the claims in said specification, to wit:

(a) As much of claim 15 as is in excess of the following: The process of manufacturing an improved ice cream product which comprises adding thereto and dissolving therein a small percentage of an ester of glycerol and a higher fatty acid being characterized by one or more free alcoholic hydroxyl groups in the glycerol part of the ester.

(b) As much of claim 16 as is in excess of the following: As an article of manufacture, a new food product composed of ice cream containing a small percentage of an ester of glycerol and a higher fatty acid being characterized by one or more free alcoholic hydroxyl groups in the glycerol part of the ester.

(c) As much of claim 17 as is in excess of the following: In the manufacture of ice cream, the method of improving the texture and controlling the overrun of the ice cream which comprises adding to the ice cream mix and dissolving therein a small percentage of an ester of glycerol and a higher fatty acid being characterized by one or more free alcoholic hydroxyl groups in the glycerol part of the ester.

(d) As much of claim 18 as is in excess of the following: As an article of manufacture, a new food product composed of ice cream of improved texture and controlled overrun containing a small percentage of an ester of glycerol and a higher fatty acid being characterized by one or more free alcoholic hydroxyl groups in the glycerol part of the ester.

(e) As much of claim 19 as is in excess of the following: In the manufacture of ice cream, the method of improving the texture and controlling the overrun of the ice cream which comprises adding to the ice cream mix and dissolving therein a small percentage, up to 0.2 per cent by weight, of an ester of glycerol and a higher fatty acid being characterized by one or more free alcoholic hydroxyl groups in the glycerol part of the ester.

(f) As much of claim 20 as is in excess of the following: As an article of manufacture a new food product composed of ice cream of improved texture and controlled overrun containing a small percentage, up to 0.2 per cent by weight, of an ester of glycerol and a higher fatty acid being characterized by one or more free alcoholic hydroxyl groups in the glycerol part of the ester.

2,405,242.—*George C. Southworth,* Red Bank, N. J. MICROWAVE RADIO TRANSMISSION. Patent dated Aug. 6, 1946. Disclaimer filed Dec. 21, 1948, by the assignee, *Bell Telephone Laboratories, Incorporated.*

Hereby enters this disclaimer to claims 13, 14, and 20 of said patent.

2,409,456.—*William A. Tolson* and *Carl A. Meneley,* Princeton, N. J. RADIANT ENERGY LOCATING SYSTEM. Patent dated Oct. 15, 1946. Disclaimer filed Dec. 21, 1948, by the assignee, *Radio Corporation of America.*

Hereby enters this disclaimer to claims 1, 2, 3, 6, 9, and 10 of said Letters Patent.

2,416,290.—*Wallace A. Depp,* Elmhurst, N. Y. CATHODE-RAY OSCILLOSCOPE CIRCUIT. Patent dated Feb. 25, 1947. Disclaimer filed Dec. 23, 1948, by the assignee, *Bell Telephone Laboratories, Incorporated.*

Hereby enters this disclaimer to claim 3 of said patent.

2,417,829.—*Arthur C. Keller,* Bronxville, N. Y. COMPRESSIONAL WAVE SIGNALING DEVICE. Patent dated Mar. 25, 1947. Disclaimer filed Dec. 23, 1948, by the assignee, *Bell Telephone Laboratories, Incorporated.*

Hereby enters this disclaimer to claim 4 of said patent.

REGISTER OF PATENTS AVAILABLE FOR LICENSING OR SALE

(The "Groups" appearing after the patent abstracts are based on the Standard Industrial Classification Manual, Vol. I, Manufacturing Industries, Executive Office of the President, Bureau of the Budget)

Imperial Chemical Industries, Ltd., London, England, has placed more than 1100 U. S. patents on the Register of Patents as available for license on reasonable terms. Listing of the patents began in the OFFICIAL GAZETTE of January 18 (Reg. Nos. 16,816 through 17,522) and is completed in this issue. The following patents (Reg. Nos. 17,523 through 17,911) are in Group 28.

Inquiries concerning these patents should be addressed to Cushman, Darby & Cushman, American Security Bldg., 730 15th St., N. W., Washington 5, D. C.

Pat. 2,206,354. Starch Amines. July 2, 1940.

Pat. 2,208,640. Coated Fabric and the Production Thereof. July 23, 1940.

Pat. 2,211,947. Pyridine Derivatives. Aug. 20, 1940.

Pat. 2,213,693. Pigment Preparation. Sept. 3, 1940.

Pat. 2,213,726. Compounds of the Phthalocyanine Series. Sept. 3, 1940.

Pat. 2,214,454. Manufacture of Finely Divided Phthalocyanine Pigments. Sept. 10, 1940.

Pat. 2,214,469. Process for Manufacturing Halogenated Phthalocyanines. Sept. 10, 1940.

Pat. 2,214,477. Manufacture of Phthalocyanines. Sept. 10, 1940.

Pat. 2,216,229. Manufacture of New Azo Dyestuffs. Oct. 1, 1940.

Pat. 2,216,761. Manufacture of Coloring Matters. Oct. 8, 1940.

Pat. 2,216,867. Manufacture of Coloring Matters. Oct. 8, 1940.

Pat. 2,216,868. Manufacture of Coloring Matters. Oct. 8, 1940.

Pat. 2,217,696. Resist Color Printing. Oct. 15, 1940.

Pat. 2,217,697. Production of Resist Effects Illuminated With Vat Dyestuff. Oct. 15, 1940.

Pat. 2,217,805. Printing Cellulosic Textile Materials. Oct. 15, 1940.

Pat. 2,217,850. Process for the Recovery of Oxygen From Gaseous Mixtures. Oct. 15, 1940.

Pat. 2,218,148. Manufacture of Benzene Hexachloride. Oct. 15, 1940.

Pat. 2,218,344. Manufacture of Condensation Products From Phenols. Oct. 15, 1940.

Pat. 2,218,563. Manufacture of Explosive Compositions or Blasting Charges. Oct. 22, 1940.

Pat. 2,219,395. Manufacture of Pigmented Oil Compositions. Oct. 29, 1940.

Pat. 2,220,963. Azo Dyestuffs. Nov. 12, 1940.

Pat. 2,221,391. Manufacture of Double Base Propellent Powders. Nov. 12, 1940.

Pat. 2,224,912. Manufacture of Butadiene. Dec. 17, 1940.

Pat. 2,224,927. Treatment of Wool and Woollen Materials. Dec. 17, 1940.

Pat. 2,225,061. Anthraquinone Dyestuffs. Dec. 17, 1940.

Pat. 2,226,101. Manufacture of Ammonium Sulphate. Dec. 24, 1940.

Pat. 2,226,202. Synthetic Resinous Materials. Dec. 24, 1940.

Pat. 2,226,391. Method of Manufacturing Basic Lead Trinitro-M-Cresolate. Dec. 24, 1940.

Pat. 2,227,900. Manufacture of Rubber Articles. Jan. 7, 1941.

Pat. 2,228,742. Manufacture of Ammonium Sulphate. Jan. 14, 1941.

Pat. 2,229,208. Gas Generating Cartridge. Jan. 21, 1941.

Pat. 2,230,351. Halogenated Castor Oil-Polycarboxylic Acid Products. Feb. 4, 1941.

Pat. 2,230,624. Extraction of Protein From Peanuts. Feb. 4, 1941.

Pat. 2,230,827. Manufacture of Guanidine Nitrate. Feb. 4, 1941.

Pat. 2,231,471. Laminated Glass. Feb. 11, 1941.

Pat. 2,231,623. Synthetic Rubber-Like Materials. Feb. 11, 1941.

Pat. 2,232,429. Composition of Matter. Feb. 18, 1941.

Pat. 2,232,634. Shotgun Cartridge. Feb. 18, 1941.

Pat. 2,232,943. Manufacture of Unsaturated Esters. Feb. 25, 1941.

Pat. 2,232,944. Manufacture of 1-Carbalkoxybutadienes-1,3. Feb. 25, 1941.

Pat. 2,233,068. Apparatus for Wrapping Cylindrical Articles. Feb. 25, 1941.

Pat. 2,233,583. Monoazo Dyestuffs. Mar. 4, 1941.

Pat. 2,233,835. Manufacture of Halogenated Organic Acids Containing Three Carbon Atoms and Derivatives Thereof. Mar. 4, 1941.

Pat. 2,233,873. Azo Dyestuff Intermediates. Mar. 4, 1941.

Pat. 2,234,283. New Insoluble Azo Dyestuffs. Mar. 11, 1941.

Pat. 2,235,009. Manufacture of Fuseheads. Mar. 18, 1941.

Pat. 2,235,056. Process for the Recovery of Glycerol From Still Residues From Fermentation Processes. Mar. 18, 1941.

Pat. 2,235,057. Process for the Recovery of Glycerol From Still Residues From Fermentation Processes. Mar. 18, 1941.

Pat. 2,235,059. Cartridging of Gelatinous and Semi-Gelatinous Blasting Explosives. Mar. 18, 1941.

Pat. 2,235,060. Manufacture of Explosive Compositions or Blasting Charges. Mar. 18, 1941.

Pat. 2,236,618. Azo Dyestuffs. Apr. 1, 1941.

Pat. 2,236,672. Brominated Arylaminoanthraquinone Compounds. Apr. 1, 1941.

Pat. 2,237,296. Manufacture of Substituted Amides. Apr. 8, 1941.

Pat. 2,237,772. Manufacture of Azo Pigments. Apr. 8, 1941.

Pat. 2,240,989. Degreasing of Metal Articles. May 6, 1941.

Pat. 2,241,406. Fuse Head and Compositions for Use Therefor. May 13, 1941.

Pat. 2,241,709. Removal of Thionates From Solution. May 13, 1941.

Pat. 2,242,301. Coloring Matter of the Phthalocyanine Type. May 20, 1941.

Pat. 2,243,682. Cellulosic Material. May 27, 1941.

Pat. 2,244,437. Dimethyl Alpha, Alpha'-Dimethyldihydromuconate. June 3, 1941.

Pat. 2,245,514. Absorption of Bromine. June 10, 1941.

Pat. 2,247,422. Resinous Condensation Products and the Production Thereof. July 1, 1941.

Pat. 2,250,662. Molding Powder of Urea-Formaldehyde Resin Containing a Curing Accelerator. July 29, 1941.

Pat. 2,250,663. Molding Powder of Urea-Formaldehyde Resin Containing a Curing Accelerator. July 29, 1941.

Pat. 2,250,929. Manufacture of Improved Filaments, Threads, Foils or Sheets of Cellulose Esters or Ethers. July 29, 1941.

Pat. 2,250,930. Treatment of Wool and Silk. July 29, 1941.

Pat. 2,250,935. Safety Blasting Explosive. July 29, 1941.

Pat. 2,251,081. Purification of Hydroxy-Aldehydes and Hydroxy-Ketones. July 29, 1941.

Pat. 2,258,297. Gelatinous Solutions of Cellulose Compounds. Aug. 19, 1941.

Pat. 2,253,555. Nitro-Amino-Pyrenes and Process for Making Same. Aug. 26, 1941.

Pat. 2,254,354. Organic Compound. Sept. 2, 1941.

Pat. 2,255,602. Safety Blasting Device and Method. Sept. 9, 1941.

Pat. 2,256,298. Blasting Device. Sept. 16, 1941.

Pat. 2,259,602. Manufacture of Substituted Amides. Oct. 21, 1941.

Pat. 2,262,464. Production of New Azo Dyestuffs on Cellulose Materials. Nov. 11, 1941.

Pat. 2,263,994. Disazo Dyestuffs. Nov. 25, 1941.

Pat. 2,264,025. Manufacture of 1-Cyanobutadiene-1 : 3. Nov. 25, 1941.

Pat. 2,264,026. Manufacture of 1-Cyanobutadiene-1,3. Nov. 25, 1941.

Pat. 2,264,431. Hardening of Steel Articles. Dec. 2, 1941.

Pat. 2,264,519. Apparatus for Degreasing Non-Absorbent Articles. Dec. 2, 1941.

Pat. 2,265,356. Manufacture of New Organic Compounds. Dec. 9, 1941.

Pat. 2,265,785. Manufacture of Methacrylic Acid Dec. 9, 1941.

Pat. 2,265,433. Insoluble Azo Dyes. Dec. 9, 1941.

Pat. 2,265,785. Manufacture of Methacrylic Acid Esters. Dec. 9, 1941.

Pat. 2,265,814. Manufacture of Derivatives of Unsaturated Acids. Dec. 9, 1941.

Pat. 2,268,108. Insecticidal Compositions. Dec. 30, 1941.

Pat. 2,269,885. Manufacture of Azo Pigments. Jan. 13, 1942.

Pat. 2,270,024. Emulsions of the Interpolymerization Product of 2-Ethyl Hexyl Methacrylate and Methyl Methacrylate and Textile Fabrics Treated Therewith. Jan. 13, 1942.

Pat. 2,272,810. Printing Cellulosic Textile Materials. Feb. 10, 1942.

Pat. 2,273,140. Production of Synthetic Resins for Molding. Feb. 17, 1942.

Pat. 2,275,130. Disazo Dyestuffs. Mar. 3, 1942.

Pat. 2,276,761. Apparatus for the Classification of Material. Mar. 17, 1942.

Pat. 2,277,158. Insecticidal Composition. Mar. 24, 1942.

Pat. 2,277,588. Manufacture of Phthalocyanine Dyestuffs. Mar. 24, 1942.

Pat. 2,277,628. Coloring Matters of the Phthalocyanine Series. Mar. 24, 1942.

Pat. 2,277,629. Coloring Matters of the Phthalocyanine Series. Mar. 24, 1942.

Pat. 2,278,417. Treatment of Cellulosic Material. Apr. 7, 1942.

Pat. 2,278,418. Treatment of Cellulosic Material. Apr. 7, 1942.

Pat. 2,280,072. Substituted Phthalocyanines. Apr. 21, 1942.

Pat. 2,282,371. Coated Sheet Materials. May 12, 1942.

Pat. 2,282,379. New Insoluble Monoazo Compounds. May 12, 1942.

Pat. 2,282,732. Composition for Treating Soil. May 12, 1942.

Pat. 2,283,667. Manufacture of New Azo Dyestuffs. May 19, 1942.

Pat. 2,284,280. Synthetic Rubber-Like Materials From 1-Cyanobutadiene-1,3 and 2-Chlorobutadiene-1,3. May 26, 1942.

Pat. 2,284,281. Synthetic Rubber-Like Material From 1-Cyanobutadiene-1,3 and Butadiene-1,3. May 26, 1942.

Pat. 2,285,483. Manufacture of Sulpho-Trimellitic Acid. June 9, 1942.

Pat. 2,285,511. Phthalimide Coloring Matter. June 9, 1942.

Pat. 2,285,514. Manufacture of Methyl Cellulose. June 9, 1942.

Pat. 2,285,516. Manufacture of Soluble Nitro-Dyestuffs and Their Application. June 9, 1942.

Pat. 2,285,858. Electrolytic Process for the Production of Quinone and Hydroquinone. June 9, 1942.

Pat. 2,286,264. Polymerisation Product of Alpha-chloroacrylic Compounds and Preparation of Same. June 16, 1942.

Pat. 2,286,679. Coloring Matter of the Phthalocyanine Type. June 16, 1942.

Pat. 2,287,773. Rubber-Like Materials. June 30, 1942.

Pat. 2,287,774. Rubber-Like Materials. June 30, 1942.

Pat. 2,287,904. Derivatives of Phenols. June 30, 1942.

Pat. 2,290,555. Detection of Fuel Gases. July 21, 1942.

Pat. 2,290,668. Degreasing Metal Strip. July 21, 1942.

Pat. 2,290,906. Manufacture of Coloring Matters of the Phthalocyanine Series. July 28, 1942.

Pat. 2,292,129. Oxidation of Trichlorethylene. Aug. 4, 1942.

Pat. 2,292,479. Textile Treatment Agent. Aug. 11, 1942.

Pat. 2,293,266. Chemical Apparatus. Aug. 18, 1942.

Pat. 2,293,969. Manufacture of Cyanoacrylic Acid Esters. Aug. 25, 1942.

1940.

Apr. 8, 1941.

Pat. 2,295,985. Rubber Antioxidants. Sept. 15, 1942.

Pat. 2,296,403. Polymerization of Water-Insoluble Organic Compounds Dispersed in an Aqueous Vehicle. Sept. 22, 1942.

Pat. 2,297,564. Manufacture of Chlorinated Aliphatic Hydrocarbons. Sept. 29, 1942.

Pat. 2,298,169. Manufacture of Diphenylacetophenone. Oct. 6, 1942.

Pat. 2,299,128. Polymerizable Composition. Oct. 20, 1942.

Pat. 2,300,453. Anthrapyridone Dyestuffs. Nov. 3, 1942.

Pat. 2,301,206. Manufacture of Terphenyl Derivatives. Nov. 10, 1942.

Pat. 2,301,283. Packaging of Gas-Pressure-Generating Cartridges. Nov. 10, 1942.

Pat. 2,301,260. Medicinal Compounds. Nov. 10, 1942.

Pat. 2,303,191. Quaternary Ammonium Compound and Process of Making the Same. Nov. 24, 1942.

Pat. 2,304,502. Dyeing With Vat Dyestuffs. Dec. 8, 1942.

Pat. 2,305,106. Manufacture of Acetonitrile. Dec. 15, 1942.

Pat. 2,310,478. Process for the Treatment of Methylamines. Feb. 9, 1943.

Pat. 2,310,569. Degreasing of Metal Articles. Feb. 9, 1943.

Pat. 2,311,046. Manufacture of Aromatic Isocyanates. Feb. 16, 1943.

Pat. 2,311,753. Manufacture of New Anilides. Feb. 23, 1943.

Pat. 2,311,754. Manufacture of Anilides. Feb. 23, 1943.

Pat. 2,314,251. Pulverizing Granular Materials. Mar. 16, 1943.

Pat. 2,314,443. Purification of Alpha-Chloroacrylic Compounds Preliminary to Polymerization. Mar. 23, 1943.

Pat. 2,314,606. Apparatus Useful for the Manufacture of Electric Blasting Caps. Mar. 23, 1943.

Pat. 2,314,615. Production of Nitro Compounds. Mar. 23, 1943.

Pat. 2,317,865. Automatic Bag Filling and Weighing Machine. Apr. 27, 1943.

Pat. 2,318,282. Fuse Anchor. May 4, 1943.

Pat. 2,319,009. Shaped Articles Made From Vegetable Seed Proteins and Process of Making Same. May 11, 1943.

Pat. 2,321,321. Cartridge Shell Crimper. June 8, 1943.

Pat. 2,321,467. Manufacture of Tertiary Bases. June 8, 1943.

Pat. 2,321,823. Oxidation of Perchloroethylene. June 15, 1943.

Pat. 2,322,309. Flocculose Vinyl Halide Polymers. June 22, 1943.

Pat. 2,326,531. Coloring of Synthetic Resinous Compositions. Aug. 10, 1943.

Pat. 2,327,128. Production of Pastes From Polymerised Vinyl Chloride. Aug. 17, 1943.

Pat. 2,327,162. New Water-Repellent Agent and Process of Making Same. Aug. 17, 1943.

Pat. 2,327,405. Printing Vat Dyestuffs. Aug. 24, 1943.

Pat. 2,327,484. Apparatus for Grading Electrical Resistances and Articles Comprising Them. Aug. 24, 1943.

Pat. 2,328,734. Arylamides of Hydroxy Naphthoic Acids. Sept. 7, 1943.

Pat. 2,329,798. Acetate Artificial Silk Dyestuffs. Sept. 21, 1943.

Pat. 2,330,707. Production of Pattern Effects on Acetate Rayon. Sept. 28, 1943.

Pat. 2,331,007. Manufacture of Electric Detonators. Oct. 5, 1943.

Pat. 2,336,221. Dyeing Wooled Sheepskins. Dec. 7, 1943.

Pat. 2,336,916. Production of Thiophene. Dec. 14, 1943.

Pat. 2,338,187. Heat Stable Composition Containing Vinyl Chloride Polymers. Jan. 4, 1944.

Pat. 2,339,739. Dyeing Cellulosic Fiber With Phthalocyanines. Jan. 18, 1944.

Pat. 2,339,740. Phthalocyanine Azo Dyes on Cellulosic Fibers. Jan. 18, 1944.

Pat. 2,340,375. Treatment of Cellulose Esters and Ethers. Feb. 1, 1944.

Pat. 2,340,909. Manufacture of Artificial Fibers From Protein Material. Feb. 8, 1944.

Pat. 2,341,687. Manufacture of Thiasoles. Feb. 15, 1944.

Pat. 2,342,662. Mercapto-Phthalocyanines. Feb. 29, 1944.

Pat. 2,342,663. Manufacture of Phthalocyanines. Feb. 29, 1944.

Pat. 2,344,798. Manufacture of Organic Esters. Mar. 21, 1944.

Pat. 2,345,126. Manufacture of Resinous Products Derived From Acrylic Acid. Mar. 28, 1944.

Pat. 2,346,492. Manufacture of Primary Amino-Substituted Aromatic Amides. Apr. 11, 1944.

Pat. 2,346,771. Anthraquinone Compounds. Apr. 18, 1944.

Pat. 2,347,677. Film, Filament, Fiber or Other Shaped Article Made by Hardening Proteins Coagulated From Their Solutions. May 2, 1944.

Pat. 2,349,089. Stabilised Diazonium Derivative of Phthalocyanine Compounds. May 16, 1944.

Pat. 2,349,090. Stabilised Polydiazo-Phthalocyanines. May 16, 1944.

Pat. 2,349,091. Stabilised Polydiazo-Phthalocyanines. May 16, 1944.

Pat. 2,349,461. Manufacture of Amines. May 23, 1944.

Pat. 2,351,118. Coloring Matters of the Phthalocyanine Series. June 13, 1944.

Pat. 2,351,119. Coloring Matter of the Phthalocyanine Series. June 13, 1944.

Pat. 2,351,133. Monoazo Dyestuff. June 13, 1944.

Pat. 2,352,525. Chlorination of Polymeric Materials. June 27, 1944.

Pat. 2,356,060. Anthraquinone Vat Dyestuffs. Aug. 15, 1944.

Pat. 2,356,061. Anthraquinone Dyestuffs. Aug. 15, 1944.

Pat. 2,357,469. Isolation of Water-Insoluble Celluloses Hydroxy Fatty Acids and Their Water-Soluble Salts. Sept. 5, 1944.

Pat. 2,357,958. Monoazo Red Acid Dyes. Sept. 12, 1944.

Pat. 2,358,219. Production of Solutions for the Manufacture of Artificial Fibers. Sept. 12, 1944.

Pat. 2,358,427. Manufacture of Filaments From Vegetable Globulin. Sept. 19, 1944.

Pat. 2,359,912. Sulphanilamide Derivatives. Oct. 10, 1944.

Pat. 2,361,560. Black Tetrakisazo Dyestuffs. Oct. 31, 1944.

Pat. 2,364,192. Synthetic Phenolic Resins. Dec. 5, 1944.

Pat. 2,364,227. Production of Polymeric Vinyl Materials With an Improved Resistance to Water. Dec. 5, 1944.

Pat. 2,364,414. Sulphur Compounds. Dec. 5, 1944.

Pat. 2,365,623. Preparation of Dihydropyran. Dec. 19, 1944.

Pat. 2,366,165. Gas Pressure-Generating Cartridge. Jan. 2, 1945.

Pat. 2,366,464. Manufacture of Tetrahydrofuran. Jan. 2, 1945.

Pat. 2,368,638. Transport of Aqueous Emulsions and Liquid Explosives. Feb. 6, 1945.

Pat. 2,368,657. Manufacture of Dyestuffs. Feb. 6, 1945.

Pat. 2,369,122. Treatment of Materials. Feb. 13, 1945.

Pat. 2,369,776. Nitrogenous Organic Compounds and Their Applications. Feb. 20, 1945.

Pat. 2,370,392. Halogeno-Ketones. Feb. 27, 1945.

Pat. 2,370,537. Monoazo Dyestuffs. Feb. 27, 1945.

Pat. 2,372,046. Compositions for Use in Agriculture or Horticulture. Mar. 20, 1945.

Pat. 2,373,693. Monoazo Dyestuffs. Apr. 17, 1945.

Pat. 2,374,158. Monoazo Dyestuffs. Apr. 17, 1945.

Pat. 2,374,646. Artificial Resinous Condensation Products and Their Manufacture. May 1, 1945.

Pat. 2,375,545. Process for the Production of Trichloroacetonitrile. May 8, 1945.

Pat. 2,377,066. Cleansing Compositions. May 29, 1945.

Pat. 2,377,642. Manufacture of Chlorosulphonic Acid. June 5, 1945.

Pat. 2,378,140. Synthetic Rubber-Like Materials Comprising Butadiene-1,3-Interpolymers. June 12, 1945.

Pat. 2,379,104. Manufacture of Esters. June 26, 1945.

Pat. 2,379,409. Process for Chlorinating Polymeric Materials. July 3, 1945.

Pat. 2,379,948. Organic Isocyanates. July 10, 1945.

Pat. 2,380,620. Production of Alkali Metal Percarbonates. July 31, 1945.

Pat. 2,380,934. Substituted Ureas. Aug. 7, 1945.

Pat. 2,381,083. Cartridge Case. Aug. 7, 1945.

Pat. 2,381,088. Viscous Solutions of Vegetable Globulins. Aug. 7, 1945.

Pat. 2,382,241. Production of Nitroparaffins. Aug. 14, 1945.

Pat. 2,382,629. Interpolymerisation Products. Aug. 14, 1945.

Pat. 2,382,845. Preparation of Sulphur Nitride. Aug. 14, 1945.

Pat. 2,382,914. New Coloring Matters. Aug. 14, 1945.

Pat. 2,382,915. Manufacture of Substituted Pyrroles. Aug. 14, 1945.

Pat. 2,382,916. Manufacture of Pyrrole Derivatives. Aug. 14, 1945.

Pat. 2,382,917. Manufacture of New Pyrrole Derivatives. Aug. 14, 1945.

Pat. 2,383,286. Anthraquinone Derivatives. Aug. 21, 1945.

Pat. 2,383,318. Tetraalkylthiuram Monosulphide Preparation. Aug. 21, 1945.

Pat. 2,384,047. Manufacture of Organic Nitrogen Compounds. Sept. 4, 1945.

Pat. 2,384,048. Manufacture of Organic Nitrogen Compounds. Sept. 4, 1945.

Pat. 2,384,049. Process for the Production of Polynitroethylene. Sept. 4, 1945.

Pat. 2,384,050. Process for the Preparation of Alpha-Nitro-Isobutene. Sept. 4, 1945.

Pat. 2,384,749. Monoazo Dyestuffs. Sept. 11, 1945.

Pat. 2,384,750. Monoazo Acid Dyestuffs. Sept. 11, 1945.

Pat. 2,384,751. Monoazo Acid Dyestuffs. Sept. 11, 1945.

Pat. 2,384,752. Monoazo Dyestuffs. Sept. 11, 1945.

Pat. 2,384,753. Monoazo Dyestuffs. Sept. 11, 1945.

Pat. 2,384,754. Monoazo Dyestuffs. Sept. 11, 1945.

Pat. 2,384,755. Monoazo Dyestuffs. Sept. 11, 1945.

Pat. 2,385,037. Process for the Production of Derivatives of Nitroethylene. Sept. 18, 1945.

Pat. 2,385,111. Process for the Production of Nitroethylene. Sept. 18, 1945.

Pat. 2,385,182. Manufacture and Application of Synthetic Rubber-Like Materials. Sept. 18, 1945.

Pat. 2,385,185. Process for the Manufacture of Vat Dyes from Bis-(9 : 9'-Anthronylidene)-Ethane. Sept. 18, 1945.

Pat. 2,385,376. Marine Flare. Sept. 25, 1945.

Pat. 2,385,564. Solvent Extraction. Sept. 25, 1945.

Pat. 2,385,855. Manufacture of New Coloring Matters. Oct. 2, 1945.

Pat. 2,385,860. Apparatus for the Treatment of Metal and Like Articles With Liquids or Vapors for Degreasing. Oct. 2, 1945.

Pat. 2,386,140. Water-Repellency Agents and Processes of Making and Using the Same. Oct. 2, 1945.

Pat. 2,386,141. Process of Treating Textile Materials. Oct. 2, 1945.

Pat. 2,386,142. Quaternary Ammonium Salts and Process of Making the Same. Oct. 2, 1945.

Pat. 2,386,143. Process of Treating Textile Materials. Oct. 2, 1945.

Pat. 2,387,873. Secondary Diamines. Oct. 30, 1945.

Pat. 2,388,586. Absorption of Bromine. Nov. 6, 1945.

Pat. 2,388,665. Dibenzanthrone Compounds. Nov. 13, 1945.

Pat. 2,389,173. Recovery of Glycerol From Fermented Liquors. Nov. 20, 1945.

Pat. 2,389,950. Production of Di-Carboxylic Acids. Nov. 27, 1945.

Pat. 2,389,958. Recovery of Polymeric Materials. Nov. 27, 1945.

Pat. 2,390,853. Process for Preparing Dichlorodiethyl-Ether-Alkali Metal Polysulphide Condensation Products in Pulverulent Form. Dec. 11, 1945.

Pat. 2,391,006. Transport of Aqueous Emulsions of Liquid Explosives. Dec. 18, 1945.

Pat. 2,391,162. Interpolymers of Isobutyrene With Vinyl Methacrylate and Their Preparation. Dec. 18, 1945.

Pat. 2,392,857. Sheet Materials Comprising Polyvinyl Chloride. Jan. 15, 1946.

Pat. 2,392,860. Preparation of Para Nitroguanidine. Jan. 15, 1946.

Pat. 2,394,315. Production of Nitro-Paraffins. Feb. 5, 1946.

Pat. 2,395,117. Dyestuffs of the Phthalocyanine Series and the Process of Preparing the Same. Feb. 19, 1946.

Pat. 2,395,135. Pyrroleazo Dyestuffs. Feb. 19, 1946.

Pat. 2,395,229. Anthraquinone Dyestuffs. Feb. 19, 1946.

Pat. 2,395,353. Brisant Explosive Charges and Their Manufacture. Feb. 19, 1946.

Pat. 2,395,440. Insecticidal and Fungicidal Compositions. Feb. 26, 1946.

Pat. 2,395,483. Burning of Sulphur. Feb. 26, 1946.

Pat. 2,395,812. Polymers of 1-Carbalkoxybutadienes-1,3 and Process of Making Same. Mar. 5, 1946.

Pat. 2,396,396. Production of Colored Photographic Images. Mar. 12, 1946.

Pat. 2,396,636. Casting of Rare Earth Metals. Mar. 19, 1946.

Pat. 2,396,692. Production of Organic Silicon Compounds. Mar. 19, 1946.

Pat. 2,397,065. Recovery of Butylene Glycol From Carbohydrate Fermentation Mashes. Mar. 19, 1946.

Pat. 2,397,399. Synthetic Rubber-Like Materials. Mar. 26, 1946.

Pat. 2,397,942. Thermoplastic Compositions. Apr. 9, 1946.

Pat. 2,398,283. Bisureas. Apr. 9, 1946.

Pat. 2,398,683. Cartridge for Actuating Gas Pressure Operated Mechanical Devices. Apr. 16, 1946.

Pat. 2,399,641. Purification of Crude Trichloroacetyl Chloride. May 7, 1946.

Pat. 2,399,686. Production and Esterification of Esterifiable Nitroparaffin Derivatives. May 7, 1946.

Pat. 2,400,810. Apparatus for Treating Gases With Liquids. May 21, 1946.

Pat. 2,404,700. Manufacture of Vinyl Ethers. July 23, 1946.

Pat. 2,406,186. Manufacture of Surface Active Compounds. Aug. 20, 1946.

Pat. 2,406,412. Treatment of Wool Fibers. Aug. 27, 1946.

Pat. 2,406,453. Treatment of Paper or Textile Fabrics. Aug. 27, 1946.

Pat. 2,406,454. Treatment of Paper or Textile Fabrics. Aug. 27, 1946.

Pat. 2,407,346. Manufacture of New Coloring Matters. Sept. 10, 1946.

Pat. 2,407,595. Manufacture of Detonating Explosives and Products Obtained Thereby. Sept. 10, 1946.

Pat. 2,407,597. Explosive Compositions Comprising Low Freezing Liquid Mixtures of Aromatic Nitro-Compounds. Sept. 10, 1946.

Pat. 2,407,701. Manufacture of Halogenated Hydrocarbons. Sept. 17, 1946.

Pat. 2,408,396. Process for Activating Catalysts. Oct. 1, 1946.

Pat. 2,408,607. Manufacture of Nitro-compounds. Oct. 1, 1946.

Pat. 2,408,889. Production of Organic Compounds. Oct. 8, 1946.

Pat. 2,409,519. Sodium Dispersion. Oct. 15, 1946.

Pat. 2,409,829. Alkylene-bis-ureas. Oct. 22, 1946.

Pat. 2,409,832. Aryl-dicyandiamide Production. Oct. 22, 1946.

Pat. 2,409,851. Perylene Derivatives. Oct. 22, 1946.

Pat. 2,410,406. Process for Producing Mepacrine Dihydrochloride. Nov. 5, 1946.

Pat. 2,410,604. Manufacture of New Coloring Matters. Nov. 5, 1946.

Pat. 2,410,605. Interpolymers of Isobutylene With an Alkyl Acetylene and Their Preparation. Nov. 5, 1946.

Pat. 2,413,491. Coated Hygroscopic Salts. Dec. 31, 1946.

Pat. 2,414,155. Anthraquinone Dyestuffs. Jan. 14, 1947.

Pat. 2,414,374. Metal Phthalocyanines Having Amino- or Nitro-Phenyl Groups Attached to Their Aromatic Nuclei by >0, >CO or $>SO_2$. Jan. 14, 1947.

Pat. 2,414,655. Manufacture of Cyanuric Chloride. Jan. 21, 1947.

Pat. 2,414,934. Manufacture of Polymerization Products. Jan. 28, 1947.

Pat. 2,415,074. Manufacture of Crystalline Magnesium Hydroxide. Feb. 4, 1947.

Pat. 2,415,252. Phenotiazine Derivatives. Feb. 4, 1947.

Pat. 2,415,377. Sulphuric Acid Esters of Hydroxy-Alkylamino-Anthraquinones. Feb. 4, 1947.

Pat. 2,416,380. Inhibition of Acid-Fading on Dyed Cellulose Acetate With N:N'-Diphenylethylene Diamino. Feb. 25, 1947.

Pat. 2,416,386. Process for Making Phthalocyanines Containing —SH Groups. Feb. 25, 1947.

Pat. 2,416,387. Process for Making Sulfa-Containing Phthalocyanines. Feb. 25, 1947.

Pat. 2,416,563. Quinoline Derivatives. Feb. 25, 1947.

Pat. 2,416,571. Sealed Apparatus for Degreasing and Drying Articles. Feb. 25, 1947.

Pat. 2,416,650. Process for the Preparation of Beta-Nitroethyl Ethers. Feb. 25, 1947.

Pat. 2,416,974. Manufacture of Mono-Nitration Products of Toluene. Mar. 4, 1947.

Pat. 2,417,115. Immunizing of Seed From Pest Attacks. Mar. 11, 1947.

Pat. 2,417,380. Process for the Preparation of Alpha-Nitro-Isobutene. Mar. 11, 1947.

Pat. 2,417,576. Manufacture of Viscous Protein Solutions for the Production of Artificial Filaments. Mar. 18, 1947.

Pat. 2,418,548. 4-Amino-5-Arylpyrimidine. Apr. 8, 1947.

Pat. 2,419,157. Preparation of Ethylene Bisimino Diacetic Acid and Salts Therefrom. Apr. 15, 1947.

Pat. 2,421,302. Process for Improving the Extensibility and Strength of Hardened Artificial Filaments, Films and Like Thin Materials Having a Protein Basis. May 27, 1947.

Pat. 2,421,408. Thermoplastic Polyvinyl Halide Composition Containing Chlorinated Paraffin Wax. June 3, 1947.

Pat. 2,241,409. Thermoplastic Polyvinyl Chloride, Chlorinated Paraffin Wax, Plasticiser Compositions. June 3, 1947.

Pat. 2,422,453. Recovery of Glycerine From Fermented Liquors. June 17, 1947.

Pat. 2,422,667. Substituted 2,4-Diaryl-Pyrrole Compounds and Method of Producing Same. June 24, 1947.

Pat. 2,422,668. Pyrrole Coloring Matters and Method of Making Same. June 24, 1947.

Pat. 2,422,887. Pyrimidine Compound and Processes for Making the Same. June 24, 1947.

Pat. 2,422,888. Pyrimidine Compounds and Method of Making the Same. June 24, 1947.

Pat. 2,422,889. Pyrimidine Compounds and Process for Making the Same. June 24, 1947.

Pat. 2,422,890. Pyrimidine Compounds. June 24, 1947.

Pat. 2,424,068. Process for Mothproofing Furs. July 15, 1947.

Pat. 2,424,408. Preparation of Peanut Protein. July 22, 1947.

Pat. 2,424,510. Production of Beta-Nitro Ethanol and Beta-Nitro Ethyl Nitrate. July 22, 1947.

Pat. 2,424,883. Paraformaldehyde Modified Reaction Products of Diisocyanates With Linear Polyester Polyamide. July 29, 1947.

Pat. 2,424,884. Sulfur Vulcanization of Unsaturated Reaction Products and Diisocyanate With Linear Polyesters and Linear Polyesteramides and Products Resulting Therefrom. July 29, 1947.

Pat. 2,424,885. Paraformaldehyde Treatment of Reaction Products of Diisocyanate With Linear Polyesters and Linear Polyester-Amides and Products Resulting Therefrom. July 29, 1947.

Pat. 2,425,396. Water-Soluble Salts of N,N'-Di-(Sulfoalkyl)-4,4'-Diaminodiphenylsulfones and Preparations. Aug. 12, 1947.

Pat. 2,426,024. Fire Extinguisher. Aug. 19, 1947.

Pat. 2,426,080. Photo-Chemical Chlorination of Polyvinyl Chloride. Aug. 19, 1947.

Pat. 2,426,091. Production of Chlorinated Aliphatic Nitriles. Aug. 19, 1947.

Pat. 2,426,547. Anthraquinone Dyestuffs. Aug. 26, 1947.

Pat. 2,427,492. Production of Chloracrolein. Sept. 16, 1947.

Pat. 2,427,624. Manufacture of Oxidation Products of Perchlorethylene. Sept. 16, 1947.

Pat. 2,428,614. Nitronitriles. Oct. 7, 1947.

Pat. 2,428,716. Method of Coating Fabric With Polyvinyl Chloride. Oct. 7, 1947.

Pat. 2,429,411. 1-Alkoxy-2,4-Pentadienes and Substituted Derivatives Thereof. Oct. 21, 1947.

Pat. 2,429,600. Chromable Monoazo Pyrazolone Dye. Oct. 28, 1947.

Pat. 2,429,799. Process for the Preparation of σ-Valerolactone. Oct. 28, 1947.

Pat. 2,430,052. Phthalocyanine Derivatives. Nov. 4, 1947.

Pat. 2,431,140. Dicarbamates and Process of Making the Same. Nov. 18, 1947.

Pat. 2,431,585. Nitration of Aromatic Hydrocarbons. Nov. 25, 1947.

Pat. 2,431,921. Benzoyl Peroxide Treatment of Reaction Products of Diisocyanates With Linear Polyesters. Dec. 2, 1947.

Pat. 2,432,148. Curing of Diisocyanate-Modified Polyester. Dec. 9, 1947.

Pat. 2,432,758. Process for 2-Hydroxy-3-Chlorotetrahydropyran. Dec. 16, 1947.

Pat. 2,433,439. Pyrimidine Compounds. Dec. 30, 1947.

Pat. 2,433,440. Pyrimidine Compounds. Dec. 30, 1947.

Pat. 2,434,039. Manufacture of New Pyrrole Coloring Matters. Jan. 6, 1948.

Pat. 2,434,204. Prevention of Deterioration of Grain. Jan. 6, 1948.

Pat. 2,434,872. Manufacture of Compact Combustible Explosive Charges. Jan. 20, 1948.

Pat. 2,435,307. Metal-Phthalocyanines Containing Halo-Methyl Groups and Process of Preparing Same. Feb. 3, 1948.

Pat. 2,435,416. Apparatus for Ageing Solutions of Colloidal Material. Feb. 3, 1948.

Pat. 2,436,018. Monoazo Dye. Feb. 17, 1948.

Pat. 2,436,428. Quaternary Ammonium Salts of Dibenzthiazyl Azo Benzenes. Feb. 24, 1948.

Pat. 2,436,436. Disazo Dyestuffs. Feb. 24, 1948.

Pat. 2,436,645. Production of Pyran Derivatives. Feb. 24, 1948.

Pat. 2,437,465. Manufacture of New Coloring Matters. Mar. 9, 1948.

Pat. 2,437,682. Pyrimidine Compounds and Processes for Making the Same. Mar. 16, 1948.

Pat. 2,437,683. Pyrimidine Compounds and Method of Producing Same. Mar. 16, 1948.

Pat. 2,438,694. Manufacture of Phenols. Mar. 30, 1948.

Pat. 2,438,900. Process for Separating Benzene Hexachloride Isomers. Apr. 6, 1948.

Pat. 2,439,051. Flexible Sheet Material Comprising a Surface Coating Containing Polyvinyl Chlorides. Apr. 6, 1948.

Pat. 2,439,328. Plastic Detonating Compositions. Apr. 6, 1948.

Pat. 2,439,746. Method of Preparing Mepacrine Dihydrochloride Dihydrate. Apr. 13, 1948.

Pat. 2,439,928. Production of Derivatives of Dihydropyran. Apr. 20, 1948.

Pat. 2,439,804. Azo Benzene Benzthiazyls. Apr. 20, 1948.

Pat. 2,440,082. Thermally Vaporisable Fumigant Comprising Sensitized Ammonium Nitrate and a Pesticide. Apr. 20, 1948.

Pat. 2,440,602. Manufacture of Dichlorophenols. Apr. 27, 1948.

Pat. 2,440,929. Production of 1:5-Pentanediol. May 4, 1948.

Pat. 2,441,248. Fast Burning Delay Fuse. May 11, 1948.

Pat. 2,441,773. Stabilized Dinitroethane and Process. May 18, 1948.

Pat. 2,442,040. Manufacture of Acrylonotrile From Acetylene and HCN. May 25, 1948.

Pat. 2,442,802. Cleaning of Metals. June 8, 1948.

Pat. 2,443,303. Hydroxypyrimidine Derivatives. June 15, 1948.

Pat. 2,407,701. Manufacture of Halogenated Hydrocarbons. Sept. 17, 1946.

1947.

Nov. 25, 1947.

Pat. 2,443,304. Halogenopyrimidine Derivatives. June 15, 1948.

Pat. 2,443,305. Pyrimidine Derivatives. June 15, 1948.

Pat. 2,443,314. Bensthiazyl Azo Dyes. June 15, 1948.

Pat. 2,443,374. Manufacture and Production of Lacquers and Plastic Masses. June 15, 1948.

Pat. 2,443,388. Production of Chlorine-Containing Pyran Derivatives. June 15, 1948.

Pat. 2,444,315. Thread Advancing Apparatus. June 29, 1948.

Reissue Pat. 22,213. (Original Pat. 2,235,056). Process for the Recovery of Glycerol From Still Residues From Fermentation Processes. Oct. 27, 1942.

Reissue Pat. 22,983. (Original Pat. 2,368,658). Manufacture of Dyestuffs. Mar. 9, 1948.

E. I. du Pont de Nemours and Company has placed more than 4,000 of its patents on the Register of Patents as available for license on reasonable terms. The index to these patents was published in the OFFICIAL GAZETTE, November 2, 1948. Abstracts of the patents are being published in the OFFICIAL GAZETTE beginning November 9, 1948. The following patents (Reg. Nos. 17,912 through 18,141) are part of Schedule 10, Group 28.

Inquiries concerning these patents should be addressed to Patent Division, E. I. du Pont de Nemours and Company, Wilmington 98, Del.

SCHEDULE 10

Patents Relating to Anthraquinone Dyes

Pat. 1,892,890. Substitution Products of Amino Benzoyl Ortho Bensoic Acid and Process of Preparing the Same. Jan. 3, 1933. Substitution products of amino bensoyl ortho benzoic acid.

Pat. 1,897,119. Vat Dyestuff and Process of Making the Same. Feb. 14, 1933. In the process of forming a readily dispersible vat dye, the step of incorporating in the dye an abietene sulfonic acid body.

Pat. 1,899,957. Process for Preparing Anthraquinone Sulphonic Acids. Mar. 7, 1933. Process of preparing a mixture of anthraquinone beta disulfonic acids which comprises heating a p'-sulfo-benzoyl-ortho-bensoic acid body in concentrated sulfuric acid and subsequently sulfonating.

Pat. 1,900,001. Method of Purifying an Anthraquinone Body. Mar. 7, 1933. Process of purifying crude beta-amino-anthraquinone by treating impure beta-amino-anthraquinone with sulfuric acid of about 80 to 85% strength and at a temperature of about 125 to 120° C. and pouring the mass into water to separate the beta-amino-anthraquinone in basic form from the dissolved impurities.

Pat. 1,904,367. 7,7'-Dichloro Flavanthrone and the Process of Making Same. Apr. 18, 1933. Process of preparing 7,7'-dichloro flavanthrone by treating 2-amino-7-chloro anthraquinone with antimony pentachloride in nitrobenzene at a temperature of about 200 to 210° C.

Pat. 1,905,088. Anthraquinone Vat Dyes and a Process of Making the Same. Apr. 25, 1933. Process of separating a bromine containing methylated dihydroxy dibenzanthrone product into two fractions, which comprises mixing the dibenzanthrone product with concentrated sulfuric acid and separating one portion from the other.

Pat. 1,906,581. Anthraquinone Derivatives and a Process of Preparing the Same. May 2, 1933. 1-X-2-R-4-Y-9-anthrones, X=amino or acidylamino, R=halogen, alkyl alkoxy, COOH, or SO_3H, Y=Cl or Br.

Pat. 1,916,216. 2-Amino-10-Anthrones and a Process of Preparing the Same. July 4, 1933. 2-Amino-3-R-10-anthrones, R=H, halogen, alkoxy, or alkyl, in which the amino group may be mono- or diacylated.

Pat. 1,917,285. Halogen Derivative of Alpha-Naphthoyl-O-Bensoic Acid. July 11, 1933. Production of a halogenated derivative of alpha-naphthoyl-o-bensoic acid which comprises reacting with halogen upon alpha-naphthoyl-o-bensoic acid in acid medium.

Pat. 1,917,286. Nitro Derivative of Alpha-Naphthoyl-O-Bensoic Acid. July 11, 1933. 8'-Nitro-5'-halo (or nitro)-1'-naphthoyl-2-bensoic acid and its preparation by reacting HNO_3 with 5'-halo-1'-naphthoyl-2-bensoic acid.

Pat. 1,931,021. Process for Preparing Pyranthrone. Oct. 17, 1933. Preparation of pyranthrone by heating in a closed vessel 2,2'-dimethyl-1,1'-dianthraquinonyl with alcoholic-potash at a temperature of about 125° C.

Pat. 1,931,264. Process for the Manufacture of Quinizarine Green and Related Products. Oct. 17, 1933. Process of condensing chloroquinizarine, purpurin or the corresponding leuco derivatives with a water-insoluble arylamine body selected from the group consisting of aniline and homologues of aniline to produce an arylamino-anthraquinone body, in the presence of water.

Pat. 1,933,236. Preparation of Amino-Anthraquinones. Oct. 31, 1933. Process of treating beta-anthraquinone-sulfonic acid or an alkali metal salt thereof with aqueous ammonia in the presence of potassium chlorate and ammonium nitrate at a temperature of about 170° C.

Pat. 1,934,221. Manufacture of 2-Methyl-Benzanthrone. Nov. 7, 1933. Recovery of 2-methyl-benzanthrone from a crude mixture thereof with isomers by precipitating alkali-reactive impurities by means of an alkali, separating the alkali and the precipitated impurities, and crystallising out 2-methyl-benzanthrone.

Pat. 1,936,077. Process for Preparing 1-Arylamino-2-Methyl-Anthraquinones. Nov. 21, 1933. Method of producing 1-aryl-amine-2-alkyl-anthraquinones by refluxing an aryl-amine and a 1-chloro-2-alkyl-anthraquinone in the presence of a copper salt, an alcohol and an alkali metal salt of a saturated fatty acid at a temperature of about 100° C. thereafter cooling to about 20–25° C. and separating the 1-aryl-amine-2-alkyl-anthraquinone formed.

Pat. 1,947,047. Vat Dyestuffs of the Dibenzanthrone Series and Process of Preparing the Same. Feb. 13, 1934. Production of vat dyes by etherifying hydroxy derivatives of dibenzanthrones with an alkylating agent of the general formula: $Y—CH_2—CH_2—X—CH_2—CH_2—Z$, X=O, NH or S and where Y and Z both—the same or different strong acid radicals, or where one of the substituents Y or Z—a strong acid radical while the other—an ether or ester radical.

Pat. 1,950,848. Anthraquinone Derivative and Process of Preparing the Same. Mar. 6, 1934. Anthraquinone-2-carboxylic acid substituted in 1-position by carboxy-phenylamino- or carboxynaphthylamino, and their preparation from the corresponding 1-chloroanthraquinone and the amino acid.

Pat. 1,954,702. Leuco-Compounds of Vat Dyes. Apr. 10, 1934. Process of producing alkyiolamine salts of inorganic sulfur and phosphorus acidic esters of leuco-vat dyes, which comprises combining the acidic ester with an alkyiolamine.

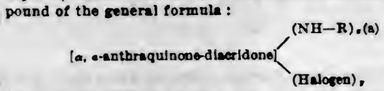
Pat. 1,957,936. Manufacture of Amino-Dihydroxy-Anthraquinones. May 8, 1934. Process of producing an amino-dihydroxy-anthraquinone from amino-anthrarufins or amino-chrysazins, by nitrating the corresponding dimethoxy-anthraquinone, reducing the nitro body thus formed to the corresponding amine and hydrolysing the amino compound to split off the methyl groups.

Pat. 1,970,908. Substituted O-Benzoyl-Bensoic Acid. Aug. 21, 1934. 2'-Methyl-4'-chloro-5'-nitro (or amino)-o-bensoylbensoic acid and their preparation by mononitrating methyl-chloro-bensoylbensoic acid and, if necessary, reducing.

Pat. 1,970,909. Anthraquinone Compound. Aug. 21, 1934. Process for preparing 1-amino-2-chloro-4-methyl anthraquinone by heating 2'-methyl-4'-chloro-5'-amino-o-bensoyl-bensoic acid in sulfuric acid of about 96% concentration at temperatures of from 150 to 180° C.

Pat. 1,972,093. Highly Halogenated Anthraquinone-Acridone Compound and Its Production. Sept. 4, 1934. Production of a highly halogenated vis-a-vis-alpha, alpha-anthraquinone diacridone by reacting with chlorine gas upon a vis-a-vis-alpha, alpha-anthraquinone-diacridone in chloro-sulfonic acid, in the presence of iodine, and continuing the process until the total halogen content of the product has reached a predetermined amount above 4 atoms per molecule.

Pat. 1,972,094. Dyes of the Anthraquinonyl-Amino Anthraquinone-Acridone Series and Their Production. Sept. 4, 1934. Claims an anthraquinone-acridone compound of the general formula:



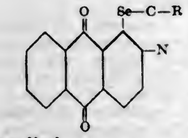
where R represents a radical of the anthraquinone series, x stands for 1 or 2, while y stands for a number not less than 4.

Pat. 1,972,095. Dyestuff of the Anthraquinone-Acridone Series. Sept. 4, 1934. A ring-closed condensation product of a Bz,Bz-tetrachloro-4,5-di-a-anthraquinonylamino-1,2,8,7-anthraquinone-diacridone.

Pat. 1,977,242. Substitution Derivatives of Bz1,Bz1'-Dibenzanthronyl-Selenide. Oct. 16, 1934. A Bz1, Bz1'-dibenzanthronyl selenide having up to four —X—R groups, X=O, S, or NH, R=alkyl, aryl, or aralkyl, and its preparation from the corresponding halogenated dibenzanthronyl selenide and R—X—H.

Pat. 1,983,561. Seleno-Anthraquinone Compound and Process of Preparing the Same. Dec. 11, 1934. Claims an intermediate for dyes comprising an anthraquinone compound substituted by a selenium containing radical in an alpha position and by an amino group in a position ortho thereto.

Pat. 1,983,562. Anthraquinone-Selenazoles and Process of Preparing Same. Dec. 11, 1934. Claims a vat dye of the anthraquinone series comprising a compound of the formula:

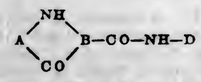


R is an organic radical.

Pat. 1,985,452. Manufacture of Purpurin. Dec. 25, 1934. Process of preparing purpurin by reacting phthalic anhydride with p-chloro-resorcinol in a medium of sulfuric acid and boric acid. 1,2,4-Trihydroxy benzene may be prepared in a separate step from p-chlor resorcinol and then condensed with phthalic anhydride.

Pat. 1,986,798. Process for Halogenating Amino-Anthraquinone Compounds. Jan. 8, 1935. Halogenation of amino-anthraquinone compounds in nitrobenzene and a sufficient amount of a metal chloride to maintain the amino-anthraquinone compound and the resulting halogenation product in solution.

Pat. 1,989,904. Anthraquinone-Acridone Imide Compounds and Their Production. Feb. 5, 1935. Vat dyes of the formula:



A=an anthraquinonyl, B=a phenyl or naphthyl radical, D=aromatic radical, and their preparation from the corresponding acid chloride and the aromatic amine.

Pat. 1,990,506. Benzanthrone Compounds and Process of Preparing the Same. Feb. 12, 1935. Dibenzanthronyl-dichloro-methane and dibenzanthronyl ketone and their preparation from benzanthrone and CCl_4 in the presence of $AlCl_3$, and hydrolyzing the dichloride to the ketone.

Pat. 1,990,807. Process of Producing Benzanthrone Carboxylic Acid. Feb. 12, 1935. Process for producing benzanthrone-carboxylic acid by heating benzanthrone with carbon tetrachloride to reaction temperatures and under conditions leading to their condensation and hydrolysing the reaction product.

Pat. 1,991,646. Manufacture of Aromatic Selenium Compounds. Feb. 19, 1935. Process of producing an arylselenol compound by suspending an organic halide of the anthraquinone series in an alcoholic medium together with a reducing metal and a compound of the group consisting of selenium, its oxides and its oxy-acids, warming up the mass, and adding gradually a solution of a caustic alkali.

Pat. 1,991,687. Vat Dyestuff and Intermediate of the Pyrene-Quinone and Perylene-Quinone Series. Feb. 19, 1935. Production of a ketonic compound of the anthracene series, which comprises fusing with aluminum chloride an alpha-aroyl-anthracene selected from the group consisting of alpha-mono-aroyl-anthracene and x, 1-di-aroyl-anthracene, wherein x designates the 4,5 or 10 position in the anthracene molecule.

Pat. 1,991,688. a,a-Anthracene-Dicarboxyl-Chloride and Process of Preparing the Same. Feb. 19, 1935. 1,4- (or 1,5)-Anthracenedicarbonyl chloride and their preparation by chlorinating the corresponding dicarboxylic acid.

Pat. 1,993,660. Indanthrone Printing Color. Mar. 5, 1935. Claims a sulfonation derivative of halogenated indanthrone containing about one atomic portion of sulfur per two moles of halogen indanthrone and also halogen in stable combination.

Pat. 1,993,663. Preparation of Phenyl Mercaptans and Intermediates Therefor. Mar. 5, 1935. Preparation of phenyl mercaptans comprising reducing an aluminum compound of a benzene sulfinic acid in acid medium. The reaction product of $AlCl_3$ and SO_2 with M-chlorocresol or monochloro-P-xylene are also claimed.

Pat. 1,996,959. 1-Aroylamino-6-Amino-Anthraquinone and Its Preparation. Apr. 9, 1935. Claims a 1-aroyl-amino-6-amino-anthraquinone.

Pat. 1,999,995. Process for the Preparation of Glyoxal Sulphate. Apr. 30, 1935. Glyoxal sulfate is made by slowly adding tetrachloroethane to oleum of over 25% strength in the presence of a catalyst.

Pat. 1,999,997. Mixed Benzanthrone-Anthraquinone Selenoethers. Apr. 30, 1935. Preparation of mixed benzanthronyl-anthraquinonyl seleno ethers by heating a compound of the benzanthrone series with a compound of the anthraquinone series, one of which is in the form of its selenol, diselenide or alkali-metal selenolate, the other being substituted by a halogen atom the reactive substituent in the benzanthrone compound being in the Bz1 position.

Pat. 1,999,998. Anthraquinonyl Selenoethers. Apr. 30, 1935. Claims a di-anthraquinonyl selenoether.

Pat. 1,999,999. Benzanthrone Selenoethers. Apr. 30, 1935. Preparation of benzanthronyl seleno ethers by heating a Bz1-halogen-benzanthrone compound with a compound of the group consisting of a Bz1-benzanthronyl-selenolate, a Bz1-benzanthronyl-selenol, and a Bz1,Bz1'-benzanthronyl-diselenide.

Pat. 2,001,063. Manufacture of Bz1, Bz1'-Dibenzanthronyl. May 14, 1935. Bz1, Bz1'-dibenzanthronyl is made by oxidising benzanthrone in H_2SO_4 with an oxidizing agent.

of Preparing the Same. July 4, 1933. 2-Amino-3-R-10-anthrones, R—H, halogen, alkoxy, or alkyl, in which the amino group may be mono- or diacylated.

benzoylbenzoic acid and their preparation by monobrominating methyl-chloro-benzoylbenzoic acid and, if necessary, reducing.

A—an anthraquinonyl, B—a phenyl or naphthyl radical, ing agent.

Pat. 2,001,418. Acridone Dianthrimide Vat Dyestuffs and Their Production. May 14, 1935. Preparation of a 1,2-acridonyl-alpha-alpha'-dianthrimide containing halogen in the Bz nucleus by heating an alpha-amino-anthraquinone with a poly-halogen anthraquinone-1,2-acridone having halogen in the Bz nucleus and in an alpha position on the anthraquinone nucleus.

Pat. 2,001,419. Anthraquinone Acridone Vat Dyestuff. May 14, 1935. Preparation of a novel dye by condensing a Bz-halogen-1,2-acridonyl-alpha,alpha'-dianthrimide by the aid of an acid condensing agent.

Pat. 2,005,529. Anthraquinone Derivative. June 18, 1935. Benzanthrone derivatives are made by reacting β-(J-phenyl)-anthraquinone, J—H, halogen, or OH, with H_2SO_4, glycerine, and a metallic reducing agent.

Pat. 2,008,738. Isodibenzanthrone-Azole and Process of Preparing the Same. July 23, 1935. Claims a vat dye comprising chiefly an isodibenzanthrone-alpha, beta; alpha',beta'-dithiazole.

Pat. 2,008,739. Isodibenzanthrone-Selenazole and Process of Preparing the Same. July 23, 1935. Claims a vat dye comprising chiefly an isodibenzanthrone-alpha,beta-selenazole.

Pat. 2,012,228. Purification of 1-N-Methyl-4-Halogen-Anthrapyridone. Aug. 20, 1935. Preparation of 1-N-methyl-4-halogen-anthrapyridone, the step which comprises subjecting a crude 1-N-methyl-4-halogen-anthrapyridone to the action of nitrous acid at a temperature below 160° C.

Pat. 2,012,233. Purification of 1-N-Methyl-4-Bromo-anthrapyridone. Aug. 20, 1935. Preparation of 1-N-methyl-4-halogen-anthrapyridone, the step which comprises precipitating the 1-N-methyl-4-halogen-anthrapyridone from a sulfuric acid solution by bringing the concentration of the acid to about 70 to 80%.

Pat. 2,012,235. Purification of 1-N-Methyl-4-Halogen-Anthrapyridone. Aug. 20, 1935. Preparation of 1-N-methyl-4-halogen-anthrapyridone, the step which comprises subjecting a crude 1-N-methyl-4-halogen-anthrapyridone to the action of a relatively strong inorganic oxidizing agent in sulfuric acid.

Pat. 2,012,930. Anthraquinone Vat Dyestuffs. Aug. 27, 1935. Claims a 4'-aroylamino-2-phenyl-anthraquinone.

Pat. 2,013,657. Fluoroaminoanthraquinone and Its Preparation. Sept. 10, 1935. Claims amino-anthraquinones containing fluorine, and also nitro fluoro-benzoylbenzoic acids for use in their preparation.

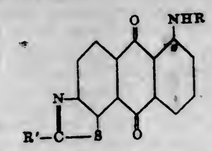
Pat. 2,019,837. Chloro-Benzoylaminoanthraquinone. Nov. 5, 1935. 1-Benzamido-4-chloro-8-benzamide-(or chloro)-anthraquinones which may have a chlorine atom in 5-position, and then preparation by chlorinating the corresponding benzamido derivatives.

Pat. 2,019,846. Dyestuff of the Anthraquinone Series. Nov. 5, 1935. Process which comprises fusing a 2-methyl-anthraquinone compound with sulfur monobromide at temperatures above 150° C.

Pat. 2,019,850. Selenium Containing Anthraquinone Compounds. Nov. 5, 1935. Claims a C-diaryl-anthraquinone diselenazole in which the selenazole groups are attached to opposite rings of the anthraquinone nucleus in alpha,beta positions.

Pat. 2,022,884. Preparation of Vat Dyestuffs of the Dibenzanthrone Series. Dec. 3, 1935. Process for preparing a dibenzanthrone compound, by heating the corresponding 2,2'-dibenzanthronyl compound with aluminum chloride and an oxidising agent.

Pat. 2,028,104. Intermediates and Dyestuffs of the Anthraquinone Series. Jan. 14, 1936. Compounds of the formula:



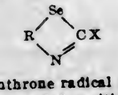
R—aroyl of the benzene, naphthalene or anthraquinone series, and R—radical of the benzene series.

Pat. 2,028,114. Benzanthrone Thiazole and Process of Preparing the Same. Jan. 14, 1936. Claims a compound of the formula:

R—a divalent benzanthrone radical to which the S and N are connected in the α and β positions respectively while X—hydrogen, alkyl or aryl.

Pat. 2,028,115. Dibenzanthrone-Azole and Process of Preparing the Same. Jan. 14, 1936. Claims a vat dye of the dibenzanthrone-azole series obtainable by subjecting to alkali-fusion a compound of the group consisting of a benzanthrone-1,2-thiazole and a benzanthrone-1,2-selenazole.

Pat. 2,028,116. Benzanthrone Selenazole and Process of Preparing the Same. Jan. 14, 1936. Claims a compound of the formula:



R—a divalent benzanthrone radical to which the S and N are connected in the α and β positions respectively while X—hydrogen, alkyl or aryl.

Pat. 2,028,117. Manufacture of Dyestuffs and Intermediates of the Dibenzanthrone Series. Jan. 14, 1936. Preparation of dioxy-dibenzanthrone compounds by reacting an impure dioxy-dibenzanthrone compound in alkaline solution in the presence of a metal which in such alkaline solution liberates hydrogen.

Pat. 2,028,118. Preparation of Thiazole Compounds. Jan. 14, 1936. Process for producing thiazole compounds wherein compounds having the atomic grouping: Ar—N=CH—Ar', which Ar—an aryl radical of the naphthalene and anthraquinone series, and Ar'—an aryl radical of the benzene, naphthalene and anthraquinone series, are fused with sulfur by carrying out the reaction in the presence of at least stoichiometrical amounts of bromine.

Pat. 2,030,035. Organic Tellurium Compounds and Process of Preparing the Same. Feb. 4, 1936. Claims compounds of the group consisting of Bz1, Bz1'-dibenzanthronyl-ditelluride, Bz1-benzanthrone-tellurol and alkali-metal Bz1-benzanthrone tellurolate and their process of manufacture.

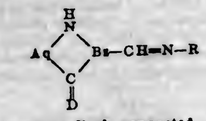
Pat. 2,030,876. Compounds of the N-Dihydro-1,2,2',1'-Anthraquinone Azine Series and Process for the Production Thereof. Feb. 18, 1936. Manufacture of N-dihydro-1,2,2',1'-anthraquinone azines or β-chloro derivatives thereof by condensing 2-amino-1-chloro-anthraquinone or its β-chloro derivative in the presence of cuprous copper or cuprous salts; or condensing 2-amino-1,3-dichloro-anthraquinone or its β-chloro derivative in the presence of copper or a cuprous salt.

Pat. 2,030,877. Production of Derivatives of N-Dihydro-1,2,2',1'-Anthraquinone Azine. Feb. 18, 1936. Manufacture of N-dihydro-1,2,2',1'-anthraquinone azines or β-chloro derivatives thereof by condensing 2-amino-1-chloroanthraquinone or its 2-chloro derivative in the presence of cuprous copper or cuprous salts; or condensing 2-amino-1,3-dichloroanthraquinone or its β-chloro derivative in the presence of copper or a cuprous salt.

Pat. 2,032,519. Chloro-Benzoylamino-Anthraquinones. Mar. 3, 1936. Claims 1-aroylamino-4, X-dichloroanthraquinone, X—5, 6 or 7, and the aroyl group is of the benzene series.

Pat. 2,032,520. Chloro Substituted Dibenzoylamino Anthrimide Compounds. Mar. 3, 1936. 1-Benzamido-4-(α-benzamidoanthraquinonyl amino)-5-(6, or 7)-chloro-anthraquinone and their preparation.

Pat. 2,033,182. Intermediates and Dyestuffs of the Anthraquinone Acridone Series. Mar. 10, 1936. Benzanthrone acridones of the formula:

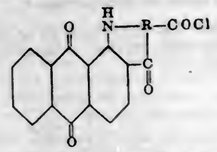


Aq—anthraquinone radical connected to the acridone group in 1,2-position, R—aryl of the anthraquinone series.

Pat. 2,033,339. Preparation of Anthraquinone Compounds. Mar. 10, 1936. Process which comprises reacting an anthraquinone alpha-disulfonic acid with a mercaptan in the presence of an alkali in aqueous solution at a temperature of 130 to 160° C. and at elevated pressure.

Pat. 2,033,863. Separation of Isomeric Chloromethyl-Anthraquinones. Mar. 10, 1936. In the separation of 2,3-chloro-methyl-anthraquinone from 2,1-chloro-methyl-anthraquinone, the step which comprises bringing the dilution of a concentrated sulfuric acid solution of these two isomers between 87% and 75% sulfuric acid.

Pat. 2,042,165. Anthraquinone Derivatives and Process of Preparing the Same. May 26, 1936. Anthraquinone-acridones of the formula:



R—benzene or naphthalene nucleus having the COCl in o-position.

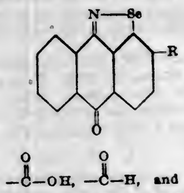
Pat. 2,042,423. Process for the Manufacture of Dyestuffs of the Anthraquinone Series. May 26, 1936. Sulfur dyes are made by fusing sulfur with a β-methyl-anthraquinone in the absence of a solvent.

Pat. 2,045,304. Intermediates and Dyestuffs of the Anthrimide Type. June 23, 1936. Di-α,α-(anthraquinonyl-aminoanthraquinonyl) dicarboxylic acid diamides of the formula:

Aq—NH—Aq—NH—CO—R—CO—NH—Aq—NH—Aq

R—organic radical, Aq—anthraquinone group.

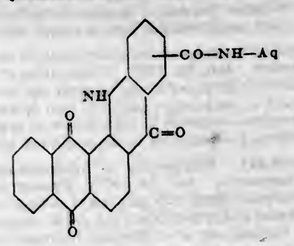
Pat. 2,049,212. Anthraquinone Derivative. July 28, 1936. Claims the compound having the formula:



R= —C(=O)—OH, —C(=O)—H, and —C(=O)—Cl

Pat. 2,049,896. Dyestuffs of the Flavanthrone Series. Aug. 4, 1936. Claims omega, omega-diphenyl-flavanthrone-dithiazole dyes, the dye being when dry a greenish-yellow powder, soluble in sulfuric acid with a yellow color and dyeing cotton from a blue-violet vat in greenish-yellow shades.

Pat. 2,052,592. Dyestuffs of the Anthraquinone Acridone Series and Process of Making Them. Sept. 1, 1936. Claims compounds of the formula:



Aq represents an anthraquinone radical containing at least one hydroxy or methoxy group.

Pat. 2,059,646. Bz2-Halogen-Benzanthrones. Nov. 3, 1936. Process for preparing Bz2-halogen-benzanthrones by diazotizing a Bz2-amino-benzanthrone and reacting the resulting diazo compound with a metal halide adapted to replace the diazo group with halogen.

Pat. 2,059,647. Compounds of the Benzanthrone Series. Nov. 3, 1936. Claims a Bz2-halogen-benzanthrone containing in the Bz1-position a reactive negative substituent of the group consisting of Cl, Br, I, —NO_2, —SO_3H, —SH, —SeH.

Pat. 2,061,249. Process of Halogenating N-Dihydro-1:2:2':1'-Anthraquinone Azines. Nov. 17, 1936. Preparation of chlorinated N-dihydro-1,2,2'1'-anthraquinone azines by treating a sulfuric acid solution of N-dihydro-1,2,2',1'-anthraquinone azine with chlorine under superatmospheric pressure in the continuously maintained presence of at least one mole of added hydrogen chloride per mole of N-dihydro-1,2,2',1'-anthraquinone azine.

Pat. 2,063,027. Process for Preparing Formylamino Anthraquinones and Products Obtainable by Said Process. Dec. 8, 1936. Preparation of acyl amino anthraquinone derivatives by heating halogen-substituted derivatives of anthraquinone with formamide in the presence of a catalyst (copper) and an acid binding agent in various solvents, such as toluene, nitro benzene, etc. Products dye acetate cellulose various shades.

Pat. 2,063,028. Compounds of the Anthraquinone Series and Process for Preparing Them. Dec. 8, 1936. Claims an alpha-formylamino-anthraquinone carrying a substituent of the class consisting of —NH_2 and —NO_2 in at least one alpha position para to a formylamine group.

Pat. 2,063,420. Halogenated Anthraquinone Compounds. Dec. 8, 1936. 1,3,5,7-(and 1,3,6,8)-Tetrahalo-anthraquinones.

Pat. 2,068,312. Halogen-Amino-Flavanthrones and Process of Producing the Same. Jan. 19, 1937. Process of heating an α,α-dihalogen-tetra-β-acylamino-1,1'-dianthraquinonyl in which one acyl-amino group is attached to each anthraquinone molecule ortho to the dianthraquinonyl linkage, and in which one halogen and one acyl-amino group are attached in ortho position to each other in the benzene ring of each anthraquinone molecule remote from the dianthraquinonyl linkage in sulfuric acid, whereby to form an α,α-dihalogen-β,β'-diamino-flavanthrone.

Pat. 2,068,313. Compounds of the Anthraquinone Series and Process for Producing the Same. Jan. 19, 1937. Process of heating an α,α-dihalogen-β,β-diacylamino-anthraquinone in which one halogen and one acyl-amino group are attached to each benzene nucleus of the anthraquinone molecule in ortho position to each other in an

chloride and an oxidising agent.

chloroanthraquinone or its 2-chloro derivative in the pre-

618 O. G.—63

inert organic medium and in the presence of a copper catalyst to produce dihalogen-tetra-acyl-tetramine-1,1'-dianthraquinonyl.

Pat. 2,068,321. Benzoyl Benzoic Acid Compounds and Process for Producing the Same. Jan. 19, 1937. 4'-Halo-3'-cyano-2-benzoylbenzoic acid and its 3,4,5 and/or 6 halogen derivatives, and their preparation from the corresponding 3'-amino compound by diazotizing and treating with an alkali metal cyanide and a copper salt.

Pat. 2,068,350. Preparation of Dyestuffs of the Anthraquinone Series. Jan. 19, 1937. Preparation of a brominated dimethoxy-dibenzanthrone wherein the bromination is carried out in concentrated sulfuric acid by neutralizing any free bromine contained in the solution at least as soon as the sulfuric acid solution becomes diluted with water.

Pat. 2,068,371. Preparation of Aralkylamino-Anthraquinone Compounds. Jan. 19, 1937. Process of heating an aminoanthraquinone with an aralkyl alcohol in an inert organic solvent at approximately the reflux temperature of the mass, the amount of aralkyl alcohol used being only slightly in excess of that theoretically necessary to give the desired aralkyl-amino-anthraquinone.

Pat. 2,068,372. Preparation of Aralkylamino-Anthraquinone Compounds. Jan. 19, 1937. Claims a polyaminoanthraquinone containing at least three amino groups in alpha positions in which at least one alpha amino group contains an aralkyl radical.

Pat. 2,068,373. Process for Preparing Diamino-Di-Phenoxy-Anthraquinone Disulphonic Acids. Jan. 19, 1937. Process for isolating a 1,4-diamino-2,3-diphenoxy-anthraquinone disulfonic acid from its sulfonation mass by adjusting the sulfuric acid concentration of the mass to between 45 and 65%, to precipitate the sulfate of the 1,4-diamino-2,3-diphenoxy-anthraquinone disulfonic acid.

Pat. 2,074,309. Process for the Preparation of Anthraquinonedisulphonic Acids. Mar. 16, 1937. In the process for the preparation of anthraquinone-2,6-disulfonic acid, the steps which comprise diluting the sulfuric acid mass resulting from the beta-disulfonation of anthraquinone to an acid concentration of from 75 to 80%, extracting the precipitated disulfonic acids with 20–30% hydrochloric acid and filtering off the substantially pure 2,6-anthraquinonedisulfonic acid.

Pat. 2,081,874. Dyestuffs of the Anthraquinone Series. May 25, 1937. Claims the dye obtainable by the alkaline condensation of Bz-1-benzanthronyl-5-anthraquinone-2,1(N)-benzacridone imide.

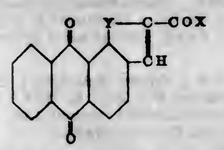
Pat. 2,084,970. Halogenated Anthraquinone Compounds. June 22, 1937. Process of reacting beta,beta-diamino-anthraquinone, in which the amine groups are in opposite rings of the anthraquinone molecule, with chlorine while the anthraquinone compound is suspended in a hydrochloric acid solution of from 15 to 22% acid concentration.

Pat. 2,091,235. 1,3-Dihalogen-2-Monomethylamino-Anthraquinones and Process for Preparing Same. Aug. 24, 1937. 1,3-Dihalo-2-monomethylamino-anthraquinone and their preparation from the amine and formaldehyde in concentrated H_2SO_4.

Pat. 2,091,236. Anthraquinone Vat Dyestuffs of the Indanthrone Series. Aug. 24, 1937. Process of condensing a 1,3-dihalogen-2-mono methylamino-anthraquinone to the corresponding dihalogen-dimethyl-indanthrone compound by heating the same in an inert high boiling solvent in the presence of an acid binding agent and a copper catalyst.

Pat. 2,091,242. Benzanthrone Acrylic Acids. Aug. 24, 1937. Process for preparing benzanthrone-acrylic acids by reacting upon a benzanthrone aldehyde in which the aldehyde group is present in one of the free peri positions of the benzanthrone molecule with a compound which is capable of reacting with an aldehyde to form an acrylic acid.

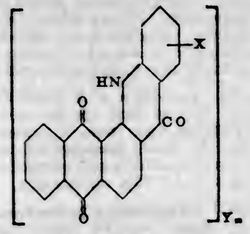
Pat. 2,097,860. Anthraquinone Thiophene and Benzenophene Carboxylic Acid Compounds. Nov. 2, 1937. Claims an anthraquinone carboxylic acid compound of the formula:



Y—sulfur or selenium, and X—OH or halogen.

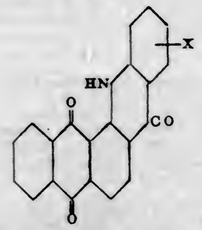
Pat. 2,099,781. Halogenation Process and Product. Nov. 23, 1937. Claims a composition adapted to react with hydroxy compounds to produce phosphorus oxychloride and compounds in which the hydroxyl group is replaced by a chlorine atom, comprising substantially phosphorus pentachloride, phosphorus trichloride and orthodichlorobenzene.

Pat. 2,100,531. Mixed Chloro-Fluoro Anthraquinone Acridones. Nov. 30, 1937. Mixed halogen-anthraquinone-2,1-benzacridones of the formula:



X—F_n or CF_n, n—a number not greater than 2, Y—halogen, and m—a number not greater than 4.

Pat. 2,100,532. Fluoro Compounds of Anthraquinone-2,1-Benzacridone. Nov. 30, 1937. Claims compounds having the formula:



X—F_n or CF_n, n—a number not greater than 2.

Pat. 2,100,533. Condensation Products of 1-Amino-Anthraquinone 2-Phenyl Azomethine. Nov. 30, 1937. Compounds which are made by condensing a haloanthraquinone with 1-aminoanthraquinone-2-phenylazomethine.

Pat. 2,107,656. Dyestuffs of the Dibenzanthrone Series. Feb. 8, 1938. Products obtainable by reacting a primary amino dibenzanthrone with perchloromethyl mercaptan.

Pat. 2,111,074. Dyestuffs and Intermediates of the Anthraquinone Series. Mar. 15, 1938. Claims benzanthrone-anthraquinone-2-1(N)-benzacridone imides, wherein the imide linkage is between one of the peri-positions of the benzanthrone nucleus and an alpha-position of the anthraquinone nucleus.

Pat. 2,111,091. Anthraquinone Compounds. Mar. 15, 1938. New compounds of the class consisting of 3-amino-anthraquinone-2,1(N)-benzacridone and its halogen substitution products.

Pat. 2,111,092. Dyestuff of the Anthrimidecarbazole Series. Mar. 15, 1938. Claims the acid condensation product of 6,6'-dichloro-4,4'-dibenzamido-1,1'-dianthrimide.

Pat. 2,113,231. Dyestuffs of the Anthraquinone Series. Apr. 5, 1938. An anthraquinone derivative of the formula:

Y—4-hydroxy-1-anthraquisonyl or 4-methoxy-1-anthraquinonyl, R—a diphenyl radical, such as diphenyl, diphenyl oxide, diphenylene oxide, diphenylmethane, fluorene or fluorenone.

Pat. 2,117,772. Sulphuric Acid Esters of Halogen-Aminoanthraquinones. May 17, 1938. Preparation of leuco-disulfuric acid esters of 2-amino-3-halogen-anthraquinones, by reacting a 1,3-dihalogen-2-aminoanthraquinone in which the amine group is protected by substituents of the class consisting of alkyl and acidyl groups, in a tertiary organic base, with a compound of the class consisting of sulfur trioxide, oleum, chloro-sulfonic acid, and the pyridine sulfur trioxide compound obtainable by reacting sulfur trioxide with pyridine, in the presence of a metal of the class consisting of copper and zinc, at temperatures not materially above 120° C.

Pat. 2,124,165. Dyestuffs of the Anthrimide Carbazole Series. July 19, 1938. Di-(a,a-anthraquinonyl-amino-anthraquinone)-dicarboxylic acid di-imides of the general formula:

Aq'—NH—Aq—NH—CO—R—CO—NH—Aq—NH—Aq'

Aq—anthraquinone

are cyclized with acid condensing agents to give dyes of the carbazole series.

Pat. 2,125,412. Process for Hydrogenating Polynuclear Aromatic Ketones. Aug. 2, 1938. Liquid phase hydrogenation of the keto group of an aromatic ketone having at least 3 benzene rings in the presence of a chromite catalyst.

Pat. 2,126,456. Process for the Preparation of Indanthrone Compounds. Aug. 9, 1938. Process for preparing indanthrone compounds by heating 1-chloro-2-aminoanthraquinone in an inert organic solvent in the presence of a cuprous halide prepared by direct union of finely divided copper and a halogen in an organic solvent.

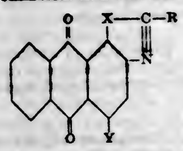
Pat. 2,127,098. Process for the Preparation of 2,6-Dichloroanthraquinone. Aug. 16, 1938. Preparation of 2,6-dichloroanthraquinone by replacing both —SO_3H groups of a 2,6-anthraquinone disulfonic acid.

Pat. 2,128,178. Process for the Chlorination of Aminoanthraquinone Compounds. Aug. 23, 1938. Process for preparing halogenated amino anthraquinones by chlorination in the presence of 45–55% sulfuric acid.

Pat. 2,129,991. 1-Acidylamino-2-Methyl-4-Aminoanthraquinones. Sept. 13, 1938. Preparation of 1-acidylamino-2-methyl-4-aminoanthraquinones by selective hydrolysis of the corresponding 1,4-diacidylamino-2-methyl-anthraquinone with alkali.

Pat. 2,129,993. Anthraquinonoyl Aminoanthraquisones. Sept. 13, 1938. 6-(6-R-Amino-2-anthraquinonyl-2-carbamido) 2-R'-aminoanthraquinone, R and R'—o-anthraquinonyl radicals.

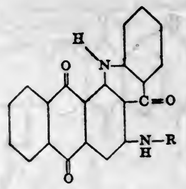
Pat. 2,130,031. Dyestuff Intermediates of the Anthraquinone Series. Sept. 13, 1938. Preparation of C-aryl-1,2-anthraquinonethiazoles and oxazoles of the formula



X—an element of the class consisting of sulfur and oxygen, Y—an element of the class consisting of chlorine and bromine and R—a radical of the class consisting of those of the benzene, anthracene and anthraquinone series.

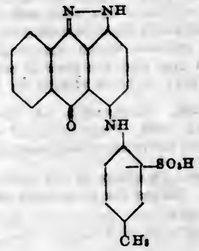
Pat. 2,133,072. Dyestuffs of the Anthrimide Series. Oct. 11, 1938. Preparation of 5-(β-anthraquinonyl-amino)-2-(R-amino-carbonyl)-anthraquinone, R—radical of benzene or anthraquinone series.

Pat. 2,133,274. Dyestuffs of the Anthraquinone Series. Oct. 18, 1938. Compounds of the formula:

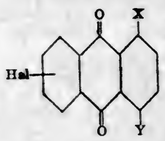


R—an acyl radical of an organic carboxylic acid.

Pat. 2,133,432. Compounds of the Pyrasolanthrone Series. Oct. 18, 1938. Dyes of the pyrasolanthrone series are obtained by condensing 4-halogen pyrasolanthrone with arylamines of the benzene and naphthalene series and sulfonating the product.



Pat. 2,134,654. Compounds of the Anthraquinone Series. Oct. 25, 1938. Claims compounds of the anthraquinone series having the general formula:



X—NH_2 or NH-alkyl; Y—NH_2 or OH; Hal—chlorine or bromine which is attached to one of the positions 6 and 7.

Pat. 2,136,998. Process for Preparing 2-Bz-1'-Dibenzanthronyl. Nov. 15, 1938. Preparation of 2-Bz-1'-dibenzanthronyl by heating 2-benzanthrone acrylic acid with methyleneanthrone in an organic solvent in the presence of a mild oxidizing agent.

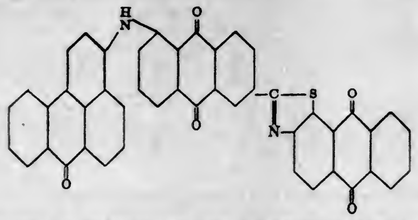
Pat. 2,141,858. Vat Dyestuffs of the Anthraquinone Series. Dec. 27, 1938. Claims the dyes resulting from the caustic alkali fusion of di(benzanthronyl-amino)-di(anthraquinonylamino) anthraquinones which dye cotton in yellow-olive shades of good fastness properties.

Pat. 2,141,872. Compounds of the Pyrazolanthrone Series. Dec. 27, 1938. A new compound, 1,9-pyrazolanthrone containing in the 6 position a group of the class consisting of —COOH and COCl, is claimed.

Pat. 2,141,877. Compounds of the Benzanthraquinone Series. Dec. 27, 1938. Claims 4-X-3-amino-1,2-benzanthraquinone, X—SH, —SM, —SSH, —SSM, or —S halogen, M—alkali metal, and 3,3'-diamino-1,2,1',2'-dibenzanthraquinonyl-4,4'-disulfide.

Pat. 2,145,905. Process for Preparing Polynuclear Isocyclic Fused Ring Compounds R. G. Perylene. Feb. 7, 1939. Process for condensing an isocyclic polynuclear compound having at least 2 fused aromatic bensene rings with R—CH=CR'—CHO, R and R'=H, alkyl or halogen, in the presence of HF.

Pat. 2,150,093. Dyestuffs of the Anthraquinone Series. Mar. 7, 1939. The compound obtained by the alcoholic alkali condensation of the bensanthrone imide of the formula:

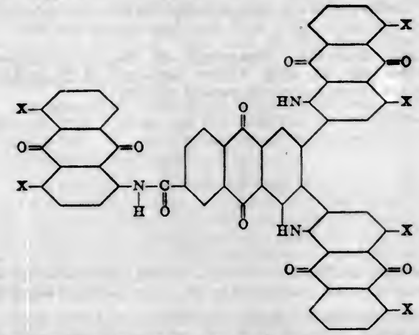


followed by reprecipitation from cold concentrated sulfuric acid. The corresponding 6-Bs-1-benzanthrone disubstituted analogue is also covered.

Pat. 2,151,634. Arylamino-Aryloxy-Hydroxyanthraquinones. Mar. 21, 1939. Anthraquinone compounds which carry in the molecule one arylamino-radical, at least one —OH group in an alpha position, and an aryloxy-radical in a beta position, which compounds on sulfonation yield acid wool dyes that dye wool in red to violet shades convertible to gray to black shades on chroming.

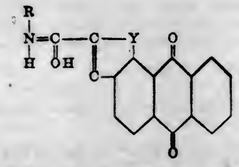
Pat. 2,151,635. Compounds of the Anthraquinone Series. Mar. 21, 1939. Preparation of 6,6'-dichloro 1,1'-dianthrimide and its carbazolized product.

Pat. 2,152,186. Dyestuffs of the Anthraquinone Series. Mar. 28, 1939. Claims the compounds of the formula:



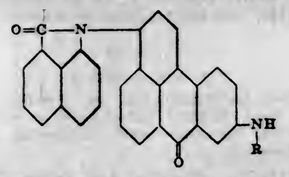
where the X's—hydrogen or an aroyl-amino radical of the bensene series.

Pat. 2,155,359. Dyestuffs of the Anthraquinone Series. Apr. 18, 1939. Preparation of vat dyes of the general formula:



where R represents an anthraquinone radical and Y stands for an element of the group consisting of sulfur and selenium.

Pat. 2,155,360. Dyestuffs of the Anthraquinone Series. Apr. 18, 1939. Preparation of dyes obtained by the alkaline condensation of 6-anthraquinonylamino-Bs-1N-bensanthronyl-naphthostyrils of the following general formula:



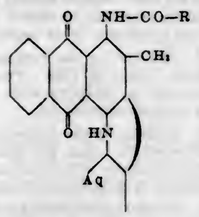
where R stands for a radical of the anthraquinone class, which dye cotton from an alkaline hydrosulfite vat in neutral gray shades of good fastness properties.

Pat. 2,155,364. Compounds of the Pyrazolanthrone Series. Apr. 18, 1939. Alkylation of 6-chloropyrazolanthrone followed by (a) direct fusion with alcoholic KOH or (b) chlorination to 2:6-dichloro-N-alkylpyrazolanthrone followed by vatting. Either process gives 6:6'-dichloro-N:N'-dialkyl-2:2'-dipyrazolanthronyls which are red vat dyes. Intermediates only are claimed.

Pat. 2,155,369. Compounds of the Pyrazolanthrone Series. Apr. 18, 1939. 6-Halogen (especially 6-chloro) 1:9-pyrazolanthrone is made from the corresponding 1-amino-6-halogen-anthraquinone by the usual diazotisation route. The products are useful for alcoholic caustic fusion and subsequent alkylation to give N:N'-dialkyl-2:2'-dipyrazolanthronyls which contain from 3 to 9% halogen in the 6-positions.

Pat. 2,161,967. Dyestuffs of the Anthraquinone Series. June 13, 1939. Vat dyes are prepared by condensation of amino anthraquinones or aminoanthrones, e. g. 1-aminoanthraquinone, with a halogen bensobenzanthrone and subsequent caustic alkali fusion of the anthrimide compound so produced.

Pat. 2,162,196. Dyestuffs of the Anthrimide-Carbazole Series. June 13, 1939. Preparation of vat dyes of the following formula:



where R is an aryl radical and Aq is an anthraquinone radical which contains an aroylamino group in one of the positions 4 and 5 by condensing 1-acidyl-amino-2-methyl-4-bromo (or amino) anthraquinone with amino (or bromo) anthraquinone compounds containing an aroylamino radical in the 4 or 5 position.

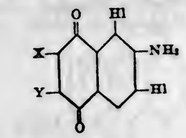
Pat. 2,162,201. Dyestuffs and Intermediates of the Pyrazolanthrone Series. June 13, 1939. Preparation of N:N'-dialkyl-2:2'-dipyrazolanthronyls containing methoxy groups, especially in the 6:6' and 8:8'-positions. The products are red to violet vat dyes of good soaping fastness and high tinctorial value.

Pat. 2,162,203. Preparation of Anthraquinone Vat Dyestuffs. June 13, 1939. The aluminum chloride ring-closed product of 1,4-di-(5-benzamidoanthraquinonylamino)-anthraquinone.

Pat. 2,162,205. Compound of the Pyrazolanthrone Series. June 13, 1939. The compound, 1,9-pyrazolanthrone-6-aldehyde, useful as a dye intermediate.

Pat. 2,162,206. Compounds of the Pyrazolanthrone Series. June 13, 1939. Red vat dyes are obtained by alkylation of the caustic fusion product of 1:9-pyrazolanthrone-6-aldehyde. N,N'-Diethyl-dipyrazolone-6,6'-dialdehyde is claimed as a new composition.

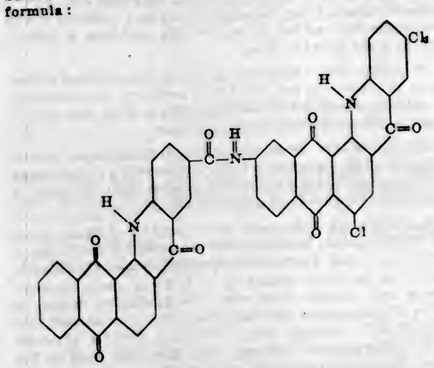
Pat. 2,164,784. Process for the Preparation of Dyestuffs and Intermediates of the Anthraquinone Series. July 4, 1939. Production of beta, beta-dihalogen-anthraquinone dithiasoles by reacting a tetra-halogen-diaminoanthraquinone compound of the formula:



X and Y—the bivalent radical

with an alkali metal sulfide, and condensing the dimercaptan so formed with an aromatic aldehyde in which the aldehyde group is attached directly to the aromatic ring.

Pat. 2,165,618. Compounds of the Anthraquinone Series. July 11, 1939. Claims a red vat dye of the formula:



wherein the anthraquinone-2,1(N)-benzacridonoylamine radical is attached in one of the positions 5 and 8.

Pat. 2,170,381. Compounds of the Bensanthrone Series. Aug. 22, 1939. Dialkoxyisodibenzanthrones containing halogen are prepared either by direct halogenation of Bs2, Bs2'-dialkoxyisodibenzanthrones or by halogenation of the intermediates followed by alkylation, e. g., 6-chloroisodibenzanthrone may be oxidized and methylated yielding chlorodialkoxyisodibenzanthrone which is a greenish blue vat dye.

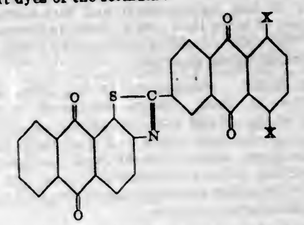
Pat. 2,172,020. Process of Reducing Cyclic Carboxyl Compounds. Sept. 5, 1939. Process of reducing cyclic carbonyl compounds to the corresponding hydrocarbon by heating the cyclic carbonyl compound with zinc dust and zinc chloride at reduction temperature until reduction to the corresponding hydrocarbon is complete, and isolating the corresponding hydrocarbon from the reaction mass. The reduction of the carbonyl group of heterocyclic compounds is disclosed.

Pat. 2,172,763. Anthraquinone Acid Wool Dyestuff. Sept. 12, 1939. Claims compounds useful as wool dyes, of the class consisting of 1-amino-2-methyl-4-(2'-methoxy-5'-methyl-anilido) anthraquinone-sulfonic acid which carries the sulfonic acid radical in the aryl ring of the anilido nucleus, and its alkali-metal salts.

Pat. 2,174,118. Ring Closure of Aromatic Compounds With the Aid of Hydrofluoric Acid. Sept. 26, 1939. Use of HF of not less than 48% strength as an acidic dehydration agent for ring-closing aromatic compounds.

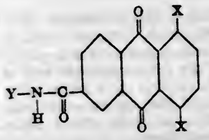
Pat. 2,176,630. Alkyl Sulphone Dyestuffs of the Anthraquinone Series. Oct. 17, 1939. Claims 1-amino-5-alkylsulfone-2-anthraquinone-sulfonic acids and their alkali metal salts which have a 4-alkylamino, 4-arylamino, 4-aralkylamino, or 4-cycloamino group.

Pat. 2,179,551. Dyestuffs and Dyestuff Intermediates of the Anthraquinone Series. Nov. 14, 1939. Manufacture of vat dyes of the formula:



in which X stands for aroylimino groups, which dye cotton in shades ranging from tan to red brown.

Pat. 2,179,552. Dyestuffs of the Anthraquinone Series. Nov. 14, 1939. Claims anthraquinone compounds of the formula:



X—an aroylamino radical of the bensene series and Y—an anthraquinone radical directly attached to the nitrogen.

Pat. 2,179,920. Compounds of the Perylene Series. Nov. 14, 1939. Claims compounds of the class consisting of 12,Bs-1-oxydo-1:2-bensperylene and 12,Bs-1-oxydo-1:2-bensperylene-3:10-quinone prepared by cyclicisation of 1-(beta-naphthoxy) anthraquinone.

Pat. 2,180,336. Dyestuff Intermediates of the Anthraquinone Series. Nov. 21, 1939. Cyanoanthraquinone compounds which carry in the 1-position an amino radical of the class consisting of amino, alkylamino, and acidylamino radicals, in the 2-position a member of the group consisting of hydrogen, bromine and sulfonic acid groups and in the 4-position a bromine atom, there being present in the molecule one cyano group in one of the alpha positions, 5 and 8.

Pat. 2,180,337. Dyestuffs of the Anthraquinone Series. Nov. 21, 1939. Claims greenish blue wool dyes of the anthraquinone series consisting of cyanoanthraquinone sulfonic acids which carry in the 1-position an amino radical of the class consisting of amino, alkylamino, and acidylamino radicals, in the 2-position a member of the group consisting of hydrogen, bromine and sulfonic acid groups, in the 4-position an arylamino radical of the benzene series, and a cyano radical in one of the positions 5 and 8.

Pat. 2,181,046. Dihalogen Quinizarins. Nov. 21, 1939. 2-halo-6(or 7)-haloquinizarine and their preparation from quinizarine.

Pat. 2,181,048. Anthraquinonoyl-Amino Anthraquinones. Nov. 21, 1939. 2-(R-aminocarbonyl)-6-haloanthraquinones R—a-anthraquinonyl radicals, including heterocyclic substituted anthraquinone radicals.

Pat. 2,183,625. Reduction Products of Bs-2,Bs-2'-Dihydroxydibensanthrone and Process for Preparing the Same. Dec. 19, 1939. Preparation of a stable reduction product by preparing an alkaline hydrosulfite vat of Bs-2,Bs-2'-dihydroxydibensanthrone, reducing the alkalinity to a pH of from 9 to 12 and maintaining the temperature at 60 to 90° C., until the precipitation of the monoalkali-metal salt is completed. The monoalkali metal salt may be converted to the free hydroxy compound, which upon bromination produces a valuable vat dye intermediate.

Pat. 2,183,626. Compounds of the Dibenzanthrone Series. Dec. 19, 1939. Claims compounds of the class consisting of beta hydroxyalkyl and beta-hydroxy-cycloalkyl ethers of leuco Bs-2; Bs-2'-dialkoxy-dibenzanthrone in which the alkyl radical is attached to a leuco oxygen of the dibenzanthrone molecule.

Pat. 2,183,627. Compounds of the Dibenzanthrone Series. Dec. 19, 1939. Claims compounds of the class consisting of the alkylol and cyclo-alkylol ethers of Bs-2,-Bs-2'-dihydroxydibenzanthrone and Bs-2,Bs-2'-dihydroxy-isodibenzanthrone which carry at least one group of the class consisting of beta-hydroxyalkyl ether and beta-hydroxycycloalkyl ether groups in one of the Bs-2 positions, and their sulfonation products.

Pat. 2,183,628. Alkyl Esters of Leuco Dibenzanthrone. Dec. 19, 1939. Claims aliphatic acid esters of leuco dibenzanthrone compounds and their stable derivatives in which the aliphatic ester side chain contains at least 8 carbon atoms and is attached through the leuco oxygen in the dibenzanthrone nucleus.

Pat. 2,183,629. Compounds of the Dibenzanthrone Series. Dec. 19, 1939. Claims aliphatic acid esters of alkylol ethers of beta-hydroxyalkyl and beta-hydroxycycloalkyl ethers of the dibenzanthrone and isodibenzanthrone series, the aliphatic acid ester group being attached to the hydroxy radical of the alkylol ether side chain, and aliphatic acid esters of leuco alkylol ethers of Bs-2,Bs-2'-dimethoxy dibenzanthrone.

Pat. 2,183,630. Compounds of the Dibenzanthrone Series. Dec. 19, 1939. Process of reacting a hydroxy-dibenzanthrone or hydroxy-isodibenzanthrone with an aliphatic acid chloride or anhydride which contains at least 8 carbon atoms, to give oil soluble compounds which impart fluorescence. A method of purifying dihydroxy dibenzanthrone and ethers thereof is disclosed.

Pat. 2,183,320. Process for the Manufacture of Leuco Sulphuric Acid Esters of Alkyl Ethers of Bs-2,Bs-2'-Dihydroxydibenzanthrone. Jan. 30, 1940. Use of stable leuco compounds of alkylated Bs-2:Bs-2'-dihydroxy dibenzanthrone in making leuco sulfuric acid esters.

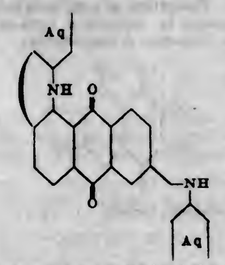
Pat. 2,188,537. Di-Benzanthrone-Anthraquinone-Di-Acridines. Jan. 30, 1940. An alpha diamino-anthraquinone is condensed with 2 mols of 6-Bs-1-dibromobenzanthrone and the product further condensed with two mols of 1-amino-anthraquinone. The resulting pentanthrimide is then fused with alcoholic KOH and pasted to give a fast olive vat dye of the "benzanthrone-acridone" type.

Pat. 2,188,538. Vat Dyestuffs of the Benzanthrone-Anthraquinone-Acridine Series. Jan. 30, 1940. 6-Bs'-Dibromobenzanthrone is condensed with 1 mol of o-aminoanthraquinone. Two mols of this product are then condensed with one mol of an alpha-diamino-anthraquinone. The product is fused with alcoholic KOH and acid pasted to give a fast olive vat dye of the "benzanthrone-acridone" class.

Pat. 2,188,776. Dyestuffs of the Anthraquinone Series. Jan. 30, 1940. A dark brown vat color is obtained by ring-closure of 4':4''-di(benzoylamino)-1:1':5:1''-trianthrimide in nitrobenzene with aluminum chloride.

Pat. 2,200,480. 3,3'-Dihalogen-Dianthrahydroquinoneazine Tetraacidpburic Acid Esters and Process of Making the Same. May 14, 1940. The alkali metal salts of tetrasulfuric esters of leuco 3:3'-dihalogen-dianthraquinoneazines are prepared from 1:3-dihalogen-2-aminoanthraquinones (of the class in which the amino group is protected by an alkyl or acidyl group) by treatment with sulfur trioxide, copper, and pyridine followed by hydrolysis and finally oxidation in an alkaline medium.

Pat. 2,203,227. Anthraquinone Vat Dyestuffs. June 4, 1940. Claims compounds of the following general formula:



in which the Aq's stand for radicals of the anthraquinone series, which may be substituted by benzoylamino groups. Colors are brown.

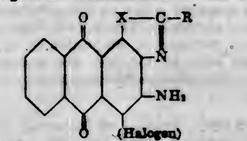
Pat. 2,203,416. Dyestuffs of the Benzanthrone Series. June 4, 1940. Claims the alkaline condensation products of Bs-1-benzanthronylaminoanthrones containing a heterocyclic ring in the 1,9-position of the anthrone radical, the amino-anthrone being attached to the Bs-1 position of the benzanthronyl radical in one of the positions 4 and 5. Products are gray vat dyes.

Pat. 2,204,741. Dyestuffs of the Anthraquinone Series. June 18, 1940. A red vat dye is prepared by condensing 4'-chloro-2-phenyl-6-bromoanthraquinone with one mol of 4-amino-1,9-(N-methyl)-anthrapyridone.

Pat. 2,204,742. Dyestuffs of the Anthraquinone Series. June 18, 1940. An acid vat dye is prepared by condensing 4'-chloro-2-phenyl-6-bromoanthraquinone with two mols of 4-amino-1:9-(N-methyl)-anthrapyridone.

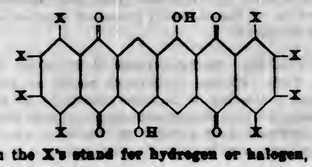
Pat. 2,204,748. Dyestuffs of the Acid Wool Class. June 18, 1940. Claims acid wool dyes comprising 1-hydroxy-2-arylaminoanthraquinones which carry in the 4-position a radical of the class consisting of hydroxy and arylamino groups and wherein both cases the arylamino radical is of the benzene series, the compounds carrying at least two sulfonic acid radicals, one of which is directly attached to the anthraquinone nucleus. The dyes color wool by the usual chroming methods in brown shades.

Pat. 2,204,970. Dyestuff Intermediate of the Anthraquinone Series. June 18, 1940. 3-Bromo-C-phenyl-1:2-anthraquinone thiazole or oxazole is amidated and then halogenated to give an intermediate of the formula:



X=O, S; R=benzene, naphthalene, anthraquinone.

Pat. 2,210,396. Hexacene Compounds. Aug. 6, 1940. Claims 7,15-dihydroxy hexacene-5,16; 8,12-diquinone-(2,3:6,7-diphthaloyl-1,5-dihydroxynaphthalene) of the formula:

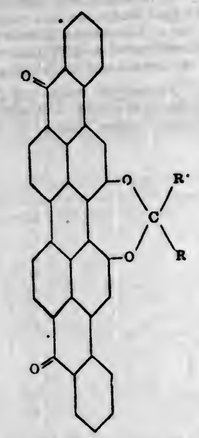


in which the X's stand for hydrogen or halogen, obtained

by the reaction between phthalic anhydride and 1,5-dihydroxy-naphthalene in the presence of $AlCl_3$. Dyes cotton blue from a brown vat, dyeings turning reddish-brown in acid.

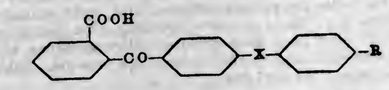
Pat. 2,217,849. Compounds of the Anthraquinone Series. Oct. 15, 1940. 1-Mercapto-2-anthraquinone carboxylic acid is condensed with alpha-halogen ketones to give C-acyl-1,9-thiophenanthrone acids which are intermediates for acidylaminoanthraquinone vat dyes.

Pat. 2,218,663. Dyestuffs of the Dibenzanthrone Series. Oct. 22, 1940. Claims compounds of the formula:



R'=$-CH_3$ and $-CH_2-$Hal, and R=alkyl or alkylene and halogen alkyl radicals which contain not more than 5 carbon atoms.

Pat. 2,225,088. Benzoyl Benzoic Acid Derivatives. Dec. 17, 1940. Compounds of the formula:



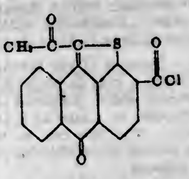
X=CO or CH_2, R=H or o-carboxybenzoyl, and their preparation.

Pat. 2,225,603. Dye Stain. Dec. 17, 1940. A dye stain comprising a water-soluble, alcohol-soluble, or oil-soluble dye dissolved in a normally liquid N-alkyl amide of a lower aliphatic monocarboxylic acid, free from acidic and basic substituents.

Pat. 2,231,787. Phenanthrene Dicarboxylic Acid Anhydrides. Feb. 11, 1941. Trans-9:10-dicarboxy-9:10-dihydro phenanthrene is obtained by metallization of phenanthrene with sodium and simultaneous treatment with CO_2. It is easily converted into the ester, anhydride, and cis form and the corresponding derivatives of the latter. Oxidation produces the anhydride of phenanthrene-9:10-dicarboxylic acid, which readily undergoes the Friedel-Crafts reaction to yield products that can be converted to 1,2,3,4-dibenz-anthraquinones.

Pat. 2,231,788. 9-Aroyl-10-Phenanthroic Acids. Feb. 11, 1941. Process for the production of 9-aroyl-10-phenanthroic acids from phenanthrene by the steps: (1) Simultaneous metallization and treatment with CO_2; (2) Acidification to the dicarboxylic acid; (3) Anhydride formation and oxidation to the 9:10-phenanthrene dicarboxylic acid anhydride; (4) Friedel-Crafts reaction.

Pat. 2,233,496. Dyestuffs of the Anthraquinone Series. Mar. 4, 1941. Yellow to red vat dyes are prepared by reacting amino-anthraquinones with C-acyl-1:9-thio-phenanthrone-2-carboxyl chlorides, such as:



Pat. 2,233,502. Compounds of the Anthraquinone Series. Mar. 4, 1941. Claims 1-(p-X-phenyl)-anthraquinone, X=H, Cl, or Br, having at least one halogen in at least one of the 5, 6, 7, or 8-positions.

Pat. 2,238,959. Process for the Preparation of Naphthazarin Intermediate. Apr. 22, 1941. Claims the process of isolating the crude sodium salt of naphthazarin intermediate by rendering slightly alkaline the cooled dilute acid solution of the drowned reaction mass.

Pat. 2,238,961. Dyestuff of the Anthrapyridone Series. Apr. 22, 1941. Claims the product obtained by condensing two moles of 4-amino-N-methylanthrapyridone with one mole of 2:6-dichloroanthraquinone which dyes cotton from the usual alkaline hydrosulfite vat in bright bluish red shades of good strength and fastness properties.

Pat. 2,242,842. Separation of Carbazole. May 20, 1941. A continuous process for the removal of carbazole from solvent solutions of crude anthracene by means of sulfuric acid of a given strength.

Pat. 2,245,535. Preparation of Leuco Esters of Vat Dyestuffs. June 10, 1941. Preparation of the leuco sulfuric acid esters of vattable compounds by effecting the esterification with the reaction product of carbylsulfate and pyridine which is substantially identical with the product obtained by heating one mole of technical carbyl sulfate with at least two moles of pyridine at temperatures above 50° C.

Pat. 2,251,558. Dyestuffs of the Dibenzanthrone Series and Process of Making Them. Aug. 5, 1941. Preparation of dyes of the dibenzanthrone series which comprises heating a dinitrodibenzanthronyl with a secondary dialkylamine until reaction is completed, and heating the resulting bisdialkylaminobenzanthronyl with an alkaline condensing agent to convert the same to a dibenzanthrone. The products are vat blacks useful for dyeing and printing.

Pat. 2,251,559. Intermediates of the Dibenzanthrone Series and Process of Making Them. Aug. 5, 1941. Process for preparing dialkylamino-dibenzanthronyls which comprises heating a nitrodibenzanthronyl with a secondary dialkyl-amine at reaction temperatures.

Pat. 2,251,566. Dyestuff of the Anthraquinone Series. Aug. 5, 1941. Claims the dye which is identical to that obtained by condensing one mole of an alpha-chloro-Bs-1-bromo-benzanthrone with an alpha-aminoanthraquinone, further condensing one mole of this product with one mole of a Bs-1-aminobenzanthrone, and fusing the dicondensation product with caustic alkali, and which dyes cotton from the usual alkaline hydrosulfite vat in green-olive shades of excellent fastness properties.

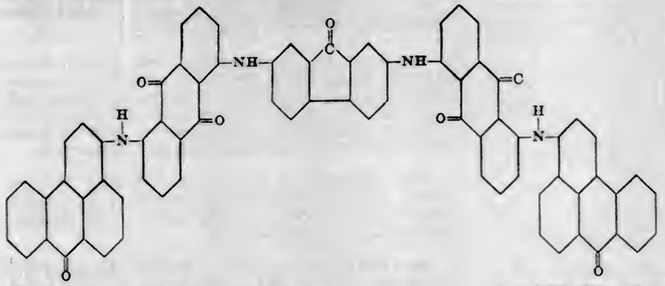
Pat. 2,254,230. Compounds of the Anthraquinone Series. Sept. 2, 1941. Claims a 1-amino-4-arylaminoanthraquinone which carries in the 2-position a substituent of the group consisting of —H, $-SO_3H$ and $-SO_3M$ in which M stands for an alkali metal and in which the arylamino group is a heterocyclic radical of the class consisting of aminobenzoidioxanes and aminobenzodioxoles.

Pat. 2,265,654. Dyestuffs and Dyestuff Intermediates for the Dibenzanthrone Series and a Process for Preparing the Same. Dec. 9, 1941. Process of heating a Bz1-Bz1'-dibenzanthronyl with a phosphorus halide, and treating the resulting intermediate with a strong acid to convert it into a vat dye. Dinitro-Bz1 : Bz1'-dibenzanthronyl gives rise to a neutral gray to black dyeing vat dye.

Pat. 2,265,721. Dyestuff of the Dibenzanthrone Series. Dec. 9, 1941. Claims a gray to black dyeing vat dye obtained by the process which comprises subjecting dibenzanthrone to dinitration by means of a nitrating agent in chlorosulfonic acid. The dye can be further improved by caustic fusion during which chlorine is eliminated and nitro groups are reduced.

Pat. 2,266,782. Vat Dyestuffs of the Anthraquinone Series. Dec. 23, 1941. Claims yellow to red vat dyes prepared by condensation of trimesic acid chloride with amino-anthraquinones that contain bensoyl-amino groups.

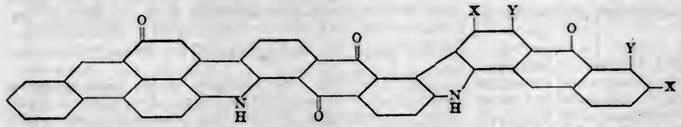
Pat. 2,266,879. Dyestuff of the Benzanthronyl-Amino-Anthraquinone Acridine Series. Dec. 23, 1941. Caustic fusion of :



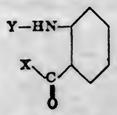
to the acridine, yielding a gray vat dye.

Pat. 2,273,966. Process for Preparing 1-Amino-5-Nitro-Anthraquinone. Feb. 24, 1942. Preparation of 1-amino-5-nitro-anthraquinone by reacting 1,5-dinitroanthraquinone with dimethyl aniline in a phenolic solvent and in the presence of sulfuric acid, the dimethyl aniline being added slowly to prevent an undue liberation of heat, the reduction being stopped immediately upon disappearance of the 1,5-dinitroanthraquinone from the suspension.

Pat. 2,278,977. Dyestuffs of the Anthraquinone Series. Apr. 7, 1942. Claims dyes of the formula :



one X and Y represent the benzacridone radical :



and the remaining X and Y are hydrogen.

Pat. 2,287,590. Fluoroarylaminoanthraquinone Acid Wool Dyestuffs. June 23, 1942. Claims 1-amino-4-arylaminoanthraquinones and 1-hydroxy-4-arylaminoanthraquinones in which the arylamino groups are of the benzene series and which carry fluorine directly attached to the aryl ring of the arylamino radical, and their sulfonic acid derivatives.

Pat. 2,292,551. Naphthostyril-5-Carboxylic Acid. Aug. 11, 1942. Claims the process which comprises nitrating 1,4-naphthalene dicarboxylic acid and reducing the resulting nitro compound with hydrogen in the presence of a nickel catalyst to naphthostyril-5-carboxylic acid. Disclosure is made to the preparation of anthanthrone-3,8-dicarboxylic acid from naphthostyril-5-carboxylic acid.

Pat. 2,293,254. Dyestuffs of the Anthraquinone Series. Aug. 18, 1942. Claims vat dyes obtained by the alcoholic caustic alkali fusion of the anthrimide type condensation derivatives produced by condensing one mole of a dinegatively substituted Bz-1,Bz-1'-dibenzanthronyl in which the negative substituents are of the class consisting of halogen and —NO_2, with two moles of 1,5-diamino-anthraquinone and then with two moles of Bz-1-bromobenzanthrone.

Pat. 2,293,709. Dyestuffs of the Anthraquinone Series. Aug. 25, 1942. 6-Bz-1-dibromobenzanthrone is condensed with two mols of a 1-amino-4-arylamino-anthraquinone and the products sulfonated to give gray wool dyes. The aryl group is of the benzene or naphthalene series.

Pat. 2,293,783. Process for Producing Dibenzanthrone. Aug. 25, 1942. Sodium monoxide and sodium phenate are added to the dibenzanthrone fusion, in order to obtain increased yields.

Pat. 2,302,729. Process of Purifying 1-Nitro-Anthraquinone. Nov. 24, 1942. Purification of 1-nitro-anthraquinone by treatment with sodium sulfite.

Pat. 2,302,733. Compounds of the Dibenzanthrone Series. Nov. 24, 1942. Claims compounds of the class consisting of the di-alkylol and di-cyclo-alkylol others of Bz-2,Bz-2'-dihydroxydibenzanthrone, and their sulfation products, e. g., the di-(β-hydroxy-propyl) ether is obtained by condensing Bz-2 : Bz-2'-dihydroxy-dibenzanthrone with propylene oxide at 165–170° under slight pressure. Sulfations give a green wool dye.

Pat. 2,302,823. Dyestuffs of the Anthraquinone Series. Nov. 24, 1942. Sulfonation of 1-dimethylamino-4-arylamino-anthraquinones, to give level dyeing blue to green wool dyes.

Pat. 2,310,143. Dyestuffs of the Anthraquinone Series. Feb. 2, 1943. Claims the water-soluble sulfonation derivative of 4-amino-4'-hydroxyl, 1'-dianthraquinonylamine which dyes wool from the usual acid bath in clear strong bluish gray shades of good fastness properties.

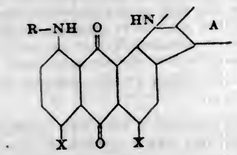
Pat. 2,312,401. Dyestuffs of the Anthraquinone Series. Mar. 2, 1943. Claims the olive dyes obtained by the condensation of a Bz-1-1'-anthraquinonylamino-benzanthrone which carries halogen in an alpha position of the benzanthrone nucleus with a 1-amino-anthraquinone-2-phenyl-azomethine and subjecting the resulting condensation product to a caustic alkaline fusion.

Pat. 2,312,462. Dyestuffs of the Anthraquinone Series. Mar. 2, 1943. Olive to gray dyes obtained by condensing a 6-bromo-Bz-1-1'-anthraquinonylaminobenzanthrone with 1 mole of 1-amino-anthraquinone-2-phenyl-azo-methine and subjecting the resulting condensation product to a caustic alkaline condensation reaction.

Pat. 2,314,356. Compounds of the Anthraquinone Series. Mar. 23, 1943. A dye for animal and related fibers comprising a water-soluble alkanolamine salt of an anthraquinone sulfonic acid in which the alkanolamine radical contains at least two OH groups, which compound exhibits materially increased solubility in water over the alkali metal salts of the corresponding sulfonic acid compound.

Pat. 2,318,133. Process of Dyeing With Vat Dyes. May 4, 1943. Dyeing textile fibers with vat colors by padding the fibers with a caustic alkali solution of the reduced colors and developing the colors on the fibers by subjecting them to a mild alkaline solution of an alkali metal hydrosulfite until development of the color is substantially complete and after the development of the color is substantially complete oxidising the reduced dye on the fibers.

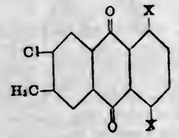
Pat. 2,318,174. Dyestuffs of the Anthraquinone Series. May 4, 1943. Claims water-soluble sulfonation derivatives of 1,2-anthraquinone-naphthcarbazoles :



one X = —NH—CO—R' in which R' = alkyl or aryl and the remaining X = H, R = H, alkyl, aralkyl or aryl radicals and A = a naphthalene nucleus which contains no further substituents, which dyes dye wool and related fibers in gray shades of good fastness properties.

Pat. 2,318,439. Process for Preparing Vat Dyes in Powder Form. May 4, 1943. Production of vat dye powders by incorporating in a highly dispersed aqueous suspension of a vat dye paste, a deflocculating agent comprising an ester of an alkanolamine and a long chain fatty acid, and an aqueous emulsion of an inert, volatile, water-immiscible organic liquid, evaporating the product to dryness and pulverising.

Pat. 2,329,023. Dyestuff Intermediates. Sept. 7, 1948. Claims the amino-chloro-methyl-anthraquinone of the formula :

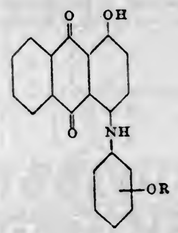


one X = NH_2, the other X = H.

Pat. 2,330,713. Chemical Compounds and Process of Making the Same. Sept. 28, 1943. Claims the process which comprises reacting a primary amino anthraquinone with a beta sulfo saturated aliphatic carboxylic acid inner anhydride of 2 to 6 carbon atoms between 20° C. and 100° C. in the absence of water and recovering a sulfo carboxylic acid amide. Example: 1,4,5,8-tetramino anthraquinone + beta sulfo propionic acid anhydride.

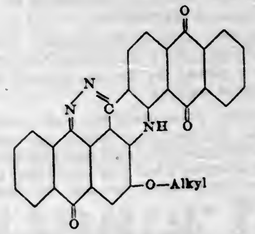
Pat. 2,332,779. Dyestuffs of the Anthraquinone Series. Oct. 26, 1943. Compounds of the group consisting of 4,4'-di-(toluidino)-1,1'-dianthrimide sulfonic acid and 4,4'-di-(xylidino)-1,1'-dianthrimide sulfonic acid, their alpha-nitro- and alphamino-substitution derivatives and the alkali metal salts of such sulfonic acids. Products dye wool directly in gray shades of good fastness properties.

Pat. 2,333,384. Arylaminoanthraquinone Compound. Nov. 2, 1943. Compounds of the formula :



R = —CH_2—COOH, —CH_2—CH_2—OH, CH_2COOCH_3 and CH_2—$COOC_2H_5$ products dye cellulose acetate in violet shades fast to gas fumes.

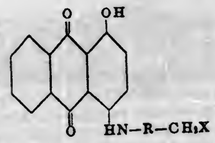
Pat. 2,334,892. Dyestuffs of the Anthraquinone Series. Nov. 23, 1943. The pyridasine derivatives of diphthaloyl acridone of the formula :



the alkyl contains 1–6 C atoms.

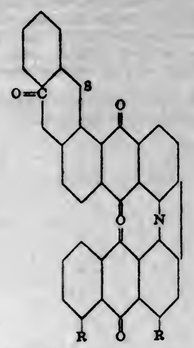
Pat. 2,335,648. Dyestuffs of the Anthraquinone Series. Nov. 30, 1943. New gray wool dyes consisting of 4,4'-di-anilino-1,5- or -2,6- or -1,4- (1',1''-di-anthraquinonyl-amino) anthraquinone sulfonic acid and alkali metal salts thereof.

Pat. 2,335,680. Arylaminoanthraquinone Compounds. Nov. 30, 1943. Compounds of the general formula :



R = phenylene or tolylene, X = —CN, —NHCOCH$_3$, and —OCH_3. Products dye cellulose acetate in violet shades fast to gas fumes.

Pat. 2,344,981. Dyestuffs of the Anthraquinone Series. Mar. 28, 1944. Vat dyes of the formula:



one R—H, the other R—a benzacylamino group. Products dye cotton from a violet hydrosulfite vat in orange to red shades of excellent fastness properties.

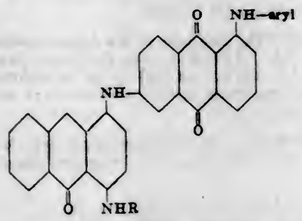
Pat. 2,346,726. Process for Preparing Compounds of the Anthraquinone Series. Apr. 18, 1944. Production of benzoylamino anthraquinones by reacting chloranthraquinones with benzamide in inert solvent in the presence of Cu_2Br_2 and sufficient K_2CO_3 to react with the HCl liberated in the reaction.

Pat. 2,346,772. Process for the Manufacture of 5-Chloro-Quinizarin. Apr. 18, 1944. Production of 5-chlorquinizarin by heating 1-nitro-5-chloranthraquinone or 1-amino-5-chloro-anthraquinone in H_2SO_4 in the presence of H_3BO_3 and $NaNO_3$ at 150°–220° C.

Pat. 2,346,957. Printing Composition. Apr. 18, 1944. An emulsion comprising a film-forming material water, a water-insoluble solvent for the film-forming material and a poly-anthrimide pigment.

Pat. 2,347,252. Dyestuffs of the Anthraquinone Series. Apr. 25, 1944. Claims water soluble sulfonation derivatives of 1,2-anthraquinone-naphthcarbazoles which carry in one of the positions 4 and 5 an aroylamino group of the anthraquinone series which contains not more than five condensed rings.

Pat. 2,348,013. Dyestuffs of the Anthraquinone Series. May 2, 1944. Compounds of the formula:



and their sulfonic acids and alkali metal salts of their sulfonic acids, R—H or alkyl, aryl—benzene or naphthalene.

Pat. 2,353,041. Dyestuffs of the Anthraquinone Series. July 4, 1944. Production of acid wool dyes of good fastness properties by reacting an anilinoanthraquinone which carries a methylol group in the para position of the anilino radical with a diarylamine in which one aryl group is benzene and is unsubstituted in the position para to the amino group.

Pat. 2,350,381. Compounds of the Anthraquinone Series. Oct. 3, 1944. Claims 1,4-di-(omega-cyanoalkylamino)-anthraquinones in which the alkyl group in each instance is a straight chain alkyl group of 2–5 C atoms, which carry in the 5- and 8- positions an H or OH. Products color acetate silk in shades which show exceptional resistance to atmospheric fading.

Pat. 2,363,042. Dyes of the Anthraquinone Series. Nov. 21, 1944. Claims the 1,9-isothiazoleanthrones of the formula:

R—H, alkyl, aralkyl, cycloalkyl acidyl sulfonyl and aryl of the benzene or naphthalene series as well as halogen and sulfonic acid derivatives of these compounds.

Pat. 2,363,069. Anthraquinone Dyes for Animal and Related Fibers. Nov. 21, 1944. Production of wool taupe dyes by acylating a 4-amino-1,1'-dianthrimide, sulfonating the resulting product in oleum and subjecting the resulting acylated amino-1,1'-dianthrimide sulfonic acid to the action of a reducing agent in H_2SO_4 at 0° to 100° C.

Pat. 2,364,473. Dyes of the Anthraquinone Series. Dec. 5, 1944. Claims blue dyes of the anthraquinone acid wool series, which exhibit good level dyeing properties, of the group: 1-amino-4-(cyanomethylphenylamino)-2-anthraquinone sulfonic acid alkali metal salts and 1-amino-4-(cyanamethyl-4-tolylamino)-2-anthraquinone sulfonic acid alkali metal salts.

Pat. 2,369,969. Acid Wool Dyestuffs of the Anthraquinone Series. Feb. 20, 1945. Claims 4,7'-diamino-1-(2'-fluorenonylamino)-anthraquinone sulfonic acid and its alkali metal salts. These products of the acid wool series give dyeings of gray to olive shades which have excellent light fastness.

Pat. 2,372,313. Diarylamino-Trianthrimides. Mar. 27, 1945. Claims diphenyl-amino-trianthrimides in which each of the trianthrimide amino groups is connected in an alpha position to at least one anthraquinone molecule and which trianthrimides carry the phenyl amino group in the para position on the anthraquinone nucleus relative to the imino linkages, e. g., 4'4''-dianilino-1,5-(1',1''-dianthraquinonylamino)-anthraquinone.

Pat. 2,373,826. Process for the Preparation of Anthraquinonylamino Substitution Derivatives of Cyanuric Chloride. Apr. 17, 1945. Preparation of triarylamino derivatives of cyanuric chlorides by replacing two of the Cl atoms with amines of the anthraquinone series in an inert organic solvent, and replacing the third Cl atom with an arylamine in a phenol or naphthol at 100° to 120° C. The products dye cotton in fast orange-yellow and greenish blue shades.

Pat. 2,396,989. Process for the Preparation of 1-Bromo-2-Methylanthraquinone. Mar. 19, 1946. Preparation of 1-bromo-2-methylanthraquinone by reacting 1 mole of 2-methylanthraquinone in a mixture of oleum and chlorsulfonic acid with .5 to .55 moles of bromine in the presence of a bromination catalyst and chlorine or sulfuryl chloride as an oxidising agent to liberate Br from HBr formed during the reaction.

Pat. 2,399,355. Compounds of the Naphthoquinone Series. Apr. 30, 1946. Blue and green cellulose ester dyes from 1,4-di-(alkylamino)-5,8, naphthoquinone in which the alkyl groups contain 1–5 carbons.

Pat. 2,405,702. Process for Preparing Pyranthrone. Aug. 13, 1946. Preparation of pure pyranthrone from impure 2,2'-dimethyl-1,1'-dianthraquinoeyl containing 2-halogen-3-methyl-anthraquinones by fusing with a phenol and an alkali metal hydroxide.

TRADE-MARKS

OFFICIAL GAZETTE, JANUARY 25, 1949

[VOL. 618. No. 4]

ACT OF 1905

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication. As provided by section 14 of said act, a fee of ten dollars must accompany each notice of opposition.

Marks published for opposition under the act of 1946 follow the 1905 publications.

CLASS 2

RECEPTACLES

Ser. No. 519,957. THE KALART COMPANY INC., Stamford, Conn. Filed Apr. 1, 1947.

KALART

FOR SHIPPING BOXES AND CARTONS MADE OF CARDBOARD, WOOD, OR PLASTIC; SHIPPING BAGS AND ENVELOPES MADE OF FABRIC OR PAPER.
Claims use since 1935.

CLASS 4

ABRASIVE, DETERGENT, AND POLISHING MATERIALS

Ser. No. 520,502. FAIRY DYES LTD., Glasgow, Scotland. Filed Apr. 11, 1947.

MORNING PRIDE

FOR SHAVING CREAM.
Claims use since May 18, 1935.

CLASS 6

CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS

Ser. No. 489,629. VANCE LABORATORIES, San Francisco, Calif. Filed Oct. 8, 1945.

KAYO

FOR MEDICINAL PREPARATION IN LIQUID FORM FOR THE TREATMENT OF WARTS.
Claims use since July 15, 1932.

Ser. No. 496,541. CASIMIRO POLLEDO S. A. C. G. AND ALBERTO FERRASANO, Buenos Aires, Argentina. Filed Feb. 14, 1946.

TRETOLINA

FOR DISINFECTANTS FOR HUMAN, HOUSEHOLD, INDUSTRIAL, AND ANIMAL USE.
Claims use since July 24, 1945.

Ser. No. 511,333. LINCOLN LABORATORIES, INCORPORATED, Decatur, Ill. Filed Oct. 23, 1946.

AQUEOUS ESTROTHIOLIN

No claim is made to the word "Aqueous," apart from the mark.
FOR MEDICINAL PREPARATION SOLD ONLY ON A PHYSICIAN'S PRESCRIPTION AND ADMINISTERED BY INJECTION USED IN THE TREATMENT OF THE CLIMACTERIC OR MENOPAUSE, CERTAIN OTHER CONDITIONS RESULTING FROM OVARIAN DEFICIENCY SUCH AS SENILE VAGINITIS, KRAUROSIS VULVAE, PRURITUS VULVAE, AND IN PROMOTING SEXUAL DEVELOPMENT IN CASES OF INFANTILISM WHERE THE DESIRED EFFECTS FROM THE USE OF THE GONADOTROPIC HORMONES HAVE BEEN DISAPPOINTING.
Claims use since Mar. 17, 1944.

Ser. No. 515,138. SUN CHEMICAL CORPORATION, New York, N. Y. Filed Dec. 31, 1946.

WARCOFIX

FOR QUATERNARY ORGANIC MATERIAL FOR USE IN THE PROCESSING OF TEXTILES, PARTICULARLY AS A FIXATIVE FOR DYESTUFFS.
Claims use since Aug. 14, 1946.

Ser. No. 520,131. WILLIAM P. WANNEMACHER, doing business as Wannemacher Mfg. Co., Bloomington, Ill. Filed Apr. 3, 1947.

WAN-NA-TIN

The lining is solely for the purpose of designating shading. Applicant disclaims the syllable "Tin" apart from the mark.
FOR TINNING LIQUID FOR USE IN BONDING TIN, LEAD, AND SOLDER TO OTHER METALS.
Claims use since Apr. 5, 1941.

CLASS 13

HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES

Ser. No. 525,722. WARREN WEBSTER & COMPANY, Camden, N. J. Filed July 2, 1947. Under 10-year proviso.

Webster

FOR PLUMBING AND STEAM FITTING SUPPLIES—NAMELY, VALVES FOR STEAM AND HOT WATER CONDUITS, APERTURED DISC-LIKE ORIFICE DEVICES FOR CONTROLLING THE FLOW OF STEAM IN STEAM HEATING SYSTEMS, TRAPS, STRAINERS, PIPE FITTINGS, FITTINGS FOR ACCUMULATING WATER IN CONDUITS CONNECTING STEAM MAINS TO THE DIAPHRAGMS OF PRESSURE REDUCING VALVES, FITTINGS FOR STEAM BOILERS TO PREVENT EXCESSIVE DROP OF THE WATER LEVEL THEREIN, STEAM FITTINGS FOR BREAKING THE VACUUM AT A PREDETERMINED POINT IN STEAM SYSTEMS, EXPANSION JOINTS, OIL SEPARATORS.
Claims use since Jan. 1, 1888.

CLASS 19

VEHICLES

Ser. No. 499,059. THE KARRIALL COMPANY, Chicago, Ill. Filed Mar. 27, 1946.

KAMPER

FOR CAMPING AND HOUSING TRAILERS FOR USE WITH AUTOMOBILES.
Claims use since Dec. 1, 1944.

Ser. No. 505,590. KAISER-FRAZER CORPORATION, Willow Run, Mich. Filed July 13, 1946.

The lining represents the colors black and green which are an integral part of the mark.
FOR PASSENGER AUTOMOBILES.
Claims use since Jan. 17, 1946.

CLASS 20

LINOLEUM AND OILED CLOTH

Ser. No. 525,038. W. & J. SLOANE, New York, N. Y. Filed June 27, 1947. Under 10-year proviso.

SLOANE

FOR LINOLEUM, OIL CLOTH AND FELT BASE FLOOR, WALL, SHELF, AND FURNITURE COVERING, SOLD BY THE YARD OR CUT INTO RUGS, MATS, OR TILES, AND COMPOSITION FLOOR TILES OF LINOLEUM OR OTHER MATERIAL.
Claims use since 1855.

CLASS 21

ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES

Ser. No. 486,621. JOSEPH W. JONES, New York, N. Y. Filed Aug. 2, 1945.

Motrola

FOR ELECTRIC MOTORS FOR WINDING PHONOGRAPH SPRING MOTORS.
Claims use since Dec. 27, 1915.

CLASS 26

MEASURING AND SCIENTIFIC APPLIANCES

Ser. No. 498,562. WILLSON PRODUCTS, INC., Reading, Pa. Filed Mar. 19, 1946.

FOR OPHTHALMIC MOUNTINGS AND PARTS THEREOF.
Claims use since 1870.

CLASS 28

JEWELRY AND PRECIOUS-METAL WARE

Ser. No. 500,840. SPAULDING & COMPANY, Chicago, Ill. Filed Apr. 24, 1946.

The trade-mark consists of a right angle triangle in solid color, with the hypotenuse thereof extending obliquely with respect to the container to which the trade-mark is applied. The mark is often applied to the top left-hand corner of a rectangular container for the goods.
FOR JEWELRY FOR PERSONAL WEAR (NOT INCLUDING WATCHES)—NAMELY, FINGER RINGS, BRACELETS, ANKLETS, EARRINGS, EAR CLIPS, NECKLACES, PINS, CLIPS, AND COSTUME JEWELRY: DIAMONDS AND OTHER PRECIOUS AND SEMI-PRECIOUS STONES, NATURAL AND CULTURED PEARLS; AND THE FOLLOWING GOODS MADE OF GOLD, SILVER, PLATINUM, OR PALLADIUM, OR ORNAMENTED WITH SAME: TABLE CUTLERY, TABLE PLACE-SETTINGS, TABLE FLATWARE, TABLE CARVING SETS, PLAQUES, TRAYS, DOUBLE DISHES, PICTURE FRAMES, BOWLS, VASES, ASH TRAYS, CANDLESTICKS, PITCHERS, SALT AND PEPPER SHAKERS, PEPPER MILLS, CUPS, THIMBLES, AND TOILET SETS.
Claims use since Oct. 1, 1932.

Ser. No. 521,661. GUILD ARTS & CRAFTS, INC., Richmond Hill, N. Y. Filed May 1, 1947.

LIFETIME

FOR ROSARIES.
Claims use since Feb. 4, 1946.

CLASS 36

MUSICAL INSTRUMENTS AND SUPPLIES

Ser. No. 513,279. VALCO MANUFACTURING COMPANY, Chicago, Ill. Filed Nov. 26, 1946.

CLASS 1

RAW OR PARTLY PREPARED MATERIALS

Reg. No. 83,571. Registered Sept. 26, 1911. A. F. GALLUN & Sons, Milwaukee, Wis. Republished by A. F. Gallun & Sons Corporation, Milwaukee, Wis., a corporation of Delaware.

AZTEC

FOR VEGETABLE-TANNED LEATHER MADE OF CALF, KIP, AND CATTLE HIDES.
Claims use since July 1, 1898.

Reg. No. 83,572. Registered Sept. 26, 1911. A. F. GALLUN & Sons, Milwaukee, Wis. Republished by A. F. Gallun & Sons Corporation, Milwaukee, Wis., a corporation of Delaware.

DOMINO

FOR CHROME-TANNED LEATHER MADE OF CALF, KIP, AND CATTLE HIDES.
Claims use since Apr. 24, 1905.

Reg. No. 201,715. Registered Aug. 4, 1925. PEABODY LEATHER COMPANY, INC., Quakertown, Pa. Republished by McAdoo & Allen Welting Co., Quakertown, Pa., a corporation of Pennsylvania.

PELCO

FOR LEATHERS.
Claims use since January 1923.

Reg. No. 281,588. Registered Mar. 24, 1931. A. F. GALLUN & SONS CORPORATION, Milwaukee, Wis., a corporation of Delaware. Republished by registrant.

ESKIMO

FOR LEATHER.
Claims use since December 1924.

Reg. No. 285,045. Registered July 14, 1931. GENERAL COAL COMPANY, Cincinnati, Ohio, a corporation of Delaware. Republished by registrant, present address Philadelphia, Pa.

The words "Old Kentucky" are disclaimed apart from the mark as shown.
FOR COAL.
Claims use since July 1, 1930.

Reg. No. 294,750. Registered June 7, 1932. SEMET-SOLVAY COMPANY, New York, N. Y. Republished by Semet-Solvay Company, New York, N. Y., a corporation of New York, now by merger Allied Chemical & Dye Corporation, a corporation of New York.

SEMET-SOLVAY

The words "There is no Better Fuel Than" and "Coke" are disclaimed apart from the mark as shown.
FOR COKE.
Claims use since Nov. 2, 1931.

Reg. No. 296,844. Registered Aug. 23, 1932. STONEGA COKE & COAL COMPANY, Philadelphia, Pa., a corporation of Delaware. Republished by registrant.

PREMIX
STOKER

The word "Stoker" is disclaimed apart from the mark as shown.
FOR COAL.
Claims use since Mar. 19, 1932.

Reg. No. 297,477. Registered Sept. 13, 1932. STONEGA COKE & COAL COMPANY, Philadelphia, Pa., a corporation of Delaware. Republished by registrant.

DENDRON

FOR COAL.
Claims use since May 5, 1932.

Reg. No. 298,042. Registered Oct. 11, 1932. THE SPONGE RUBBER PRODUCTS COMPANY, Derby, Conn., a corporation of Connecticut. Republished by registrant, present address Shelton, Conn.

Rub-a-glo

FOR RUBBER SPONGES.
Claims use since on or about June 2, 1932.

Reg. No. 316,123. Registered Aug. 14, 1934. A. F. GALLUN & SONS CORPORATION, Milwaukee, Wis., a corporation of Delaware. Republished by registrant.

BAGUETTE

FOR LEATHER.
Claims use since Apr. 3, 1933.

Reg. No. 391,197. Registered Oct. 28, 1941. PRODUCERS' CROP IMPROVEMENT ASSOCIATION, Piper City, Ill., a corporation of Illinois. Republished by registrant.

The words "Producers' Certified Hybrids" and the representation of the map are disclaimed apart from the mark as shown. The drawing is lined for the colors red and blue.
FOR FIELD SEEDS AND HYBRID SEED CORN.
Claims use since December 1940.

CLASS 3

BAGGAGE, ANIMAL EQUIPMENTS, PORTFOLIOS, AND POCKETBOOKS

Reg. No. 237,055. Registered Jan. 3, 1928. NORTH & JUDD MANUFACTURING COMPANY, New Britain, Conn., a corporation of Connecticut. Republished by registrant.

FOR ACCESSORIES FOR HARNESS AND SADDLERY OF ALL KINDS—NAMELY, BUCKLES, SPRING-LEVER BUCKLES, SLIDE BUCKLES, PATENT-LEVER BUCKLES, BUCKLES FOR WEB STRAPS, BUCKLES FOR SKI STRAPS, GROMMETS AND WASHERS, WEB STRAP TIPS, BELT BUCKLES, WITH ROLLING BAR, BELT BUCKLES WITH ADJUSTABLE CAM LEVER, REPAIR BUCKLES, QUICK-RELEASE BUCKLES, BUCKLE PARTS, BLANKET BUCKLES, TRACE BUCKLES, DOUBLE-GRIP-BUCKLE PARTS COMPRISING SCREW BAILS AND TONGUES, BRIDLE BUCKLES, CINCH BUCKLES, LEGGING BUCKLES, SHIELD REVERSE BUCKLES, TUG BUCKLES, BAGGAGE BUCKLES, REIN BUCKLES, SNAPS, BAG SNAPS, SWIVEL BAG SNAPS, BLANKET SNAPS, TRIGGER SNAPS, HUBBARD SNAPS, SWIVEL-EYE CHAIN SNAPS, LOOP SNAPS, BOLT SNAPS, SWIVEL-EYE SNAPS, OPEN-EYE SNAPS; HINGED-EYE BOLT SNAPS, DOUBLE BOLT SNAPS, SAFEGUARD SNAPS, SWIVEL-EYE SAFEGUARD SNAPS, HARNESS SNAPS, BIT, MUZZLE, AND BREECHING SNAPS; ROPE SNAPS, D RINGS AND CLASPS, TEAMSTER SNAPS; TEAMSTER SNAPS, RIGHTS AND LEFTS; CHOKE SNAPS, CHOKE SNAPS WITH SCREW AND ROLLER; CHOKE SNAPS, SWIVEL PATTERN WITH SCREW AND ROLLER; NECK-YOKE SNAPS WITHOUT ROLLER AND WITH LOOSE RIVET, BREAST-STRAP ROLLER SNAPS, SNAPS AND SLIDES, CHAIN SNAPS, BREAST-CHAIN SNAPS, BREAST-CHAIN SNAPS WITH OSCILLATING SLIDE, BREAST CHAINS AND SNAPS, HEEL CHAINS AND SNAPS, CHAIN-REPAIR LINKS, RINGS, RING TONGUES, D'S, POLE-STRAP D'S, BREECHING D'S, REPAIR D'S, CINCH RINGS AND D'S, CHEEK D'S; HARNESS LOOPS; HARNESS LOOPS, TWO FOLD; LOOPS, HITCH STRAP, SHAFT TUG, ETC.; LAYER LOOPS, TRACE LOOPS, SPREAD LOOPS, SQUARES, TUCK LOOPS, TERRETS, TERRETS AND HOOKS, COLLARS AND SOFT-PAD TERRETS, SAFETY CHECK HOOKS, PAD HOOKS, POST HOOKS, TURN-BACK HOOKS, EXPRESS HOOKS, PAD SCREWS, PAD-PLATE SCREWS, SELF-ADJUSTING TREES, GIG SADDLE TREES, PAD BRIDGES, BEARER LOOPS, BACK-BAND LOOPS, GIG SADDLE CLIPS AND D'S, GAG SWIVELS, METAL ORNAMENTS FOR SADDLERY AND HARNESS; HALTER HARDWARE COMPRISING HALTER BOLTS, SWIVELS, COMBINED LOOPS AND RINGS, ROPE CLAMPS AND RINGS, ROPE TIE ADJUSTERS, ROPE THIMBLES, ROPE HALTER SETS AND WEB HALTER TRIMMINGS, AND BRIDLE AND HALTER SQUARES; HAMES AND HAME TRIMMINGS AND ATTACHMENTS AND REPAIR PARTS COMPRISING HAMES, HAME BALLS, HAME FASTENERS, HAME TERRETS, HAME BOTTOM LOOPS, HAME-REPAIR CLIPS, HAME STAPLES, HAME LINE RINGS AND STUDS, HAME CLIPS, HAME ATTACHMENTS, HOOKS FOR HAMES, RATCHETS FOR HAMES, HAME TUG PLATES; COCKEYES, COCKEYE CLIPS, STEEL CLIPS, TRACE CLIPS, TOGGLES, JOINTED TRACE CONNECTERS, TRACE HOOKS, TUG HOOKS, HOOKS AND D'S, TRACE D'S, CLEVISES, TRACE SPLICES, BREECHING LOOPS, TRACE LOOPS, JOCKEY-STRAP LOOPS AND RINGS, TRACE SUPPORTERS, BREAST-STRAP SLIDES, BACKBAND HOOKS, TRACE CARRIERS, TRACE CARRIERS AND RUMP RINGS, BITS, SNAFFLES, REIN CHAINS, CURB CHAINS, SPURS, SPUR ROWELS, SPUR STRAPS, STIRRUPS, BUCKLE SHIELDS, COLLAR FASTENERS, HONDA OR LASSO RINGS, REIN BILLET STEELS, COLLAR STRAP SLIDES, REIN SLIDES, REIN OR SATCHEL HOOKS, HAMMOCK D'S; REIN HOLDERS, MANE COMBS, SADDLE TRIMMINGS, BUTTONS; BLANKET HARDWARE COMPRISING D'S, SLIDES, LOOPS, CATCHES, FRONT SETS, CLASPS, HOOK AND EYE; HANDY HARDWARE ASSORTMENT FOR REPAIRS; TRUNK AND BAG HARDWARE COMPRISING BUCKLES, HANDLE LOOPS, WARDROBE-TRUNK DRAWER PULLS, SHAWL-STRAP HANDLES, AND D'S; DOG-COLLAR TRIMMINGS COMPRISING BUCKLES AND NAME PLATES; LEAD-REIN HOLDERS, DOUBLE EYE AND LOOP, STUD HOOKS, STIRRUP-STRAP LOOPS, BREAST-STRAP HOOKS, SIDE AND BACK STRAP HOOKS, SIDE LINE FASTENERS, LARIAT HOOK LINK AND THIMBLE; SLIDING KEEPERS FOR STRAP ENDS, CLIPS FOR STRAP ENDS, FASTENERS FOR APPLICATION TO STRAP ENDS, END HOOKS, SLING LOOPS, DOUBLE HOOKS, CHOKE STAPLES AND PLATES, AND KNAPSACK HARDWARE.
Claims use since Sept. 8, 1878.

Reg. No. 237,056. Registered Jan. 3, 1928. NORTH & JUDD MANUFACTURING COMPANY, New Britain, Conn., a corporation of Connecticut. Republished by registrant.

Claims use since Sept. 6, 1878.

CLASS 4

ABRASIVE, DETERGENT, AND POLISHING MATERIALS

Reg. No. 189,925. Registered Sept. 30, 1924. THE SOLVAY PROCESS COMPANY, Solvay, N. Y. Republished by The Solvay Process Company, New York, N. Y., a corporation of New York, now by merger Allied Chemical & Dye Corporation, a corporation of New York.

SUPER CLEANSER

The word "Cleanser" is disclaimed apart from the mark as shown.
FOR CHEMICAL CLEANSING AND WASHING COMPOUNDS.
Claims use since Nov. 27, 1922.

Reg. No. 193,830. Registered Jan. 6, 1925. THE SOLVAY PROCESS COMPANY, Solvay, N. Y. Republished by The Solvay Process Company, New York, N. Y., a corporation of New York, now by merger Allied Chemical & Dye Corporation, a corporation of New York.

SUPER-ALKALI

The word "Alkali" is disclaimed apart from the mark as shown.
FOR CLEANSING AND WASHING COMPOUNDS.
Claims use since Jan. 16, 1922.

Reg. No. 216,267. Registered Aug. 10, 1926. THE SOLVAY PROCESS COMPANY, Solvay, N. Y. Republished by The Solvay Process Company, New York, N. Y., a corporation of New York, now by merger Allied Chemical & Dye Corporation, a corporation of New York.

SNOW FLAKE

FOR CLEANSING PREPARATION USED EITHER AS A SUBSTITUTE FOR OR IN CONNECTION WITH SOAPS OR WASHING POWDERS.
Claims use since March 1894.

Reg. No. 251,982. Registered Jan. 22, 1929. EMERGENCY LABORATORIES, New York, N. Y. Republished by Block Drug Company, Inc., Jersey City, N. J., a corporation of New Jersey.

POSLAM

FOR SOAP.
Claims use since September 1910.

Reg. No. 267,770. Registered Feb. 25, 1930. THE SOLVAY PROCESS COMPANY, Solvay, N. Y. Republished by The Solvay Process Company, New York, N. Y., a corporation of New York, now by merger Allied Chemical & Dye Corporation, a corporation of New York.

SOLVAY

FOR PREPARATIONS USED AS CLEANSING AGENTS, PARTICULARLY FOR CLEANING METALS AND GLASS, FOR SCOURING TEXTILE MATERIALS, AND FOR LAUNDRY AND HOUSEHOLD CLEANSING.
Claims use since Jan. 31, 1884.

Reg. No. 273,181. Registered July 22, 1930. THE SOLVAY PROCESS COMPANY, Solvay, N. Y. Republished by The Solvay Process Company, New York, N. Y., a corporation of New York, now by merger Allied Chemical & Dye Corporation, a corporation of New York.

FOR ALKALI AND ALKALI-CARBONATE CLEANSING PREPARATIONS, PARTICULARLY FOR CLEANSING METALS AND GLASS AND FOR SCOURING TEXTILE MATERIALS.
Claims use since Jan. 10, 1884.

Reg. No. 288,094. Registered Oct. 20, 1930. THE SOLVAY PROCESS COMPANY, Solvay, N. Y. Republished by The Solvay Process Company, New York, N. Y., a corporation of New York, now by merger Allied Chemical & Dye Corporation, a corporation of New York.

SUPER DETERGENT

The word "Detergent" is disclaimed apart from the mark as shown in the drawing.
FOR CLEANSING AND SCOURING COMPOUND.
Claims use since Sept. 29, 1930.

Reg. No. 288,151. Registered Oct. 20, 1931. THE SOLVAY PROCESS COMPANY, Syracuse, N. Y. Republished by The Solvay Process Company, New York, N. Y., a corporation of New York, now by merger Allied Chemical & Dye Corporation, a corporation of New York.

No. 300

FOR PREPARATIONS USED AS CLEANSING AGENTS FOR GENERAL HOUSEHOLD AND INDUSTRIAL CLEANSING PURPOSES.
Claims use since Apr. 20, 1930.

Reg. No. 288,152. Registered Oct. 20, 1931. THE SOLVAY PROCESS COMPANY, Syracuse, N. Y. Republished by The Solvay Process Company, New York, N. Y., a corporation of New York, now by merger Allied Chemical & Dye Corporation, a corporation of New York.

No. 400

FOR PREPARATIONS USED AS CLEANSING AGENTS FOR GENERAL HOUSEHOLD AND INDUSTRIAL CLEANSING PURPOSES.
Claims use since July 1926.

Reg. No. 292,468. Registered Mar. 15, 1932. THE SOLVAY PROCESS COMPANY, Syracuse, N. Y. Republished by The Solvay Process Company, New York, N. Y., a corporation of New York, now by merger Allied Chemical & Dye Corporation, a corporation of New York.

FOR CLEANSING AND SCOURING COMPOUND AND FOR A CLEANING COMPOUND FOR REMOVING CASEIN AND MILKSTONE, PARTICULARLY FOR USE IN DAIRIES AND CREAMERIES.
Claims use since Jan. 1, 1927.

Reg. No. 293,169. Registered Apr. 12, 1932. THE SOLVAY PROCESS COMPANY, Syracuse, N. Y. Republished by The Solvay Process Company, New York, N. Y., a corporation of New York, now by merger Allied Chemical & Dye Corporation, a corporation of New York.

DOMINION

FOR PREPARATION USED AS CLEANSING AGENT, PARTICULARLY FOR CLEANING GLASS, FLOORS, DISHES, METAL ARTICLES, TEXTILE MATERIALS, AND THE LIKE; AND FOR GENERAL HOUSEHOLD AND INDUSTRIAL CLEANING PURPOSES ESPECIALLY IN DAIRIES, CREAMERIES, FACTORIES, HOTELS, RESTAURANTS, OFFICE BUILDINGS, HOSPITALS, BOTTLING PLANTS, LAUNDRIES, AND THE LIKE.
Claims use since July 1926.

Reg. No. 308,350. Registered Dec. 5, 1933. EASSON SOAP, INC., Portland, Oreg. Republished by Nu Bora Soap Company, Inc., Portland, Oreg., a corporation of Oregon.

NU BORA

FOR SOAP.
Claims use since Nov. 1, 1932.

Reg. No. 376,950. Registered Apr. 9, 1940. THE SOLVAY PROCESS COMPANY, New York, N. Y. Republished by The Solvay Process Company, New York, N. Y., a corporation of New York, now by merger Allied Chemical & Dye Corporation, a corporation of New York.

SUPERBILD

FOR CHEMICAL PREPARATION FOR USE AS A CLEANSING COMPOUND, PARTICULARLY FOR CLEANSING METALS AND GLASS AND FOR GENERAL INDUSTRIAL AND LAUNDRY PURPOSES.
Claims use since Sept. 28, 1939.

Reg. No. 407,215. Registered May 23, 1944. THE MATCHLESS METAL POLISH CO., Chicago, Ill., and Glen Ridge, N. J., a corporation of Illinois. Republished by registrant.

M.M. P.CO.

TRADE —X— MARK

CHICAGO GLEN RIDGE

The words "Trade-Mark," "Chicago," and "Glen Ridge" are disclaimed apart from the mark as shown.

FOR BUFFING AND POLISHING COMPOSITIONS USED ON METAL, GLASS, PLASTICS, ENAMEL, AND OTHER HARD SURFACES.

Claims use since January 1892.

CLASS 5

ADHESIVES

Reg. No. 191,504. Registered Nov. 11, 1924. BLAKE, MOFFITT & TOWNE, San Francisco, Calif., a corporation of California. Republished by registrant.

BLAKE, MOFFITT & TOWNE

PAPER

The word "Paper" is disclaimed apart from the mark as shown.

FOR PRINTING PAPER, CORRUGATED PAPER, BOND PAPER, BOOK PAPER, WRITING PAPER, MIMEOGRAPH PAPER, LEDGER PAPER, BLOTTING PAPER, COVER PAPER, ENVELOPES, CARDBOARD, GUMMED PAPER, WAX PAPER, TISSUE PAPER, ADDING MACHINE PAPER EITHER IN SHEETS OR ROLLS, PAPER NAPKINS, PAPER TOWELS, TOILET PAPER, CREPE PAPER, AND PAPER SEALING TAPE.

Claims use since about Feb. 15, 1901.

Reg. No. 198,672. Registered May 26, 1925. PHILADELPHIA QUARTZ COMPANY, Philadelphia, Pa., a corporation of Pennsylvania. Republished by registrant.

SEAL BRAND

The word "Brand" is disclaimed apart from the mark as shown.

FOR SILICATE OF SODA FOR ADHESIVE PURPOSES.

Claims use since Sept. 1, 1924.

CLASS 6

CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS

Reg. No. 67,880. Registered Feb. 25, 1908. STRAWSONS, London, England. Republished by The Strawson Chemical Co., Limited, London, England, a United Kingdom corporation.

VAPORITE

FOR INSECTICIDES.

Claims use since Apr. 7, 1903.

Reg. No. 88,968. Registered Oct. 29, 1912. THE SOLVAY PROCESS COMPANY, Solvay, N. Y. Republished by The Solvay Process Company, New York, N. Y., a corporation of New York, now by merger Allied Chemical & Dye Corporation, a corporation of New York.

FOR SODA ASH, CRYSTALS OF SODA, CAUSTIC SODA, MONOHYDRATE CRYSTALS, AND CALCIUM CHLORID.

Claims use since Jan. 10, 1884.

Reg. No. 99,030. Registered Aug. 11, 1914. JAMES T. WELLINGTON, Norwood, Mass. Republished by Wellington & Company, Inc., Norwood, Mass., a corporation of Massachusetts.

HERBLAX

FOR LAXATIVE PREPARATION.

Claims use since May 1, 1908.

Reg. No. 129,312. Registered Feb. 10, 1920. THE SOLVAY PROCESS COMPANY, Solvay, N. Y. Republished by The Solvay Process Company, New York, N. Y., a corporation of New York, now by merger Allied Chemical & Dye Corporation, a corporation of New York.

SOLVAY

FOR SODA ASH, CRYSTALS OF SODA, CAUSTIC SODA, MONOHYDRATE CRYSTALS, AND CALCIUM CHLORID.

Claims use since Jan. 31, 1884.

Reg. No. 168,395. Registered May 22, 1923. THE SOLVAY PROCESS COMPANY, Solvay, N. Y. Republished by The Solvay Process Company, New York, N. Y., a corporation of New York, now by merger Allied Chemical & Dye Corporation, a corporation of New York.

SNOW FLAKE

FOR SESQUICARBONATE OF SODA.

Claims use since March 1894.

Reg. No. 170,193. Registered July 10, 1923. ALFRED J. KRANK, St. Paul, Minn. Republished by Consolidated Royal Chemical Corporation, Chicago, Ill., a corporation of Delaware.

FIX-A-GLOSS

FOR HAIR DRESSING AND DANDRUFF REMEDY.

Claims use since Nov. 23, 1922.

Reg. No. 201,133. Registered July 21, 1925. J. B. ROSENFIELD, doing business as An-Fo Manufacturing Co., Oakland, Calif. Republished by An-Fo Manufacturing Co., Oakland, Calif., a partnership.

FLY-FOIL

FOR FLY SPRAY AND INSECTICIDE.

Claims use since Oct. 15, 1924.

Reg. No. 203,065. Registered Sept. 8, 1925. THE SOLVAY PROCESS COMPANY, Solvay, N. Y. Republished by The Solvay Process Company, New York, N. Y., a corporation of New York, now by merger Allied Chemical & Dye Corporation, a corporation of New York.

SNOW FLAKE

FOR CHEMICAL PREPARATION RECOMMENDED FOR CLEANSING, BLEACHING, AND SOFTENING OF HARD WATER.

Claims use since March 1894.

Reg. No. 232,650. Registered Sept. 13, 1927. THE C. CALLAHAN COMPANY, La Fayette, Ind., a corporation of Indiana. Republished by registrant.

MONEY-BACK

FOR AMMONIA, BAKING SODA, BAKING POWDER, BLUING, LAUNDRY STARCH, AND LYE.

Claims use since May 1, 1905.

Reg. No. 240,830. Registered Nov. 20, 1928. MARSWELL, INCORPORATED, Wantagh, N. Y. Republished by Plexo Preparations, Inc., New York, N. Y., a corporation of New York.

Myraphen

FOR PREPARATION FOR USE IN THE TREATMENT OF HEADACHE, BACKACHE, AND TOOTHACHE.

Claims use since June 16, 1928.

Reg. No. 288,309. Registered Oct. 27, 1931. THE SOLVAY PROCESS COMPANY, Syracuse, N. Y. Republished by The Solvay Process Company, New York, N. Y., a corporation of New York, now by merger Allied Chemical & Dye Corporation, a corporation of New York.

FOR CHEMICAL PREPARATION FOR USE AS A CREAM NEUTRALIZER.

Claims use since Apr. 18, 1930.

Reg. No. 289,052. Registered Nov. 17, 1931. THE SOLVAY PROCESS COMPANY, Syracuse, N. Y. Republished by The Solvay Process Company, New York, N. Y., a corporation of New York, now by merger Allied Chemical & Dye Corporation, a corporation of New York.

SOLVAY

FOR CHEMICAL PREPARATION FOR USE AS A CREAM NEUTRALIZER.

Claims use since Apr. 18, 1930.

Reg. No. 306,737. Registered Sept. 26, 1933. U. S. PHOSPHORIC PRODUCTS CORPORATION, New York, N. Y. Republished by Tennessee Corporation, New York, N. Y., and Atlanta, Ga., a corporation of New York.

WHITE BAND

FOR INSECTICIDES.

Claims use since Apr. 8, 1933.

Reg. No. 324,724. Registered May 28, 1935. JOHN WAGNER & SONS, Philadelphia, Pa., a firm. Republished by registrant.

FISHERS

FOR ORANGE BITTERS.

Claims use since about March 1877.

Reg. No. 370,452. Registered Aug. 29, 1939. THE SOLVAY PROCESS COMPANY, New York, N. Y. Republished by The Solvay Process Company, New York, N. Y., a corporation of New York, now by merger Allied Chemical & Dye Corporation, a corporation of New York.

Para-Baco

FOR INSECTICIDES AND FUNGICIDES.
Claims use since Dec. 6, 1938.

Reg. No. 370,453. Registered Aug. 29, 1939. THE SOLVAY PROCESS COMPANY, New York, N. Y. Republished by The Solvay Process Company, New York, N. Y., a corporation of New York, now by merger Allied Chemical & Dye Corporation, a corporation of New York.

The expression "Para" per se is disclaimed.
FOR INSECTICIDES AND FUNGICIDES.
Claims use since Dec. 6, 1938.

Reg. No. 375,563. Registered Feb. 20, 1940. THE SOLVAY PROCESS COMPANY, New York, N. Y. Republished by The Solvay Process Company, New York, N. Y., a corporation of New York, now by merger Allied Chemical & Dye Corporation, a corporation of New York.

ANCHOR BRAND

The word "Brand" is disclaimed per se.
FOR CAUSTIC SODA.
Claims use since April 1923.

Reg. No. 403,023. Registered Aug. 31, 1943. PRINTING ARTS RESEARCH LABORATORIES, INC., Santa Barbara, Calif., a corporation of Delaware. Republished by registrant.

FLUOROGRAPHIC

No claim is made to the mark for goods involving fluorography.

FOR CHEMICAL PREPARATIONS FOR INCORPORATION INTO, OR APPLICATION TO, AN ARTIST'S DRAWING ON PAPER TO RENDER THE WORK AREAS OF THE DRAWING ABSORBENT OF ULTRAVIOLET LIGHT WHEREBY TO ADAPT THE DRAWING FOR REPRODUCTION BY A PHOTOENGRAVING PROCESS WHEREIN THE HIGHLIGHT AREAS ON THE NEGATIVE ARE CLEARED OF SCREEN PATTERN BY EXPOSURE TO ULTRAVIOLET LIGHT REFLECTED BY THE NON-WORK AREAS OF THE DRAWING, SAID PREPARATIONS BEING IN THE FOLLOWING FORMS: (a) A LIQUID PREPARATION (DEVOID OF ANY FLUORINE OR FLUORINE COMPOUND), CONTAINING ULTRAVIOLET LIGHT ABSORBENT MATERIAL, TO BE MIXED WITH A PIGMENT TO FORM AN ARTIST'S WASH FOR MAKING THE PAPER DRAWING TO BE REPRODUCED; (b) A SOLID PREPARATION (DEVOID OF ANY FLUORINE OR FLUORINE COMPOUND) IN CRAYON OR PENCIL FORM, CONTAINING AN ARTIST'S PIGMENTING MATERIAL AND ULTRAVIOLET LIGHT ABSORBENT MATERIAL, FOR MAKING THE PAPER DRAWING TO BE REPRODUCED; AND (c) A LIQUID PREPARATION (DEVOID OF ANY FLUORINE OR FLUORINE COMPOUND), COMPRISING A SOLVENT FOR ULTRAVIOLET LIGHT ABSORBENT MATERIAL, FOR APPLICATION TO THE PAPER DRAWING TO BE REPRODUCED.
Claims use since Feb. 1, 1939.

Reg. No. 410,079. Registered Nov. 7, 1944. KATZ DRUG COMPANY, Kansas City, Mo., a corporation of Missouri. Republished by registrant.

FOR ASPIRIN, IRON AND YEAST, MEDICINAL MINERAL OIL, COD LIVER OIL, MILK OF MAGNESIA, ANALGESIC BALM, AND ZINC OXIDE OINTMENT.
Claims use since Mar. 1, 1944.

Reg. No. 422,017. Registered June 25, 1946. JERRY C. TOTZKA, doing business as Drug Industries Co., Detroit, Mich. Republished by registrant.

AL-VITE

FOR VITAMIN CAPSULES.
Claims use since Jan. 1, 1944.

Reg. No. 428,678. Registered Apr. 1, 1947. THOMPSON-HAYWARD CHEMICAL COMPANY, Kansas City, Mo., a corporation of Missouri. Republished by registrant.

FEEDRI

The capitalized "F" and "D" and the word "DRI" are disclaimed apart from the mark as shown.
FOR VITAMIN CONCENTRATE TO BE INCORPORATED IN POULTRY AND LIVESTOCK FEED.
Claims use since Sept. 9, 1941.

Reg. No. 434,925. Registered Dec. 9, 1947. THOMPSON CHEMICAL COMPANY, Pawtucket, R. I., a copartnership. Republished by registrant.

FOR MATERIALS FOR COLORING LOW SPOTS ON BALLS OR ROLLERS OF BEARINGS AS A GUIDE FOR GRINDING—NAMELY, BEARING BLUE.
Claims use since Oct. 31, 1924.

CLASS 7

CORDAGE

Reg. No. 384,335. Registered Jan. 14, 1941. WESTERN (ILLINOIS) VENETIAN BLIND COMPANY, Chicago, Ill. Republished by Westerngrade, Incorporated, Chicago, Ill., a corporation of Delaware.

WESTERNGRADE

FOR VENETIAN BLINDS, INCLUDING PARTS AND REPLACEMENTS THEREFOR, SPECIFICALLY LUMBER SECTIONS, HARDWARE, CORDS, AND TAPES.
Claims use since about Feb. 15, 1939.

CLASS 9

EXPLOSIVES, FIREARMS, EQUIPMENTS, AND PROJECTILES

Reg. No. 242,120. Registered May 15, 1928. SAFETY MINING COMPANY, Chicago, Ill. Republished by Cardox Corporation, Chicago, Ill., a corporation of Illinois.

CARDOX

FOR EXPLOSIVES.
Claims use since Nov. 19, 1927.

CLASS 10

FERTILIZERS

Reg. No. 396,471. Registered July 21, 1942. PLANTERS COTTON OIL & FERTILIZER CO., Rocky Mount, N. C., a corporation of Delaware. Republished by registrant.

PLANTERS "Controlled" FERTILIZERS

The words "Planters" and "Fertilizers" are disclaimed apart from the mark as shown.
FOR FERTILIZERS.
Claims use since Mar. 1, 1934.

CLASS 11

INKS AND INKING MATERIALS

Reg. No. 327,698. Registered Sept. 3, 1935. THE SHERWIN-WILLIAMS COMPANY, Cleveland, Ohio, a corporation of Ohio. Republished by registrant.

PERMANSA

FOR INK PIGMENTS, PRINTING INKS, AND LITHOGRAPHING INKS.
Claims use since Aug. 24, 1933.

CLASS 12

CONSTRUCTION MATERIALS

Reg. No. 252,059. Registered Jan. 22, 1929. E. D. CODDINGTON MANUFACTURING COMPANY, North Milwaukee, Wis., a corporation of Wisconsin. Republished by registrant.

Cedartex

FOR PLASTER.
Claims use since on or about Feb. 1, 1926.

Reg. No. 302,732. Registered Apr. 25, 1933. FARLEY & LOETSCHER MANUFACTURING COMPANY, Dubuque, Iowa, a corporation of Iowa. Republished by registrant.

FARLITE

FOR DOORS, STRUCTURAL PANELS, PANEL STOCK, MOLDINGS, BUILDING TRIM, VENEERING; VENEERED STOCK IN SHEET, BOARD, AND STICK FORM; LUMBER IN SHEET, BOARD, AND STICK FORM, INCLUDING NATURAL, ARTIFICIAL, AND COMPOUND LUMBER; SUCH PRODUCTS BEING USUALLY TREATED WITH OR CONSTRUCTED WITH A SYNTHETIC RESIN CONDENSATION PRODUCT.
Claims use since Sept. 6, 1932.

Reg. No. 395,849. Registered June 16, 1942. META-FOLD AWNING COMPANY, Bluffton, Ohio. Republished by The Acklin Stamping Company, Toledo, Ohio, a corporation of Ohio.

Meta-Fold

The word "Fold" is disclaimed apart from the mark as shown.
FOR METAL AWNINGS.
Claims use since July 1940.

CLASS 13

HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES

Reg. No. 27,975. Registered Mar. 17, 1896. LOUIS SACKS, Newark, N. J. Republished by Sacks-Barlow Foundries, Inc., Newark, N. J., a corporation of New Jersey.

The word "Boston" or other name indicating a special brand of heel-plate and such additional printed matter are disclaimed apart from the mark as shown.
FOR HEEL-PLATES FOR BOOTS OR SHOES.
Claims use since Jan. 1, 1891.

Reg. No. 56,506. Registered Oct. 2, 1906. LOUIS SACKS, Newark, N. J. Republished by Sacks-Barlow Foundries, Inc., Newark, N. J., a corporation of New Jersey.

STAR

FOR HEEL PLATES FOR BOOTS AND SHOES.
Claims use since Sept. 20, 1886.

Reg. No. 384,335. Registered Jan. 14, 1941. WESTERN (ILLINOIS) VENETIAN BLIND COMPANY, Chicago, Ill. Republished by Westerngrade, Incorporated, Chicago, Ill., a corporation of Delaware.

WESTERNGRADE

FOR VENETIAN BLINDS, INCLUDING PARTS AND REPLACEMENTS THEREFOR, SPECIFICALLY LUMBER SECTIONS, HARDWARE, CORDS, AND TAPES.
Claims use since about Feb. 15, 1939.

Reg. No. 432,221. Registered Aug. 26, 1947. HOUSTON OIL FIELD MATERIAL COMPANY, INC., Houston, Tex., a corporation of Delaware. Republished by registrant.

HOMCO

FOR STEEL FITTINGS—NAMELY, NIPPLES, BULL PLUGS, T's, ELBOWS, CROSSES, OIL WELL VALVES.
Claims use since on or about June 1, 1945.

CLASS 15

OILS AND GREASES

Reg. No. 312,707. Registered May 8, 1934. STANDARD OIL CO., Louisville, Ky., a corporation of Kentucky. Republished by registrant.

NO. 5

FOR CYLINDER OIL.
Claims use since 1901.

CLASS 16

PAINTS AND PAINTERS' MATERIALS

Reg. No. 118,009. Registered Aug. 14, 1917. THE DUQUESNE PAINT COMPANY, Pittsburgh, Pa. Republished by W. W. Lawrence & Company, Pittsburgh, Pa., a corporation of Pennsylvania.

DU-KANE

FOR READY-MIXED AND PASTE PAINT.
Claims use since Mar. 7, 1917.

Reg. No. 198,680. Registered May 26, 1925. GOLDEN STAR POLISH MANUFACTURING COMPANY, Kansas City, Mo., a corporation of Missouri. Republished by registrant.

GOLDEN STAR

FOR POLISH INCIDENTALLY POSSESSING CLEANING PROPERTIES FOR FURNITURE, PIANOS, SEWING MACHINES, CARRIAGES, AND AUTOMOBILE BODIES.
Claims use since Jan. 1, 1901.

Reg. No. 261,568. Registered Sept. 17, 1929. VALENTINE & COMPANY, New York, N. Y. Republished by Valentine & Company, Inc., New York, N. Y., a corporation of Delaware.

The drawing is lined to indicate the colors brown, yellow, red, green, and blue which are claimed as features of the mark. The representation of the label is disclaimed apart from the mark as shown.
FOR READY-MIXED PAINTS.
Claims use since Jan. 30, 1929.

Reg. No. 328,647. Registered Apr. 23, 1935. THE SHERWIN-WILLIAMS COMPANY, Cleveland, Ohio, a corporation of Ohio. Republished by registrant.

SOLFAST

FOR PAINTS (READY MIXED, PASTE FORM AND DRY), PAINT ENAMELS, LACQUERS, VARNISHES, STAINS, AND PAINT, ENAMEL, VARNISH, AND LACQUER FILLERS.
Claims use since Dec. 6, 1934.

CLASS 17

TOBACCO PRODUCTS

Reg. No. 80,061. Registered Nov. 1, 1910. KUHNELS & STERIFF, New York, N. Y., and Manila, P. I. Republished by Alhambra Cigar & Cigarette Manufacturing Company, Manila, P. I., a corporation of the Republic of the Philippines.

ALHAMBRA

FOR CIGARS AND CIGARETTES.
Claims use since Feb. 1, 1910.

Reg. No. 266,615. Registered Jan. 28, 1930. JOHN WAGNER & SONS, Philadelphia, Pa., a firm. Republished by registrant.

FOR CIGARS, CIGARETTES, AND SMOKING TOBACCO.
Claims use since Oct. 8, 1918.

Reg. No. 303,036. Registered May 9, 1933. JOHN WAGNER & SONS, Philadelphia, Pa., a firm. Republished by registrant.

MONTICELLO

FOR CIGARS, SMOKING TOBACCO, AND CIGARETTES.
Claims use since Oct. 28, 1929.

Reg. No. 435,331. Registered Dec. 16, 1947. W. P. ALLEN, doing business as Irvin S. Cobb Cigar Co., Paducah, Ky. Republished by registrant.

IRVIN S. COBB

FOR CIGARS.
Claims use since at least as early as 1916.

CLASS 21

ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES

Reg. No. 180,349. Registered Feb. 26, 1924. THE LOUIS ALLIS COMPANY, Milwaukee, Wis., a corporation of Wisconsin. Republished by registrant.

L-A

FOR ELECTRIC MOTORS, GENERATORS, ROTARY CONVERTERS, INVERTED ROTARIES, FREQUENCY CHANGERS, CONTROLLERS, AND COMPENSATORS.
Claims use since about Sept. 1, 1922.

Reg. No. 183,269. Registered Apr. 29, 1924. THE LOUIS ALLIS COMPANY, Milwaukee, Wis., a corporation of Wisconsin. Republished by registrant.

FOR ELECTRIC MOTORS, GENERATORS, ROTARY CONVERTERS, INVERTED ROTARIES, FREQUENCY CHANGERS, CONTROLLERS, AND COMPENSATORS.
Claims use since about Sept. 1, 1922.

Reg. No. 191,628. Registered Nov. 11, 1924. THE LOUIS ALLIS COMPANY, Milwaukee, Wis., a corporation of Wisconsin. Republished by registrant.

MARK OF ALLIS EXCELLENCE

The words "Mark of Allis Excellence" are disclaimed apart from the mark as shown.
FOR ELECTRIC MOTORS, GENERATORS, ROTARY CONVERTERS, INVERTED ROTARIES, FREQUENCY CHANGERS, CONTROLLERS, AND COMPENSATORS.
Claims use since about Feb. 1, 1924.

Reg. No. 392,800. Registered Jan. 13, 1942. BULLDOG ELECTRIC PRODUCTS COMPANY, Detroit, Mich., a corporation of West Virginia. Republished by registrant.

Clampmatic

FOR CONTACTS FOR ELECTRICAL SWITCHES.
Claims use since on or about July 20, 1941.

Reg. No. 401,580. Registered May 25, 1943. P. R. MALLORY & CO., INC., Indianapolis, Ind., a corporation of Delaware. Republished by registrant.

ELKONIUM

FOR ELECTRIC CONTACTS.
Claims use since February 1929.

CLASS 22

GAMES, TOYS, AND SPORTING GOODS

Reg. No. 355,751. Registered Mar. 29, 1938. LESTER M. DAVIS, Tacoma, Wash. Republished by registrant.

FLEX-I-TROLL

FOR TROLLING SPINNERS.
Claims use since Feb. 1, 1936.

CLASS 23

CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF

Reg. No. 64,334. Registered Aug. 6, 1907. E. C. ATKINS AND COMPANY, Indianapolis, Ind., New York, N. Y., and elsewhere, a corporation of Indiana. Republished by registrant, present address Indianapolis, Ind.

EXCELSIOR

FOR TOOLS FOR FITTING SAWS.
Claims use since prior to Jan. 1, 1888.

Reg. No. 215,404. Registered July 20, 1926. AMERICAN ROAD MACHINERY COMPANY, INC., Kennett Square, Pa. Republished by Good Roads Machinery Corporation, Kennett Square, Pa., a corporation of Pennsylvania.

CLIMAX

FOR ROAD-GRADING MACHINES, ROCK CRUSHERS, ELEVATORS, CONVEYERS, SCREENS, AND STONE BINS.
Claims use since on or about Jan. 1, 1888.

Reg. No. 230,153. Registered July 12, 1927. E. C. ATKINS AND COMPANY, Indianapolis, Ind., a corporation of Indiana. Republished by registrant.

COLUMBIAN CAST STEEL WARRANTED COLUMBIAN SAW WORKS

FOR CIRCULAR SAWS OF ALL KINDS, BAND SAWS OF ALL KINDS, RIP AND PANEL SAWS, CROSSCUT SAWS, WOOD (BULK) SAWS, DRAG-SAWS, MACHINE KNIVES OF ALL KINDS, SHEAR BLADES FOR CUTTING METALS, CIRCULAR KNIVES, CORN KNIVES, CANE KNIVES, SCRAPER BLADES OF ALL KINDS, AND TROWELS.
Claims use since on or about July 1894.

Reg. No. 245,978. Registered Aug. 28, 1928. FARREL-BIRMINGHAM COMPANY, INCORPORATED, Ansonia, and Derby, Conn., and Buffalo, N. Y., a corporation of Connecticut. Republished by registrant.

BIRMINGHAM

FOR ROLLING MILLS, CHILLED-IRON ROLLS, GRAY-IRON ROLLS, CINDER GRINDERS, TIN-FOIL MACHINES, ASBESTOS MIXERS, ASBESTOS SHEETERS, HYDRAULIC ACCUMULATORS, BALANCE WHEELS, ROPE WHEELS, SHAFT COUPLINGS, SHAFTING, ROLL GRINDERS, BOARD CALENDERS, GEAR WHEELS, GEAR REDUCTIONS, HYDRAULIC RUBBER PRESSES, HOSE-MAKING MACHINES, SLAB MOLDS, RUBBER CALENDERS, RUBBER MIXERS, RUBBER GRINDERS, RUBBER REFINERS, RUBBER CRACKERS, WASHERS FOR CRUDE RUBBER AND SIMILAR MATERIALS, RUBBER-DOUBLING MACHINES, PHONOGRAPH-RECORD-BLANKING MILLS, PLATENS FOR RUBBER PRESSES, BELT PRESSES, MATTING PRESSES, HEEL PRESSES, TILING PRESSES; STEAM TABLES FOR HEATING RUBBER, RUBBER MOLDS, ETC.; EMBOSSING CALENDERS, LINOLEUM CALENDERS, LINOLEUM GRINDERS, LINOLEUM SCRATCHERS, CELLULOID GRINDERS, CELLULOID PRESSES, METAL CUTTING AND SLITTING MACHINES.
Claims use since 1891.

Reg. No. 248,759. Registered Oct. 30, 1928. THE BILLINGS & SPENCER COMPANY, Hartford, Conn. Republished by The Billings & Spencer Company (1928), Hartford, Conn., a corporation of Connecticut.

LIFE-TIME

FOR HAND TOOLS—NAMELY, WRENCHES, CHISELS, SCREW DRIVERS, PLIERS, AND HAMMERS.
Claims use since Apr. 1, 1926.

Reg. No. 299,803. Registered Nov. 29, 1932. RAPID ROLLER CO., Chicago, Ill., a corporation of Illinois. Republished by registrant.

The representation of the printer's roller is disclaimed separate and apart from the combination in mark as shown.
FOR PRINTERS' ROLLERS, COMPOSITION COATED ROLLERS, OFFSET AND LITHOGRAPH ROLLERS, ROTOGRAVURE ROLLERS, AND RUBBER ROLLERS.
Claims use since July 1918.

Reg. No. 362,136. Registered Nov. 15, 1938. L. O. BEARD TOOL COMPANY, Lancaster, Pa., a corporation of Pennsylvania. Republished by registrant.

BEARD

FOR REAMERS, PISTONS, PISTON PINS, VALVE GRINDERS, REAMER DRIVE MACHINES, RIDGE REAMERS, AXLE, WHEEL, AND BEARING PULLERS, PISTON PIN REMOVERS, REAMER AND BUSHING DRIVERS, AND VALVE RESEATING TOOLS.
Claims use since June 1, 1921.

Reg. No. 422,194. Registered July 9, 1946. EDWARD S. FIELDS, Morgantown, W. Va. Republished by registrant.

Buddy

FOR MINE OR TIMBER JACKS.
Claims use since Aug. 7, 1945.

Reg. No. 428,094. Registered Mar. 11, 1947. HOUSTON OIL FIELD MATERIAL COMPANY, INC., Houston, Tex., a corporation of Delaware. Republished by registrant.

HOMCO

FOR OIL WELL TOOLS AND PARTS THEREOF—NAMELY, CUTTERS AND CUTTING KNIVES, SUBS, BITS, SWAGES, SPEARS, OVERSHOTS, FISHING TOOLS, GUIDES FOR OVERSHOTS AND FISHING TOOLS, SHOES, MILLS AND MILLING TOOLS, FISHING TAPS AND BASKETS, BLOCKS, SAMPLERS, DRILLING AND CORING TOOLS, PACKERS, PLUGS, CEMENT RETAINERS, SETTING TOOLS, PERFORATORS, JARS, CLEANERS, BAILERS, JOINTS, COUPLINGS, CONNECTIONS; OIL WELL PUMPS; INTERNAL COMBUSTION ENGINES; DEHYDRATION PLANT EQUIPMENT FOR GAS WELLS AND PARTS THEREOF, COMPRISED OF DEHYDRATORS, CONTACTORS, HEAT-EXCHANGERS, HEATERS, CONDENSORS, AND SEPARATORS.
Claims use since on or about June 1, 1944.

Reg. No. 430,282. Registered June 10, 1947. PERFECUT Scissors Co., Oklahoma City, Okla., a firm. Republished by registrant.

PERFECUT

The representation of a pair of scissors is disclaimed apart from the mark as shown.
FOR SCISSORS.
Claims use since Jan. 8, 1946.

CLASS 27

HOROLOGICAL INSTRUMENTS

Reg. No. 285,956. Registered Aug. 11, 1931. ED. HAUER & CO. JULES JURGENSEN WATCH CO., Beinne, Switzerland. Republished by Jules Jurgensen Corporation, New York, N. Y., a corporation of New York.

JULES JURGENSEN

FOR HOROLOGICAL INSTRUMENTS, NOT INCLUDING WATCH SPRINGS.
Claims use since 1835.

Reg. No. 370,243. Registered Aug. 22, 1939. BENRUS WATCH COMPANY, INC., New York, N. Y., a corporation of New York. Republished by registrant.

SKY CHIEF

FOR WATCHES AND WATCHES AND ATTACHED BRACELETS SOLD AS A UNIT.
Claims use since Mar. 1, 1936.

CLASS 28

JEWELRY AND PRECIOUS-METAL WARE

Reg. No. 386,831. Registered Apr. 22, 1941. GOODMAN AND COMPANY, Indianapolis, Ind., a partnership. Republished by registrant.

RHODIGOLD

FOR FINGER RINGS.
Claims use since on or about Apr. 27, 1940.

Reg. No. 393,532. Registered Feb. 17, 1942. GOODMAN AND COMPANY, Indianapolis, Ind., a partnership. Republished by registrant.

RHODIGEM

FOR FINGER RINGS, NECKLACES, BRACELETS, EARRINGS, JEWELRY CLIPS, BROOCHES, AND LOCKETS.
Claims use since on or about Jan. 1, 1941.

Reg. No. 397,240. Registered Aug. 25, 1942. GOODMAN AND COMPANY, Indianapolis, Ind., a partnership. Republished by registrant.

GEM CREST

The word "Gem" is disclaimed apart from the mark as shown.
FOR FINGER RINGS, NECKLACES, BRACELETS, EARRINGS, JEWELRY CLIPS, BROOCHES, AND LOCKETS, NOT INCLUDING WATCHES.
Claims use since on or about Nov. 20, 1941.

CLASS 29

BROOMS, BRUSHES, AND DUSTERS

Reg. No. 52,852. Registered May 22, 1906. JOHN L. WHITING & SON CO., Boston, Mass. Republished by Whiting-Adams Company, Inc., Boston, Mass., a corporation of Massachusetts.

KRAKO

FOR BRUSHES OF ALL KINDS.
Claims use since about Jan. 1, 1884.

Reg. No. 391,913. Registered Dec. 2, 1941. OX FIBRE BRUSH COMPANY, INC., New York, N. Y., a corporation of Delaware. Republished by registrant.

OX

FOR STREET BRUSHES AND BROOMS.
Claims use since on or about Apr. 20, 1939.

Reg. No. 391,914. Registered Dec. 2, 1941. OX FIBRE BRUSH COMPANY, INC., New York, N. Y., a corporation of Delaware. Republished by registrant.

FOR STREET BRUSHES AND BROOMS.
Claims use since on or about Apr. 20, 1939.

Reg. No. 391,915. Registered Dec. 2, 1941. OX FIBRE BRUSH COMPANY, INC., New York, N. Y., a corporation of Delaware. Republished by registrant.

OX

FOR STREET BRUSHES AND BROOMS.
Claims use since about April 1939.

Reg. No. 431,452. Registered July 22, 1947. ATLANTIC SOUTHWESTERN BROOM COMPANY, Baltimore, Md., a corporation of Maryland. Republished by registrant.

Reg. No. 413,522. Registered May 1, 1945. THE SHERWIN-WILLIAMS COMPANY, Cleveland, Ohio, a corporation of Ohio. Republished by registrant.

Quali-Craft

FOR SILK SCREEN OUTFIT CONTAINING VARIOUS PAINTS, SILK SCREEN, PRINTING FRAME, PRINTING BASE, SQUEEGEE, STENCIL KNIFE, INSTRUCTOR HANDBOOK, GLUE, SHELLAC, AND OTHER MATERIALS REQUIRED IN THE SILK SCREEN PROCESS FOR PREPARING SIGNS AND OTHER ADVERTISING MATERIALS.
Claims use since on or about June 1941.

Reg. No. 433,236. Registered Sept. 30, 1947. AMERICAN MEDICAL GLASS COMPANY, Washington, D. C., a firm. Republished by registrant.

ORTHOGLAS

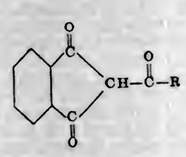
FOR IMPREGNATED GLASS FABRIC FOR FABRICATION OF ORTHOPEDIC APPLIANCES.
Claims use since Mar. 2, 1946.

REISSUES

JANUARY 25, 1949

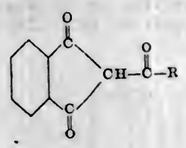
23,080
LETHAL COMPOSITION FOR INSECTS
Howard W. Eck, deceased, late of East Lansing, Mich., by Lowell B. Kilgore and Helen Ford Kilgore, Washington, D. C., assignees, and Jared H. Ford, Kalamazoo, Mich.
No Drawing. Original No. 2,310,949, dated February 16, 1943, Serial No. 266,035, April 4, 1939. Application for reissue August 8, 1947, Serial No. 767,602
20 Claims. (Cl. 167—24)

1. An insecticide comprising an insect-paralyzing agent intermixed with a compound of the type—



wherein R is a hydrocarbon radical, the compound serving to impart lethal qualities to the insecticide.

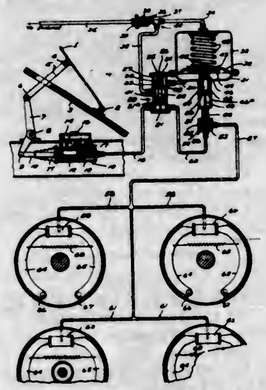
15. An insecticidal composition of matter comprising a compound of the type:



wherein R is alkyl containing at least 4 carbon atoms, the compound serving to impart lethal qualities to the composition, and a carrier therefor.

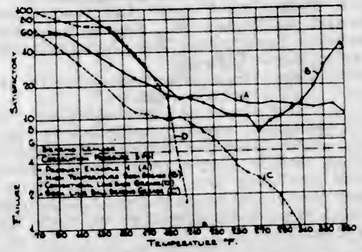
23,081
APPARATUS INCLUDING POWER UNIT FOR SETTING BRAKES
Edward A. Rockwell, Shaker Heights, Ohio, assignor to Electrofio Corporation, Cleveland, Ohio, a corporation of Delaware
Original No. 2,423,204, dated July 1, 1947, Serial No. 501,034, September 1, 1943. Application for reissue June 24, 1948, Serial No. 34,957
31 Claims. (Cl. 188—152)

1. In a device of the character described, a source of power, a wheel brake, manually operable means including a master cylinder having a piston provided with a seal, apparatus adapted to apply said power to substantially merely set the brake hydraulically, and means, including a double check valve, connecting the master cylinder with said apparatus so as to thereafter apply a manual hydraulic pressure on said wheel brake and to cut off the application of the power upon the brake while the manual pressure is being



applied and allow the return of the liquid through the double check valve to the master cylinder.

23,082
GREASE COMPOSITIONS
John C. Zimmer, Union, and Gordon W. Duncan, Westfield, N. J., assignors to Standard Oil Development Company, a corporation of Delaware
Original No. 2,444,970, dated July 13, 1948, Serial No. 570,785, December 30, 1944. Application for reissue September 25, 1948, Serial No. 51,132
10 Claims. (Cl. 252—33.2)



1. A grease composition comprising a mineral lubricating oil and sufficient of the complex reaction product of an oil-soluble metal salt of sulfonic acid, said acid having a combining weight of approximately 300 to 600, and a salt of an acid selected from the group consisting of low molecular weight aliphatic carboxylic acids, in which at least one cation in the above salts is polyvalent, to thicken the mineral oil to a grease consistency, said complex reaction product being produced by dissolving said sulfonate in said mineral oil and reacting said sulfonate with said salt in the presence of heat.

resistor in parallel, a fifth resistor connected at barrel having cylindrical bores therein substan-

PATENTS

GRANTED JANUARY 25, 1949

2,459,779
PERHALOTOLUENES
Waldo B. Ligett, Detroit, Mich., and Earl T. McBee, La Fayette, and Vincent V. Lindgren, West Lafayette, Ind., assignors to Purdue Research Foundation, West Lafayette, Ind., a corporation of Indiana
No Drawing. Application November 13, 1945, Serial No. 628,378
5 Claims. (Cl. 260—651)

1. A perhalo(trifluoromethyl)benzene containing chlorine and having at least one fluorine atom attached to the benzene ring.

2,459,780
ANELLATED POLYCARBOCYCLIC PERFLUOROCOMPOUNDS
Earl T. McBee, La Fayette, Ind., and Lavon D. Bechtol, Baltimore, Md., assignors to Purdue Research Foundation, West Lafayette, Ind., a corporation of Indiana
No Drawing. Application September 24, 1945, Serial No. 618,394
10 Claims. (Cl. 260—648)

1. A compound from the group consisting of saturated polycarbocyclic anellated and saturated lower-alkyl substituted polycarbocyclic anellated fluorocarbons wherein the number of rings is at least three and the number of shared carbon atoms is at least three, the total number of carbon atoms being from 8 to 22, inclusive.

2,459,781
ANELLATED FLUOROCARBONS
Earl T. McBee, La Fayette, Ind., and Lavon D. Bechtol, Baltimore, Md., assignors to Purdue Research Foundation, West Lafayette, Ind., a corporation of Indiana
No Drawing. Application September 24, 1945, Serial No. 618,395
5 Claims. (Cl. 260—648)

1. A compound selected from the group consisting of saturated dicarbocyclic anellated fluorocarbons and saturated alkyl-substituted dicarbocyclic anellated fluorocarbons in which the number of adjacent shared carbon atoms is three, the total number of carbon atoms being from 7 to 19, inclusive.

2,459,782
ANELLATED FLUOROCARBONS
Earl T. McBee, La Fayette, Ind., and Lavon D. Bechtol, Baltimore, Md., assignors to Purdue Research Foundation, West Lafayette, Ind., a corporation of Indiana
No Drawing. Application September 24, 1945, Serial No. 618,396
6 Claims. (Cl. 260—648)

1. A saturated alkyl-substituted dicarbocyclic anellated fluorocarbon containing from 9 to 18 carbon atoms, inclusive, in which the number of adjacent shared carbon atoms is two and wherein both rings contain six carbon atoms, the total number of carbon atoms in the rings being ten.

2,459,783
FLUORINATION OF UNSATURATED CYCLIC PERCHLORO COMPOUNDS
Earl T. McBee, La Fayette, and Park A. Wiseman, West Lafayette, Ind., assignors to Purdue Research Foundation, West Lafayette, Ind., a corporation of Indiana
No Drawing. Application November 30, 1945, Serial No. 632,104
15 Claims. (Cl. 260—648)

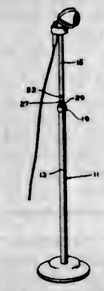
1. In a process for the preparation of a 1,2-dichlorofluorocycloalkene halocarbon, wherein the two chlorine atoms are attached to the two olefinic carbon atoms of the single double bond, the step which includes: treating an unsaturated cyclic chlorocarbon with antimony pentafluoride at a fluorinating temperature between about room temperature and about 250 degrees centigrade for a period of time sufficient to produce a 1,2-dichlorofluorocycloalkene halocarbon.

2,459,784
MILLIVOLT CONTROL UNIT
John W. Alderson, Oakland, Calif., assignor to the United States of America, as represented by the Secretary of War
Application August 10, 1943, Serial No. 498,049
4 Claims. (Cl. 315—116)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. In a remote control system comprising a radio transmitter, a remote radio receiver wherein incident modulated radiations from the transmitter are converted into a unidirectional current output, a device to be controlled remote from the transmitter and remote from the receiver, and a control device operative by variation in said unidirectional current output operatively connected to said device to be controlled; the improvement in said control device which comprises a gas-charged thermionic tube having at least an anode, a cathode and a control grid, first and second input leads from the unidirectional output of said receiver, a variable first resistor and a parallel second resistor of half the value of the first connected commonly between the grid and said first input lead, said first resistance bridging said leads and the grid having brush connection therewith, a variable third resistor connected in series between the said first lead and the cathode whereby said second resistor and part of the third are additionally in series between the grid and cathode, a fourth resistor connected to the third

resistor in parallel, a fifth resistor connected at one end between the third and fourth resistors and the cathode and in series with the cathode and the anode, and a sixth resistor and by-pass capacitor in series-parallel between the last-named fifth resistor and the anode, an alternating current anode supply having one terminal connected between the fifth and sixth resistors so that the sixth resistor and capacitor are in series parallel with the source and anode, another terminal of said source being connected at the outer ends of the said third and fourth resistors so that the latter are in series parallel with the source and cathode, and so that the third and fourth resistors at one side and the fifth resistor at the other are in series across the line with said source, a second thermionic tube having at least an anode, a cathode and a control grid, an anode-cathode current supply connected to said second tube, a current-operated part of the said device to be operated being connected in said anode-cathode circuit, the grid of the second tube being connected to the anode of the first tube, said variable resistors being adjusted to establish a grid-cathode relation critically near the potentials for firing the tube.

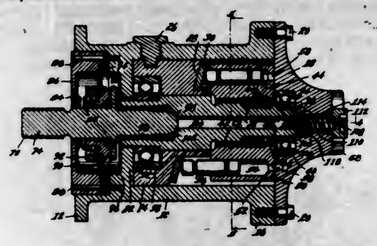
2,459,785
LOCKING DEVICE
Charles E. Allerton, Morrisville, Pa.
Application April 16, 1945, Serial No. 588,507
5 Claims. (Cl. 248—161)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



1. A locking device for telescopable tubes having cooperating cylindrical bearing surfaces, comprising a tapered circumferential recess between said tubes and extending into only one of said surfaces, said taper extending in a circumferential direction; an arcuate wedge-shaped friction slug disposed in said recess, said slug being wedged tightly between the base of said recess and one of said bearing surfaces when the tubes are in locked condition.

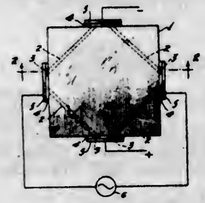
2,459,786
HYDRAULIC PRESSURE PUMP OR MOTOR
Bernard Beaman, Julius Hulman, and Robert A. Stein, Dayton, Ohio
Application March 12, 1945, Serial No. 582,376
13 Claims. (Cl. 103—162)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. In a hydraulic pressure pump or motor, a housing, a power shaft extending inside and outside of said housing, a barrel driving shaft secured to said power shaft and journaled in said housing, a barrel loosely mounted on said driving shaft and operatively connected thereto, said barrel having cylindrical bores therein substantially parallel to the axis of rotation of the barrel and its drive shaft, a piston in each of said bores, said barrel having one of its ends seated against an end of said housing, ports in said end of said barrel and communicating with said cylinder bores, a stationary cam in said housing having



a cam surface surrounding said barrel driving shaft and in the shape of a truncated cylinder end, said cam cooperating with said pistons to reciprocate them upon rotation of said barrel, and intake and discharge ports in said end of said housing for communicating with said cylinder ports of said barrel.

2,459,787
METAL RECTIFIER BRIDGE
Mortimer C. Bloom, Newton Highlands, Mass., assignor, by mesne assignments, to Federal Telephone and Radio Corporation, New York, N. Y., a corporation of Delaware
Application September 24, 1945, Serial No. 618,337
8 Claims. (Cl. 175—366)



1. A metal rectifier bridge unit comprising a body of insulating material, a plurality of metal rectifier elements, each having a rectifying portion and a conducting portion, disposed over different portions of the bounding surface of said body, the respective portions of each of said elements being connected by an extension of said conducting portion through said body, and connecting members connecting selected adjacent ones of said rectifier element portions to form a rectifier bridge construction.

2,459,788
FULL-WAVE RECTIFIER IN GLASS OR OTHER INSULATING CONTAINERS
Walter F. Bonner, Glen Ridge, N. J., assignor to Federal Telephone and Radio Corporation, New York, N. Y., a corporation of Delaware
Application February 23, 1946, Serial No. 649,605
3 Claims. (Cl. 175—366)

1. In a cartridge type electric current rectifying element of the type that comprises a stack of rectifier elements, a plurality of electrical conductors connected to certain elements of said stack; the improvements that comprise a tubular casing, open at the ends, formed of electrical insulat-

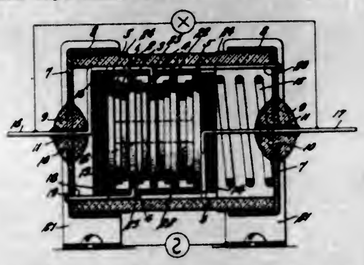
ing material and adapted to receive and surround said stack with the conductors extending at least

of metallic particles disposed, in random fashion, on said plate on the side thereof facing said

filamentary element having a segmental cross section and having electrically emissive and non-

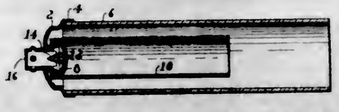
2,459,795
METHOD AND APPARATUS FOR ELECTRIC WELDING

ing material and adapted to receive and surround said stack with the conductors extending at least to the ends of said casing, said casing being provided with two external annular silver coatings integral therewith, one located near each end thereof; metallic cup-like terminal caps, one on each end of said casing, overlying and hermetically united with the adjacent external annular silver coating on the casing in a manner precluding rotation of the cap relative to the casing, each of said caps being connected to one of said con-



ductors; at least one of said caps having a centrally located opening formed therein, an insulative bead mounted in said opening and hermetically joined to the margin thereof, a metallic sleeve, open at the ends, mounted in said bead without contact with the cap in which the bead is positioned and extending in a direction substantially coaxial with the casing, whereby one of the conductors connected to the rectifier stack extends through and is hermetitcally sealed to said sleeve to provide an additional external terminal of the rectifier.

2,459,789
ELECTRODE CONSTRUCTION FOR NEON SIGNS
Thomas H. Briggs, Jr., Norristown, Pa., assignor to Superior Tube Company, Philadelphia, Pa., a corporation of Pennsylvania
Application August 21, 1946, Serial No. 692,099
2 Claims. (Cl. 176—126)



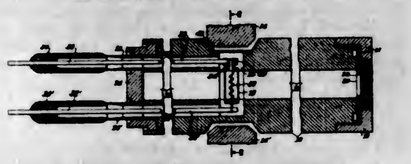
1. An electrode construction for gas discharge signs comprising a length of glass tubing, a cap of an alloy having substantially the same expansion characteristics as the glass tubing, said cap having a depressed central portion, and a tubular electrode within said glass tubing and having a portion of its inner surface secured to the depressed central portion of the cap.

2,459,790
INDICATING CATHODE-RAY TUBE
Henri G. Busignies, Forest Hills, N. Y., assignor to Federal Telephone and Radio Corporation, New York, N. Y., a corporation of Delaware
Application September 5, 1945, Serial No. 614,527
6 Claims. (Cl. 315—13)

1. A cathode ray tube comprising means for producing an electron beam, a fluorescent screen arranged in the path of said beam, a perforated plate of insulating material, said plate disposed between said means and said screen, a plurality of metallic particles disposed, in random fashion, on said plate on the side thereof facing said means, and means for conditioning said electrode

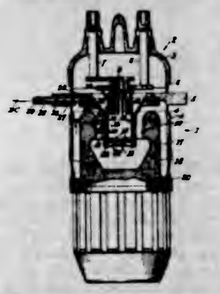
so as to permit the passage of electrons only through selected ones of the perforations in said plate.

2,459,791
VACUUM TUBE
Paul Georges Chevigny, New York, N. Y., and Carson McKeag Wheeler, Montclair, N. J., assignors to Federal Telephone and Radio Corporation, Newark, N. J., a corporation of Delaware
Application March 26, 1943, Serial No. 480,662
12 Claims. (Cl. 250—27.5)



1. An electron discharge device, including a hollow metal pipe formed with a transverse passage in one wall leading to its central bore and forming therewith a central cavity, and a pair of relatively smaller bores extending through its walls at an angle to said passage and communicating with said cavity, a cathode positioned within said cavity, cover means sealing the open end of said passage, a pair of cathode leads each attached at one end to said cathode and extending through said smaller bores outwardly of said pipe, means sealing the outer ends of said smaller bores and supporting said leads therein, a pair of magnets, one positioned on each side of said pipe in alignment with said cavity, and means sealing both ends of said pipe.

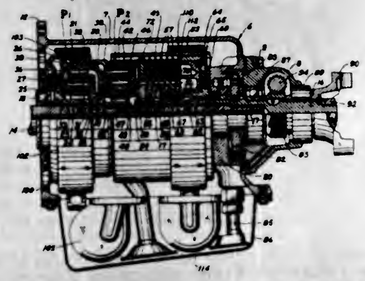
2,459,792
BEAM TYPE ELECTRON DISCHARGE DEVICE
Paul Georges Chevigny, New York, N. Y., assignor to Federal Telephone and Radio Corporation, New York, N. Y., a corporation of Delaware
Application July 8, 1944, Serial No. 544,053
7 Claims. (Cl. 250—27.5)



1. A beam type electron discharge device comprising an anode, a cathode and at least one control element, said element being mounted relative to and providing a clear path between said anode and cathode, said cathode being comprised of a

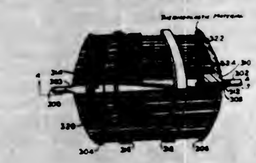
filamentary element having a segmental cross section and having electrically emissive and non-emissive surfaces, said emissive surfaces being flat and facing along the path and all of said non-emissive surfaces being away from said anode.

2,459,793
TRANSMISSION
Harold E. Churchill, South Bend, Ind., assignor to The Studebaker Corporation, South Bend, Ind., a corporation of Delaware
Application August 9, 1946, Serial No. 689,602
17 Claims. (Cl. 74—269)



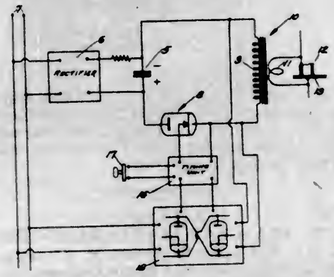
5. A transmission comprising a first planetary gear mechanism having three first elements, namely, a first sun gear, first single planet pinion means, and a first ring gear, a second planetary gear mechanism having three second elements, namely, a second sun gear, a second dual planet pinion means and a second ring gear, said first and second planet pinion means being connected together, said first ring gear and said second sun gear being connected together, first brake means associated with said first sun gear, second brake means associated with said second ring gear, and clutch means between one pair of the connected elements of said planetary gear mechanisms and another element of one of said planetary gear mechanisms.

2,459,794
SPHERICAL COIL FOR VARIOMETERS
Edward E. Combs, Long Branch, N. J.
Application September 12, 1945, Serial No. 615,910
1 Claim. (Cl. 175—359)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



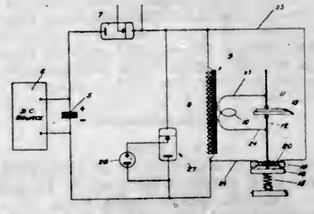
A spherical wire-coil for variometer comprising a plurality of wire-supporting ribs made of thermoplastic material forming a spherical support for said coil, a coil-forming wire thermally imbedded in and supported by said ribs, thermoplastic re-enforcing means extending inwardly from opposed ribs and a two-piece metallic shaft having threaded reduced end portions passing through said re-enforcing means and connected thereto and to the ends of said coil.

2,459,795
METHOD AND APPARATUS FOR ELECTRIC WELDING
John W. Dawson, West Newton, Mass., assignor to Raytheon Manufacturing Company, Newton, Mass., a corporation of Delaware
Application June 4, 1945, Serial No. 597,421
5 Claims. (Cl. 219—4)



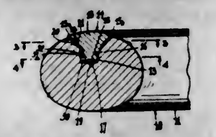
1. The method of welding two parts having rough surfaces in the areas at which the weld is to be effected which comprises bringing said surfaces of said parts into contact between the projecting high points of said surfaces and with a gap between intervening areas, passing a unidirectional impulse of current through said parts, said impulse being of sufficient intensity to flash off said high points and project the material thereof outwardly through said gap, closing said gap between said work pieces and thereafter passing an alternating current through said parts to complete the welding operation.

2,459,796
WELDING SYSTEM
John W. Dawson, West Newton, Mass., assignor to Raytheon Manufacturing Company, Newton, Mass., a corporation of Delaware
Application June 21, 1945, Serial No. 600,727
3 Claims. (Cl. 219—4)



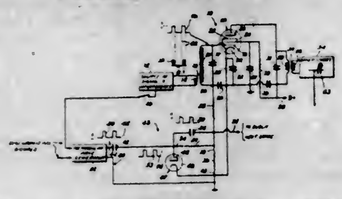
1. A welding system comprising: a pair of welding electrodes movable into engagement with the work to be welded, means to apply pressure to said work through said welding electrodes, means to apply a welding current impulse te said work, an electromagnet operable upon one of said electrodes for applying an additional pressure to the work, and means for supplying a unidirectional voltage impulse to said electromagnet in response to said welding current impulse, said electromagnet having an inductance which is high to delay the rise of current therein and delay the application of said additional pressure until after the establishment of current flow through the work.

2,459,797
STEERING WHEEL FOR MOTOR VEHICLES
Frank Den, New York, N. Y.
Application November 26, 1947, Serial No. 788,265
8 Claims. (Cl. 74—552)



8. In a steering wheel for a motor vehicle, a groove provided in the top of the rim of the wheel, a ring over said top, and legs on the ring adapted to ride in said groove whereby the ring may rotate with relation to the rim.

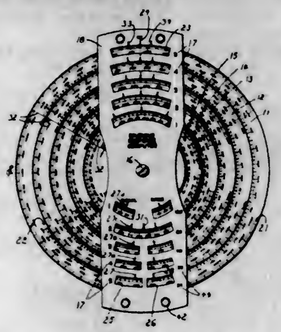
2,459,798
SIGNAL TRANSLATOR BLOCKING CIRCUIT
Maxwell C. Dettman, Brooklyn, N. Y., assignor to Federal Telephone and Radio Corporation, New York, N. Y., a corporation of Delaware
Application March 3, 1944, Serial No. 524,976
7 Claims. (Cl. 250—20)



7. For use with electronic signal translating means, the combination, comprising means for generating spaced signal pulses, means having a plurality of stages responsive to said pulses and also to transients that may occur between them, means synchronized with said pulses for generating a substantially rectangular waveform having a frequency substantially equal to the repetition frequency of said pulses, means for adding a direct current component to said wave to establish the crests thereof at substantially zero direct current potential, and means for applying said wave to at least one stage of the pulse responsive means in a direction to block substantially all of the interval between successive pulses.

2,459,799
SPURIOUS RESPONSE COMPUTER
William T. Doyle, Albertson, N. Y., and Earl R. Baker, Delta, Colo.
Application August 21, 1947, Serial No. 769,967
4 Claims. (Cl. 235—83)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

4. A calculator comprising a plurality of circular disks of progressively decreasing diameters pivotally mounted concentrically for relative rotation each with respect to the others, pairs of circular scales marked adjacent the edges of each disk, a cursor disposed diametrically across the faces of said disks pivotally mounted on the axis of said disks, said cursor having a first plurality of arcuate slots cut therethru on one radius thereof, said slots registering, respectively, with the first of each of said pairs of scales, and a second plurality of arcuate slots cut therethru on the other radius thereof, said last mentioned slots registering, respectively, with the second of each of said pairs of scales, a first series of single indices marked on said cursor at the edges of said first plurality of slots cooperative with the first of said pairs of scales, a first series of spaced double indices marked on said cursor at the edges of said second plurality of slots cooperative with the second of said pairs of scales, a second, single index

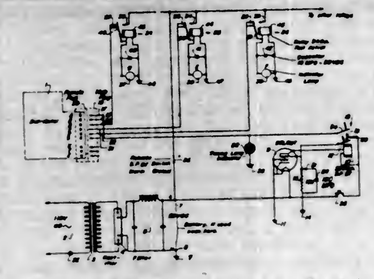


marked on said cursor at the edge of one of said second plurality of slots cooperative with the second of said pairs of scales, a second series of spaced double indices marked on said cursor at the edges of said first plurality of slots, cooperative with the first of said pairs of scales, and a series of radial index lines marked across said scales for use in arranging said disks in a predetermined relative position.

2,459,800
SAWMILL CONSTRUCTION
Ernest E. Esgate, Coeur d'Alene, Idaho
Application May 16, 1947, Serial No. 748,640
1 Claim. (Cl. 248—23)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

A platform adapted for the mounting of conventional sawmill units, and comprising a trussed frame structure including a central section and end sections hingedly connected thereto and foldable upon said central section, said sections being formed in symmetrical separable halves connected together along the longitudinal center line, and an insert adapted to be placed intermediate said symmetrical half sections to widen said frame, said frame and said insert being composed of upper and lower longitudinal and transverse members, and spacing members, said spacing members including jacks connected to said upper and lower transverse members, positioned laterally from the longitudinal center of said mounting a distance sufficient to effect stability thereof and to support the loads thereon at least substantially beneath their centers of gravity, and base plates operatively connected to said jacks adapted to be retracted within said trussed structure between said lower longitudinal members.

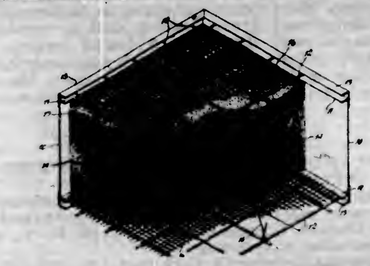
2,459,801
BOMB STATION DISTRIBUTOR CHECKER
Joseph A. Fahrner, United States Navy
Application October 25, 1945, Serial No. 624,625
3 Claims. (Cl. 175—183)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



1. In an apparatus for testing a pulse actuated distributor, said testing apparatus comprising: a direct current power supply; an electronic tube having a heating filament, cathode, plate, control grid and screen grid, said heating filament being connected across said power supply, and said cathode and control grid being connected to the negative side of said power supply; a capacitor-resistance timing circuit connected across said screen grid and the negative side of said power supply; a plug connector; a double-pole single-throw relay switch having a relay coil, a pair of armatures and a pair of fixed contacts, said relay coil being connected across said plate and the positive side of said power source, said fixed contacts being connected to the positive side of said power supply, one armature being normally closed and connected to said screen grid, and the other armature being normally open and connected to a pin of said plug connector; an indicating lamp connected across said other armature and the negative side of said power source; single-pole double-throw relay switch means having a relay coil, an armature, and a pair of fixed contacts, one of said fixed contacts connected to the positive side of said power supply, the relay coil, the other of said fixed contacts and said armature which is normally closed against said other fixed contact connected in series across a pin of said plug connector and the negative side of said power supply; a capacitor connected across said last-named relay coil; indicating means connected across said last-named relay coil; a switch connected between said one fixed contact and the positive side of said power supply; and a switch connected between the double-pole single-throw relay switch and the positive side of the power supply.

2,459,802
AIR-CONDITIONING APPARATUS
Walter L. Fleisher, New City, N. Y.
Application November 6, 1944, Serial No. 562,190
4 Claims. (Cl. 183—45)

1. A capillary cell designed to have air and water pass through it in a vertical direction and comprising a tubular casing, a coarse grid at each extremity of said casing, a plurality of vertical capillary threads in said casing substantially parallel with the sides thereof and to the direction of the flow of air and water through the cell, and a small apertured stabilizing screen adjacent to but spaced inwardly from the upper and lower ends of the casing, each small aperture of said screen receiving the ends of a group of said capillary threads at the top and bottom of the casing and maintaining the threads in a vertical position

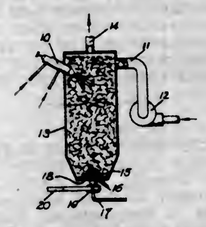


and in a predetermined relation to the direction of the flow of air and water through the cell and spacing the individual groups of vertical capillary threads from one another.

2,459,803
FELTLIKE PRODUCTS
Carleton S. Francis, Jr., Chestnut Hill, Pa., assignor, by mesne assignments, to American Viscose Corporation, Wilmington, Del., a corporation of Delaware
No Drawing. Application October 23, 1939, Serial No. 300,876
2 Claims. (Cl. 154—54)

1. A felt-like product formed from a mixture of textile fibres and thermoplastic staple resin fibres formed from a copolymer of vinyl chloride and vinyl acetate, said resin fibres being normally non-tacky, flexible and tough, and being rendered tacky at a temperature below that at which the textile fibres are damaged, fibres in said product being bonded to each other due to the thermal tackiness after heating of said staple resin fibres, said resin fibres being present in such minor proportion that the outer surfaces of the finished felt are substantially non-adhesive when said thermoplastic fibres are in a tacky condition.

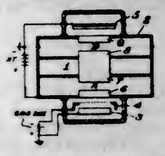
2,459,804
SHAPED FELTED STRUCTURES
Carleton S. Francis, Jr., Chestnut Hill, Pa., assignor, by mesne assignments, to American Viscose Corporation, Wilmington, Del., a corporation of Delaware
Application August 1, 1942, Serial No. 453,284
3 Claims. (Cl. 154—46)



1. A fibrous structure of fixed inherent shape having a non-planar configurated wall of predetermined thickness comprising non-cementitious fibres and thermoplastic resin fibres formed of a copolymer of vinyl chloride and vinyl acetate and being normally non-tacky, flexible and tough and being rendered tacky at a temperature

below that at which the non-cementitious fibres are damaged, fibres in said product being bonded together and said non-cementitious fibres and said resin fibres being arranged in universally multi-directional truss-forming and permeable relation to each other, the said wall having a fixed inherent shape established by post-assembly activation and deactivation of the resin fibres throughout the area and thickness of said wall.

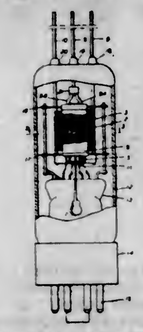
2,459,805
ELECTRON DISCHARGE DEVICE OF THE VELOCITY MODULATION TYPE
John Heaver Fremlin, London, England, assignor, by mesne assignments, to International Standard Electric Corporation, New York, N. Y., a corporation of Delaware
Application October 14, 1942, Serial No. 462,029
In Great Britain December 12, 1941
3 Claims. (Cl. 315—6)



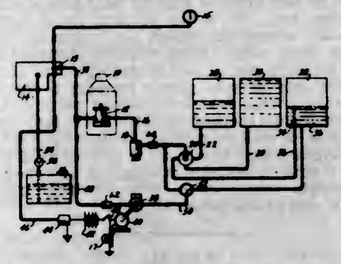
1. An ultra high frequency apparatus comprising an electron discharge device of the velocity modulation type including an electron gun for producing and directing a beam of electrons along a beam path, said gun including a cathode, and a plurality of means mounted in the order named along said beam path from said gun, means for producing an ultra high frequency electric field for velocity modulating electrons in said beam, means providing a first drift space, means for extracting ultra high frequency energy from said velocity modulated beam and an electrode spaced along said beam from said energy extracting means for reflecting the electrons in said beam back through said extracting means, the space between said extracting means and said reflecting electrode forming a second drift space, said ultra high frequency apparatus further comprising means connected to said energy extracting means for applying a potential thereto and means connected to said cathode and said reflecting electrode for applying a common potential thereto, said last-mentioned potential being negative with respect to said first-mentioned potential and providing an electron transit time from said energy extracting means to said reflecting electrode and return corresponding to an odd number of half cycles of the high frequency field whereby the electrons are bunched when they arrive at the energy extracting means and arrive at said energy extracting means during the intervals between the arrival of bunches in the incident beam.

2,459,806
VELOCITY-MODULATED ELECTRON DISCHARGE DEVICE
John Heaver Fremlin and Christopher Henry Foulkes, London, England, assignors, by mesne assignments, to International Standard Electric Corporation, New York, N. Y., a corporation of Delaware
Application October 28, 1942, Serial No. 463,700
In Great Britain January 9, 1942
3 Claims. (Cl. 315—6)

1. An electron beam velocity modulation and device comprising wire grids forming a complete cavity resonator having a velocity modulation region and an energy extracting region, said regions being separated by a drift space, said wire grids including a first set of turns of wire forming a tubular shaped inner structure about said drift space, said turns of wire of said first set being electrically connected together, said wire grids further including a second set of turns of wire forming an outer concentric tubular shaped structure, the turns of wire of said second set being electrically connected together, said two sets of wire turns forming the cavity resonator therebetween, an electron beam generator mounted to direct an electron beam along a path through said two sets of wire grids and through said drift space, and an envelope enclosing said resonator and said beam generator.



2,459,807
MULTIPLE TANK FUEL SYSTEM WITH EMERGENCY PUMP TO MAINTAIN REQUIRED DISCHARGE PRESSURE
Edward M. Gavin, Las Vegas, Nev., and Ralph E. Grey, Osborn, Leslie L. Aspelin, Elyria, and George F. Tate, Dayton, Ohio
Application March 16, 1944, Serial No. 526,794
5 Claims. (Cl. 158—36.4)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



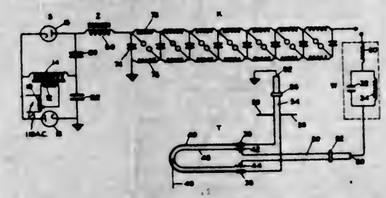
1. The combination in an aircraft fuel system, of a main fuel supply receptacle, a main fuel pump having its suction side connected to said main fuel supply receptacle, a discharge-pressure control means for said main fuel pump, a reserve fuel supply container, an auxiliary fuel pump having its suction side connected to said reserve fuel supply container, a discharge-pressure control means for said auxiliary fuel pump, a fuel receiving means, the discharge side of both said pumps being connected to said fuel receiving means, the discharge-pressure control means of the auxiliary fuel pump being operable at the same pressure as the main fuel pump for delivering fuel to said fuel receiving means, and a pressure responsive means associated with the main fuel pump, adapted upon a predetermined drop in pressure at the discharge side of the main fuel pump to operate said auxiliary fuel pump.

3. The combination, in an aircraft fuel system, of a plurality of main fuel supply receptacles, a main fuel pump, means for selectively connecting the suction side of said pump to any of said supply receptacles one at a time, a reserve fuel supply container, an auxiliary fuel pump, means connecting the suction side of said auxiliary fuel pump to said reserve fuel supply container, a fuel metering means, the discharge side of both said pumps being connected to said fuel metering means, valve means for disconnecting the suction side of the auxiliary fuel pump from said reserve fuel supply container and connecting it into the suction line of the main fuel pump, and a pressure responsive means associated with the fuel metering means, adapted, upon a predetermined drop in pressure at the fuel intake of said fuel metering means to operate said auxiliary fuel pump.

2,459,808
TUBE EXPANDER WITH EXPANSIBLE BALL DRIFT REMOVABLE BY ITS EXPANSION
George A. Geyer, New York, N. Y.
Application October 11, 1945, Serial No. 621,651
4 Claims. (Cl. 153—80)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

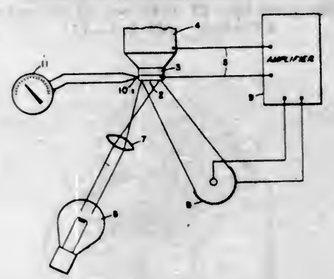
3. A tube expander comprising a body, a taper portion near one end of the body and tapering inwardly toward said end, an expansible ball drift mounted for sliding movement on said taper portion, a retaining enlargement at the narrow end of and integral with said taper portion, said ball drift in expanded condition being capable of passing over said enlargement, and an enlargement at the large end of said taper portion forming a transverse shoulder for limiting sliding movement and expansion of said ball drift.

2,459,809
HIGH-POWER PULSE GENERATOR
John E. Gorham, Spring Lake, and Irving Sager, Beal, N. J.
Application January 14, 1943, Serial No. 472,352
6 Claims. (Cl. 250—17)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



4. A transmitter for pulse-echo work, said transmitter comprising a D.-C. potential source having minimum size smoothing capacitors, a large inductive impedance, a network having a plurality of condensers, chokes connecting said condensers in parallel, and spark gaps connecting said condensers in series, means for applying said potential source in series with said impedance to said network whereby said condensers charge in parallel until the voltage thereon equals the breakdown voltage of said spark gaps, whereupon said condensers discharge in series so that the resulting pulse has the cumulative potential of said condensers, said impedance in combination with said parallel condensers forming an oscillatory circuit and serving to increase the charging voltage on said condensers, said impedance also functioning to impede the charging current to quickly quench the spark, a wave-shaping network in the discharge path of said condensers to square the wave-form of the resulting pulse, and a transmitter tube having a tank circuit associated therewith, the output from the wave-shaping network being applied to the transmitter tube to act as the D.-C. driving potential for the same.

2,459,810
DEW-POINT INDICATOR
Orman L. Graves, Santa Clara, and Richard Bishop, Palo Alto, Calif.
Application March 31, 1945, Serial No. 586,010
4 Claims. (Cl. 73—17)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

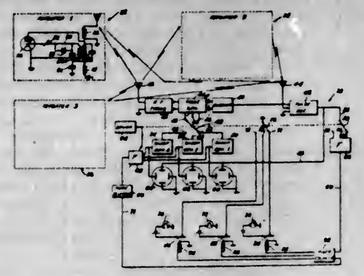


3. In a dew-point-indicator having a source of light, a photo-cell and an amplifier electrically connected to said photo-cell; a mirror head assembly comprising an electrically conductive mirror element, an electrically conductive cold element, a heating element possessing both electrical and thermal resistivity sandwiched between and affixed to said mirror and cold elements to constitute an integral assembly, said cold and mirror elements being adapted for electrical connection to said amplifier to form an electrical circuit from said amplifier through said cold element, said heating element and said mirror element, whereby light from said source of light will be reflected from said mirror element to said photo-cell to control the flow of electricity from said amplifier through said heating element.

2,459,811
RADIO IDENTIFYING SYSTEM
Donald B. Grieg, Forest Hills, N. Y., assignor to Federal Telephone and Radio Corporation, New York, N. Y., a corporation of Delaware
Application March 18, 1944, Serial No. 527,074
16 Claims. (Cl. 343—13)

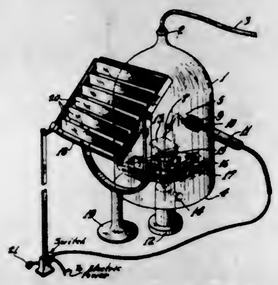
16. A method of indicating at a single location the identity of objects in the vicinity of said

location, comprising transmitting from said single location trains of pulses at different given repetition rates, repeating from different ones of said



objects pulses at different ones of said repetition rates, receiving said repeated pulses at said given location, and producing an indication of the repetition rate of said received repeated pulses.

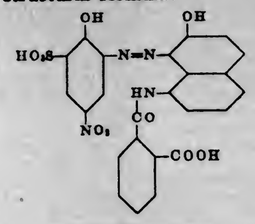
2,459,812
WELDING APPARATUS
Thomas W. Griffiths, Newark, N. J., assignor to Federal Telephone and Radio Corporation, New York, N. Y., a corporation of Delaware
Application May 31, 1946, Serial No. 673,213
4 Claims. (Cl. 219—14)



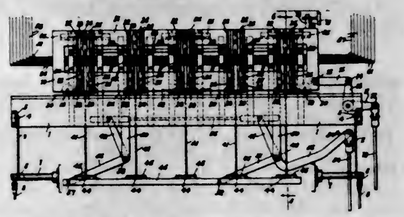
1. A welding apparatus for performing a welding operation on a work piece in an atmosphere of inflammable gas comprising a container for confining an inflammable gas around a work piece, said container having an opening at the top for introducing said inflammable gas into said container and an opening at the bottom for permitting the work piece to be inserted within the container and for permitting the gas to exhaust from the container, a porous shield positioned between said work piece and said bottom opening to prevent incandescent pieces of metal from falling through the opening while permitting said gas to pass through the shield.

2,459,813
MONOAZO CHROMIUM COMPLEX
Harry W. Grimmel and Ludwig Richter, Easton, Pa., assignors to General Aniline & Film Corporation, New York, N. Y., a corporation of Delaware
No Drawing. Application November 14, 1945, Serial No. 628,658
1 Claim. (Cl. 260—151)

The chromium complex compound obtained by after-chroming of the mono azo dye having the following structural formula:

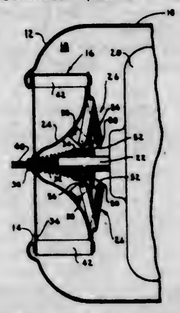


2,459,814
NARROW WARE LOOM
Max Hahne, New York, N. Y.
Application June 20, 1946, Serial No. 678,111
10 Claims. (Cl. 139—18)



1. In a loom, a beam on which a batten is longitudinally slidable, shuttle guides mounted on the batten, shuttles slidable in said guides in a vertical direction and transversely of the batten, means located below the guides for selectively engaging the shuttles and raising the same to the top of the guides, means adjacent the tops of the guides for engaging the raised shuttles and holding the same in their raised position, and release means for selectively freeing the shuttles to thereby allow the same to descend solely by gravity in their guides.

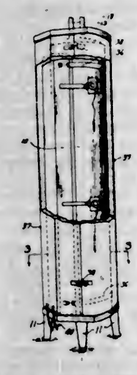
2,459,815
AUTOMATIC AIR SHUTOFF AND DRAFT CONTROL FOR OIL BURNERS
Kemper M. Hammell, Bloomington, Ill., assignor to Eureka Williams Corporation, Detroit, Mich., a corporation of Michigan
Application January 23, 1947, Serial No. 723,857
11 Claims. (Cl. 230—114)



11. In a blower wheel having axially extending blades and which wheel is closed on one side, said wheel having at its other side a ring form-

ing an end of said wheel and an opening through which air flows into said wheel, an air deflecting circular member comprising a plate arranged within said wheel normal to the axis of rotation thereof and extending into close proximity to said blades and means for mounting said member for rotation with and adjustment axially of said wheel so that said member may be positioned to shut off the flow of air to those portions of said blades adjacent the closed side of said wheel whereby to decrease the effective axial length of said wheel, said plate being shaped so as to have a central apex projecting away from the closed end of said wheel and arranged so as to direct the air, which flows axially into said blower wheel through said opening, radially outwardly toward the blades of said blower wheel, the diameter of said member being greater than the diameter of said opening in said ring but less than the diameter inside said wheel between the inner edges of said blades, and screw threaded means operable for adjusting said member axially of said wheel.

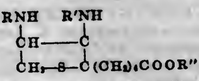
2,459,816
WATER HEATER CONVERSION UNIT
Harold E. Handley, Jackson, Mich., assignor to Handley Brown Heater Company, Jackson, Mich., a corporation of Michigan
Application May 31, 1945, Serial No. 596,900
1 Claim. (Cl. 219—38)



A water heater of the type having a heating element adjacent an outside surface of a water tank, comprising a circular upright tank, means including a separable shell insulating said tank throughout its length and around more than 180° of its circumference, fastening means for said insulating means releasable and available at the uncovered portion of the tank, and means completing the circumferential insulation and forming a heating chamber extending the length of said tank comprising two walls meeting the vertical edges of the first insulation means and extending substantially tangentially of the enclosed tank and a third enclosing wall joining the tangential walls spaced from the tank, four elongate heating units mounted in vertically aligned pairs on the inside of said third wall, each being independently mounted and removable, and each being composed of an electric resistance unit within a transparent di-electric tube, and fastening means for said last insulation means available at the outside of said joined insulation units, said first fastening means being enclosed within the second insulation means.

2,459,817
2-(4' CARBOXY-BUTYL)- 3:4 - DI(ACYLAMIDO) - 4:5 DIHYDROTHIOPHENE AND ITS ESTERS
Stanton A. Harris, Westfield, and Glen E. Arth, Rahway, N. J., assignors to Merck & Co., Inc., Rahway, N. J., a corporation of New Jersey
No Drawing. Application September 16, 1944, Serial No. 554,454
8 Claims. (Cl. 260—329)

8. Dihydrothiophene compounds having the formula:



wherein R and R' are acyl radicals and R'' is a radical selected from the class which consists of hydrogen, alkyl, aryl, and aralkyl radicals.

2,459,818
SOAP PRODUCT CONTAINING GUANIDINE STEARATE
Lloyd F. Henderson, Reading, Mass., assignor to Lever Brothers Company, Cambridge, Mass., a corporation of Maine
No Drawing. Application August 4, 1944, Serial No. 548,142
3 Claims. (Cl. 252—117)

1. A solid, all-soap product for washing with water, consisting essentially of an unfilled alkali metal soap and 1 to 15% by weight of guanidine stearate.

2,459,819
WEEDLESS FISH LURE
Clyde C. Hoage, St. Paul, Minn.
Application May 2, 1946, Serial No. 666,647
8 Claims. (Cl. 43—39)

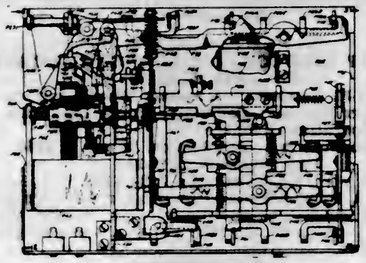
1. In a fish lure, a body, a hook projecting from said body, a guard for said hook carried by said body and movable to and from guarding position, and magnetic means carried by said body and operative to bias said guard toward hook guarding position.

2,459,820
FRACTIONATION OF UNSATURATED GLYCERIDE OILS
Edward M. James, Winchester, Mass., assignor to Lever Brothers Company, a corporation of Maine
No Drawing. Application June 23, 1943, Serial No. 491,974
5 Claims. (Cl. 260—428.5)

1. A process of fractionating soybean oil, which comprises mixing one part of soybean oil with an amount of a non-polar solvent within the range of 1 to 20 parts, rapidly chilling said mixture of oil and solvent to a temperature within the range of —20° to —60° F., the rapidity of chilling, the amount of solvent within the above range and the chilling temperature within the above range being interrelated so as to precipitate a fraction in an amorphous flowable form having a lower iodine value than the iodine value of the soybean oil, and to leave the remainder of the oil as a

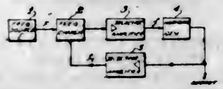
liquid fraction having a higher iodine value than the soybean oil, and continuously separating the precipitated amorphous flowable fraction from the liquid fraction in a continuous type centrifuge, said precipitated fraction of lower iodine value being suitable for hydrogenation to form an edible shortening, and said liquid fraction of higher iodine value having improved drying properties.

2,459,821
ELECTRICAL CODE PRINTER
Ladislas Kozma and Georges X. Lens, Antwerp, Belgium, assignors to International Standard Electric Corporation, New York, N. Y., a corporation of Delaware
Application November 29, 1943, Serial No. 512,144
12 Claims. (Cl. 178—34)



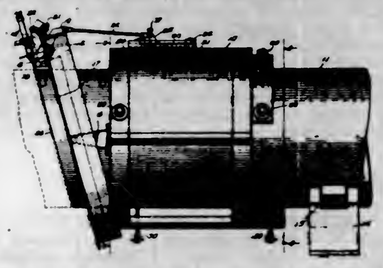
1. A code-controlled printer comprising a printing device and means for selecting a character on said device, including a plurality of levers, means linking the levers together to form an aggregate motion linkage, a plurality of selectively-operable magnets, and a plurality of lever-devices operated by corresponding ones of said magnets and including links reciprocable side by side and each providing at least one intermediate fulcrum of said levers.

2,459,822
FREQUENCY GENERATING SYSTEM
Marc André Lalande, Paris, France, assignor to International Standard Electric Corporation, New York, N. Y., a corporation of Delaware
Application July 25, 1947, Serial No. 763,619
In France February 15, 1946
Section 1, Public Law 690, August 8, 1946
9 Claims. (Cl. 250—36)



1. An arrangement for obtaining multiple sub-harmonic frequency energy from a stable source of base frequency energy comprising a source of modulation frequency energy, means for modulating said base frequency energy with said modulation frequency energy to obtain a sub-harmonic frequency energy, a full wave rectifier, a sub-harmonic frequency amplifier conditioned for operating in an oscillatory or a non-oscillatory state, and means for applying said sub-harmonic frequency energy through said amplifier to said full wave rectifier, means responsive to the output of said amplifier for controlling the state of operation of said sub-harmonic frequency amplifier, said source of modulation frequency energy comprising means for deriving from said rectifier output said modulation frequency energy and means for deriving from said rectifier output the multiple sub-harmonic frequency energy.

2,459,823
PIPE MITERING APPARATUS
Michael N. Lebedeff, Chicago, Ill., assignor to Chicago Bridge & Iron Company, a corporation of Illinois
Application February 11, 1946, Serial No. 646,889
6 Claims. (Cl. 33—21)

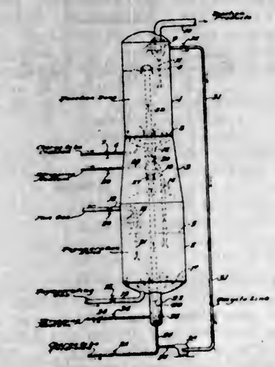


2. Apparatus for cutting pipe or the like at a desired angle to the central axis of said pipe comprising mounting means holding the pipe for rotation substantially about its central axis; a cylinder of larger diameter than the pipe; means for attaching said cylinder to the pipe including a pair of members rockably mounted on said cylinder near one end thereof and another pair of said members similarly mounted on the other end of the cylinder, each pair of members being located on opposite sides of the vertical center of the cylinder near the top and each member having two contact portions for contacting the pipe on one side of said vertical center, and clamps on the bottom portion of the cylinder for clamping the pipe against said contact portions; an annular guide member of larger internal diameter than the external diameter of the pipe and of the cylinder pivotally mounted on arms extending from one end of the cylinder with said arms being substantially parallel to each other in a substantially horizontal plane with said plane substantially bisecting the cylinder; a raised section on said annular guide member of substantially circular shape; means for holding said annular guide member at a desired angle to the central axis of the pipe, cutting means carried on the raised section of the guide member for cutting the pipe with the cutting means being movable on said raised section, and means for holding the cutting means substantially stationary during the rotation of the pipe, cylinder, and guide member.

2,459,824
METHOD AND APPARATUS FOR CONTACTING SUBDIVIDED SOLID CONTACT MATERIAL WITH FLUID REACTANTS, PARTICULARLY HYDROCARBONS
Frederick W. Leffer, Riverside, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a corporation of Delaware
Application October 31, 1946, Serial No. 706,914
10 Claims. (Cl. 196—52)

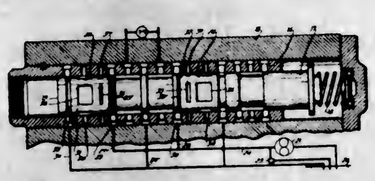
1. A method for the simultaneous conversion of two different hydrocarbon streams which comprises maintaining a downwardly moving bed of subdivided solid catalyst particles in each of two

contacting zones disposed in vertical alignment, passing one of said hydrocarbon streams at conversion temperature through the catalyst bed in the upper of said zones, continuously discharging contacted solid catalyst particles from the upper of said zones to the top of the bed in the lower zone, passing an oxidizing gas upwardly through the bed in the lower of said zones, withdrawing oxidized and regenerated catalyst particles down-



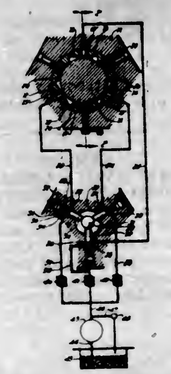
wardly from the lower portion of said lower zone, commingling the regenerated catalyst particles withdrawn from the lower zone with the other of said hydrocarbon streams, passing the resultant mixture upwardly in a confined straight line path through the catalyst beds in said contacting zones and then discharging the same into the upper portion of said upper zone, and subjecting said other hydrocarbon stream to conversion during its upward passage in said confined path.

2,459,825
BEARING
Mario E. Martellotti, Cincinnati, Ohio, assignor to The Cincinnati Milling Machine Company, Cincinnati, Ohio
Application May 24, 1941, Serial No. 395,086
26 Claims. (Cl. 308—122)



1. A bearing structure comprising a pair of telescoping members, one member having a bore providing an internal bearing face and the other member being cylindrical and having an outer bearing face slightly smaller in diameter to allow for a clearance space and relative movement between said bearing faces, one of said members having circumferentially spaced receiving recesses in its bearing face, one of said members having circumferentially spaced balancing pockets in its bearing face axially offset relative to said recesses, means interconnecting individual circumferentially spaced pockets and recesses, means forming a source of lubricant under pressure, and means for coupling the lubricant under pressure to said clearance space at a point adjacent said recesses and remote from said pockets whereby radial relative displacement of the members will increase the clearance space adjacent a recess reducing the resistance to flow of lubricant under pressure and simultaneously decrease the clearance adjacent the pocket coupled with said recess increasing resistance to flow therefrom to build up a pressure in said last-mentioned pocket to resist said radial displacement.

2,459,826
FLUID PRESSURE BEARING
Mario E. Martellotti, Cincinnati, Ohio, assignor to The Cincinnati Milling Machine Company, Cincinnati, Ohio
Application September 30, 1941, Serial No. 413,005
15 Claims. (Cl. 308—121)



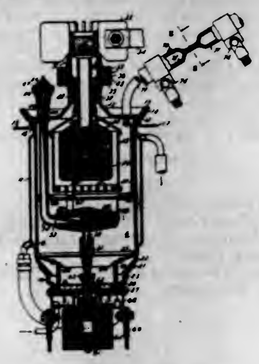
1. In a fluid pressure bearing structure for a journal, the combination of a bearing member for said journal having a plurality of lubricant receiving pockets formed in circumferentially spaced relation about said journal, independent lubricant supply means for the several pockets, collector grooves positioned between the respective pockets, means functional of the position of the journal for controlling the escape of fluid from said pockets to said grooves to determine the necessary pressures in said pockets to hold the journal in a normal running position whereby any shifting of the journal will disturb said pressures, and valve means responsive to any disturbance of said pressures for readjusting the resistance to flow in the several channels and thereby readjust said pressures to a sufficient extent to reposition the journal to its normal running position.

2,459,827
ELECTRIC VALVE WITH VITREOUS ENAMEL SEALS
Othmar K. Marti, Wauwatosa, Wis., assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis., a corporation of Delaware
Application September 15, 1945, Serial No. 616,557
4 Claims. (Cl. 250—27.5)

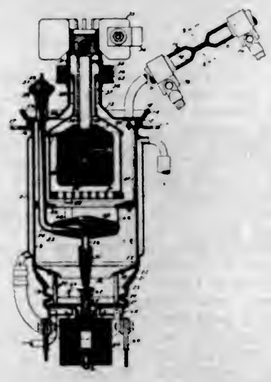
1. An electric discharge device comprising a fluid tight metallic casing, an anode and a cathode, said casing comprising an anode-containing section provided with a converging frusto-conical edge portion and a cathode-containing section

of the muzzle of said projector and arranged to

provided with a diverging frusto-conical edge portion complementary of said converging edge portion, and a layer of vitreous material uniting said edge portions in fluid tight insulated relation.

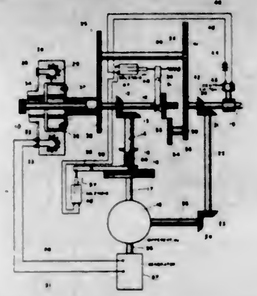


2,459,828
ELECTRIC VALVE WITH GRID MOUNTED ON DIVIDED ANODE INSULATOR
Othmar K. Marti, Wauwatosa, and Ervin B. Steinberg, Milwaukee, Wis., assignors to Allis-Chalmers Manufacturing Company, Milwaukee, Wis., a corporation of Delaware
Application September 15, 1945, Serial No. 616,558
6 Claims. (Cl. 250—27.5)



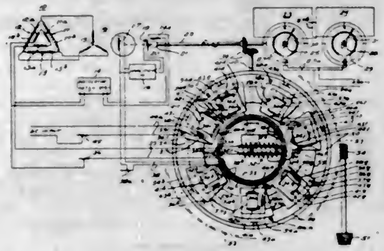
1. An electric discharge device comprising a fluid tight metallic casing, an anode, a cathode and a control electrode, means for supporting said anode in said casing comprising a rigid conductor and a metallic cap, means for supporting said cap on said casing in fluid tight insulated relation thereto comprising a stack of metal washers disposed about said rigid conductor and a plurality of layers of vitreous material severally uniting each said washer with the adjacent said washers in fluid tight insulated relation, and means for supporting said control electrode on said casing comprising a second conductor connected between said control electrode and an intermediate washer of said stack of washers.

2,459,829
POWER TRANSMISSION
Edward C. Maxwell, United States Navy
Application April 29, 1946, Serial No. 665,711
8 Claims. (Cl. 172—284)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



1. A variable speed power transmission comprising, a driving member, a driven member, means for providing a variable degree of interconnection between said driven and driving members including a magnetic clutch, a differential member connected between said driving and driven members, a current generating means for the magnetic clutch, said current generating means being driven by said differential member, the differential member rotating the current generating means at a speed which varies with the difference in relative rotation between the driving member and the driven member.

2,459,830
MOTION REPEATING SYSTEM
Thomas O. McCarthy, United States Navy
Application September 12, 1944, Serial No. 553,777
21 Claims. (Cl. 318—30)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



10. A system for transmitting angular motion comprising an electrical transmitter, a torque amplifier comprising a polycircuit primary winding electrically connected to receive data from said transmitter, a rotatable secondary winding, amplifier means connected to receive energy from said secondary winding and to amplify the same, a reversible motor driven by the output of said amplifier and connected to drive said secondary winding to a null position, a correction voltage generator comprising a field member including a plurality of individually adjustable means for providing an adjustable magnetic field and an armature member, means driving one of said members by said motor, said armature member when in any selected angular position with respect to said field member being adapted to generate a voltage which is a function of the field strength at said position, and means superimposing said voltage on the motor to modify the position thereof.

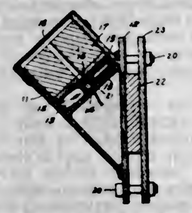
2,459,831
PROCESS FOR DYEING NYLON WITH ACID DYES OF LIMITED SOLUBILITY
Frank C. McGrew and William Henry Sharkey, Wilmington, Del., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application July 2, 1946, Serial No. 681,136
6 Claims. (Cl. 8—55)

1. A process for evenly dyeing nylon textile articles which comprises immersing the nylon article, until the desired depth in shade is obtained, in an aqueous dyebath in which the coloring material is a salt of an acid dyestuff which dissociates in the aqueous dyebath to yield a dye anion concentration of at least 0.1 part per million but not greater than 50 parts per million based on the weight of the dyebath.

2,459,832
ELECTRICAL OUTLET TERMINAL
Benjamin P. McKinley, Bradenton, Fla.
Application January 29, 1945, Serial No. 575,115
5 Claims. (Cl. 173—340)

1. An electrical terminal comprising a strip of conductive metal shaped to provide a contact means at one end and providing a pair of spaced apart arms having a reentrant portion extending inwardly between the arms at the other end of the terminal defining an axial passage and a transverse passage intersecting said axial passage, and conductor anchoring means in one of said passages adapted to engage a conductor end inserted in the other of said passages.

2,459,833
SMOKE BOMB PROJECTOR
Joseph H. McLain and Alfred C. Fairchild, United States Army
Application June 7, 1945, Serial No. 598,199
1 Claim. (Cl. 89—1)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



In combination: a cylindrical projector barrel; a canister loaded therein and substantially coextensive with said barrel; smoke producing material in said canister; a muzzle cover pressed into air-tight engagement with the outer surface of the muzzle of said projector and arranged to be blown off by the discharge of said canister; bracket means arranged to hold said projector on a vehicle at a firing angle of approximately 45°; a propellant charge positioned under said canister; a driving disc positioned between said canister and said charge; electrical firing means for said charge; communicating means between said charge, said canister and disc arranged to cause the ignition of said smoke producing material upon the firing of said propellant charge.

2,459,834
PROCESS OF PREPARING HYDROXY HYDROPHENANTHRENE CARBOXYLIC ACIDS AND THEIR ESTERS
Karl Miescher, Riehen, and Jules Heer and Jean René Billeter, Basel, Switzerland, assignors to Ciba Pharmaceutical Products Inc., Summit, N. J.
No Drawing. Application June 29, 1944, Serial No. 542,812. In Switzerland January 10, 1944
12 Claims. (Cl. 260—473)

1. A hydrophenanthrene which is saturated at least in the 1-, 2-, 3-, and 4-positions and which contains, as sole substituents, an alkyl group in each of the 1- and 2-positions, a member selected from the class consisting of the carboxylic acid and carboxylic acid ester groups in the 2-position, and a member selected from the class consisting of phenolic hydroxyl and etherified phenolic hydroxyl in the 7-position.

2,459,835
ALLYLATION OF DIHYDROXY BENZENE
Kenneth P. Monroe, Butler, Pa., assignor to Koppers Company, Inc., Pittsburgh, Pa., a corporation of Delaware
No Drawing. Application October 24, 1947, Serial No. 782,041
13 Claims. (Cl. 260—621)

1. A process of allylating dihydroxybenzene comprising: dissolving the dihydroxybenzene in an acid reacting buffer solution, adding a series of aliquots of allyl halide with stirring in the presence of a base while maintaining a pH of the reaction solution between 5 and 7.

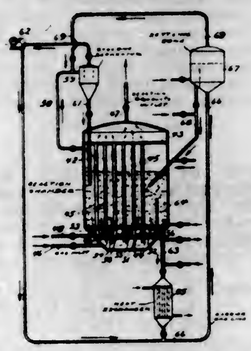
2,459,836
CONTROLLING REACTION TEMPERATURES
Eger V. Murphree, Summit, N. J., assignor to Standard Oil Development Company, a corporation of Delaware
Application December 11, 1942, Serial No. 468,630
3 Claims. (Cl. 23—1)

1. A process for controlling reaction temperatures which comprises, carrying out the reaction in indirect heat exchange relationship with a relatively large body of finely divided solid material, passing a gas upwardly through said solids at a velocity adjusted to maintain a turbulent dense fluidized layer of solids on which is superposed a dispersed phase, the quantity of said fluidized solid material being sufficient to absorb relatively large amounts of heat with minimum rise in temperature whereby said fluidized solid serves as a relatively constant temperature bath, removing a stream of fluidized solid material from the dense layer into the top of a vertical column, keeping a fluidizing gas in admixture with the solid throughout the length of the column in an amount sufficient to maintain said solid in a freely flowing, fluidized state to develop thereby a fluid pressure sufficient to discharge the fluidized solid from the base of said column through a tem-

mounted on the frame to provide access to any

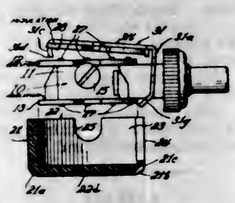
2,459,842

perature modifying zone, modifying the temperature of the solid so discharged through said zone and returning it to said dense layer, thereby regu-



lating the temperature of said dense layer to maintain said reaction temperature within predetermined limits.

2,459,837
HOUSING FOR ELECTRICAL SWITCHES
Rudolf Popp, Valparaiso, Ind., assignor to McGill Manufacturing Company, Inc., Valparaiso, Ind., a corporation of Indiana
Application February 7, 1945, Serial No. 576,620
8 Claims. (Cl. 200—168)

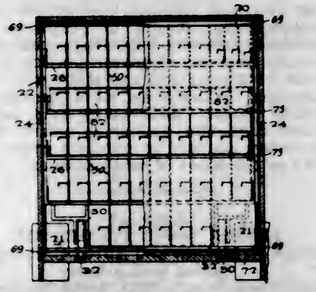


2. A housing for a preassembled electrical switch unit of the type having a side plate at one side thereof and a mounting element extending therefrom adapted for use in mounting a switch included in such unit on a supporting member, said housing comprising an insulating housing member having an open side for detachably receiving said switch unit therewithin with said side plate facing toward said open side and said housing member having a side opening for receiving said mounting element, an insulating cover lying flat against said plate, a U-shaped assembly element having an opening in its base portion for receiving said mounting element, and having legs which respectively overlie the outer surface of said cover and a wall of said housing member opposite to said cover to telescopically maintain said cover, said housing member and said unit in assembled but demountable relationship, and mounting means cooperable with said mounting element for mounting said unit upon a supporting member and for holding said assembly element in a position wherein said legs respectively overlie the wall of said housing member and said cover.

2,459,838
TRIGGER LOCK FOR PISTOLS
John Quinn, Washington, D. C., and Lawrence L. McDenie, Coral Hills, Md.
Application December 2, 1947, Serial No. 789,262
4 Claims. (Cl. 42—70)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

4. In a firearm having a cover plate, a holding bushing therefor, a spring constituting a component of a trigger lock for use in said firearm, said spring comprising a leaf having a hole in one end to fit upon the bushing, and a pair of spaced pins at the other end of the spring, one pin being longer than the other pin to serve respectively as a cam actuable by an insertable and removable magazine and as a trigger lock.

2,459,839
DELIVERY TRUCK LOADING AND DISPENSING APPARATUS
Henry I. Richards, Arlington, Va.
Application August 11, 1944, Serial No. 549,646
17 Claims. (Cl. 296—24)

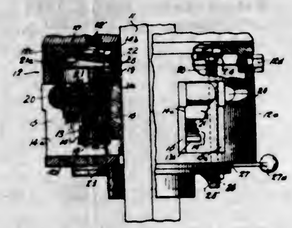


1. A loading apparatus for delivery truck bodies comprising a wheeled frame including package receiving shelves, each of said shelves being provided with a plurality of vertical partitions to form separate package receiving rows, and ejector means mounted on said partitions and defining separate package receiving compartments in each row.

12. A loading apparatus for delivery truck bodies of the type having a load carrying space normally completely open at the front and provided with walls, a roof, and a slotted rear door, comprising a wheeled frame having package-carrying shelves and being constructed and arranged to fit closely within said space adjacent the walls and roof thereof, the spacing of said frame from the truck body providing a passage for the flow of air from the front of the load-carrying space to the rear door slot, and a plurality of vertically movable closure members

mounted on the frame to provide access to any single shelf at a time and otherwise close the front end of the frame to prevent air flow therethrough and to direct air flow thereabout.

2,459,840
PULLDOWN DEVICE
Vernon E. Richardson, Albuquerque, N. Mex., assignor to Continental Oil Company, Ponca City, Okla., a corporation of Delaware
Application February 13, 1943, Serial No. 475,717
8 Claims. (Cl. 24—263.5)

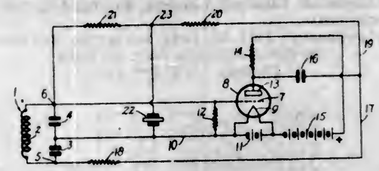


8. A device of the character described including a housing having an axial passageway for a member to be gripped, a plurality of jaws arranged about said passageway to engage said member to be gripped and having outer surfaces inclined relatively to the axis of the passageway, correspondingly inclined guide means between the housing and the respective jaws for individual movement of the jaws in opposite axial directions of said passageway while moving toward and away from said axis, springs between the jaws and the housing for moving the jaws in one direction to grip said member, a jaw backing member for each jaw and having a peripheral surface for engagement with the inclined surface of its respective jaw, and means mounting the backing members for rotary movement in the housing with said peripheral surfaces in engagement with the inclined surfaces of the jaws for maintaining the jaws in gripping contact with said gripped member when the housing is shifted in one longitudinal direction wth respect to the axis of said passageway.

2,459,841
CATHODE
Glenn F. Rouse, Long Branch, N. J.
Application June 8, 1943, Serial No. 490,036
4 Claims. (Cl. 250—27.5)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

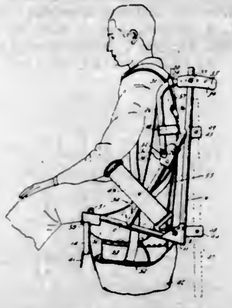
1. A cathode for an electron emission tube, said cathode having a relatively extensive metal surface provided with a large number of small recesses, said recesses having a smaller width at their outer ends than at their bases containing a metal oxide material of high electron emissivity at relatively low temperature.

2,459,842
CRYSTAL CONTROLLED OSCILLATOR
George T. Royden, South Orange, N. J., assignor to Federal Telephone and Radio Corporation, New York, N. Y., a corporation of Delaware
Application August 19, 1944, Serial No. 550,245
9 Claims. (Cl. 250—36)



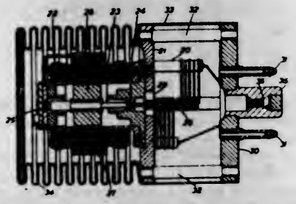
7. In an oscillator for producing oscillations of a predetermined frequency, an amplifier having input and output circuits, means for regeneratively coupling energy from said output circuit to said input circuit and means for degeneratively coupling energy from said output circuit to said input circuit comprising a crystal having a series resonance frequency substantially the same as said predetermined frequency and connected to bypass said degenerative coupling means at said frequency whereby the degenerative effect is minimized at said predetermined frequency.

2,459,843
SLING TYPE SEAT FOR AIRCRAFT
Per F. Scholander, Swarthmore, Pa.
Application March 6, 1946, Serial No. 652,479
10 Claims. (Cl. 244—122)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



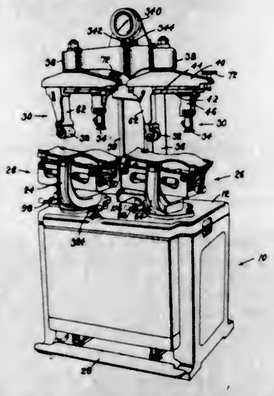
5. An aircraft seat for use by a seat occupant wearing a parachute harness having a seat-pack parachute attached directly to said harness, said seat comprising a supporting frame including a back frame section and a seat frame section, an occupant-supporting sling in the form of a rectangular sheet of fabric, means releasably connecting said sheet of fabric to the back frame section near the upper end of said back frame section and to the seat frame section near the forward end of said seat frame section, said sling being normally worn by said occupant under said parachute harness so as to directly support the seat occupant with said sling being supported only by said means, a pocket supported from the seat frame section and hanging below said section and below said sling, and said seat-pack parachute being normally carried within said pocket independently of said sling when the occupant is using said seat.

2,459,844
CIRCUIT ELEMENT AND MOTOR FOR DRIVING THE SAME
Edward Graham Smith and Edwin Claude Klepp, London, England, assignors to Standard Telephones and Cables Limited, London, England, a British company, and S. Smith and Sons (England) Limited, London, England, a British company
Application July 25, 1944, Serial No. 546,534
In Great Britain July 29, 1943
7 Claims. (Cl. 172—36)



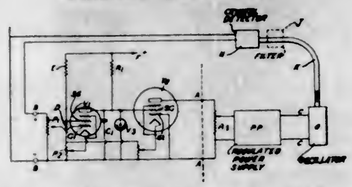
1. Device for the control of the angular position of a rotatable electrical circuit element, including a rotatable shaft connected to said circuit element, a motor of the type having a plurality of windings and a rotor cooperating therewith to control the movement of said shaft in accordance with the relative distribution of currents in said windings, and a single terminal plate common to both said motor and said circuit element.

2,459,845
SOLE-PRESSING MECHANISM
Thomas H. Seely, Melrose, and Lambert S. Linderoth, Jr., Marblehead, Mass., assignors to United Shoe Machinery Corporation, Flemington, N. J., a corporation of New Jersey
Application August 7, 1946, Serial No. 689,068
23 Claims. (Cl. 12—36)



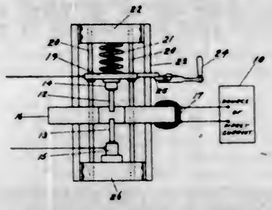
14. Pressure-applying mechanism comprising a plurality of pressing stations each of which comprises a member movable to apply pressure to a work piece, a piston connected to said member, and a cylinder housing said piston, a pump, a rotary valve member controlling communications between said pump and each of said cylinders and arranged in response to successive movements of rotation in one direction to connect the outlet of the pump successively to the cylinders of each station of the machine, and means for imparting successive movements of equal extent in one direction to said valve.

2,459,846
VOLTAGE CONTROL ARRANGEMENT
Charles Norman Smyth and Alan Scott Grant, London, England, assignors, by mesne assignments, to International Standard Electric Corporation, New York, N. Y., a corporation of Delaware
Application May 25, 1943, Serial No. 488,457
In Great Britain April 9, 1942
Section 1, Public Law 690, August 8, 1946
Patent expires April 9, 1962
4 Claims. (Cl. 250—36)



2. In combination, an ultra-high-frequency oscillator, a regulator circuit comprising a valve having a cathode, an anode and at least two grids, a source of potentials for said regulator circuit, means for negatively biasing the first grid, a sweep voltage generator comprising a condenser and a discharge lamp bridged in parallel between the anode and the negative pole of said source, a resistance to which the sweep voltage is applied, a variable tapping for applying voltage from said load resistance to said oscillator to cause it to sweep over a range of voltages which is likely to cause oscillation, means for rectifying the output of said oscillator and applying positive D. C. potential therefrom to said first grid, a potentiometer in the last mentioned connection adjusted to produce an anode current flow proportional to said D. C. potential, followed by a corresponding drop in the potential applied to said condenser to arrest the sweep voltage, whereby constant control voltage will be applied to the oscillator while its output amplitude remains constant.

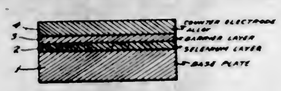
2,459,847
ELECTRIC FLASH PERCUSSIVE WELDING
Percy L. Spencer, West Newton, Mass., assignor to Raytheon Manufacturing Company, Newton, Mass., a corporation of Delaware
Application June 14, 1945, Serial No. 599,405
4 Claims. (Cl. 219—4)



1. The method of electrically welding two metallic parts which comprises moving said parts from a separated position toward each other, impinging one of said parts upon the other, impressing a voltage between said parts sufficient

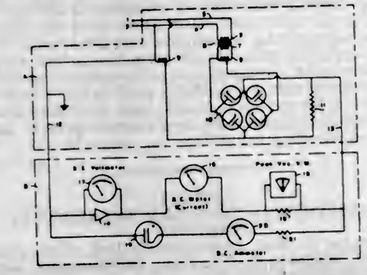
to provide an arc between said parts when a short distance apart whereby an arc is established between said parts as the same approach contacting relation, and maintaining a unidirectional magnetic field across the space between said parts with the lines of force of said magnetic field directed transversely to the lines of electrostatic force between said parts, whereby said arc is provided at a shorter distance than in the absence of said magnetic field.

2,459,848
RECTIFIER ELEMENT
Murray J. Stateman, Brooklyn, N. Y., assignor to Federal Telephone and Radio Corporation, New York, N. Y., a corporation of Delaware
Application July 17, 1945, Serial No. 605,616
4 Claims. (Cl. 175—366)



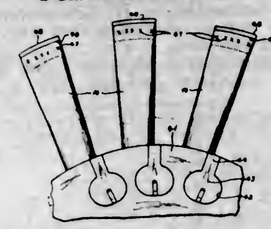
1. In a dry rectifier element a metal base plate, a selenium layer on said base plate, a barrier layer on said selenium layer comprising an organic selenide of a metal of the class consisting of cadmium and tin, and a counterelectrode on said barrier layer.

2,459,849
TESTING CIRCUIT
Murray J. Stateman, New York, N. Y., assignor to Federal Telephone and Radio Corporation, New York, N. Y., a corporation of Delaware
Application July 8, 1946, Serial No. 681,802
9 Claims. (Cl. 175—366)



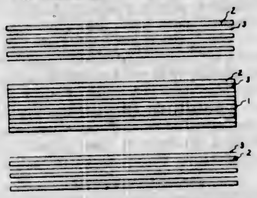
1. A circuit for measuring changes in resistance of a selenium rectifier during electro-forming including a source of voltage having a wave form consisting of voltage pulses of one polarity alternating with voltage pulses of the opposite polarity, means for separately controlling the amplitudes of said pulses of one polarity and said pulses of the opposite polarity, means for connecting said source of voltage across said selenium rectifier so that said pulses of one polarity force currents therethrough in a reverse direction and said pulses of the opposite polarity force currents therethrough in the forward direction, means for indicating the amplitudes of said pulses of one polarity and said pulses of the opposite polarity, means for indicating changes in the magnitudes of the reverse currents and the forward currents through said rectifier during electro-forming.

2,459,850
TURBINE APPARATUS
Samuel S. Stine, Lansdowne, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application December 10, 1945, Serial No. 634,012
1 Claim. (Cl. 253—77)



In an axial flow turbine or compressor: a rotor and a stator; a circumferential row of radially-extending blades carried by the rotor with their tips adjacent, but spaced slightly from, the stator; and a thin strip of metal secured to one side of each of said blades near the tip thereof and projecting therebeyond toward the stator with its projecting edge conforming to the shape of the opposed portion of the stator, said thin strips of metal having good rubbing characteristics, and said strips being secured to the blades by spot welding, whereby they may be removed and replaced while the blades are mounted on the rotor.

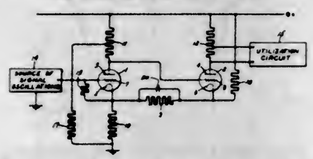
2,459,851
LIGNO-CELLULOSE DIE-STOCK AND PROCESS OF MAKING
Charles F. Story, Laurel, Miss., assignor to Masonite Corporation, Laurel, Miss., a corporation of Delaware
Application December 31, 1941, Serial No. 425,034
2 Claims. (Cl. 154—132)



1. Process of making thick dense slabs having high bond strength from steam treated and exploded ligno-cellulose fiber material and containing a low percentage of water solubles, which comprises the steps of providing a plurality of dense and relatively thin ligno-cellulose fiber boards from the materials described, adjusting the moisture content of said boards to about 3–8%, subjecting a stack of said boards sufficient to make a core slab not to exceed 1¼ inches thick with intermediate films of heat reactive resin glue to pressure of at least 1000 pounds per square inch while applying to the stack surfaces heat sufficient to melt and set the glue through to the center of the stack but not so great as to cause material detrimental effect at the stack surfaces, cooling the stack while under the stated pressure, then applying a plurality of like boards to each face of the core slab so produced with films of said glue in position for gluing said boards to one another and to the core slab, subjecting the stack so produced to heat and pressure as

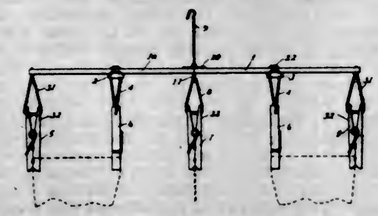
aforesaid, and cooling the resulting slab when the new glue films have set and while still maintaining the pressure.

2,459,852
TRIGGER NETWORK
Harry R. Summerhayes, Jr., Schenectady, N. Y., assignor to General Electric Company, a corporation of New York
Application June 8, 1945, Serial No. 598,361
1 Claim. (Cl. 250—27)



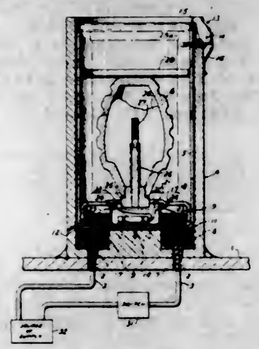
A pulse forming network comprising, in combination, a direct current supply source having positive and negative terminals, a first electron discharge device having an anode, cathode and control grid, said anode being connected through a first resistor to said positive terminal and said cathode being connected through a second resistor to said negative terminal, said control grid being biased so that said device normally draws substantial anode current, a second electron discharge device also having an anode, cathode and control grid, the anode of said second device being connected through a third resistor to said positive terminal and the cathode of said second device being connected through a fourth resistor to the cathode of said first device, a direct connection from the anode of said first device to the control grid of said second device, whereby said second device has a negative bias impressed thereon in response to anode current in said first device, means for increasing said negative bias to maintain said second device normally beyond cut off comprising a fifth resistor connected between said positive terminal and the cathode of said second device and a sixth resistor connected between an intermediate point on said first resistor and said negative terminal, means for impressing a negative pulse on the control grid of said first device of sufficient magnitude to initiate an abrupt reversal in the conditions of conductivity of said two devices, and an output load circuit responsive to voltage variations on said third resistor.

2,459,853
HOSE PROTECTOR
Lewis H. Swetnam, El Paso, Tex., assignor of one-half to Howard D. Fulwiler
Application June 25, 1946, Serial No. 679,228
4 Claims. (Cl. 211—113)



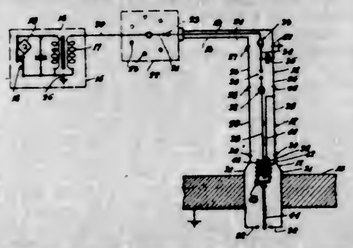
1. In a garment drying rack, a pair of center bars, a hinge connecting the upper side of one end of each bar, a hook connected to the hinge, an eye depending from the hinge, spaced cross bars swivelly connected to the center bars, triangular loops depending from the ends of the bars and the eye, and clothes pins supported by the loops.

2,459,854
GRENADE PROJECTOR
Willard E. Swift, Jr., Foxboro, Mass.
Application April 18, 1946, Serial No. 662,995
6 Claims. (Cl. 89—1)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



1. A projector for discharging a grenade by electro-magnetic induction, said projector comprising, a cylindrical holder having a raised portion on the interior bottom surface thereof, a primary winding surrounding said raised portion, a projector tube having a closed end, said projector tube retained within said holder by latching means, a first cup-shaped member contained within said projector tube, a secondary winding surrounding said cup-shaped member, and a second cup-shaped member abutting the interior of said projector tube and having a threaded opening to receive the fuse end of a grenade, said member enclosing said secondary winding and capping said cup-shaped member to define a firing chamber, said firing chamber having a propellent charge and a firing squib embedded therein, said squib wired to said secondary winding.

2,459,855
IGNITION SYSTEM AND APPARATUS THEREOF
Alexander C. Wall, Indianapolis, Ind., assignor to P. R. Mallory & Co., Inc., Indianapolis, Ind., a corporation of Delaware
Application August 12, 1944, Serial No. 549,278
11 Claims. (Cl. 315—85)



1. In an ignition system for internal combustion engines, the combination comprising a converter for changing pulses of electrical current to high frequency electrical energy, a transformer spark plug for stepping up the voltage of said high frequency electrical energy to provide charge-ignition current of high voltage, and a connecting cable having a pair of conductors connected between said converter and the primary of the transformer, said cable having high capacitance and low inductance, said inductance being substantially less than that of said transformer primary.

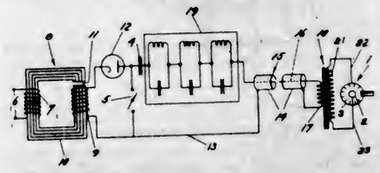
2,459,856
TRANSFORMER SPARK PLUG
Alexander C. Wall, Indianapolis, Ind., assignor to P. R. Mallory & Co., Inc., Indianapolis, Ind., a corporation of Delaware
Original application August 12, 1944, Serial No. 549,278. Divided and this application November 16, 1945, Serial No. 629,175
10 Claims. (Cl. 315—57)

1. A transformer - spark plug comprising, in combination, a spark plug structure including a metallic casing having a chamber therein, a pair of electrodes mounted on the spark plug, a transformer secondary winding structure mounted in said chamber including a cup of insulating material and a secondary winding wound around the exterior of said cup, the ends of said winding being connected, respectively, to said electrodes, and a transformer primary winding mounted in said cup.

2,459,857
ATTENUATING LINE FOR ULTRA-HIGH FREQUENCIES
Chester B. Watts, Jr., East Orange, N. J., assignor to Federal Telephone and Radio Corporation, a corporation of Delaware
Application August 17, 1942, Serial No. 455,038
2 Claims. (Cl. 178—44)

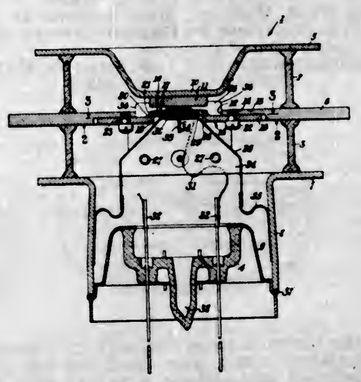
1. A substantially flat load of the type adapted to terminate an ultra-high frequency circuit operating at a frequency of more than five megacycles, consisting of a compact attenuating line comprising a pair of spaced-apart conductors, and a plurality of high resistance resistors having low inductance and low capacity bridged between said conductors, the spacing between adjacent resistors being small compared to the wavelength of the applied frequency, said resistors being so graded that the resistances thereof decrease in a direction away from the input of the line, the power applied thereto being dissipated substantially evenly along the length of the line.

2,459,858
ELECTRICAL PULSE SYSTEM
Vernon C. Westcott, Lincoln, Mass., assignor to Raytheon Manufacturing Company, Newton, Mass., a corporation of Delaware
Application December 21, 1944, Serial No. 569,230
6 Claims. (Cl. 320—1)



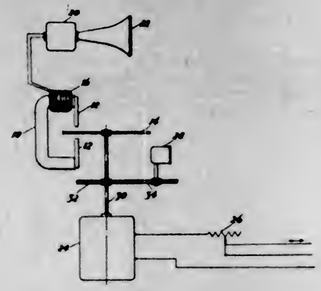
1. A condenser charging and discharging system comprising a condenser, a source of alternating current for charging said condenser, a transformer between said source and said condenser, said transformer including a magnetic core, said core having an air gap of approximately .014 inch, a half wave rectifier between said transformer and said condenser, a load circuit, and means for intermittently connecting said condenser to said load circuit to discharge said condenser into said load circuit.

2,459,859
GRID STRUCTURE FOR ELECTRON DISCHARGE DEVICES
Simeon Weston, New York, N. Y., assignor to Federal Telephone and Radio Corporation, New York, N. Y., a corporation of Delaware
Application March 23, 1945, Serial No. 584,422
10 Claims. (Cl. 250—27.5)



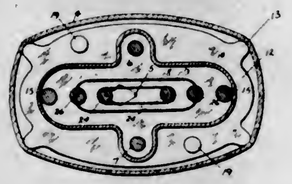
1. An electrode structure for an electron discharge device comprising a bent plate, a multistrand electrode mounted on said plate, a mount for said plate and said electrode and means holding said plate in an altered shape against said mount for bringing said electrode under tension.

2,459,860
ENGINE NOISE EQUIPMENT
Claude E. Wilkinson, United States Navy
Application December 2, 1944, Serial No. 566,383
1 Claim. (Cl. 177—7)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



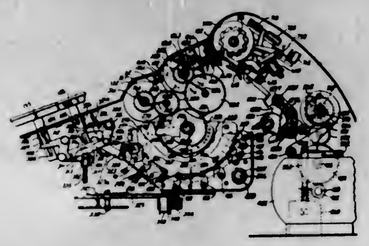
An aircraft engine noise and speed simulator comprising a magnet having its pole members slightly spaced apart, a rotatable disc positioned adjacent said pole members and having a plurality of projections rotatable therebetween through the magnetic flux to provide a flux interrupter, a winding about said magnet adapted to have current induced therein by the interruptions of flux, a speaker connected to said winding, a motor for rotating said disc, means for adjustably controlling the speed of said motor, a tachometer designed to indicate simulated speeds of the engine, and transmission mechanism connected between said motor and said tachometer and designed to cause the latter to indicate simulated speeds of the aircraft engine.

2,459,861
ELECTRODE STRUCTURE FOR ELECTRICAL SPACE DISCHARGE TUBES
Ross Wood, Waltham, Mass., assignor to Raytheon Manufacturing Company, Newton, Mass., a corporation of Delaware
Application March 21, 1946, Serial No. 655,967
3 Claims. (Cl. 250—27.5)



1. An electrical space discharge tube comprising a cathode, a pair of anodes disposed on opposite sides of said cathode, a pair of grids surrounding said cathode and intervening between said cathode and anodes, and a suppressor grid comprising an imperforate sheet of metal surrounding said grids and having surfaces defining a pair of recesses, one for each of said anodes, said surfaces providing shields extending around the sides of said anodes remote from said cathode.

2,459,862
TEN KEY ENTRY MECHANISM
Harold T. Avery, Oakland, Calif., assignor to Marchant Calculating Machine Company, a corporation of California
Original application October 16, 1943, Serial No. 506,519. Divided and this application March 7, 1945, Serial No. 581,514
16 Claims. (Cl. 235—61)

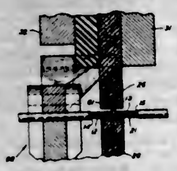


1. In a calculating machine having a multiorder first factor receiving device, a multiorder second factor receiving device, selecting mechanism, and an operation control member; the combination of, means for transmitting movements representative of different numeral values from said selecting mechanism to said first factor receiving device including an ordinally shiftable set-up carriage, shifting means operable under control of said selecting mechanism to shift said carriage into operative relationship with successive orders of the first factor receiving device, means for transmitting movement representative of different numeral values from said selecting mechanism to said second fact ? receiving device including a second ordinally shiftable set-up carriage, and a second shifting means operable under control of said selecting mechanism for shifting the second set-up carriage into operative relationship with successive orders of the second factor receiving device, with shift disabling mechanism normally effective to disable the second shifting means and hold the second set-up carriage out of operative relationship with the second factor receiving device, and shift control means responsive to actuation of said control member for causing said first shifting means to shift the first carriage out of operative relationship with the first receiving device and concurrently rendering said shift disabling mechanism ineffective.

2,459,863
METHOD OF ELECTRICAL BRAZING OF CONDUCTORS
George E. Berggren, Baltimore, Md., assignor to Western Electric Company, Incorporated, New York, N. Y., a corporation of New York
Application November 10, 1944, Serial No. 562,848
2 Claims. (Cl. 219—12)

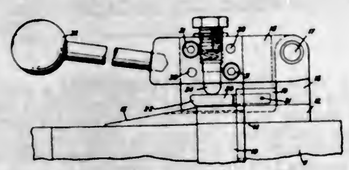
1. The method of brazing stranded electrical conductors of predetermined shape, which comprises clamping a stranded electrical conductor in contact with the bottom of a groove formed in an electrode and having the shape of the conductor, pressing a preformed disc of brazing material of a diameter greater than that of the conductor and a predetermined mass in the groove against the end of the conductor, holding the end of a second stranded conductor against the opposite side of the disc and in contact

with the bottom of the groove, pressing a second electrode against the periphery of the preformed disc with a predetermined amount of pressure, and passing a predetermined amount of current from one of the electrodes to the other electrode for a predetermined period of time, whereby the current initially flows through only the disc of brazing material and melts the brazing



material, the second electrode moves into contact with the end portions of the conductors as the brazing material melts and flows into the interstices between the strands of the conductors, and a current flows through the ends of the conductors after the second electrode has moved into an engagement therewith, whereby a brazed joint is formed of the same diameter as that of the stranded conductors.

2,459,864
STRAP CUTTING TOOL
Norman T. Bissett, Reading, and Norman C. Moore, Haverhill, Mass., assignors to Western Electric Company, Incorporated, New York, N. Y., a corporation of New York
Application September 1, 1945, Serial No. 614,016
5 Claims. (Cl. 30—134)



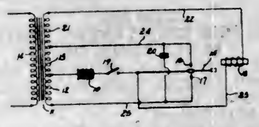
1. A tool for cutting package binding straps, the tool comprising a base having a wedge shaped leading end to facilitate movement of the base between a package and a tensioned strap binding the package, a knife to cooperate with the base to cut the strap, a holder for the knife movable relative to the base to move the knife into and out of its cutting position, and means to grip the strap to hold the ends of the strap created by the cut against flying outwardly.

2,459,865
SHOPPER'S COMBINATION CARRIER AND CONVEYANCE
Sarah E. Bourne, Mount Rainier, Md.
Application May 4, 1946, Serial No. 667,397
2 Claims. (Cl. 280—36)

1. A shopper's package and article carrying and transporting device of the class described, a carrier-truck comprising a relatively small flat board provided on its underside with corner arranged casters, said board being substantially rectangular, and four board lifting, carrying and package tying ropes, each rope being of elongated loop form, the free end portions attached to marginal edge portions of said board, said four such

ropes being situated so that there is one for each marginal edge portion of the board.

2,459,866
VIBRATOR CIRCUIT
Harold J. Brown and Joseph A. Mas, Indianapolis, Ind., assignors to Electronic Laboratories, Inc., a corporation of Indiana
Application November 26, 1943, Serial No. 511,782
6 Claims. (Cl. 175—365)



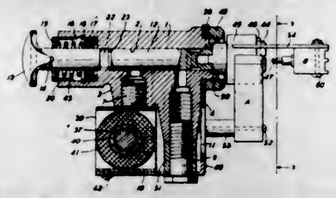
1. In an electrical system for converting current from a direct current source into alternating current, a transformer having a core and a primary winding with opposite end terminals, oppositely disposed contact means respectively connected to the opposite end terminals of said primary winding, vibratory contact means disposed between said oppositely disposed contact means and connected to one side of the direct current source, a center tap for said primary winding connected to the opposite side of said direct current source, a driving magnet for said vibratory contact means, said driving magnet having a coil, and circuit means for energizing the coil of the driving magnet, said circuit means comprising an induction winding surrounding the core of the transformer, said induction winding having a first and a second end connection, said first end connection being connected to an end terminal of the primary winding and said second end connection being connected to one side of the coil of the driving magnet, the other side of the coil of the driving magnet being connected to the vibratory contact means.

2,459,867
GUNNERY TRAINING DEVICE
Russell B. Buchanan, Lynbrook, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application October 12, 1945, Serial No. 622,066
12 Claims. (Cl. 35—25)

6. In apparatus in a trainer for simulating the hydraulic control of a gun charger by a gun charger control valve, means for simulating the production of a hydraulic pressure adequate to

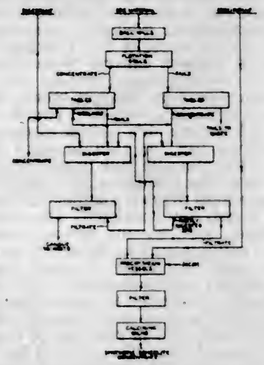
against the adjacent bevel gear thereby disabling

pull back the bolt of the gun to safety the gun, a gun charger control rotatable to a gun safetying position and then depressible for simulating a gun charger control valve, a relay operable in response to the rotation and depression of said control, means for locking said control in its depressed position, a magnet operable for releasing said locking means in simulation of the increase



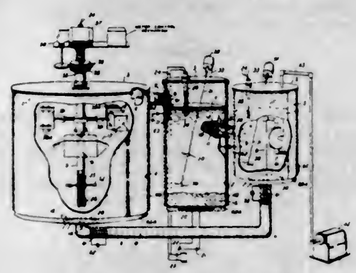
in hydraulic pressure to a value adequate to pull out the bolt of a gun, a relay operable in response to the operation of said first relay if said hydraulic pressure simulating means is in a condition representative of said adequate pressure to cause the operation of said release magnet, and means controlled by said latter relay to simulate the reduction of hydraulic pressure incident to pulling back the bolt of a gun to safety the gun.

2,459,868
METHOD FOR RECOVERING TUNGSTEN VALUES FROM ORE
Blair Burwell, Grand Junction, Colo., and Joseph H. Brennan, Niagara Falls, N. Y., assignors to United States Vanadium Corporation, a corporation of Delaware
Application August 14, 1942, Serial No. 454,762
6 Claims. (Cl. 23—24)



5. A method of treating a tungsten ore material to recover tungsten as calcium tungstate therefrom, which method comprises separating said ore material by flotation into a tungsten-rich portion and a tungsten-poor portion; separately tabling both said tungsten-rich portion and said tungsten-poor portion, thereby recovering from said tungsten-rich portion a high-grade tungsten concentrate, a middling-grade tungsten concentrate, and a tailing-grade tungsten concentrate and from said tungsten-poor portion a low-grade tungsten concentrate and gangue; digesting said middling-grade, tailing-grade, and low-grade tungsten concentrates with an alkaline digestant in a plurality of countercurrent stages, said middling-grade tungsten concentrate and said low-grade tungsten concentrate being digested in a first digestion stage with digestant recovered from a second digestion stage, thereby recovering from said first digestion stage a tungsten-containing liquor and partly digested ore material, and said tailing-grade tungsten concentrate and said partly digested ore material being digested in a second digestion stage with fresh digestant, thereby recovering from said second digestion stage digestant and a residue of insoluble material; and adding a calcium compound to said tungsten-containing liquor, thereby precipitating calcium tungstate therefrom.

2,459,869
CRYSTAL GROWING APPARATUS
Carl J. Christensen, Summit, and Albert C. Walker, Short Hills, N. J., assignors to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application August 10, 1946, Serial No. 689,672
6 Claims. (Cl. 23—273)

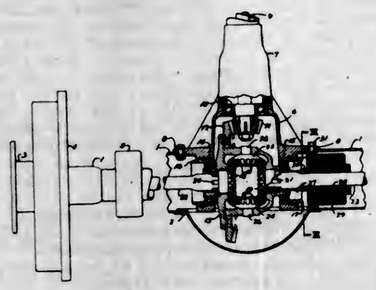


1. A crystallizer system comprising a plurality of more than two separate interconnected vessels each having inlet and outlet openings and including a saturator vessel, an unsaturator or superheat vessel, and a crystallizer vessel, and conduits cyclically connecting said vessels in the order from said saturator vessel to said unsaturator vessel and from said unsaturator vessel to said crystallizer vessel and from said crystallizer vessel back to said saturator vessel, said conduits comprising a conduit connecting said outlet opening in said saturator vessel with said inlet opening in said unsaturator vessel, a conduit connecting said outlet opening in said unsaturator vessel to said inlet opening in said crystallizer vessel, said last-mentioned inlet opening being an opening extending through the lowermost part of the bottom of said crystallizer vessel, and a conduit connecting said outlet opening in said crystallizer vessel with said inlet opening in said saturator vessel, a temperature sensitive device disposed in said saturator vessel, a heater electrically connected with said temperature sensitive device and disposed adjacent said saturator vessel, a temperature sensitive device disposed in said unsaturator vessel, a heater electrically connected with said last-mentioned temperature sensitive device and disposed adjacent said unsaturator vessel, said crystallizer vessel having disposed therein work carrying means, a temperature sensitive device disposed in said crystallizer vessel, and a heater electrically connected with said last-mentioned temperature sensitive

device and disposed adjacent said bottom inlet opening in said crystallizer vessel, said temperature sensitive devices being independently responsive to predetermined temperature values.

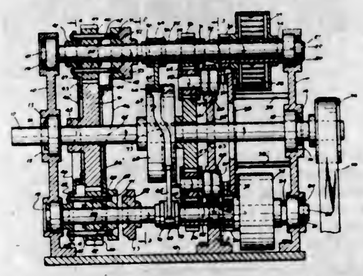
5. The method of growing crystals from nutrient solution circulating in contact with excess solid salt disposed at a point along the path of travel of the solution passing successively through a saturator stage, a separate superheat or unsaturator stage and a separate crystallizer stage, which consists in circulating the solution cyclically in a path of travel passing from the saturator stage to the unsaturator stage, from the unsaturator stage to the crystallizer stage and from the crystallizer stage back to the saturator stage, stirring the solution in contact with the excess solid salt in the saturator stage, heating the solution in the saturator stage to a temperature value sufficiently above its saturation point temperature to render it sufficiently unsaturated to add additional solute thereto from the excess solid salt therein, filtering the solution sufficiently to remove solid crystalline material therefrom in passing from the saturator stage to the unsaturator stage, heating the solution in the unsaturator stage to a different temperature value above said temperature value in the saturator stage and sufficiently above its saturation point temperature to render it sufficiently unsaturated to dissolve crystalline material in the solution passing through the unsaturator stage, moving the heated solution from the unsaturator stage upwardly into the lowest part only of the bottom of the body of solution in the crystallizer stage, heating the lowest part only of the body of solution in the crystallizer stage at a temperature suitable to maintain the upper part thereof saturated at a temperature value sufficiently below saturation point temperature to permit crystallization and growth of the crystals therein, and moving the crystals in contact with the saturated upper part of the solution in the crystallizer stage.

2,459,870
DIFFERENTIAL LOCK
Everett J. Cook, Toledo, Ohio, assignor to Cook Research Laboratory, Inc., Toledo, Ohio, a corporation of Ohio
Application May 30, 1945, Serial No. 596,735
6 Claims. (Cl. 74—712)



1. In a differential gear for equalizing the driving torque between the driving wheels of an automotive vehicle, in combination, a plurality of bevel gears comprising the torque equalizing mechanism of a differential, a collar coaxial with and adjacent the hub of one of the bevel gears, an electromagnet, and a lever system actuated by the magnet and adapted to force the collar against the adjacent bevel gear thereby disabling the differential by driving the adjacent bevel gear into binding engagement with the other bevel gears to permit unequal division of torque to the driving wheels.

2,459,871
SPRING MOTOR
Edward J. Cole, Peekskill, N. Y.
Application December 9, 1946, Serial No. 714,992
3 Claims. (Cl. 185—9)

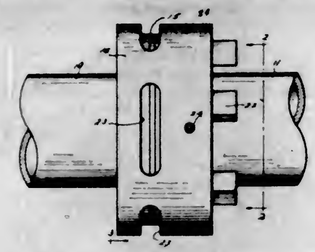


2. In a spring motor, a driven shaft mounted for rotation, a plurality of parallel driving shafts located equi-distantly from the driven shaft and mounted for independent rotation, torsion springs secured to said driving shafts respectively, interengaging gearing mounted on said driving shafts and on said driven shaft, clutch means connected with the gearing on said driving shafts, cam means carried by said driven shaft and engaging with said clutch means for coupling the gearing on each of said driving shafts to its shaft during a portion of each revolution of said driven shaft for turning the driven shaft by the tension of said torsion springs and said cam means retaining the gearing on each of said driving shafts in uncoupled relation with its shaft during the remaining portion of each revolution of said driven shaft, an interengaging train of gearing connecting said driving shafts with said driven shaft for turning said driving shafts by said driven shaft in a direction opposite the direction of rotation of the driving shafts by the tension of said torsion springs, clutch means for coupling the driving shafts with said train of gearing and cam means carried by said driven shaft and engaging said last named clutch means for rendering the same active for coupling each of the driving shafts with said train of gearing during the portion of the revolution of the driven shaft that said driving shafts are in said uncoupled relation with the first mentioned gearing.

2,459,872
COUPLING FOR ROUND PIPES AND TUBES
Frank E. Cox, Brooklyn, N. Y.
Application April 5, 1944, Serial No. 529,653
1 Claim. (Cl. 285—120)

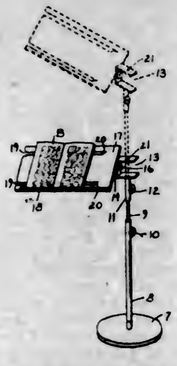
A coupling for straight, smooth faced pipes and tubes of any size, comprising cylindrical male and female coupling members and a collar fitting flush on the adjacent end of each pipe and a ring weld for permanently securing each collar on its pipe, each of said members adapted for abutting against opposite faces of said two collars and to turn freely on the pipes, a gasket having the same outside diameter as the collars and the same bore as the pipes being inserted between said collars, and means for tightening the coupling members

against said collars, said means consisting of interengaging threaded portions on said members, and tightening elements on each of said members, said tightening elements consisting of radial tool slots in the wall of the female member



and lugs protruding from said male member lengthways of the pipes, and removable locking means between said coupling members consisting of a radial set screw in the wall of said female members adapted for engaging said male member to prevent relative turning of said members.

2,459,873
READING STAND
William H. Curtis, Pass Christian, Miss.
Application December 14, 1945, Serial No. 634,988
2 Claims. (Cl. 45—60)



1. In a reading stand, the combination of a table containing a pair of horizontal slots serving to hold sheet material such as newspapers, a support for said table, and means for adjustably holding said table for tilting movement with relation to said support.

2,459,874
COATING COMPOSITION AND SHEETS COATED THEREWITH
Robert E. Fay, Jr., Bridgeport, Conn., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application March 14, 1947, Serial No. 734,847
8 Claims. (Cl. 117—76)

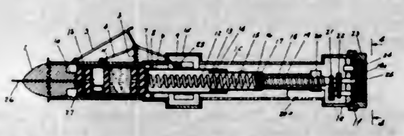
6. The method of preparing an artificial leather which is highly resistant to abrasion which comprises coating a sateen fabric running 1.12 yards per pound per 53" width material with a composition having the following composition:

Copolymer of butadiene and acrylonitrile	pounds	40
Complex terpene resin (advagum)	do	8
Camel whiting (calcium carbonate)	do	12
Stearic acid	ounces	6
Zinc oxide	pounds	2
Non-heat hardening phenolic resin	do	4
Cumarone resin	do	4
Benzothiazyl disulfide	ounces	10
Sulfur	do	10

applying sufficient of the said composition until 3¼ ounces of non-volatile material is applied per linear yard of 50" width material, allowing the solvent to evaporate, and then applying 11 ounces per yard of 50" material of a composition having the following formula in parts by weight:

Polymerized chloroprene	100.0
Copolymer of butadiene and acrylonitrile	100.0
Chlorinated polyethylene (65% chlorine)	35.0
Release agent	6.0
Zinc oxide	70.0
Magnesium oxide	50.0
Calcium carbonate	45.0
Ground leather	45.0
Light process petroleum oil	10.0
Colored pigments	30.0
Benzothiazyl disulfide	4.0
Sulfur	4.0
Phenyl salicylate	0.4

2,459,875
SYRINGE AND AMPOULE
Marvin L. Folkman, Shaker Heights, Ohio
Application September 11, 1944, Serial No. 553,605
3 Claims. (Cl. 128—215)

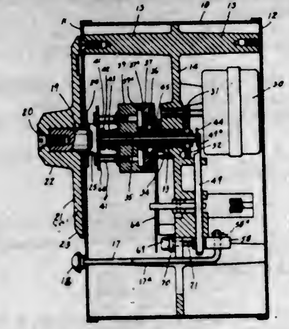


1. In a syringe, in combination, an applicator section for containing medicant, an operating section, and medicant ejecting means in the operating section including a spring case comprising relatively movable spring enclosing sections, a spring in the case, instrumentalities to compress the spring by relative movement of the case sections including a handle turnable on the operating section and a member operable by the handle to move a case section to put the spring under compression, and manually controllable detent means to normally restrain a section of the case against medicant ejecting action under the action of the spring.

2,459,876
ADJUSTABLE TIME INTERVAL CONTROL DEVICE
Percy O. Gibson, Kokomo, Ind.
Application October 18, 1945, Serial No. 623,139
2 Claims. (Cl. 161—1)

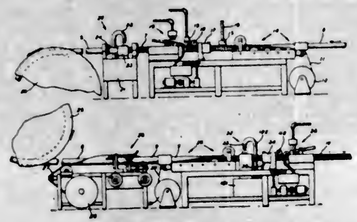
1. A variable interval control device including in combination a motor, a clutch, an actuator clutch connected to the motor and rotatable thereby, switch means for motor control, means simultaneously effecting clutch operation and switch means operation and operable by the actuator at the expiration of a predetermined interval for motor stoppage and clutch disconnection, a manual initiator for actuating the

said simultaneous means, the latter including an over-center holding arrangement, and spring



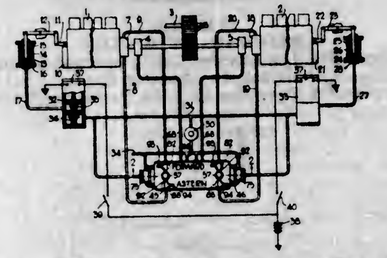
means normally constraining the said simultaneous means to non-clutching and open switch position.

2,459,877
APPARATUS FOR MAKING MULTIPLY CABLE SHEATHS
Randall Gillis, Westfield, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a corporation of New York
Application April 25, 1944, Serial No. 532,613
1 Claim. (Cl. 113—33)



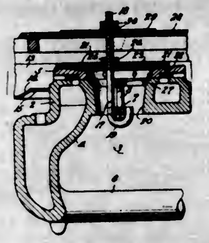
An apparatus for making electrical conductor cable in one continuous operation and comprising a sequence of forming rolls to fold a longitudinally advancing tape of sheath material about a longitudinally and horizontally advancing core into a sheath on the core and having a seam therein running longitudinally along the top of the sheath, a nozzle to apply sealing material to the seam of the sheath on the advancing core, a heated member pressed against the seam of the sheath on the advancing core to cause the sealing material to seal the same hermetically, a guide sheave to receive the advancing sheathed core and lead the same through an arcuate path to advance longitudinally and horizontally with the seam of the sheath on the bottom of the sheathed core, and a second sequence of forming rolls to fold a longitudinally advancing tape of sheath material about the longitudinally and horizontally advancing sheathed core into a second sheath over the first sheath and having a seam therein running longitudinally along the top of the second sheath, a second nozzle to apply sealing material to the seam of the second sheath on the advancing core, and a second heated member pressed against the seam of the second sheath on the advancing core to cause the sealing material to seal the same hermetically.

2,459,878
PLURAL ENGINE CONTROL SYSTEM
John N. Good, Wilmerding, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a corporation of Pennsylvania
Original application July 30, 1942, Serial No. 452,950, now Patent No. 2,407,877, dated September 17, 1946. Divided and this application April 30, 1943, Serial No. 485,116
9 Claims. (Cl. 60—97)



3. An apparatus for controlling operation of a clutch for each of two reversely operating prime movers, for transmitting power from the respective prime mover, said apparatus comprising in combination, two individual and relatively movable levers, means responsive to movement of one of said levers to selectively render one of said clutches either effective or ineffective, other means responsive to movement of the other lever to selectively render the other clutch either effective or ineffective, and means automatically operative upon movement of either one of said levers to render the respective clutch effective to maintain the other clutch ineffective.

2,459,879
CLAMPING MEANS
Christopher L. Hardwick, Cleveland, Tenn.
Application September 27, 1945, Serial No. 618,918
2 Claims. (Cl. 248—361)

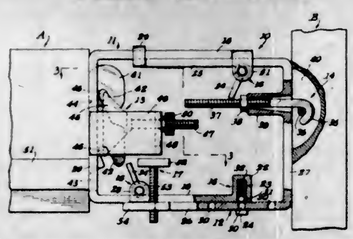


1. A clamping means for securing together upper and lower and intermediate superposed parts, said intermediate and lower parts each having an upper and a lower cross web respectively, said cross webs being of substantially the same width and in vertical alinement with each other, said clamping means comprising a threaded shanked member, hook-shaped means on the lower end of the shank of said shanked member removably engageable beneath said lower cross web and the intermediate portion of said shanked member above said hook-shaped means adapted to extend above and adjacent to one side of said upper cross web, a pair of spaced apertured clamping members, said apertures being offset from but in substantial alinement with one side face of each of said cross webs, said

the latter for movement in one direction along

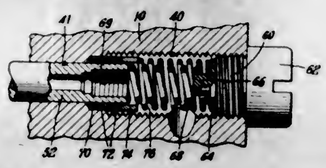
clamping members adapted to be loosely mounted on said threaded shanked member, and nuts cooperating with said apertures and threadedly mounted on the upper end of said shanked member engageable with the upper faces of said clamping members for forcing said clamping members against said upper and intermediate parts respectively whereby said upper, lower and intermediate parts will be clamped together.

2,459,880
BED-RAIL EXTENSION
Glenn Hill, Los Angeles, Calif., assignor to Irvin A. Brock, Los Angeles, Calif.
Application December 22, 1945, Serial No. 636,888
8 Claims. (Cl. 5—181)



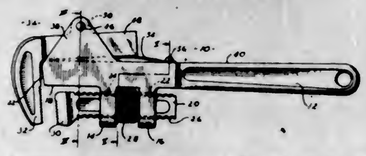
8. A bed-rail extension comprising a member, another member slidable with respect to the first member, cross-pins in one of said members adapted to removably interlock with and fit into the hooks of a standard bed-rail, hook means in the other of said members adapted to removably interlock with and embrace a pin of a standard bed-post, and means for adjusting the distance between said cross-pins and said hook means including a screw device.

2,459,881
BLOWPIPE
Wilgot J. Jacobsson, Plainfield, N. J., assignor to Union Carbide and Carbon Corporation, a corporation of New York
Application September 15, 1944, Serial No. 554,190
7 Claims. (Cl. 158—27.4)



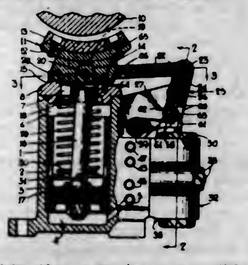
1. A blowpipe comprising, in combination, an elongated pipe containing a gas mixing tube, an elongated mixer nozzle subject to undesirable longitudinal expansion and contraction due to temperature changes and disposed in spaced concentric relation within said pipe to provide an annular passage therebetween, said nozzle being adapted to discharge a stream of gas axially into said tube, means disposed adjacent the front end of said nozzle for spacing the front end of said nozzle from the rear end of said mixing tube to provide a gas inlet to said mixing tube, means for supplying one gas to the annular passage between said nozzle and pipe, means for supplying another gas to said nozzle, gas-tight bearing means disposed between the rear end portions of said pipe and nozzle, the rear end portion of said nozzle being free to expand and contract longitudinally in said gas-tight bearing means, and resilient means urging said nozzle forwardly within said pipe.

2,459,882
SWINGING JAW ADJUSTABLE WRENCH
Rollie Johnson, Edgerton, Mo.
Application February 17, 1947, Serial No. 729,109
1 Claim. (Cl. 81—99)



A wrench comprising a body having a handle on the rear end thereof; a pair of longitudinally spaced and transversely extending sleeves projecting from one edge of the body between the ends thereof and having longitudinally aligned apertures therein, a slidable jaw movable toward and away from the forward end of the body and having a threaded shank positioned within said sleeve apertures, a nut on said shank and positioned in the space between said sleeves, a swingable jaw on the opposite edge of the body having a head overlapping said forward end of the body in close proximity thereto, said head of the swingable jaw extending into the path of travel of said threaded shank, a pair of transversely spaced and longitudinally extending triangular ears projecting from the opposite edge of the handle and at the forward end of the body, said swingable jaw having a rigid shank positioned between said ears and pivotally joined to that apex of each ear remote from said opposite edge, said remote apexes lying in a transverse plane passing through the body substantially midway between the forward end of the body and the forwardmost sleeve.

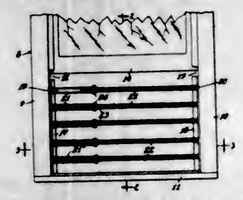
2,459,883
CONTROL APPARATUS
Cecil S. Kelley, Forest Hills, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a corporation of Pennsylvania
Application October 27, 1945, Serial No. 625,011
9 Claims. (Cl. 137—144)



2. In combination, a motion reversible member, a longitudinally and transversely movable structure, means for actuating said structure longitudinally into and out of engagement with said member, means to be controlled operable by transverse movement of said structure by said reversible member in either of two directions, stop means engageable by said structure to limit said transverse movement in both directions for

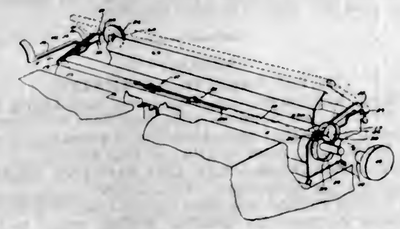
defining two different positions of said structure, and means for holding said structure against transverse movement when disengaged from said reversible member and rendered ineffective by longitudinal movement of said structure into engagement with said member.

2,459,884
SAFETY WINDOW GUARD
Harold Kopf, New York, N. Y.
Application April 19, 1948, Serial No. 21,940
1 Claim. (Cl. 160—223)



A window guard adapted to be inserted into the side channels of a window comprising two angle irons, the angle irons being adapted for upright insertion in the window channels in opposed relationship, a plurality of spaced horizontal dowels disposed vertically along the angle irons and extending inwardly in opposed relationship when the angle irons are inserted in the channels, tubes having outer ends removably disposed over the dowels on one side of the window frame, coacting rods having outer ends removably disposed over the dowels on the opposite side of the frame, the inner end of each rod being threaded and partly located within the inner end of the corresponding tube on the opposite side of the window, and a separate nut mounted upon the threaded end of each rod outside of the tube and adapted to be pressed and tightened against the inner end of the tube.

2,459,885
BOTTOM MARGIN GUIDE FOR TYPEWRITING MACHINES
Helge Krogseng, Bronxville, N. Y., assignor to Krogseng Laboratories, Inc., New York, N. Y., a corporation of New York
Application February 26, 1946, Serial No. 650,162
12 Claims. (Cl. 197—189)



1. A bottom margin indicator for a typewriter having a horisontally disposed platen for supporting a sheet and for moving it through the typewriter; the said indicator comprising an indicating member supported for movement along a linear course; a screw, coacting with said platen and said indicating member for moving the latter along said course in direct proportion to the movement of the sheet through the typewriter; means independent of said sheet for interconnecting said screw and said member, to condition the latter for movement in one direction along said course in response to advancing movement of the sheet through the typewriter; means independent of said sheet for automatically disconnecting said member and said screw upon such advancement of the sheet to a predetermined extent through the typewriter; and means, operative upon such disconnection, for moving said member in the opposite direction.

2,459,886
SELENIUM RECTIFIER
Walter P. Krok, Lorain, Ohio, assignor, by mesne assignments, to Lorain Products Corporation, Lorain, Ohio, a corporation of Ohio
No Drawing. Application November 2, 1945, Serial No. 626,440
8 Claims. (Cl. 175—366)

3. A rectifier comprising a conducting base plate, a selenium layer thereon, said layer having a hydrochloric acid treated surface, and a counter-electrode in contact with said treated surface.

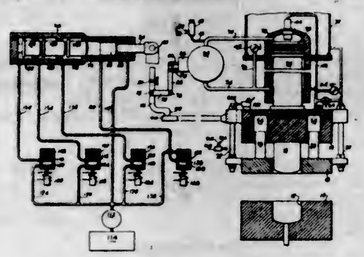
2,459,887
BASEBALL GLOVE
Harry B. Latina, East St. Louis, Ill., assignor to Rawlings Manufacturing Company, St. Louis, Mo., a corporation of Missouri
Application October 7, 1946, Serial No. 701,661
10 Claims. (Cl. 2—19)

10. A baseball glove comprising back and palm covers secured together around their peripheral portions, said palm cover having a ball receiving pocket, padding interposed between said covers and including a base pad seated against the inner face of said back cover, a horseshoe-shaped pad seated on said base pad and two curb pads seated on said horseshoe-shaped pad and extending on opposite sides thereof from its closed end to its open end and shaping and supporting the sides of said pocket and means accessible from the side edge of said glove and entirely clear of said pocket for changing the cross-sectional shape of at least one of said curb pads, said means comprising a marginal extension of said palm cover that extends over the outer side of said curb pad, beneath said palm cover and over the palm cover opposing face of said curb pad and over the inner side thereof, and a lacing extending across the back cover opposing face of said curb pad and through the portions of the extension that cover the inner and outer sides of said curb pad.

2,459,888
MOMENTARY SLOWDOWN DEVICE FOR HIGH-SPEED BLANK HOLDER PRESSES
Robert J. Lindsey, Mount Gilead, Ohio, assignor to H-P-M Development Corporation, Wilmington, Del., a corporation of Delaware
Application December 6, 1944, Serial No. 566,926
4 Claims. (Cl. 113—45)

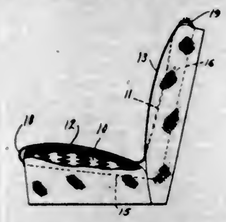
1. The combination in a blankholder press of a main platen, a blankholder platen, a plurality of piston-cylinder means operatively associating said blankholder platen with said main platen,

rods carried by said blankholder platen extending through said main platen and having collars thereon to limit the maximum spacing of said platens while permitting movement thereof toward each other, motor means for advancing said main platen into working position during which time said blankholder is moved toward said main platen and for retracting said main platen from said working position during which time said blankholder moves away from said main platen,



means carried by said main platen to be engaged by one of said collars for retarding the speed of movement of said main platen immediately prior to the engagement thereof with said blankholder platen through said rods and collars, and means comprising annular resilient elements encircling said rods and interposed between said collars and said main platen whereby during the retracting movement of said main platen said blankholder platen is picked up smoothly and without shock.

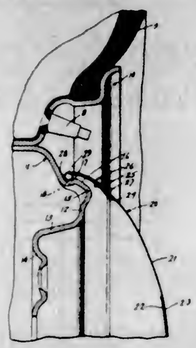
2,459,889
PLASTIC COVER FOR AUTOMOBILE SEATS
George Albert Lyon, Allenhurst, N. J.
Application May 14, 1945, Serial No. 593,664
6 Claims. (Cl. 155—179)



1. A cover for seats such as an automobile seat and the like which includes a seat proper and a back part, said cover comprising integral portions made of sheet thin resiliently pliable form-sustaining plastic material shaped to conform generally with said seat and back parts and also including edge portions bulged away from the extremities of the back and seat parts and which bulged portions will yield outwardly upon occupancy of the seat but will spring back of their own accord to their original contour without deformation upon release of pressure on the seat and back parts.

2,459,890
WHEEL HUBCAP STRUCTURE
George Albert Lyon, Allenhurst, N. J.
Application October 15, 1945, Serial No. 622,448
8 Claims. (Cl. 301—108)

1. As an article of manufacture a wheel hub cap comprising a dished shell of metallic material including a central crown portion and a curved outer margin and an annular ring of highly resilient metallic material curved to conform to and tightly nest over said outer shell margin and having a continuous outer turned edge beyond the outer edge of said shell, said



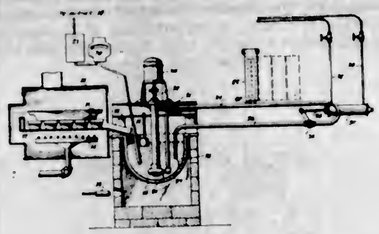
ring providing said cap with a resiliently deflectable outer edge for snap on detachable retaining engagement with a wheel, said crown portion and curved outer margin being connected by an indented shoulder portion and said ring having an inner edge tightly seated on said shoulder portion.

2,459,891
PRESSURE SENSITIVE ADHESIVE MASS
William L. Nelson, Highland Park, and Otto R. Sinnig, New Brunswick, N. J., assignors to Johnson & Johnson, a corporation of New Jersey
No Drawing. Application July 22, 1944, Serial No. 546,218
5 Claims. (Cl. 260—33.6)

1. As a spreadable pressure sensitive adhesive mass a mixture of 20–35% partially cured, rubbery butadiene-styrene copolymer; 5–15% polyisobutylene of a molecular weight of 80,000 to 120,000; 5 to 20% tackifying resin; 10 to 25% of a plasticizer composed of a major amount of low molecular weight, high viscosity liquid polyisobutylene and a minor amount of a high viscosity mineral oil; and 20 to 35% of a filler.

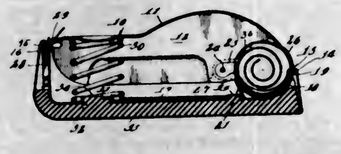
2,459,892
METAL CASTING APPARATUS
Sidney L. Palmer, San Francisco, and Lloyd M. Beckes, San Bruno, Calif., assignors to American Smelting and Refining Company, New York, N. Y., a corporation of New Jersey
Application December 14, 1945, Serial No. 634,934
3 Claims. (Cl. 22—70)

2. In a casting machine of the class described having a vessel for holding molten metal to be cast, a vertically-disposed mold of the split-type hinged at the top and with a port near the bottom for ingress of molten metal to the mold cavity, a pump in said vessel, a conduit interconnecting said pump and port and returning to said vessel with a valve in the return portion of said conduit, and passageways in said mold so positioned as to effect progressive solidification of the casting from the top downwardly to the port when cooling fluid is circulated therethrough, the combination with said mold of a reciprocable member constituting a part of the mold inner wall when in retracted position, and a combined port



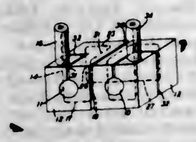
closure and casting ejector when in extended position.

2,459,893
ABRADING DEVICE
Walter P. Peterson, Chicago, Ill.
Application May 27, 1946, Serial No. 672,621
2 Claims. (Cl. 51—187)



1. An abrading device, consisting of an elongated frame member curved at one end and bent at a substantially right angle at the opposite end, a combined hinge and clamping member secured to the curved end and having an outwardly projecting flange and also having inwardly projecting ears, a cover member pivotally connected to said ears and having a clamping edge opposed to said flange said pivotal connection being at a substantial distance from the clamping edge whereby the clamp may be readily opened a sufficient distance for the easy insertion and adjustment of the abrasive strip to be used in the device, said cover member having a clamping projection extending through an opening in the angularly turned end of the frame member and coacting therewith to form a clamp, and a spring between the frame member and the cover member tending to hold the clamping devices in clamping positions.

2,459,894
ELECTRICAL COIL AND A METHOD OF MAKING SUCH
Raymond E. Powell, Westfield, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a corporation of New York
Application January 11, 1945, Serial No. 572,354
8 Claims. (Cl. 219—13)



6. An integral angularly helical conductive member comprising a body of electrically conductive material having a chamber therein and formed with three plane slots in the body all intersecting the chamber and no two slots being parallel or co-planar, the three slots and the chamber being so disposed and proportioned that the substance of the body is thereby divided into integrally united segments in an angularly helically aligned sequence coiled about the chamber.

2,459,895
PROCESS OF RECOVERING BERYLLIUM OXIDE FROM BERYLLIUM ORE
Anton Schormuller, Painesville, Ohio, assignor to Clifton Products, Inc., Painesville, Ohio, a corporation of Ohio
No Drawing. Application July 15, 1943, Serial No. 494,881
3 Claims. (Cl. 23—16)

1. The process of extracting beryllium oxide from beryl which comprises: mixing powdered beryl, having a beryllium oxide content of at least 5% and having alumina therein, with potassium carbonate and sodium carbonate in substantially the proportions of 140 pounds of beryl with 40 pounds of potassium carbonate and with from 65 to 70 pounds of sodium carbonate; fusing the mixture thus formed; cooling and powdering the resultant slag; treating the powdered slag with a sufficient proportion of sulphuric acid to form a liquid slurry therefrom and to decompose the silicates into silica and facilitate the formation of potassium alum from the alumina constituent of the slag; heating the slurry thus produced to change the silica into insoluble silica; extracting the slurry to obtain in solution materials other than silica; filtering out the silica; heating the solution to concentrate same to a specific gravity to about 1.450 while boiling; cooling the solution to form crystalline potassium alum; removing the alum; and processing the resultant liquid for the recovery of beryllium oxide.

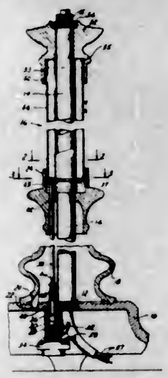
2,459,896
SILVER IMPREGNATION
George Schwarz, Williamstown, Mass.
No Drawing. Application January 18, 1945, Serial No. 573,465
5 Claims. (Cl. 117—138.5)

1. The method of producing on organic fibers a relatively permanent deposit of yellow highly dispersed colloidal silver, which comprises the steps of reducing, in contact with the organic fibers on which the deposit is to be produced, an aqueous solution of a silver compound providing silver ions, by reacting said solution with sufficient of an alkylolamine to effect such reduction.

2,459,897
SILVER IMPREGNATION
George Schwarz, Williamstown, Mass.
No Drawing. Application July 25, 1945, Serial No. 607,089
7 Claims. (Cl. 117—138.5)

1. The method of producing on a surface a deposit of highly dispersed colloidal silver, which consists in the steps of reducing, in contact with the surface on which the deposit is to be produced, an equeous solution of a silver compound providing silver ions, by reacting said solution with sufficient of a heterocyclic secondary amine to effect such reduction, said heterocyclic secondary amine being selected from the group consisting of piperidine, morpholine, thiomorpholine, pyrrolidine, there alkyl and alkylol substitution products, and mixtures thereof.

2,459,898
MEANS FOR ACTUATING ELECTRICAL SWITCHES
Theophile A. Stiffel, Chicago, Ill.
Application April 14, 1945, Serial No. 21,007
7 Claims. (Cl. 240—123)

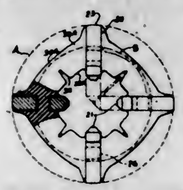


6. In a lamp including a base and a stationary vertical support secured thereto, a switch secured to said lamp exteriorly of said vertical support, a vertically slidable sleeve of substantially the length of the vertical support surrounding said support and vertically movable with respect to and independently of said base, and so constructed and arranged that when depressed it will operate said switch, and spring means for automatically returning said sleeve to its initial raised position.

2,459,899
COLLET
Arthur Merrick Stoner, West Hartford, Conn., assignor to The Jacobs Manufacturing Company, Hartford, Conn., a corporation of Connecticut
Application February 4, 1944, Serial No. 521,697
7 Claims. (Cl. 279—51)

1. A collet of wide range for a machine tool chuck having an internal conical cam surface, said collet, comprising a plurality of tapered angularly spaced rigid gripping members symmetrically disposed about the axis of the cam surface, said gripping members being arranged to extend to and be engaged by the cam surface and being movable radially in concert toward and away from said axis whereby the volume of the spaces between them is varied, non-compressible struts of resilient material in said spaces based upon adjacent sides of proximate gripping members and connected to said members, the outer surfaces of said struts being spaced from the cam surface to provide clearances into which the struts may fold, and means including the struts for inducing outward folding of said struts upon axial loading thereof when said gripping members are moved radially inwardly.

2,459,900
COLLET
Arthur Merrick Stoner, West Hartford, Conn., assignor to The Jacobs Manufacturing Company, Hartford, Conn., a corporation of Connecticut
Application June 20, 1945, Serial No. 600,550
3 Claims. (Cl. 279—46)



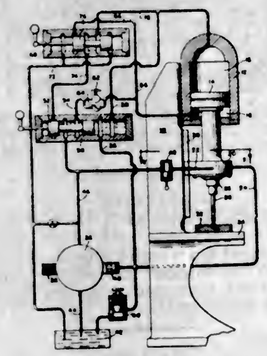
1. A collet of wide range for a machine tool chuck having an internal conical cam surface, said collet comprising a plurality of tapered angularly spaced rigid gripping members symmetrically disposed about the axis of the cam surface and being arranged to extend to and be engaged by the cam surface and being movable radially in concert toward and away from said axis, whereby the volume of the spaces between them is varied, non-compressible non-metallic struts of resilient material in said spaces based upon adjacent sides of proximate gripping members and connected to said members, the outer surfaces of said struts being spaced from the cam surface to provide clearances into which the struts may fold, and means including the struts for inducing outward folding of said struts upon axial loading thereof, said struts having longitudinal grooves of substantial depth formed in their inner and outer surfaces between the gripping members.

2,459,901
PROCESS OF MAKING RHUBARB JUICE
Orin Clark Stout, Hamilton, Ohio
No Drawing. Application October 14, 1944, Serial No. 558,749
5 Claims. (Cl. 99—105)

1. The process of forming an uncooked juice from rhubarb which consists in grinding the stems of the leaves, permitting the ground mass to stand for around two hours or more to develop the color and taste in the fluid portion of the mass from the outer skin of the stems, then settling out the solid matter from the juice while at the same time chilling the juice to a temperature just short of freezing, then adding milk of lime to the decanted juice from the settling stage, to increase the pH of the juice, then settling out the oxalic acid salts, maintaining the juice cold during the settling, and finally adding sugar to the juice.

2,459,902
HYDRAULIC OPERATING CIRCUIT FOR MACHINE TOOLS
Warren R. Tucker, Dayton, Ohio, assignor to H-P-M Development Corporation, Wilmington, Del., a corporation of Delaware
Application February 20, 1947, Serial No. 729,782
9 Claims. (Cl. 77—32)

1. In combination; a first fluid motor having an inlet and an outlet; a fluid source connected with said inlet; means of maintaining a predetermined minimum pressure at said outlet; a reciprocable ram having a larger advancing area and a smaller retracting area; means hydraulically connecting said advancing area with said outlet and said retracting area with said inlet; and means responsive to variations in pressure at said outlet for varying the delivery of said fluid source.



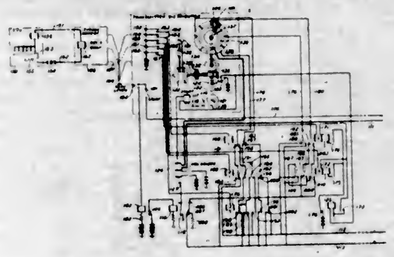
5. In a boring machine; a work support for supporting a workpiece to be bored; a spindle reciprocable toward and from said work support; a rotary fluid motor mounted for driving said spindle; a reciprocating fluid motor having a larger advancing area and a smaller retracting area mounted for reciprocating said spindle; a fluid source serially connected with said rotary motor; means to maintain a predetermined discharge pressure at the outlet of said rotary motor; means responsive to said discharge pressure for biasing said reciprocating motor in its advancing direction; and means responsive to the pressure at the inlet of said rotary motor for biasing said reciprocating motor in its retracting direction.

2,459,903
CATALYST GELS
Vanderveer Voorhees, Homewood, Ill., assignor to Standard Oil Company, Chicago, Ill., a corporation of Indiana
No Drawing. Application July 22, 1944, Serial No. 546,229
6 Claims. (Cl. 34—9)

1. The process of drying inorganic oxide gels in the form of small discrete spheroidal particles which comprises suspending in a water-immiscible hydrocarbon liquid bath spheroidal particles of a hydrogel having a strong agglomerating tendency, maintaining said liquid at an elevated temperature at which water exerts a substantial vapor pressure, removing water vapor from the suspension by injecting a desiccating gas therethrough thereby reducing the water content of the suspended gel particles to a point where agglomeration ceases, and thereafter separating the gel particles from the hydrocarbon liquid bath.

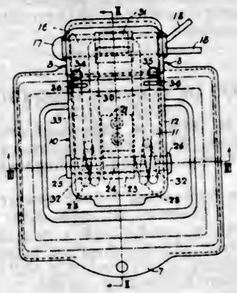
2,459,904
TELEGRAPH SIGNAL CODE TRANSLATOR
Edward F. Watson, Larchmont, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application December 9, 1943, Serial No. 513,501
13 Claims. (Cl. 178—26)

1. In a telegraph system, a source of thirty-two, five-element, two-condition, permutation code, telegraph signal combinations connected to an electromechanical translator and means in said translator, said means comprising two individual multielement selectors each including a plurality of selectively operable relays, the relays of one of said selectors actuable by a given number of the five elements of said code and the relays of



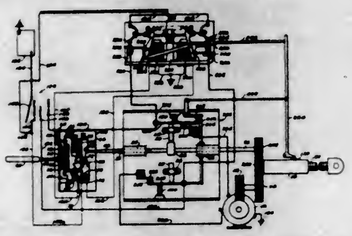
the other actuable by the remaining elements, said means responsive to the reception of any one of said signal combinations, for translating said received combinations into a corresponding particular one of thirty-two four-element, three-condition, permutation code telegraph signal combinations.

2,459,905
JOURNAL BOX LID STRUCTURE
Theodore R. Weber, Latrobe, Pa., assignor to American Locomotive Company, New York, N. Y., a corporation of New York
Application December 4, 1945, Serial No. 632,619
10 Claims. (Cl. 308—47)



1. A journal box structure comprising a journal box having an open face, a cam lug above said face and a pin extending transversely through said lug; a lid closing said face; a carrier having eyes mounted on said pin; an articulated joint connecting said lid to said carrier; and a longitudinally extending hairpin type torsion spring between said lid and carrier including two coiled portions in spring-pressed engagement with said lid at its center portion for holding said lid closed, a yoke extending upwardly from said coiled portions in spring-pressed engagement at its upper end with said lug and an arm extending upwardly from each of said coiled portions, each in spring-pressed engagement at its upper end portion with said carrier between said yoke upper end and said coiled portions.

2,459,906
AUTOMATIC REVERSING CONTROL FOR ELECTRIC MOTORS
Victor Weber, Greensburg, Pa., assignor to Robertshaw-Fulton Controls Company, a corporation of Delaware
Original application August 6, 1943, Serial No. 497,613. Divided and this application June 7, 1947, Serial No. 753,276
3 Claims. (Cl. 318—265)



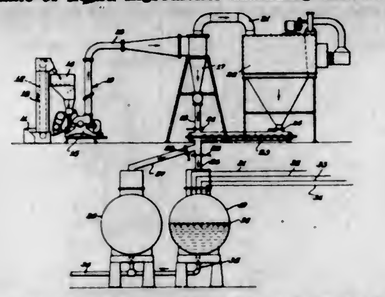
1. In combination, a reversible electric motor, a control switch operable between controlling positions for selecting the direction of operation of said motor, a relay in the motor circuit having an armature initially movable between attracted and released positions upon operation of said switch to one controlling position, means for latching said relay armature in one of its said positions to maintain said circuit energized irrespective of subsequent operation of said control switch to another controlling position, means operated intermittently from said motor in either direction to release said latching means and permit said control switch to cause deenergization of said circuit, position limit switch means in said circuit, means operated from said motor in either direction for operating said limit switch means to deenergize said circuit independently of said control switch, and means operated by said limit switch means concomitantly therewith for releasing said latching means.

2,459,907
METHOD OF CONDUCTING CHEMICAL REACTIONS
Nathaniel M. Winslow, Lakewood, and George W. Heise, Rocky River, Ohio, assignors to National Carbon Company, Inc., a corporation of New York
Application September 4, 1942, Serial No. 457,330
7 Claims. (Cl. 260—680)

1. Method of conducting a reaction between fluid reactants which comprises passing said reactants concurrently through a unitary mass of porous carbon bonded by carbon to and within and filling the cross section of an impervious tube.

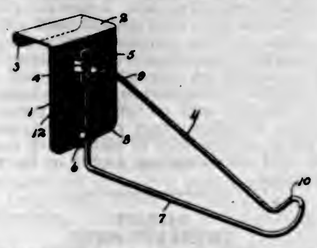
2,459,908
METHOD FOR MAKING CONFECTIONERIES
Justin J. Alikonis, Bloomington, Ill., assignor to Paul F. Beich Company, Bloomington, Ill., a corporation of Illinois
Application July 11, 1946, Serial No. 682,771
2 Claims. (Cl. 99—23)

1. A continuous method of making liquor-derived chocolate confectionery, comprising the steps of concurrently and as a single continuous operation pulverizing predetermined proportions of certain dry ingredients other than cacao ingredient and including sugar to a particle size sufficiently small that approximately 99.5% of said pulverized ingredients will pass a 325 mesh screen, and immediately thereafter discharging and mixing said pulverized dry ingredients as a single continuous operation with a predetermined volume of liquid ingredients including chocolate



liquor prepared from cacao nibs, said mixing being carried out without intervening handling of said pulverized ingredients tending to result in cohesion of particles thereof.

2,459,909
UTILITY GARMENT HANGER
Herman G. Alofs, Grand Rapids, Mich., assignor to Alofs Manufacturing Company, Grand Rapids, Mich., a corporation of Michigan
Application October 29, 1945, Serial No. 625,263
2 Claims. (Cl. 248—303)



1. In a construction as described, a vertical support plate having upper and lower vertical socket eye members therein, and a third horizontally located socket eye member at the lower end and to one side of the upper socket member, and an arm having a vertical section extending upwardly through the lower vertical socket member and at its upper end a laterally turned terminal section passing through said horizontal socket eye member, said arm at the lower end of said vertical section being extended outwardly and return bent and extending to the supporting plate and having a vertical terminal section passing downwardly through the upper vertical socket eye member, said last mentioned terminal section overlapping, at its lower portion, the upper end of said first mentioned vertical section of said arm to thereby maintain the horizontal terminal section at the upper end of said vertical section against outward movement in its horizontal socket.

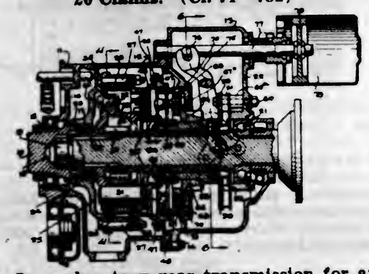
2,459,910
METHOD OF MAKING TOOL PARTS
Walter C. Alvin, Chicago, Ill., assignor to The Imperial Brass Manufacturing Company, Chicago, Ill., a corporation of Illinois
Application February 23, 1946, Serial No. 649,579
5 Claims. (Cl. 76—101)

3. The method of making the tube gripping members of a flaring tool or the like comprising

the steps of generally shaping a pair of cooperating members, forming a semicylindrical groove in each member, placing a roller formed with ridges of the character desired in the grooves of

the members between the members, and forcing the members together to cause the roller while held stationary to make thread-like ridges in the grooves.

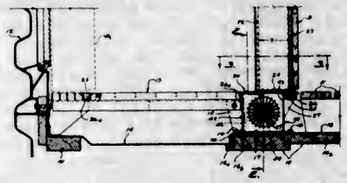
2,459,911
AUXILIARY TRANSMISSION
Benjamin B. Bachman, Philadelphia, and Donald J. Macklin, St. Davids, Pa., assignors to The Autocar Company, Ardmore, Pa., a corporation of Pennsylvania
Application October 18, 1945, Serial No. 623,078
20 Claims. (Cl. 74—781)



1. In a planetary gear transmission for automotive vehicles, a pair of axially alined, relatively rotatable power input and output shafts, a planetary gear mechanism operatively associated with and interposed between said shafts, said mechanism including a ring gear rotatable with one of said shafts and a planetary gear cage rotatable with the other of said shafts, said ring gear and said planetary gear cage being respectively provided with axially alined clutch elements, a sun gear in constant mesh with the planetary gears and rotatably journalled upon the shaft rotatable with the planetary gear cage, and means axially shiftable with respect to said sun gear for clutching together said axially alined clutch elements.

2,459,912
BUNKER AND AIR CIRCULATING FAN ASSEMBLY FOR REFRIGERATOR CARS
Paul K. Beemer, Inglewood, Calif., assignor to Preco Incorporated, Los Angeles, Calif., a corporation of California
Application August 5, 1947, Serial No. 766,399
3 Claims. (Cl. 62—24)

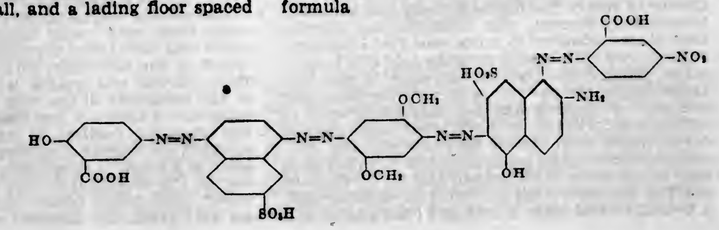
1. In a car construction having a car floor, side walls and an end wall, and a lading floor spaced above the car floor and having an end spaced from the car end wall; a combined ice bunker and ventilating structure comprising, a fan housing structure extending in length across the car floor substantially from side to side immediately adjacent the lading floor end, the fan housing being an elongate unitary box-like structure comprising top and bottom plates and an intermediate vertical wall structure comprising staggered longitudinal wall portions and interconnecting transverse wall portions forming a series of compartments alternate ones of which are open at opposite sides of the housing, the housing being spaced from the car end wall with the upper surface of its upper plate flush with the upper surface of the lading floor and forming the lower part of a transverse wall structure which divides an ice bunker compartment adjacent the end wall from a lading compartment whose floor is formed by the lading floor, a fan driving shaft extending lengthwise through the fan housing, certain of the transverse housing walls being perforate, fan units on the shaft in alternate housing compartments, an ice grate in the ice bunker compartment with its upper surface at the level of the



lading floor surface, and a bulkhead structure extending across the car interior from side to side, the bulkhead structure being movable between a position against the car end wall and a position over the fan housing where it is supported directly on the housing top plate and forms the upper part of the transverse wall structure which divides the ice bunker from the lading compartment, the housing structure including an upwardly facing channel formation extending longitudinally of the structure at a level below the surface of the top plate, and the lower edge of the bulkhead structure being provided with a downwardly projecting bead adapted to enter the channel formation.

2,459,913
METALLIZABLE TETRAKISAZO DYE
Werner Bossard, Basel, Switzerland, assignor to the firm J. R. Geigy A. G., Basel, Switzerland, a Swiss firm
No Drawing. Application February 26, 1945, Serial No. 579,898. In Switzerland April 4, 1944
1 Claim. (Cl. 260—166)

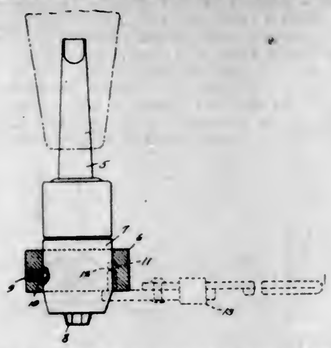
The polyazo dyestuff capable of being metallised, corresponding in the free state to the formula



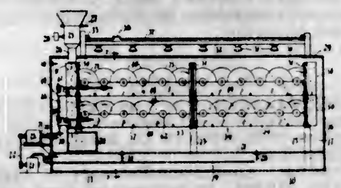
of the said roller from said idler, and below the tially spherical surface above said universal

2,459,914
CHUCK RECONDITIONING DEVICE
Louis B. Brown, Duquesne, Pa.
Application June 18, 1945, Serial No. 600,057
1 Claim. (Cl. 279—60)

The combination with a chuck having a threaded sleeve formed with a tapered inner surface movable over the cam surfaces of the chuck, operating the chuck, said sleeve having openings formed in the outer surface, of a ring having threaded bores extending transversely therethrough, fitted over the threaded sleeve, screws fitted within the threaded bores, the inner ends of the screws extending into the openings of the sleeve removably securing the sleeve to the chuck, said sleeve having vertical bores extending upwardly from the bottom thereof, the bores being arranged in a circular line, and in spaced relation with respect to each other for the reception of fingers of a wrench used in rotating the ring and sleeve.

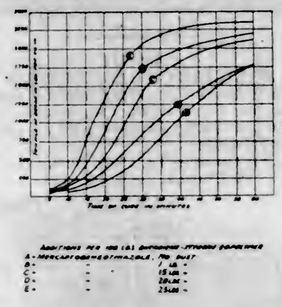


2,459,915
CONVEYER FOR DEHYDRATING MACHINES
Alwin E. Brunne, Toronto, Ontario, Canada, assignor of twenty per cent to Harry M. Sherman, Toronto, Ontario, Canada
Application June 25, 1945, Serial No. 601,407
2 Claims. (Cl. 198—211)



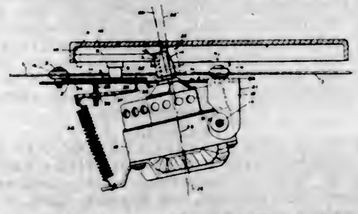
1. In a machine of the class described, a conveyor-frame formed of interchangeable units, each unit comprising a pair of spaced sills, a continuity of rotors journalled therein and arranged transversely thereof, said rotors having interfitting blades adapted to move material longitudinally of said sills, means securing said sills to each other, flanged uprights on the ends of said sills projecting above the rotors thereof for mounting one unit on another and for connecting units in end-to-end relation, a drive shaft substantially co-extensive with one of said sills of each unit, gearing individually connecting the rotors of each unit to the drive shaft thereof and for driving the shaft of one unit from the shaft of another unit, a U-shaped end plate attached to the end of sills of one unit and having blades thereon interfitted with the blades of the adjacent end rotor of this unit, and a U-shaped end plate adapted for attachment to the flanged uprights at the opposite end of a unit for forming a discharge member.

2,459,916
VULCANIZATION OF BUTADIENE-STYRENE RUBBERY COPOLYMER
Alva C. Byrns, Los Altos, Calif., and Gerald von Stroh, Coatesville, Pa., assignors to The Permanente Metals Corporation, Oakland, Calif., a corporation of Delaware
Application January 26, 1945, Serial No. 574,758
5 Claims. (Cl. 260—79)



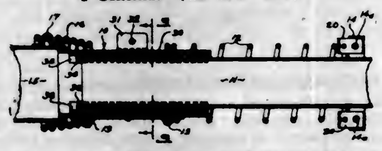
1. As a new product butadiene-styrene copolymer having uniformly admixed therein magnesium nitride particles coated with a plasticizer for synthetic rubber, said nitride being present in the amount of from 0.41 to 1.02 lbs. per 100 lbs. of said copolymer.

2,459,917
SPEED REGULATING MOTOR DRIVE
Blake W. Carrington, Elyria, Ohio, assignor to The General Industries Company, Elyria, Ohio, a corporation of Ohio
Application May 30, 1945, Serial No. 596,749
7 Claims. (Cl. 74—206)



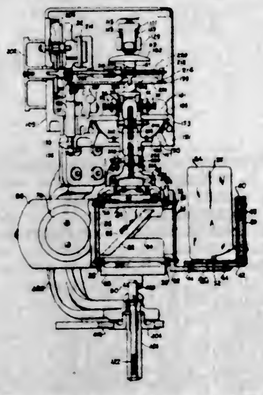
1. A speed compensating frictional drive for a phonograph turntable comprising an upwardly tapered motor driven roller, an idler, and a pendant turntable flange disposed in sequential frictional driving engagement for driving said turntable from said roller through said idler, said roller and idler being normally aligned on a minor chord of the turntable, and with said roller and flange being engageable with different regions of the periphery of the idler which are relatively separated a distance less than the idler diameter, the engaged portion of said turntable flange adapted for frictional driving by the roller driven idler in a rotative direction generally corresponding to the direction of the idler axis from said roller, said roller being laterally tiltable about an axis relatively disposed on the opposite side of the said roller from said idler, and below the plane of the idler, resilient means causing said roller when normally tilted against said idler to yieldably exert pressure thereon, said idler being responsive to the reactive effect of increased motor loads to tend to reactively roll along said flange in such direction as to exert a thrust effect upon said roller to tilt it about its tilting axis and resultantly elevate said roller, said roller having an annular upwardly tapered outer surface, said outer surface engageable with the periphery of said idler throughout all roller tilting positions, and a motor for driving said roller.

2,459,918
SIZE ADAPTION FOR AUTOMOBILE EXHAUST PIPE EXTENSIONS AND THE LIKE
Carroll W. Chester, Los Angeles, Calif.
Application August 28, 1947, Serial No. 771,032
5 Claims. (Cl. 285—198)



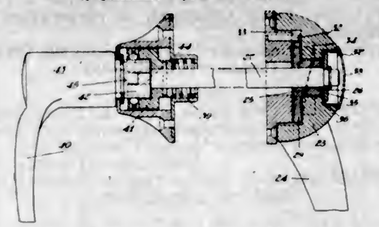
1. An adaption system for fitting a tube to a pipe or the like, said system comprising a size adjusting clamp applied to the tube which is longitudinally slitted to allow of small size adjustments, and a series of removable and replaceable shimming units spaced around the inner surface of the tube; each of said shimming units including a wire extending longitudinally of the tube and having its ends bent and passing through holes in the tube wall.

2,459,919
BOMB SIGHT
Kendall Clark, Oakwood, Ohio, assignor to General Motors Corporation, Dayton, Ohio, a corporation of Delaware
Application March 31, 1944, Serial No. 529,013
13 Claims. (Cl. 33—46.5)



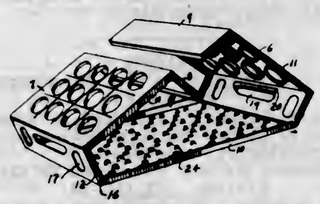
1. A sight comprising a support, a pendulum, a universal mounting connecting the pendulum and said support, a sighting device mounted upon the pendulum below the universal mounting, said pendulum being provided with a substantially spherical surface above said universal mounting, and vibrating damping means intermittently engaging said surface for snubbing vibrations of the pendulum.

2,459,920
DOOR LOCKING MEANS
John Ashley Clark, Harrow, England
Application March 4, 1946, Serial No. 651,686
In Great Britain March 13, 1945
2 Claims. (Cl. 70—223)



1. Means for locking motor vehicle doors comprising an outer lever handle for operating a latch having an actuating spindle, a boss on said handle, a cylindrical extension on said boss coaxial therewith, a sleeve surrounding said extension and rotatable relatively thereto, said sleeve being mounted on the latch spindle, means for locking said sleeve to said extension selectively by axial displacement of the latch spindle, an inner handle having a boss operatively connected to the latch spindle, a cavity with said inner handle boss, a cam face on said boss within said cavity, a member located within said cavity and mounted for sliding movement on the spindle, a cam face on said member complementary to and engaging the cam face on the inner handle boss, said member and handle rotating together during normal operation but being rotatable relatively to one another for causing said axial displacement of spindle to unlock said sleeve from said extension whereby the outer handle may be freely rotated without actuating the latch.

2,459,921
BOTTLE CARRIER
Burt Comer, Wichita, Kans., assignor of one-third to P. F. Comer and one-third to Jerry B. Comer, both of Wichita, Kans.
Application March 31, 1945, Serial No. 585,982
3 Claims. (Cl. 220—21)



1. A bottle carrying device cut from a sheet of relative stiff material and bent to form a bottom, top, end walls and a partition extending parallel with the end walls substantially midway of the device, the bottom being formed at substantially the center of the sheet, the respective edges of said sheet being turned to provide flanges on the respective edges of the bottom, top, end walls and partition, the flanges at the bent points of the

2,459,925
ing a solvent-cast, substantially dry, non-fibrous

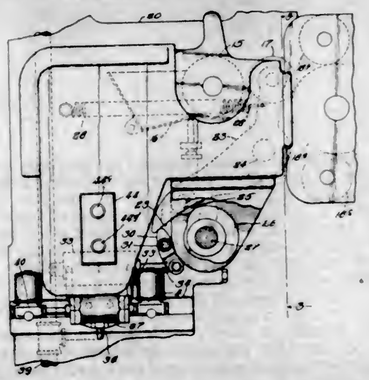
sheets being cut away so that the edges of the flanges at the bent points will meet to form a rigid structure, said top having a plurality of openings for spacing the tops of the bottles, and means on said bottom for spacing the bottoms of the bottles.

2,459,922

LIQUID FEED CONTROL, PARTICULARLY FOR THE INK FEED OF PRINTING PRESSES

Curtis S. Crafts, Oak Park, Ill., assignor to Goss Printing Press Company, a corporation of Illinois

Application December 27, 1946, Serial No. 718,684
12 Claims. (Cl. 101—351)



2. In printing apparatus: a plurality of feed arrangements, each arrangement including a printing liquid supply source, distributing apparatus, a device for delivering printing liquid from said source to said distributing apparatus, and power operated control apparatus for controlling operation of said delivery device, said power operated apparatus being movable between a first position where it prevents said delivery device from delivering printing liquid to said distributing apparatus and a second position where it permits said delivery device to deliver printing liquid to said distributing apparatus; electrical control apparatus for automatically controlling operation of said power operated apparatus between said first and second positions; and switch apparatus for reversing the position of a selected one of said control apparatuses with respect to the other control apparatus.

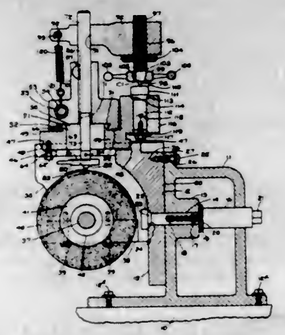
2,459,923

TRUING APPARATUS FOR CENTERLESS MACHINES

George Crompton, Jr., Framingham, Mass., assignor to Norton Company, Worcester, Mass., a corporation of Massachusetts

Application March 8, 1946, Serial No. 653,221
6 Claims. (Cl. 125—11)

1. In a truing apparatus having a spindle for the wheel to be trued, a truing diamond, means including a slideway and a slide thereon for moving said diamond rectilinearly, angularly adjustable skew means whereby the slide will move the diamond parallel to the axis of the spindle or at a skew angle thereto, a mounting for the diamond in the slide whereby the diamond can move towards or away from the spindle as the slide moves, and a follower having a point, the combination with said truing apparatus of a template member for said follower having a surface generated from a straight line moving along a curve as directrix, one of the last two parts being connected to the mounting for the diamond and the other stationary with respect to the slideway but adjustable angularly relative thereto, whereby the diamond moves in and out as the follower follows the surface to correct the truing.

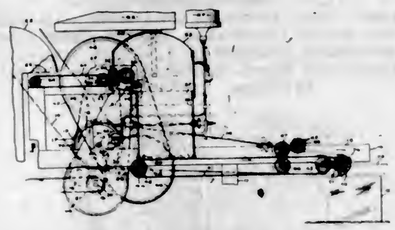


2,459,924

MACHINE FOR CARROTING LOOSE FUR

Edward A. Culhane, deceased, late of Danbury, Conn., by James McP. Culhane, executor, Bridgeport, and David D. Wilson, Danbury, Conn., assignors to John B. Stetson Company, Philadelphia, Pa., a corporation of Pennsylvania

Application June 29, 1945, Serial No. 602,366
2 Claims. (Cl. 68—5)



1. In a machine for carroting loose fur, means providing a vertical compartment open at its lower end, means for delivering fur fibres in a loose and separated condition to the upper portion of said compartment to substantially cover the horizontal area thereof whereby said fibres in said condition may float downwardly through the compartment, means intermediate the ends of the compartment for projecting thoroughly atomized carroting liquid from opposite sides of the compartment, whereby atomized liquid from one side is projected against that from the other side horizontally across substantially the whole horizontal area of said compartment to provide a zone of atmosphere moistened with such liquid and through which said separated fibres fall, and continuously operating means carrying the treated fibres away from the lower end of the compartment.

2,459,925

IMPRESSION INSTRUMENT

Wallas D. Curteman, Kansas City, Mo.

Application October 31, 1945, Serial No. 625,830
5 Claims. (Cl. 18—5.1)

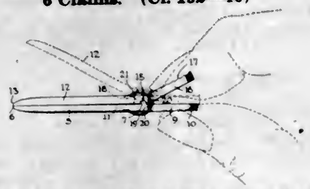
1. An impression instrument comprising, a tubular body, a plunger mounted to reciprocate in said body, a head adapted to engage in one end of said body, said head having a bore extending centrally thereof, a perforated tray member having a tubular stem engaging in said bore in said head, said tray member being shaped to fit the eyeball and surrounding tissue, means for holding said head and cup member in rigid position, and a cup-like member on the outer end of the head adapted to engage against the face of the patient around the eye orifice while the impression is being taken.

2,459,926

HAIR CLIP

Benedetto D'Alberto, Brooklyn, N. Y.

Application April 9, 1947, Serial No. 740,307
6 Claims. (Cl. 132—46)



1. A hair clip of the character described comprising a pair of opposed hair clamping jaws each having a flat main body portion with sides converging to a well rounded point and a finger piece extension reduced in width at the juncture thereof with said main body portions so as to provide end shoulders, one of said jaws having a fulcrum rib extending thereacross adjacent its shoulders, and the other of said jaws having a groove extending thereacross adjacent its shoulders in position for receiving and fulcruming on said rib, the finger piece extensions of the jaws being disposed to bear angular relation one to the other so that the end extremities thereof will be spaced apart when the jaws are closed, and a C-spring extending over the jaw body shoulders at each side of the finger piece extensions and having its ends engaging the jaw body portions so as to constantly tend to hold the jaws together.

2,459,927

PROCESS OF MANUFACTURING REGENERATED CELLULOSE SHEET MATERIAL

Camille Dreyfus, New York, N. Y., Bjorn Andersen, Maplewood, N. J., and Nickolas N. Kojevnikoff, New York, N. Y., assignors to Celanese Corporation of America, a corporation of Delaware

No Drawing. Application December 20, 1944, Serial No. 569,106
2 Claims. (Cl. 18—57)

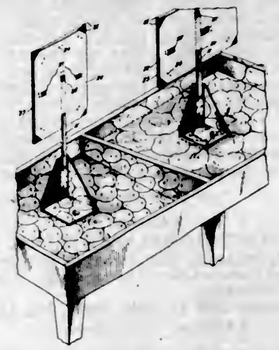
1. Process for the production of regenerated cellulose sheet material, which comprises subjecting a solvent-cast, substantially dry, non-fibrous sheet material having a basis of cellulose acetate to the action of an aqueous solution of acetone containing about 25% by weight of acetone for about 2 minutes at room temperature to effect a swelling of said sheet material, subjecting the swollen cellulose acetate sheet material to the saponifying action of an aqueous solution containing sodium acetate, sodium sulfate and 1 to 10% of sodium hydroxide by weight, whereby there is obtained a regenerated cellulose sheet of improved and substantially uniform directional strength and elongation characteristics, and then treating the regenerated cellulose sheet material with an aqueous solution of a hygroscopic agent.

2,459,928

SIGN HOLDER WITH BASE AND STANDARD

James Roy Edwards, Cincinnati, Ohio, assignor to The Kroger Grocery & Baking Company, Hamilton County, Ohio

Application February 9, 1944, Serial No. 521,698
6 Claims. (Cl. 40—125)



1. A light-weight, collapsible, sign comprising a sign holder, a detachable standard, and a collapsible base member, said sign holder consisting of a pair of relatively thin flat members, one for supporting a sign and the other for providing a reinforcing support for the first, said other member including a pair of slots for the reception of a supporting standard, one of said slots being spaced from an edge of said other member a distance greater than that which separates the second slot from the opposite edge of said other member, whereby the sign holder can be mounted on the standard to leave different lengths of the standard exposed, said thin relatively flat members being fastened together in their intermediate portions with their marginal portions unfastened and normally contacting to frictionally receive and hold the opposed edges of a sign, and said base member being formed of a relatively flat blank folded to provide a hollow corner construction adapted to receive weight for holding it in position.

2,459,929

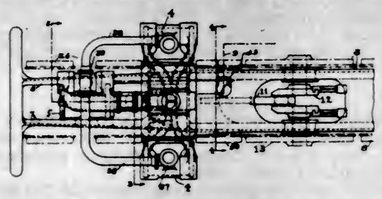
LOCOMOTIVE CYLINDER AND FRAME

Edward O. Elliott, Jenkintown, Pa.

Application September 29, 1945, Serial No. 619,379
6 Claims. (Cl. 105—37)

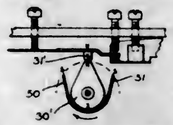
1. In combination, an integral three cylinder locomotive structure comprising a boiler and cylinder saddle for the two outside cylinders and their steam chests, a center cylinder and its

steam chest, spaced a substantial distance ahead of said boiler and cylinder saddle, front and back frame rails spaced longitudinally apart; a longitudinal opening through said saddle; driving mechanism for a crank axle, said mechanism operating through said longitudinal opening; all walls of said longitudinal opening formed integrally with the transverse walls of the saddle; a steam chest for the center cylinder, located to one side of the longitudinal center line of the said cylinder and adjacent one of



the front rails; an exhaust chamber for the steam from the steam chest of the center cylinder, formed adjacent said steam chest; said exhaust chamber being located substantially in the same horizontal plane as the said steam chest and also located substantially on the longitudinal center line of the center cylinder; said center cylinder and its steam chest being substantially joined to and incorporated with one of the front rails; a conduit connecting the exhaust chamber of the center cylinder steam chest with the exhaust passage in the cylinder saddle.

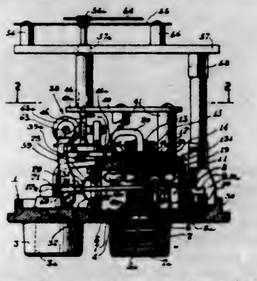
2,459,930
ELECTRIC BALANCE CLOCK
Jean Fink, Delavan, Wis., assignor to The George W. Borg Corporation, Chicago, Ill., a corporation of Delaware
Application July 10, 1944, Serial No. 544,190
4 Claims. (Cl. 58—28)



1. In a clock, an electromagnet, a switch for controlling the circuit of said electromagnet, an oscillatory system driven by said electromagnet, a polarized armature associated with said switch, and a magnetic structure included in said oscillatory system and adapted to cooperate with said armature to actuate said switch by magnetic attraction and to restore said switch by magnetic repulsion.

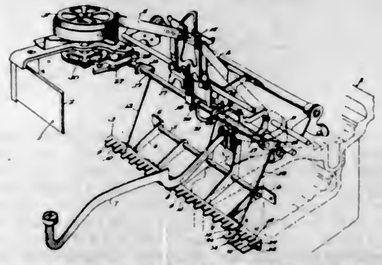
2,459,931
PRESSURE GAUGE
Hans H. Furn, Orange, N. J., assignor to Thomas A. Edison, Incorporated, West Orange, N. J., a corporation of New Jersey
Application January 12, 1945, Serial No. 572,540
15 Claims. (Cl. 73—407)

6. In an instrument including a pressure-responsive means and a pivoted indicating member: the combination of lever means pivoted on a predetermined axis and actuated by said pressure-responsive means; a gear pivoted on a second axis at right angles to said first axis and coupled to said indicating member; a first screw-threaded member secured to said lever means and disposed in substantially parallel relation to said first axis, said screw-threaded member having a circular concentric head offset from said second pivot axis; a second screw-threaded member secured to said gear and disposed substantially at right angles to said second pivot axis in spaced relation



therefrom, said second screw-threaded member having an end face confronting the peripheral edge of the head of said first screw-threaded member; and biasing means holding said two screw-threaded members in contact with each other.

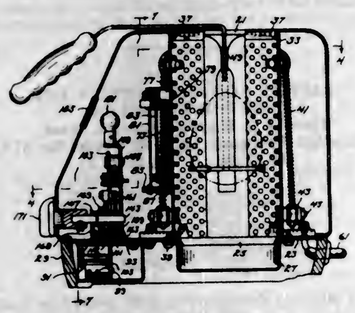
2,459,932
SILENT KEY MECHANISM FOR TYPEWRITERS
Peter F. Gattuso, Chicago, Ill., assignor to Woodstock Typewriter Company, Woodstock, Ill., a corporation of Illinois
Application October 25, 1944, Serial No. 560,224
13 Claims. (Cl. 197—83)



7. A typewriter having escapement mechanism, ribbon feeding mechanism, a depressible bar for effecting operation of the escapement mechanism, an attachment depressible with respect to said bar for effecting operation of only the ribbon feeding mechanism, keys for actuating said bar and attachment, an operative connection between said attachment and the ribbon feeding mechanism for actuation of said ribbon feeding mechanism upon depression of said attachment by an actuating key, and means operable upon depression of the bar by an actuating key and through the medium of the attachment for effecting also operation of the ribbon feeding mechanism.

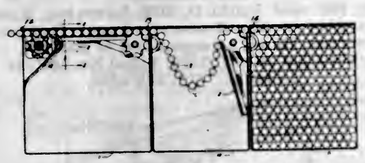
2,459,933
ELECTRIC EGG BAKER
John R. Gomersall, Elgin, Ill., assignor to McGraw Electric Company, Elgin, Ill., a corporation of Delaware
Application May 3, 1943, Serial No. 485,529
1 Claim. (Cl. 99—427)

An egg baker comprising a casing having a pair of top openings, a pair of vertical-walled adjacent cooking chambers of a diameter slightly larger than egg diameter underlying the pair of top openings and separated by a vertical partition, a vertical slot of shorter length than the partition extending downwardly from the upper end of the partition, a bifurcated member having closely spaced opposite arms projecting downwardly into



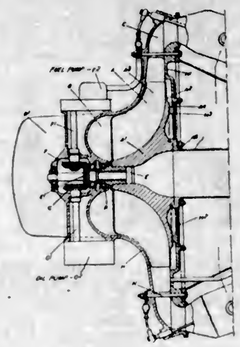
the respective chambers on opposite sides of the partition and having a bridging portion adapted to be removably supported in the slot in the partition, and egg holders secured to the respective arms of the bifurcated member, and removably supported thereby in the respective chambers spaced from and concentric with the walls of the respective chambers.

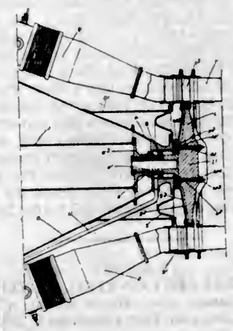
2,459,934
AMMUNITION BOX
John F. Haberlin, Seattle, Wash., assignor to Boeing Airplane Company, a corporation of Delaware
Application December 4, 1944, Serial No. 566,570
11 Claims. (Cl. 89—34)



11. An ammunition box comprising a container adapted to receive a section of ammunition belt folded back and forth to form a pile, said container having an outlet opening for ammunition belt in one side thereof spaced sufficiently above the container's bottom for accommodation of such ammunition belt pile below it, and having an inlet opening for ammunition belt in the opposite side thereof also spaced sufficiently above the container's bottom for accommodation of such ammunition belt pile below it, a bridge member, means normally suspending said bridge member in pendent attitude adjacent to one of such openings, and means operable to swing said bridge upward into a position spanning the space between such inlet and outlet openings for supporting and guiding a section of ammunition belt extending between such openings.

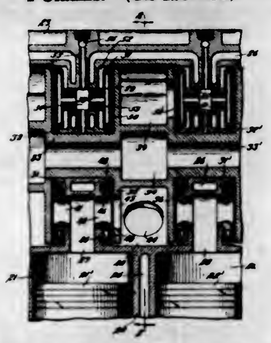
2,459,935
JET PROPULSION PLANT
Frank Bernard Halford, Edgware, England, assignor to The De Havilland Aircraft Company Limited, Edgware, England, a company of Great Britain
Application July 20, 1943, Serial No. 495,518
In Great Britain November 21, 1941
Section 1, Public Law 690, August 8, 1946
Patent expires November 21, 1961
4 Claims. (Cl. 230—116)





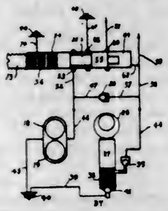
1. In a jet propulsion apparatus, the combination of a frusto-conical casing disposed with its smaller base to the rear, a comparatively large shaft co-axially mounted for rotation within the casing, a centrifugal impeller mounted on said shaft adjacent the larger base of said casing, an auxiliary casing secured to the larger base of said frusto-conical casing and enclosing said impeller, said auxiliary casing having a central intake and a peripheral discharge cooperating with said impeller, a bearing for said shaft and impeller carried by said auxiliary casing, said shaft having a reduced end section extending forwardly through said bearing and a reduced end section extending rearwardly through the smaller base of said frusto-conical casing, a well formed in said smaller base, and a bearing for said shaft mounted in said well.

2,459,936
ROTARY VALVE FOR INTERNAL-COMBUSTION ENGINES
Robert H. Hasler, Old Westbury, and Harry P. Stevens, Oyster Bay, N. Y., assignors to The Hasler Stevens Corporation, Mineola, N. Y., a corporation of New York
Application January 15, 1948, Serial No. 2,455
4 Claims. (Cl. 123—80)



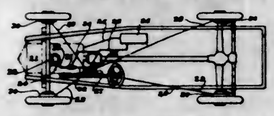
1. In an engine having a cylinder block, a cover for said cylinder block and a valve shaft rotating between said block and cover and having valve discs in cooperative relation with the cylinders, said block and cover having cylindrical chambers in which the valve discs rotate, lubricating pads for said valve discs, pressure responsive means movably supporting said pads in the cover in position for engagement with and disengagement from the faces of said valve discs, the movement of the pads away from the valve discs being sufficient to carry the lubricating faces of the pads below the surfaces defining the walls of the cylindrical valve chambers in the cover whereby said lubricating pads may be retracted below the valve chamber defining walls when the cover is applied to the block over the valve discs and means carried by the cover for applying fluid under pressure to said pressure responsive means for projecting the pads, when the cover is in place on the block, into lubricating engagement with the faces of the valve discs.

2,459,937
HYDRAULIC CONTROL SYSTEM
Fred A. Hassman and Hans Ernst, Cincinnati, Ohio, assignors to The Cincinnati Milling Machine Co., Cincinnati, Ohio, a corporation of Ohio
Application December 2, 1943, Serial No. 512,664
7 Claims. (Cl. 90—11)



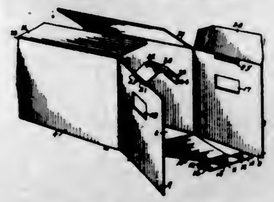
1. In a fluid pressure system for actuating various control devices of a machine tool, a low-pressure high-volume fluid pressure pump, a high-pressure low-volume pump, means for simultaneously connecting the pressure supply from both of said pumps to actuate control devices of said machine tool, means for automatically disconnecting said low-pressure high-volume pump from said devices when actuation thereof has been completed, and means for automatically connecting discharge from said high-pressure low-volume pump to the lubricating system of the machine while maintaining a predetermined relatively high pressure on said control devices when their actuation has been completed.

2,459,938
SAFETY CONTROL DEVICE FOR MOTOR VEHICLES
Harold T. Higgins, Boston, Mass.
Application February 17, 1945, Serial No. 578,532
16 Claims. (Cl. 192—3)



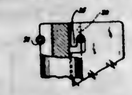
1. A control device for use in a vehicle having a pressure operated brake system including a source of fluid under pressure, a throttle valve controlled engine driving means developing and maintaining fluid under pressure at said source, and accelerator pedal actuated means to control said throttle valve and having a pair of members to be connected, said control device comprising pressure operable means normally interconnecting said pair of members to provide relative movement therebetween to limit the extent to which said throttle valve can be opened by said pedal, said means being operable to connect said pair of members to increase the extent to which the throttle valve can be opened by actuating said pedal, and means responsive to a predetermined pressure at said source to deliver fluid under pressure to said pressure operable means to render it operable.

2,459,939
CONTAINER
Irving Hill and Justin D. Hill, Lawrence, Kans., assignors to The Lawrence Paper Company, Lawrence, Kans., a corporation of Kansas
Application July 8, 1946, Serial No. 681,998
2 Claims. (Cl. 229—36)



1. A container including bottom and side walls, flaps on the ends of the bottom and side walls overlapping each other for forming end walls for said container, said side wall flaps having registered hand hold openings and the outer of said side wall flaps having slots above the hand hold openings, locking means on said flaps of the bottom extending through said hand hold openings on the outer of the side wall flaps and engaging between said side wall flaps, said side walls and the outer side wall flaps having closure flaps for forming a cover for said container, and integral tongues having fold lines on the upper edges of the inner of said side wall flaps above the hand hold openings adapted to extend through the hand holds and engaging in the slots for locking the end flaps together.

2,459,940
PARTITION DEVICE FOR COOKING POTS
Martin M. Himmel, New York, N. Y., assignor to Edison Products Corp., New York, N. Y., a corporation of New York
Application November 19, 1945, Serial No. 629,465
2 Claims. (Cl. 220—22)



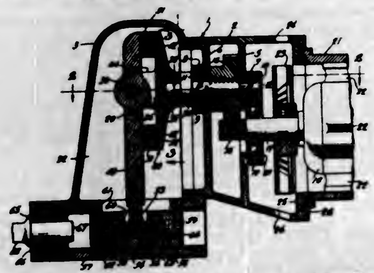
1. In a partition device for the interior of a cooker, a solid vertical support with a base in one plane, whereby the support is adapted to rest upon the floor of the cooker, a plurality of spaced vertical recesses in the lateral wall of the support, a ring embracing the lateral wall of the support, and a partition member containing a hooked portion extending into one of said recesses and mounted over the adjacent ring, whereby the partition member is maintained in a vertical position by the support.

2,459,941
ANTHRAQUINONE VAT DYESTUFFS
Theodor Holbro, Basel, Walter Kern, Sissach, and Paul Sutter, Basel, Switzerland, assignors to Ciba Limited, a Swiss firm
No Drawing. Application June 2, 1944, Serial No. 538,540. In Switzerland June 24, 1943
4 Claims. (Cl. 260—368)

1. Dyestuffs of the general formula

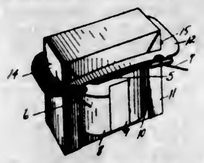
wherein Aq stands for an anthraquinone radical carrying both —CO—NH—R groups in β-position and both amino groups in α-positions orthostanding thereto, and wherein each R stands for a radical of a vattable compound containing a single anthraquinone nucleus.

2,459,942
RECIPROCATING TOOL
Rupert F. Jackson, Cleveland, Ohio, assignor of one-half to Alfred Knudsen, Mentor, Ohio
Application April 1, 1948, Serial No. 18,432
13 Claims. (Cl. 74—45)



1. In a reciprocating tool, the combination of a housing including side walls, spaced transverse partitions in said housing, a shaft rotatably mounted in said partitions, a crank mechanism including a crank-pin secured to one end of said shaft, a sliding block pivotally mounted on said crank-pin, two opposite sides of said block having transversely extending convex surfaces of revolution, a pin mounted in the side walls of said housing forwardly of said crank mechanism, the axis of said pin extending in a direction substantially at right angles to the axis of said shaft, an elongate rocker arm including a pair of spaced pivot arms extending forwardly from the central portion thereof, said pivot arms being pivotally mounted on said pin, a slot in the rearward face of said rocker arm extending transversely thereof, opposite sides of said slot having concave surfaces of revolution complementary to the convex surfaces of revolution of said sliding block, said sliding block being positioned in said slot, the depth of said slot being greater than the depth to which said block and crank-pin extend thereinto, an elongate beam member pivotally mounted on said pin between the pivot arms of said rocker arm, resilient means on opposite sides of said pin connecting said beam to said rocker arm for movement therewith, a cylinder having an elongate axially extending opening connected to said housing, the axis of said cylinder being substantially parallel to the axis of said shaft, a piston in said cylinder, said piston having an axial bore and an elongate axially extending opening leading into said bore, said beam extending through said openings and terminating in the bore of said piston, resilient means pivotally connecting said beam to said piston, and means for rotating said shaft, said resilient means increasing the speed and hitting power of the piston near the ends of its stroke.

2,459,943
TERMINAL MEANS FOR ELECTRICAL DEVICES
Carlos L. Jauss, New York, N. Y.
Application June 7, 1946, Serial No. 675,269
4 Claims. (Cl. 175—21)

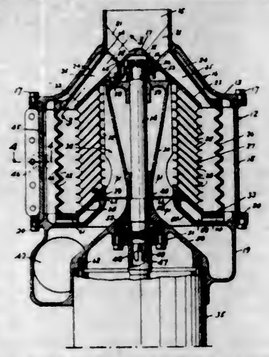


1. An electrical apparatus comprising an electrical coil winding, a casing for said winding and termnal means for said winding supported by said casing, said terminal means comprising an insulating member having a central opening fitted and retained over said casing so as to abut said winding and means on said casing acting upon opposite ends of said insulating member to maintain said insulatng member against displacement.

2,459,944
CENTRIFUGAL SEPARATOR
Leo D. Jones and Hugh S. Barnaby, Philadelphia, Pa., assignors to The Sharples Corporation, Philadelphia, Pa., a corporation of Delaware
Application October 1, 1943, Serial No. 504,562
3 Claims. (Cl. 183—77)

3. In a centrifugal separator for separating non-gaseous constituents from a gas, the combination comprising, a centrifugal rotor having a separating chamber containing a stack of superimposed spaced frusto-conical discs with separating spaces between said discs, vanes interposed between opposing faces of successive discs, said vanes forming channels through which gas

may flow inwardly within the spaces between successive discs during separation of non-gaseous constituents therefrom, a feed zone for conveying feed gas outwardly of said discs into said separating chamber, said feed zone having a plurality of impeller elements for imparting rotation to said gas, a peripheral wall surrounding said discs



and spaced radially therefrom, a plurality of small discharge outlets in said peripheral wall, said discharge outlets being distributed about said stack of discs for the discharge of separated non-gaseous constituents, a discharge zone in the central portoin of the rotor positioned inwardly of the inner circumferences of said discs, said discharge zone increasing progressively in cross sectional area in the direction of flow of gas from the feed zone through said rotor, and a plurality of radially and axially extending vanes in said discharge zone.

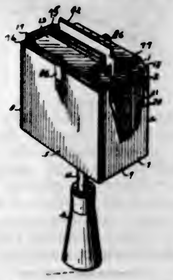
2,459,945

SHARPENING DEVICE

Benjamin H. Johnston, Oklahoma City, Okla.

Application March 4, 1946, Serial No. 651,762

6 Claims. (Cl. 51—59)



1. A device for conditioning the cutting edge of a razor blade comprising, a housing having a closed bottom, side and end walls and an open top, said end walls being provided with an opening near the top of the housing, a frame reciprocable in said housing, means for clamping a blade in the open end of the housing, oppositely facing jaws pivotally carried by the frame, spreaders having tapered side edges carried by the openings in the end walls, means for reciprocating said frame in said housing, means on said jaws engaging the tapered side edges of the spreaders to separate said jaws upon movement of the frame toward the blade, said spreaders having cam surfaces engaging the means on the spreaders to cause said jaws to contact said blade above the cutting edge at the limit of travel of the frame toward said blade, whereby reciprocation of the frame away from the blade will draw the jaws across the edge of the blade to condition the same.

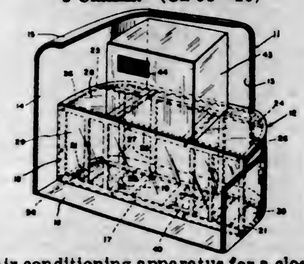
2,459,946

MOUNTING FOR REFRIGERATING APPARATUS AND THE LIKE

Henry O. Kirkpatrick, Detroit, Mich., assignor to Advance Manufacturing, Inc., Detroit, Mich., a corporation of Michigan

Application October 19, 1944, Serial No. 559,399

3 Claims. (Cl. 98—10)



1. Air conditioning apparatus for a closed cargo carrying vehicle, comprising a self-contained portable unit adapted to be completely installed within the interior of a vehicle of the type mentioned at the closed forward end thereof, said unit having a portable frame structure and air conditioning apparatus carried in its entirety by said frame structure, the said frame structure having spaced upright substantially rectangular front and rear sections and connections therebetween providing a hollow open framework of substantially square cross section adapted to rest upon the floor of the vehicle in substantially nestled relation to and be partially closed by the upright front and side walls and floor of the vehicle, means for closing the top of said open framework, including a separate platform secured to said framework and abutting the upright front and side walls of said vehicle, means for closing the rear of said open framework, including a panel detachably secured to said framework and abutting opposite upright side walls of said vehicle, said platform and panel cooperating with the floor and upright front and side walls of the vehicle to close entirely said framework and form a closed chamber, and a hood on top of said chamber, portions respectively of said air conditioning apparatus being within said chamber and hood, the portion within said hood being an evaporator, said closed chamber being provided with means for communication with air inlet and outlet openings in portions of said vehicle whereby air from the atmosphere outside the vehicle may flow to and from said chamber to cool the portion of said air conditioning apparatus within said chamber, and said hood having an outlet opening through which air conditioned by the evaporator within said hood may be discharged into the interior of the vehicle.

2,459,947

BALANCING DEVICE

Jerome Lefiar, Dayton, Ohio, assignor to The Master Electric Company, Dayton, Ohio, a corporation of Ohio

Application January 31, 1944, Serial No. 520,577

14 Claims. (Cl. 74—573)

1. A counterbalancing unit for a rotating body, including a sun gear rotating in unison with the

2,459,951

with an aperture forming a seat, said part of said

body, a relatively revoluble gear member having a number of teeth different from that of the sun gear, mounted in eccentric relation with the sun gear, a counterbalance weight carried by the revoluble gear, a planetary gear simultaneously meshing with the sun gear and revoluble gear, and a rotary mount therefor enabling the planetary gear upon rotation thereof, to travel about

the sun gear and simultaneously rotate the revoluble gear relative to the sun gear to rotatively adjust the counterbalance weight carried thereby into a position wherein it will compensate for an unbalanced condition of the rotating body while all of said gears continue to rotate simultaneously about the axis of the rotating body being balanced.

2,459,948

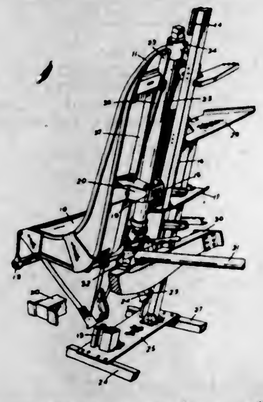
SAFETY DEVICE FOR AIRCRAFT PILOTS

Marcel Jules Odilon Lobelle, Slough, England, assignor to M. L. Aviation Company, Limited, a British company

Application April 11, 1946, Serial No. 661,213

In Great Britain April 12, 1945

10 Claims. (Cl. 244—122)



1. Safety device for use by an aircraft pilot comprising a pilot's seat, means for supporting and for guiding said seat with an upwardly directed motion, ejecting means comprising a plurality of telescoping cylinders, means connecting one of said cylinders to said seat, means connecting another of said cylinders to said seat-supporting means, locking members adapted normally to hold said cylinders in telescoping engagement, said locking members including a retaining means for preventing movement thereof, means for holding an explosive charge in one of said cylinders, means for igniting such a charge, and means operable by such a charge when ignited adapted to render ineffective said retaining means and release said locking members to permit relative movement of said cylinders by said charge.

2,459,949

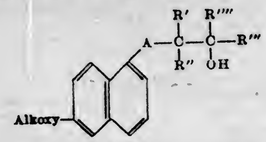
PROCESS FOR THE PREPARATION OF HYDROXY - HYDROPHENANTHRENE CARBOXYLIC ACIDS AND ESTERS

Karl Miescher, Riehen, and Georg Anner, Basel, Switzerland, assignors to Ciba Pharmaceutical Products Inc., Summit, N. J., a corporation of New Jersey

No Drawing. Application October 12, 1945, Serial No. 622,092. In Switzerland November 30, 1944

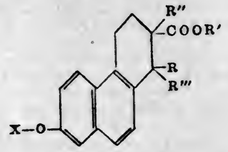
6 Claims. (Cl. 260—473)

1. A process for the manufacture of an hydroxyhydrophenanthrene, which comprises treating a compound of the formula



wherein A represents an unsubstituted ethylene group, R' and R''' represent members selected from the group consisting of unsubstituted saturated and unsaturated lower aliphatic hydrocarbon radicals, R'' represents an esterified carboxyl group and R'''' represents a member of the group consisting of a hydrogen atom and unsubstituted saturated and unsaturated aliphatic hydrocarbon radicals, with an inorganic acid.

5. A compound of the formula



wherein R, R'' and R''' each represents a member selected from the group consisting of unsubstituted saturated and unsaturated lower aliphatic hydrocarbon radicals, R' is a member selected from the group consisting of hydrogen and lower alkyl, and X is a member selected from the group consisting of hydrogen, lower alkyl and carboxylic acid radicals, the —O—X grouping in the latter case being an ester grouping.

2,459,950

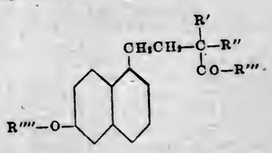
HYDROPHENANTHRENE CARBOXYLIC ACID INTERMEDIATES

Karl Miescher, Riehen, and Georg Anner, Basel, Switzerland, assignors to Ciba Pharmaceutical Products, Inc., Summit, N. J.

No Drawing. Application May 13, 1946, Serial No. 669,462. In Switzerland November 30, 1944

3 Claims. (Cl. 260—473)

1. A compound of the formula

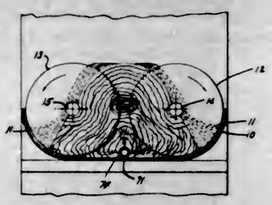


wherein R', R''' and R'''' each represents an unsubstituted alkyl radical, and R'' represents an esterified carboxyl group.

2,459,955

and projecting beyond the inner surface of said

2,459,951
SCREW CONVEYING STEAM DISTILLING APPARATUS FOR POMACE
Ernest Kurt Metzner, Los Angeles, Calif.
Application September 22, 1945, Serial No. 617,996
4 Claims. (Cl. 202—176)



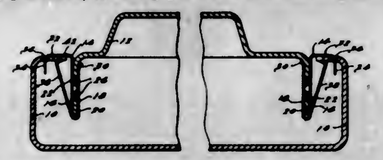
1. An apparatus for recovery of the alcohol in pomace comprising a vessel, a plurality of pairs of screw conveyor flights arranged horizontally in said vessel with the flight in each pair in a side by side relationship and at substantially the same elevation, the different conveyor flight pairs being positioned at different elevations in said vessel with each pair arranged to deliver material to a next lower adjacent pair, a material support shelf positioned beneath each pair of flights to support material moved by said pair of flights, means for rotating each screw conveyor in each pair in a direction opposite to the direction of rotation of the other flight of the pair and with the adjacent edges of the two flights moving upwardly and away from the cooperatively adjacent material support shelf to move material along the shelf and to maintain a mass of material piled up on and between the cooperating adjacent edges of the flights, a pipe arranged along each shelf between each pair of conveyors and having a plurality of jets along the length thereof to release a gas into the mass of material piled up between the pair of flights, and means for discharging material to the uppermost conveyor pair.

2,459,952
STABILIZED ALKALINE VEGETABLE PROTEIN SOLUTIONS
Alfred Frank Millidge, Conventry, and Claude Leonard Knight, Kenilworth, England, assignors to Courtaulds Limited, London, England, a British company
No Drawing. Application January 17, 1947, Serial No. 722,760. In Great Britain February 25, 1946
2 Claims. (Cl. 106—154)

1. An aqueous alkaline solution of vegetable protein which is suitable for extrusion in the manufacture of threads and which contains as a stabilising agent, a cyanide from the group consisting of the alali metal cyanides, the alkaline earth metal cyanides and ammonium cyanide, said cyanide being present in an amount not exceeding about 0.1 per cent based on the weight of the solution.

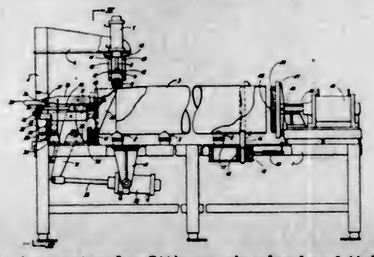
2,459,953
PANEL AND FASTENER ASSEMBLY
Herbert E. Mills, Detroit, Mich., assignor, by mesne assignments, to Mills Engineering Company, Detroit, Mich., a partnership
Application February 3, 1944, Serial No. 520,993
4 Claims. (Cl. 189—35)

1. A panel and fastener assembly comprising a pair of sheet metal panels, and a threadless fastener, a part of one of said panels being arranged normal to a part of the other of said panels and spaced from the edge thereof, said part of said other of said panels being provided with an aperture forming a seat, said part of said one of said panels being provided with a hole therein, said fastener comprising a U-shaped clip of spring metal having spaced leg portions connected at one end and adapted to accommodate between said leg portions said part of said other of said panels, one of said leg portions of said clip having an integral offset projecting toward the other of said leg portions and engageable with said seat for securing said fastener against separation from said panel on which said seat is provided, said offset having circumjacent edges lying in a plane substantially parallel to said leg portions, said leg portions functioning due to



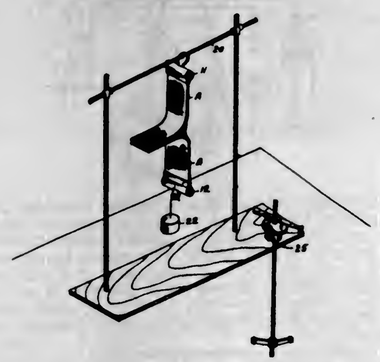
the spring pressure of said clip to hold said offset in engagement with said seat, even though tension, in any direction parallel to and in the plane of said leg portions and said part of said other panel, is exerted on said clip and said part of said other panel to pull them apart, and means provided on one of said leg portions by means of which said fastener is secured to said part of said one of said panels, said means comprising a laterally extending flange and a prong positioned to receive said part of said one of said panels therebetween, and a hook extending into said hole for holding said part of said one of said panels between said flange and prong.

2,459,954
APPARATUS FOR PRESSING ENDS INTO CYLINDRICAL SHELLS
Dwight C. Morgan, Jr., Oakmont, Pa., assignor to Scaife Company, Oakmont, Pa., a corporation of Pennsylvania
Application August 20, 1945, Serial No. 611,586
13 Claims. (Cl. 29—235)



1. Apparatus for fitting a circular head tightly in one end of a cylindrical shell, comprising means for compressing said end of the shell slightly to make it oval, an arm extending lengthwise of the shell beyond said end, said arm having a front end adapted to be connected to said head, another member adapted to engage said head, said arm being movable forward relative to said member to support said head in tilted position adjacent said oval end of the shell, means for effecting relative movement of the head and shell toward each other to insert the head in said oval end, and means for retracting said arm for straightening the position of the head in the shell after said compressing means has been released from the shell.

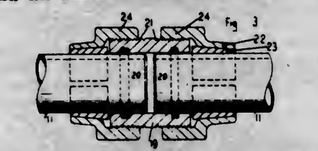
2,459,955
POLYVINYL ACETATE EMULSION ADHESIVE
George Osman Morrison, Thomas Patton Gladstone Shaw, and Joseph Donat Paul-Emile Mercier, Shawinigan Falls, Quebec, Canada, and Henry Michael Collins, Stamford, Conn., assignors to Shawinigan Chemicals Limited, Montreal, Quebec, Canada, a corporation of Canada
Application November 9, 1945, Serial No. 627,760
In Canada October 17, 1945
2 Claims. (Cl. 260—17)



1. An adhesive composition comprising (A) a stable aqueous emulsion of polyvinyl acetate formed by emulsion polymerization, said emulsion having a viscosity within the range from 100 to 5000 centipoises at 20° C. and containing as emulsifiers (a) gum tragacanth within the range from 0.25% to 1.0% by weight of the emulsion, (b) partially hydrolyzed polyvinyl acetate, which contains from 16% to 35% by weight of polyvinyl acetate, within the range from 0.25% to 0.75% by weight of the emulsion, and (c) an anionic surface-active agent, said polyvinyl acetate having a viscosity (measured at 86 grams per litre in benzene at 20° C.) greater than 20 centipoises and being present in an amount ranging from 40% to 60% by weight of the emulsion: (B) a plasticizer for polyvinyl acetate selected from the group consisting of dimethyl phthalate, diethyl phthalate, diamyl phthalate, diisoamyl phthalate, dibutyl phthalate, dimethoxy ethyl phthalate, dibutoxy ethyl phthalate, butyl-carboxy-methyl butyl phthalate, ethyl-carboxy-methyl ethyl phthalate, ethyl-carboxy-methyl methyl phthalate, acetyl triethyl citrate, O-nitrodiphenyl, dimethyl sebacate and monobutyl benzene sulphonamide, in an amount ranging from 20% to 180% by weight of the polyvinyl acetate; and (C) nitrocellulose, of less than 100 seconds viscosity, present in an effective amount of up to 20% by weight of the polyvinyl acetate.

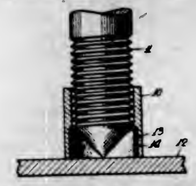
2,459,956
PIPE COUPLING
Johan A. Muller, Dayton, Ohio, assignor to John L. Lens, Dayton, Ohio
Application May 16, 1945, Serial No. 594,056
2 Claims. (Cl. 285—123)

1. In a pipe coupling, a sleeve adapted to receive the end portion of a pipe, having in the inner surface thereof a circumferential groove and having an exteriorly threaded end portion, an annular sealing member seated in said groove and projecting beyond the inner surface of said sleeve to engage said pipe about the entire circumference of the latter, means to secure said pipe in said sleeve comprising a split collar mounted about said pipe adjacent said sleeve, said split collar being separate from said sleeve having a uniform inside diameter and a smooth interior surface throughout the length thereof, and having an outwardly tapered exterior surface, and an annular clamping member having



an interiorly threaded portion engaging the threaded portion of said sleeve and having an outer end portion extending about said split collar, said outer end portion of said clamping member having a smooth inwardly flared interior surface conforming to and engaging the tapered exterior surface of said split collar, whereby the inward movement of said clamping member will clamp said split collar in firm frictional contact with said pipe.

2,459,957
WELDING STUD
Walter E. Palmer, Fair Lawn, N. J., assignor, by mesne assignments, to National Cylinder Gas Company, Chicago, Ill., a corporation of Delaware
Application May 3, 1945, Serial No. 591,711
5 Claims. (Cl. 287—20.2)



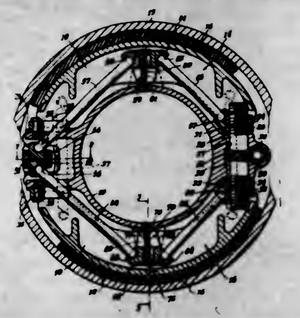
1. An article of manufacture for use in the welding of a stud to a plate, said article comprising an annular ferrule of fire resistant material adapted to receive the stud, and an annulus of form retaining fluxing composition adhering to and carried by the inner surface of said ferrule.

2,459,958
INTERNAL SHOE DRUM BRAKE
Frank Gordon Parnell, Leamington Spa, England, assignor to Automotive Products Company Limited, Leamington Spa, England
Application June 30, 1945, Serial No. 602,559
In Great Britain June 30, 1944
11 Claims. (Cl. 188—78)

9. An internal shoe drum brake of the kind referred to, wherein shoe expanding mechanism for at least one of the shoes comprises a V-shaped toggle linkage extending along the shoe, connecting means between said toggle linkage and the shoe in the region of the elbow of the toggle linkage, said connecting means being connected to the shoe intermediate the ends of said shoe, an abutment member for one end of the said linkage and serving as an anchorage for the toggle linkage, said abutment member being formed with an abutment surface which is engaged by the

shaft extending beyond the first mentioned sup-

adjacent end of the corresponding brake shoe, and being located by adjusting means for setting the "off" position of the brake shoe and at the same time taking up slack in the toggle linkage,



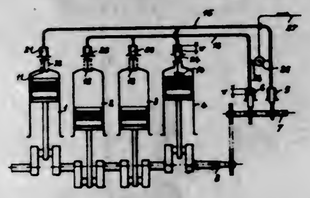
and actuating means to move the other end of said toggle linkage towards said abutment member, so as to cause the elbow of the toggle linkage to force the shoe outwards into engagement with the drum.

2,459,959
SINKER
Joseph Pelmarsh, Milwaukee, Wis.
Application March 10, 1944, Serial No. 525,896
2 Claims. (Cl. 43—52)

1. A sinker formed of soft metal and having a central body portion of large transverse dimension tapering toward its ends to a smaller dimension and each of the ends having integral therewith flattened portions providing relatively thin structures each of which has a slot therein, the slots extending in opposite directions to each other, the portions providing the edges of each slot being capable of being readily moved relatively to each other by manual manipulation without the use of tools so as to open and close the slot, such characteristic of the flattened portions being due to the material of which said sinker is made.

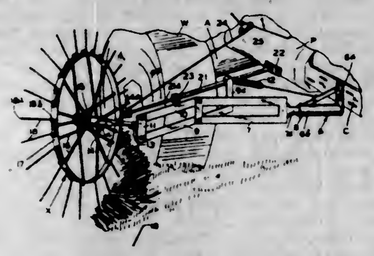
2,459,960
INTERNAL-COMBUSTION ENGINE
Richard Périssé, Paris, France
Application February 10, 1939, Serial No. 255,716
In Germany February 11, 1938
Section 3, Public Law 690, August 8, 1946
Patent expires February 11, 1958
7 Claims. (Cl. 123—90)

1. In an internal combustion engine comprising at least two cylinders each having an inlet valve, said cylinders being operated in synchronism and with a phase difference whereby different pressures will obtain within said cylinders at least over a substantial portion of a cycle of operation, in combination, a source of operating fluid, an actuating member for each of said valves, said member being responsive to pressure by said operating fluid to lift the associated valve from its seat whenever said fluid pressure bears a pre-



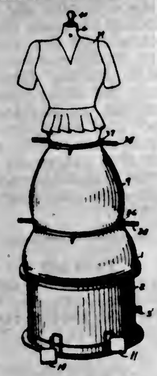
determined relationship with the internal pressure of the respective cylinder, a common conduit for said fluid connecting said actuating members in parallel to said source, and means operative at the source end of said conduit to put said fluid under pressure during said portion of a cycle whereby only the valve of the cylinder having the lower instantaneous internal pressure will operate.

2,459,961
WINDROW LIFTER AND TURNER
Ernest C. Pollard, Welcome, Minn.
Application September 23, 1946, Serial No. 698,798
10 Claims. (Cl. 56—372)



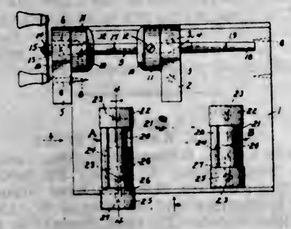
1. A windrow lifter and turner including a mobile frame, a support mounting for a freely rotatable lifting and turning wheel attached to said frame and extending therefrom, the support being secured to the frame for vertical movement with respect thereto, and having a part thereof extending at an angle with respect to the support mounting and the line of travel of the frame, a freely rotatable lifting and turning wheel mounted in a vertical plane on said angularly disposed part of said support mounting and thereby disposing the wheel in an erect plane relative to the ground and at an acute angle to the line of travel of said mobile frame, so that when the frame with the wheel so disposed and engaging the ground is moved and any obstructions are encountered by the said wheel, it and the support therefor will both move vertically either upwardly or downwardly and the stalks of cut crops on the ground over which the frame moves are lifted and turned by the wheel.

2,459,962
GARMENT FINISHING APPARATUS
John H. Richa and Frank E. Hanson, Kansas City, Mo.
Application June 10, 1946, Serial No. 675,780
7 Claims. (Cl. 223—70)



7. In a garment finishing apparatus having a framework structure adapted to support a permeable bag thereon conforming to the contour of a garment and adapted to be inflated to distend the garment including, a base member, means for introducing steam and air to said bag, a suspension member adapted to engage over said framework structure beneath said bag and having its front and back portions attached to the waist portion of said bag to provide fullness in the waist portion of said bag, a cover member for said base having a central opening, said bag having an open bottom portion, a weight member attached to the bottom edge of said bag and engaging said cover member to prevent excessive rise of said bag from the cover member when steam and are are applied thereto, a flexible extension on the bottom of said bag, means securing said extension to the cover member around the central opening to close the bottom of said bag, and ring members insertable over said bag and slidable thereon to regulate distension of the bag in different portions thereof.

2,459,963
FISHING LINE CHANGER
Martin Luther Roark, Elizabethton, Tenn.
Application May 12, 1947, Serial No. 747,522
5 Claims. (Cl. 242—85)



1. In apparatus of the class described a base, a support mounted on the base midway between opposite sides of the base, a second support mounted on one of said sides, said supports having aligning shaft bearings, a shaft rotatably mounted in said bearings and one end of said shaft extending beyond the first mentioned support to receive a line-carrying-spool, a crank on the other end of said shaft, spaced apart drum flanges on the portion of said shaft which lies between said supports, a reel holder mounted on said base in a position in line with the space between the drum flanges, and a second reel holder mounted on said base in transverse alignment with the extended end of said shaft.

2,459,964
MANUFACTURE OF MALEAMIC ACID
Ralph Sidney Robinson, Hunt's Cross, near Liverpool, and Ernst Ludwig Hamburger, Allerton, Liverpool, England, assignors to Beck, Koller and Company (England) Limited, Speke, Liverpool, England, a British company
No Drawing. Application July 29, 1947, Serial No. 764,574. In Great Britain, October 8, 1946
5 Claims. (Cl. 260—534)

1. A one step process for the direct manufacture of maleamic acid which comprises passing ammonia into a solution of maleic anhydride in an inert organic solvent, the ratio of maleic anhydride to said solvent at the commencement of the reaction being at least 1:10 by weight and the temperature being below the temperature at which maleamic acid resinifies.

2,459,965
TRAILER HITCH
Walter H. Robertson, Elkhart, Ind.
Application January 16, 1948, Serial No. 2,621
10 Claims. (Cl. 280—33.9)

6. A hitch adapted to connect a trailer with a tractor, comprising a pair of elongated rigid units, a rigid adapter for fixed connection with said tractor, a swivel joint connecting one unit with said adapter, the other unit being pivoted at its rear end to the trailer, yielding means connecting an intermediate portion of the other unit with the trailer, said units including elongated portions adapted to interfit snugly, and a latch for interlocking said interfitting parts.

2,459,966
CONCENTRATION OF NONSULFIDE ORES
Karl F. Schilling, Lakeland, Fla., assignor to Minerals Separation North American Corporation, New York, N. Y., a corporation of Maryland
No Drawing. Application April 9, 1945, Serial No. 587,442
10 Claims. (Cl. 209—9)

1. The process of separating the components of ores of the class consisting of non-sulfide non-silicate minerals admixed with silicious gangue and silicate minerals admixed with quartz and soluble potash minerals occurring in their soluble ores, which comprises admixing an aqueous pulp of the ore in a suitably divided state with a collector selected from the group consisting of: the amides and imides of trivalent iron, chromium and aluminum and salts of their amides and imides which contain at least one functioning hydrocarbon group from the class of aliphatic groups containing 7 or more carbon atoms at least

5 of which are in a single straight chain, hydro-

port and including an armature rotatable in the

position; said arms each being separately, pivot-

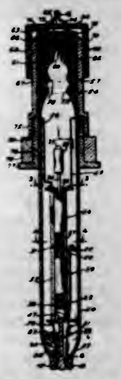
being provided with a cylindrical clutch engag-
ing surface concentric with the other member, a

5 of which are in a single straight chain, hydrocarbon groups present in abietic and naphthenic acids, and naphthalene and substituted benzene groups; and subjecting the thus conditioned pulp to a concentration operation to separate the ore constituents.

2,459,967
CONCENTRATION OF NONSULFIDE ORES
Karl F. Schilling, Lakeland, Fla., assignor to Minerals Separation North American Corporation, New York, N. Y., a corporation of Maryland
No Drawing. Application February 7, 1946, Serial No. 646,221
14 Claims. (Cl. 209—9)

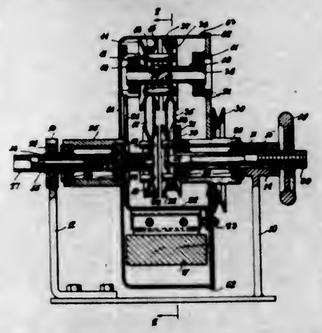
1. The process of separating the components of ores of the class consisting of non-sulfide non-silicate minerals admixed with siliceous gangue and silicate minerals admixed with quartz and soluble potash minerals occurring in their soluble ores, which comprises admixing an aqueous pulp of the ore in a suitably divided state with a collector selected from the group consisting of: sulfurous acid and sulfuric acid amides, imides, and their salts and halides, which contain at least one functioning hydrocarbon group from the class of aliphatic groups containing 7 or more carbon atoms at least 5 of which are in a single straight chain, hydrocarbon groups present in abietic and naphthenic acids, and naphthalene and substituted benzene groups; and subjecting the thus conditioned pulp to a concentration operation to separate the ore constituents.

2,459,968
ADJUSTABLE THERMOSTAT
John Leonard Schwartz, Philadelphia, Pa., assignor, by mesne assignments, to The Philadelphia Thermometer Company, Philadelphia, Pa., a partnership comprised of J. Leonard Schwartz and Hugo Engelhardt
Application August 21, 1945, Serial No. 611,819
26 Claims. (Cl. 200—141)



11. An adjustable thermostat comprising a glass bulb, mercury in the bulb, a column of glass mounted on the bulb, said column having two parallel spaced bores comprising respectively a working and a common bore extending longitudinally thereof with one of the bores in communication with the bulb mercury in the common bore, a glass housing fused to the column remote from the bulb, a support mounted in the housing, a rotatable element mounted in the support and including an armature rotatable in the glass housing, an electrode axially adjustable in the working bore, means connecting the electrode and rotatable element for axially adjusting the electrode with rotations of the element, an electrical connecting system in electrical connection at one end with the electrode and at the other extending through the glass housing, a common electrode in the housing extending into the mercury in the common bore, electrical connecting means leading from said common electrode through the glass housing, means establishing electrical connection between the common electrode and the mercury in the working bore, and rotatable means establishing polarized magnetic flux externally of the housing incident upon said armature and so arranged as to rotate the armature and rotatable element as the means is rotated.

2,459,969
VARIABLE-SPEED DRIVE
William M. Schweickart, Bay Village, Ohio
Application July 20, 1944, Serial No. 545,791
15 Claims. (Cl. 74—793)



1. In a variable speed drive a rotary support, an inner non-rotatable driving pulley, an inner rotary driven pulley, an outer pair of pulleys comprising relatively shiftable pairs of pulley disks each pair having its disks in fixed axial spacing with respect to each other, said outer pulleys being carried by said support and rotating together, belts driving said outer pulleys from said inner non-rotatable pulley and said driven pulley from said outer pulleys upon rotation of said support, and means varying the pitch diameter of the inner pulley of at least one of said belts to conversely vary the pitch diameter of the cooperating pulley through the action of the belt on its pulleys to change the rotary speed of said inner driven pulley relative to the rotary speed of said support.

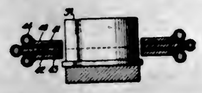
2,459,970
REFUSE BAG SUPPORT
Travis Otis Smith, Kansas City, Mo., assignor, by mesne assignments, to Arbee Products Company, Kansas City, Kans., a firm composed of David M. Lorens and Bernhard W. Alden
Application October 26, 1945, Serial No. 624,837
2 Claims. (Cl. 248—99)

1. A refuse bag holder comprising a support; a pair of jaws each having means for holding a bag along opposite portions of the mouth thereof; a pair of arms at each end of the pair of jaws, there being an arm to mount each jaw in operative

position; said arms each being separately, pivotally mounted on one face of the support, said arms being substantially L-shaped and each provided with a gear at the free end of the base leg thereof, said gear of each pair being in mesh to insure simultaneous movement of the arms about

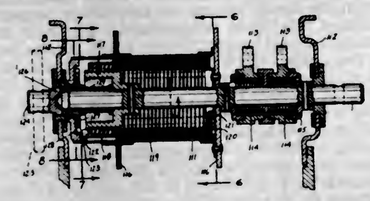
their pivotal connections when the jaws are shifted toward and from each other to close and open the bag held thereby; and a spring interconnecting one of these arms and said support for yieldably holding the arms in either the open or closed position.

2,459,971
INDUCTOR FOR HIGH-FREQUENCY INDUCTION HEATING APPARATUS
Robert J. Stanton, Brooklyn, N. Y., assignor to Induction Heating Corp., New York, N. Y., a corporation of New York
Application August 30, 1945, Serial No. 613,584
9 Claims. (Cl. 219—13)



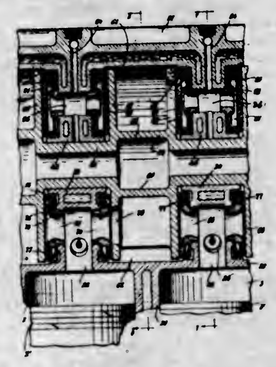
1. High frequency induction heating apparatus comprising an inductor having a plurality of closely spaced turns, each turn being formed with an outer portion including a cooling fluid passage, and an inner portion having a thin inner edge for facing the work surface to be heated, the spacing between centers of the passages in adjacent turns being substantially greater than the spacing between center lines of the inner edge surfaces of the same turns, whereby the magnetic flux at said inner edges is concentrated within a relatively narrow band as compared with the width of the band of flux which would be established about the cooling fluid passage portions of the same turns in the absence of said inner portions.

2,459,972
TORQUE LIMITING DEVICE
William Carleton Starkey, Indianapolis, Ind., assignor, by mesne assignments, to Fletcher Trust Company, Indianapolis, Ind., a corporation of Indiana, as trustee
Application November 1, 1943, Serial No. 508,601
5 Claims. (Cl. 192—56)



1. A load limiting device including a driving member, a driven member, one of said members being provided with a cylindrical clutch engaging surface concentric with the other member, a cylindrical clutch spring having a series of expansible and contractible coils mounted intermediate said members and movable into and out of clutching engagement with said surface, a load sensitive element connecting one of said members with said spring to transmit driving power to said driven member, said load sensitive element being movable by resistance thereto effective upon a predetermined overload being applied to said driven member to permit relative angular movement between said members, and normally disengaged interconnecting elements between one end of said spring and said one of said members movable into engagement upon such relative movement in a direction to actuate said clutch spring for movement out of clutching engagement.

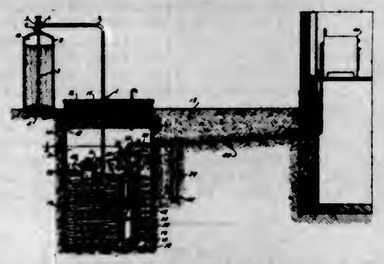
2,459,973
ROTARY VALVE INTERNAL-COMBUSTION ENGINE
Harry P. Stevens, Oyster Bay, N. Y., assignor to The Hasler Stevens Corporation, Mineola, N. Y., a corporation of New York
Application November 21, 1947, Serial No. 787,354
1 Claim. (Cl. 123—59)



An internal combustion engine comprising a cylinder block having cylinders in line, with combustion chambers at the ends of the cylinders and semi-cylindrical recesses between the combustion chambers of adjoining cylinders, a cover for said cylinder block having semi-cylindrical recesses in line with said semi-cylindrical recesses in the cylinder block and forming therewith cylindrical valve chambers, a rotary valve assembly journaled between said cylinder block and cover and having valve cages disposed to rotate in said cylindrical valve chambers, said combustion chambers of adjoining cylinders having ports both opening into the same cylindrical valve chamber and said valve chambers having ducts for the inlet and exhaust functions of the engine and said valve cages including parallel valve discs integrally connected by hollow cells extending diametrically across between the connected discs and having externally curved walls shaped to form segmental channels between the discs in line with said inlet and exhaust ducts and the valve discs having ports therethrough to register with said combustion chamber ports and opening into said segmental channels provided by the hollow cells between said valve discs.

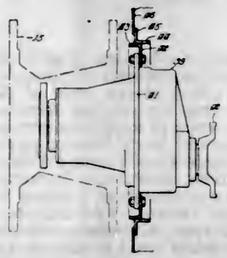
carriage mounted for vertical movement on said

2,459,974
METHOD AND APPARATUS FOR VAPORIZING LIQUEFIED PETROLEUM GAS
Arthur C. Turner, Chilhowee, Mo.
Application July 16, 1941, Serial No. 402,637
13 Claims. (Cl. 62—1)



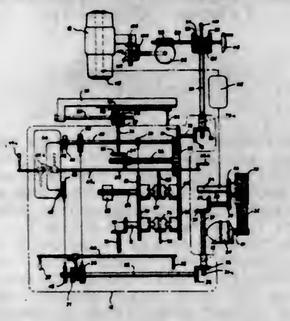
10. A liquefied petroleum gas vaporizing apparatus including a tank buried underground to receive earth heat and having a body of heat transfer liquid therein, an expansion and vaporizing coil in the tank in heat exchange relationship with the liquid contained in said tank, a pressure reducing valve within the confines of the tank in position to receive heat from said liquid, said valve being connected with the expansion and vaporizing coil, means for conducting liquefied petroleum gas to the pressure reducing valve under pressure, a service conduit means connected to the expansion and vaporizing coil, and a low pressure regulating valve in said conduit.

2,459,975
WHEELS FOR ENDLESS TRACK VEHICLES AND METHOD FOR MOUNTING SAME
Benjamin A. Swennes, Rockford, Ill., Lee E. Shelton, Kalamazoo, Mich., and Carl E. Swenson, Rockford, Ill., assignors, by mesne assignments, to the United States of America as represented by the Secretary of the Navy
Application April 5, 1944, Serial No. 529,628
8 Claims. (Cl. 180—9.1)



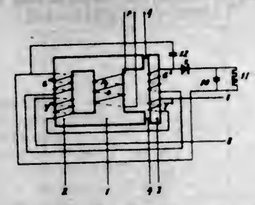
6. In a vehicle having a vehicle body, a pair of endless articulated vehicle-propelling tracks on opposite sides of said body, a plurality of wheels mounted on each side of said body and including vehicle-supporting wheels on the bottom of the body disposed in tandem, an idler wheel adjacent one end of the body and a driving sprocket wheel adjacent the other end of the body, said idler and sprocket wheels being disposed above said vehicle-supporting wheels, the wheels on each side of said body having a track disposed therearound and holding the track in looped configuration, the combination therewith of means for mounting each of the driving sprocket wheels to the body including a final gear drive unit on which the sprocket wheel is mounted, a hub portion disposed about and fixed to said final gear drive unit and having a peripheral flange extending substantially parallel with the axis of the sprocket wheels, a portion fixed with respect to the body and having an opening therethrough and having a cylindrical flange about its opening extending substantially normal to the body, said last-named cylindrical flange being larger than the cylindrical flange of said hub portion and receiving the same, said flanges being disposed with respect to each other to position the sprocket wheel in the plane of the other wheels, and means for fixing said cylindrical flanges together to fix the wheel with respect to the body.

2,459,976
MILLING MACHINE TRANSMISSION AND CONTROL
Edgar D. Vancil and Fred A. Hassman, Cincinnati, Ohio, assignors to The Cincinnati Milling Machine Co., Cincinnati, Ohio, a corporation of Ohio
Application March 6, 1944, Serial No. 525,282
1 Claim. (Cl. 90—21)



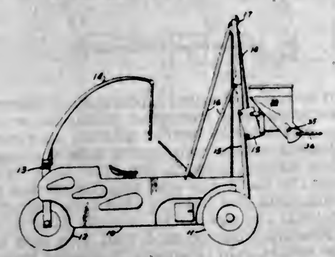
In a milling machine having a column, a knee and a spindle carrier slidably mounted on the column for movement toward and from one another, a saddle and table mounted on the knee, a spindle journaled in the carrier, the combination of transmission and control means for the different parts including a prime mover mounted in the column, a clutch for connecting the prime mover for actuation of the spindle, a common drive shaft in the knee coupled for continuous operation with the prime mover exclusive of said clutch, a variable feed transmission and a rapid traverse train mounted in the knee for actuation by said drive shaft, a common output shaft journaled in the knee, means for selectively coupling the output shaft for actuation by the feed and transmission and rapid traverse train, means coupling the output shaft for actuation with the carrier including a reversing clutch having a neutral position, a transmission train to the carrier including a shaft controlled by said clutch, a hand wheel for rotating said shaft and control means including a pinion, a three-position trip operable member rack connected to the pinion, a shifter for said clutch rack connected to the pinion, a detent responsive to rotation of the pinion, means operable by the detent for disengaging the hand wheel regardless of the direction of rotation of the pinion and a manual controlled lever connected to the pinion whereby all the controls are interlocked through said pinion and said carrier may be translated regardless of rotation of the spindle.

2,459,977
STABILIZED POWER SUPPLY
Jan van der Heem, The Hague, Netherlands, assignor to Hartford National Bank and Trust Company, Hartford, Conn., as trustee
Application December 18, 1946, Serial No. 716,966
In the Netherlands June 3, 1944
Section 1, Public Law 690, August 8, 1946
Patent expires June 3, 1964
2 Claims. (Cl. 171—97)



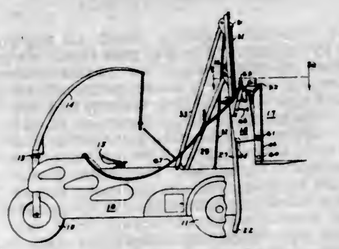
2. In a power supply system, the combination comprising an alternating-current transformer including a magnetic core having three leg portions, a primary winding surrounding the intermediate leg portion, a first pair of windings surrounding one side leg portion and a second pair of windings surrounding the other side leg portion, one of said side leg portions being separated from said intermediate leg portion by an air gap, one of said windings in said first pair being connected in series opposition with one of said windings in said pair to constitute a first secondary winding, the other winding in said first pair being connected in series opposition with the other winding in said second pair to constitute a second secondary winding, a first load coupled to said first secondary winding, a second load including a half wave rectifying device, said second load being coupled to said second secondary winding, and a condenser shunted across one of the two windings constituting said second secondary winding to equalize the loads imposed on said first and second secondary windings, thereby stabilizing the output voltages of said first and second secondary windings.

2,459,978
MATERIAL HANDLING APPARATUS
Harold A. Wagner and Gustave H. Wagner, Portland, Oreg.
Application March 12, 1946, Serial No. 653,745
5 Claims. (Cl. 214—117)



1. In a vehicle apparatus of the class described, an upright on the forward end of said vehicle, a carriage mounted for vertical movement on said upright, a hopper secured to said carriage and movable vertically therewith, said hopper having a bottom wall sloping downwardly and forwardly of said vehicle and extending substantially the full width thereof, a horizontal opening extending the full width of the lower end of said bottom wall, and a gate controlling flow of material from said opening.

2,459,979
MATERIAL LIFTING AND TRANSPORTING TRUCK
Harold A. Wagner and Gustave H. Wagner, Portland, Oreg.
Application March 12, 1946, Serial No. 653,746
4 Claims. (Cl. 214—113)



1. A material handling device comprising a vehicle including a frame, an upright secured to the forward end of said frame, a load receiving element, a carriage pivotally supporting said load receiving element and mounted upon said upright for vertical movement with respect thereto, said carriage comprising a pair of spaced apart parallel side plates, the spacing between said side plates being greater than the width of said upright, a unitary cross member rigidly securing said side plates in spaced relationship, a tubular member extending transversely of said carriage adjacent the bottom portion of said cross member, a pair of rollers mounted on the lower rear portion of said plates and adapted to ride upon the forward side of said upright, a second pair of rollers mounted on the upper rear portion of said side plates and adapted to ride on the back side of said upright, said load receiving element comprising a vertically extending back portion composed of a pair of vertical angle irons and a pair of horizontal angle irons secured to the upper and lower portions of said vertical angle irons, a plurality of forwardly extending load receiving arms secured to the lower end of said back portion, a shaft extending through said tubular member and connecting said vertical angle irons for pivotally mounting said load receiving element on said carriage, means for retaining said element in a load receiving position, said means comprising a latch shaft rotatably mounted on the upper portion of said carriage, a hook means pivotally secured to said load lifting element for cooperatively engaging said latch shaft, means for rotating said latch shaft in one direction for causing disengagement of said hook means comprising a lever pivotally mounted on one of said side plates, means for rotatably linking said lever to said latch shaft, and means connected to said lever normally biasing said lever to a latching position of said latch shaft, said lever resting against said latch shaft when in said latching position.

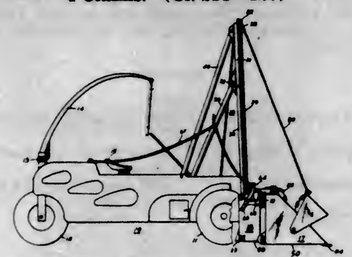
2,459,980
MOTOR VEHICLE
Ernest Wilson, Lansing, Mich., assignor to Oldsmobile Motor Works, Lansing, Mich., a corporation of Michigan
Application March 31, 1944, Serial No. 528,884
3 Claims. (Cl. 180—2)

an accessible coupling carried by the detachable

2,459,984
CENTRIFUGAL FORCE OPERATED SWITCH
Thomas E. Wood, Jr., and Mercer E. Gamble, Cincinnati, Ohio, assignors to The Procter & Gamble Company, Cincinnati, Ohio, a corporation of Ohio
Application March 31, 1944, Serial No. 528,886
3 Claims. (Cl. 200—80)

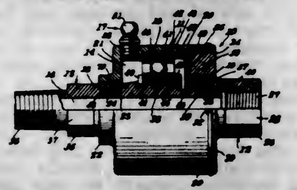
2,459,986
ELECTRIC HOUSE FURNACE
Willard H. Worden, Seattle, Wash.

2,459,980
SCOOP TRUCK
Harold A. Wagner and Gustave H. Wagner, Portland, Oreg.
Application March 12, 1946, Serial No. 653,747
4 Claims. (Cl. 214—120)



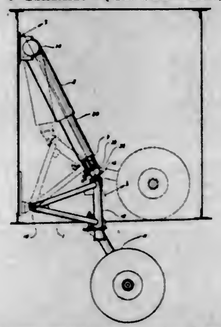
1. A material handling truck, an upright secured to the forward end of said truck, a carriage mounted on said upright for vertical movement with respect thereto, a scoop having its open end forward and comprising a bottom and sidewalls, said scoop being pivotally mounted on said carriage and having a loading position in which the scoop is in a lowered position with the bottom of said scoop in a generally horizontal plane and a dumping position wherein the scoop and carriage are in a raised position with the scoop tilted forwardly and downwardly away from said carriage, a gate extending across the open end of said scoop and pivotally mounted on said scoop for vertical movement with respect to the bottom of said scoop, flexible means connecting said gate to the upper portion of said upright and of such length as to hold the gate in an open position when said scoop is in the lowered, loading position, and a second flexible means connecting said gate to said carriage and of such length as to hold the gate in an open position with respect to the scoop when said scoop is in the dumping position.

2,459,981
SWIVEL JOINT
Doyle C. Warren, Monrovia, Calif., assignor to Chiksan Company, Brea, Calif., a corporation of California
Application April 20, 1945, Serial No. 589,428
2 Claims. (Cl. 285—97.3)



1. A swivel connection of the character described including, a central tubular section with accessible coupling means at its outer end, an outer section including a tubular body surrounding the central section, a fixed end at one end of the body surrounding the central section with substantial clearance and passing the said outer end of the central section and a detachable end at the other end of the body surrounding the central section with substantial clearance, an antifriction bearing within the body between the ends rotatably supporting the central section in the outer section, sealing means between the central section and the ends of the outer section, and an accessible coupling carried by the detachable end and projecting outwardly therefrom, the outer end of the central section projecting outward through the fixed end of the outer section to be exposed beyond the fixed end of the outer section, the inner end of the central section terminating in the structure formed by the detachable end of the outer section and the coupling carried thereby.

2,459,982
RETRACTABLE SHOCK ABSORBING STRUT
Edward C. Wells, Seattle, Wash., assignor to Boeing Airplane Company, a corporation of Delaware
Application December 13, 1944, Serial No. 568,030
7 Claims. (Cl. 244—102)



1. A strut comprising a tube having a closed end, hollow shock absorbing means received in said tube, strut mounting means received in the open end of said tube, engaged with said shock absorbing means, and movable inwardly relative to said tube against the resilience of said shock absorbing means, a screw threaded in the closed end of said tube and projectible within said tube and shock absorbing means, and second strut mounting means engaged with the portion of said screw exteriorly of said tube for movement thereby lengthwise of said tube to reduce the effective length of said strut as said screw is projected into the hollow of said shock absorbing means.

2,459,983
AWNING AND VENTILATOR
Fred Werner and Ernest C. Miles, Dallas, Tex.
Application December 8, 1945, Serial No. 633,682
4 Claims. (Cl. 20—57.5)
